Gloucestershire GTANA 2026 - Cotswold (July 2026)

This note has been prepared by RRR and Cotswold District Council to support the Cotswold Local Plan Regulation 19 consultation and has been published in advance of the wider Gloucestershire Gypsy and Traveller Accommodation Needs Assessment (GTANA) (RRR, 2026), which was being finalised at the time of writing and will be issued in due course. It provides a summary of the current provision of accommodation for Gypsies and Travellers within Cotswold District and identifies the need for additional permanent residential pitches over the plan period to 2043. The findings are drawn from the Gloucestershire GTANA and are intended to provide the evidence required to inform the Council's approach to meeting identified accommodation needs through the emerging Local Plan.

Gypsies and Travellers

There are 55 pitches with planning permission (43 occupied at the time of the assessment)

Table 1: Assessment of the need for permanent residential site pitches 2026-2031

Meeting Identified Need

The GTANA identifies a need for 32 additional permanent residential pitches in Cotswold District over the period 2026-2043. The assessment does not identify specific sites to meet this need. In accordance with the Planning Policy for Traveller Sites, the Council will need to undertake an assessment of site and land availability through the Local Plan process to identify a supply of deliverable sufficient to

maintain a five-year supply of specific deliverable sites, and developable sites sufficient to meet the identified need across the plan period.

Methodological Notes and Assumptions

The following notes explain key assumptions and methodological approaches used in the assessment of accommodation need. They provide context for the calculation of pitch requirements and should be read alongside the accompanying tables and findings.

Additional need

Households currently residing on highway land (without planning permission) were not considered to have an identified need at the time of the assessment. Accordingly, these households have not been included within the calculation of accommodation need.

This conclusion is contingent upon the assumption that the Council will continue to make appropriate provision for these households should their current circumstances change. If the existing arrangement becomes unavailable and households subsequently require alternative pitch accommodation, an additional need for accommodation would arise. Any such requirement would exceed the need identified in this assessment and would need to be addressed through future monitoring and review processes.

Clarification of steps

NB Step 14: As no reliable Census data is available to identify the number of Gypsy and Traveller households residing in bricks-and-mortar accommodation within Cotswold, a proxy approach has been applied. This assumes a requirement equivalent to 15% of the total authorised residential pitch stock (54 pitches with planning permission), resulting in an estimated need from 8 households. The total authorised pitch stock has been used as it provides a more stable indicator of the size of the resident Gypsy and Traveller community than the number of occupied pitches at a single point in time, which may fluctuate due to temporary vacancies and changes in occupancy.

This approach is consistent with that adopted in the previous assessment, although the underlying rationale has changed. The previous assessment was based on evidence of psychological aversion to conventional housing, whereas this assessment reflects a cultural preference for caravan-based living and a demonstrable need for a pitch, consistent with the requirements of the Planning Policy for Traveller Sites (PPTS) 2024.

Another change since the previous assessment is that we no longer include mortality-related supply, either within the first five years or in future growth calculations. This is because the death of an occupant does not necessarily result in the loss of a household or the release of a pitch, as pitches commonly remain occupied by other household members or are subsequently occupied by family members. Accordingly, we have applied the 11.4% household growth rate identified in the previous assessment, but have not deducted a mortality rate from the future accommodation-need calculations.

Needs of Other Groups

Showpeople: No known yards and therefore no known identified need.

Boat dwellers: This need is shared across the wider study area, although the number of residential moorings required has yet to be determined. However, given the absence of navigable waterways in the Cotswold District, residential moorings are not anticipated to be required. Consequently, any identified need is unlikely to have implications for the Council's future provision of accommodation.

Future Monitoring Considerations

The accommodation needs identified in this assessment relate to households for which sufficient evidence was available at the time of the study. Additional accommodation needs may arise during the plan period from households (Gypsies, Travellers, Travelling Showpeople and boat dwellers) not included in the assessment, including households associated with in-migration, unauthorised developments, unauthorised encampments, and some households residing in bricks-and-mortar accommodation. These potential needs have not been included within the identified pitch requirement and should be considered through ongoing monitoring and review and should be considered separately from the need identified in Tables 1 and 2. Any needs arising from such circumstances may be met through future site allocations, planning permissions, or windfall developments, as appropriate.

A1 – A3 Site Assessment

A4. Population modelling

1. Introduction

1.1 Cotswold District Council is preparing a new Local Plan to guide development in the District over the 2026-43 period. The Council has commissioned Iceni Projects ('Iceni') to prepare this Employment Land Review ('ELR').

1.28 The Employment Land Review considers the characteristics, structure and performance of the District's economy and commercial property market dynamics. This analysis then informs an assessment of future needs for office and industrial development – addressing the E(g), B2 and B8 use classes.

1.29 Consideration is then given to the supply of employment land. There are three principal components of this. Iceni has firstly undertaken a review and selective updating of the Council's 2025 Established Employment Sites Review and made a limited number of adjustments to the report. This is set out at **Appendix A4**.

1.30 A review has then been undertaken of the extant employment allocations in the Cotswold Local Plan 2011-31. This is informed by engagement, where appropriate, with landowners / developers and seek to consider whether these allocations for employment development should be retained and their deliverability.

1.31 Thirdly, a review of potential sites for employment development submitted to the Council through the 'Call for Sites' process has been undertaken. This addresses their suitability and market attractiveness for employment development, and their deliverability, with a view to informing site selection.

1.32 The report then seeks to draw these elements together in considering the current balance between supply and demand for employment land and the scale of additional employment land that needs to be allocated within the emerging Local Plan. It then provides advice on the

appropriate locations for employment development having regard to strategic development constraints in the District; the relative commercial market attractiveness of different locations and the emerging spatial strategy for development.

1.33 Employment land needs modelling in this report has been carried out for a period of 2025-43, whereas Council's plan period is 2026-43. To provide a 2026-43 position, an adjustment has been made whereby net employment completions during 2025/26 have been deducted from the modelled 2025-43 requirement.

1.34 The report has been prepared alongside a Gloucestershire-wide Housing and Economic Needs Assessment (HENA), the preparation of which Iceni is leading. It draws on elements of the analysis therein and the engagement with a range of stakeholders; but has supplemented this with engagement with a number of local commercial agents and specific discussions with those who have been involved in the development of key sites within the District.

1.35 The key purpose of the Review is to inform the emerging Local Plan. However, the assessment may also be relevant to the determination of individual planning applications on employment sites or for employment development.

Report Status and Structure

1.36 The remainder of the report is structured to address:

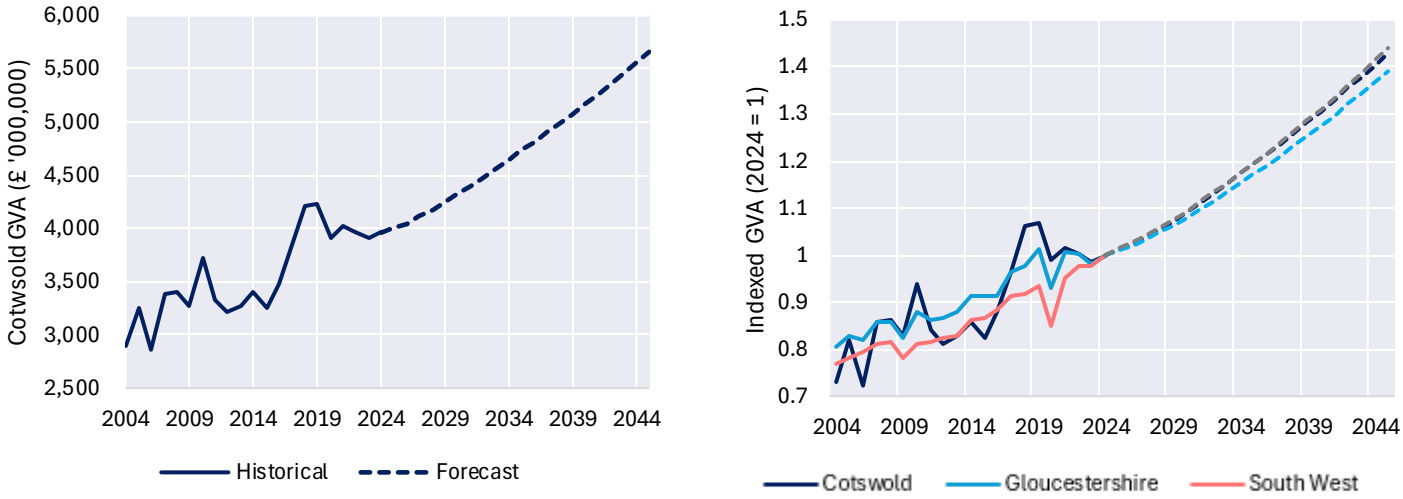
- Section 2: Economic Baseline;
- Section 3: Commercial Market Assessment;
- Section 4: Employment Land Requirements;
- Section 5: Review of Existing Employment Allocations;
- Section 6: Employment Land Supply;

- Section 7: Bringing the Evidence Together.

2. Economic Baseline

1.1 This section considers the profile of the Cotswold £4.0 billion economy which in 2024 supported 57,100 jobs. The district accounted for around 19.5% of Gloucestershire's GVA and 15.6% of its employment.

Cotswold's Economy



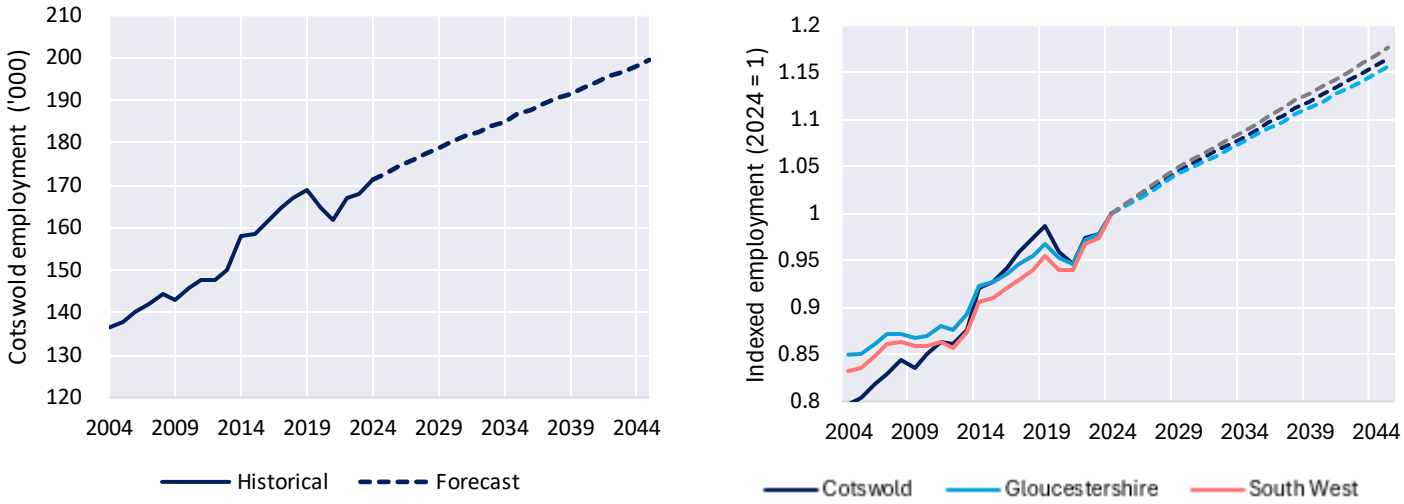
GVA and Employment

2.28 Gross Value Added ("GVA") is a measure of the value of goods and services produced in an economy. It is used to consider the size of the economy in different areas. In 2024, Cotswold was estimated to have a £4.0 billion economy.

2.29 As shown in the figure below, Cotswold's GVA has grown over time, with 36.9% growth from 2004 to 2024 although with some volatility year to year (particularly in 2020 as a result of COVID-19). Moving forward, GVA is forecast to continue to grow, reaching almost £5.7 billion by 2045 based on Experian's trend-based forecasts.

2.30 Trends in Cotswold's GVA broadly reflect those seen across Gloucestershire and the broader South-West Region as Figure 2.1 shows. However, Cotswold's growth has been slightly faster than seen in benchmark areas historically (36.9% vs 24.2% in Gloucestershire, 30.1% in the South West and 35.6% in England between 2004-2024).

Figure 2.1 : Trends in Cotswold Gross Value Added (GVA)



Source: Iceni analysis of Experian 2025 forecasts

2.31 Employment has also been growing steadily in Cotswold over the last 20 years (as shown in Figure 2.2 below). From 2004-2024, employment has grown by 25.5%, or 11,600 jobs. This growth is forecast to continue broadly in line with past trends, with Experian forecasting that an additional 9,800 jobs would be added to 2046 and overall employment reaching 66,900.

2.32 In comparison with the regional and national averages, Cotswold District's employment has grown more quickly since 2004 (25.5% in Cotswold District vs 17.7% in Gloucestershire, 20.2% in the Sout West and 19.8% in England). Between 2024-2046, baseline forecasts place Cotswold's growth levels between those of Gloucestershire and the South West (17.2% vs 16.4% in Gloucestershire and 18.5% across the South West).

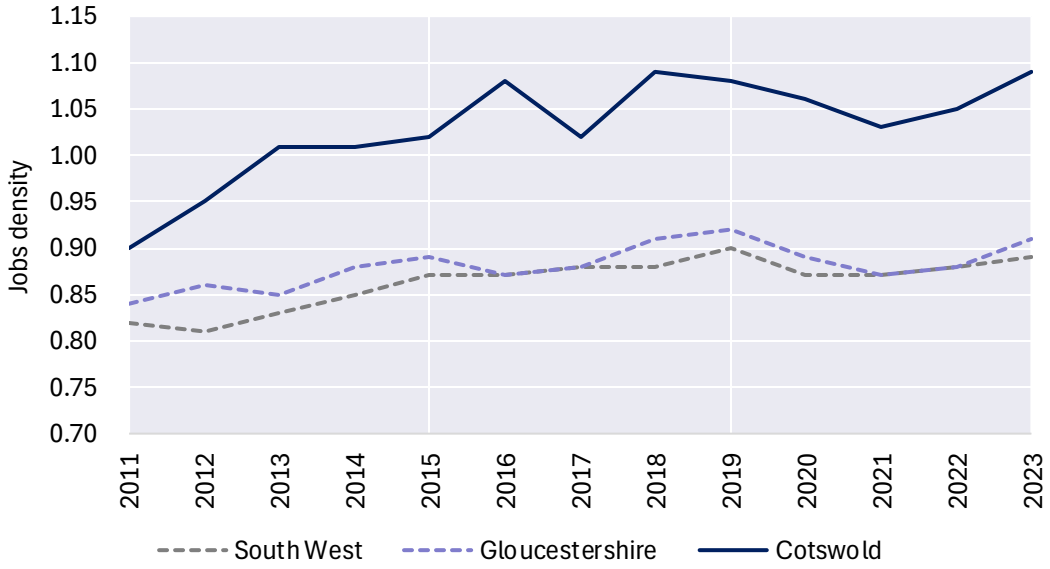
Figure 2.2 : Trends in Cotswold employment

Source: Iceni analysis of Experian 2025 forecasts

Job density

2.33 Job density is defined as the ratio of workplace-based jobs to the resident working-age population within an area. It provides an indicator of the balance between local employment opportunities and the labour supply. A jobs density of 1 would indicate one job per working age person, while a jobs density below one indicates less jobs than working-age people.

2.34 Given that not all working-age people are employed, a job density of less than one is typical nationwide. The overall job density of England in 2023 (the most recent available data) was 0.87[1].



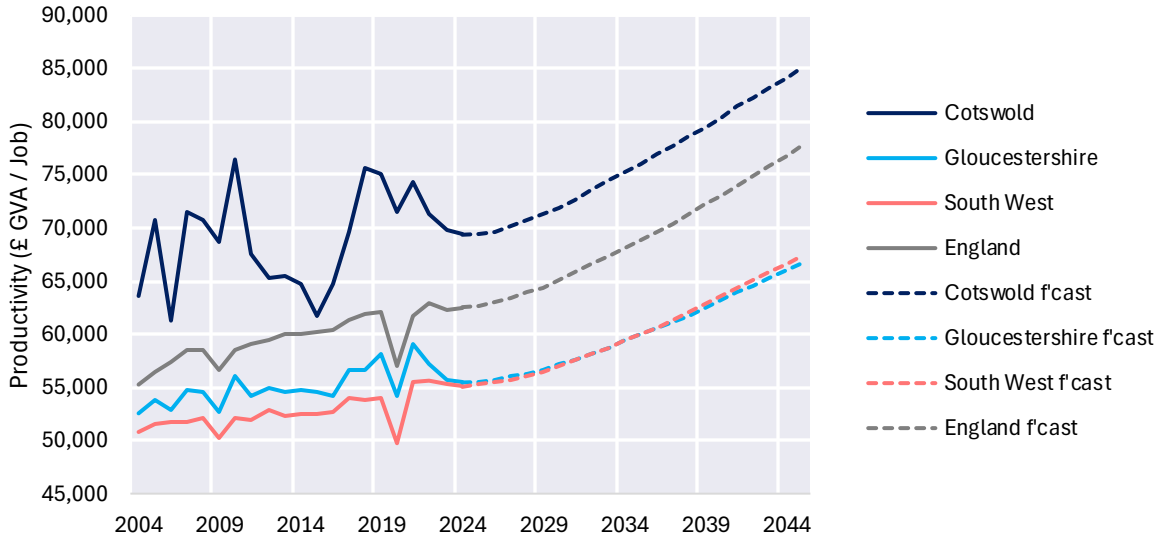
2.35 In contrast to this, Cotswold's job density in 2023 was much higher at 1.09. Indeed, Cotswold has the ninth highest job density of any rural local authority in England, after only North Warwickshire and North West Leicestershire (both of which contain major industrial and logistics areas) and Winchester and West Berkshire (which both contain prosperous towns over twice as large as Cirencester). This indicates

[1] Source: NOMIS

that for an authority of its type, Cotswold has among the highest levels of employment relative to the local population in England.

2.36 Historic data, as shown in the figure below, shows Cotswold's job density t has increased over time, and to have grown relative to benchmark areas. This indicates that job growth in Cotswold has been faster than working age population growth. This pattern is consistent with relatively weaker housing delivery compared with the growth of the District's economy; and is likely to have contributed to an increase in net in-commuting to the District.

Figure 2.3 Job density over time (Cotswold)



Source: ONS 2025 *Jobs density*

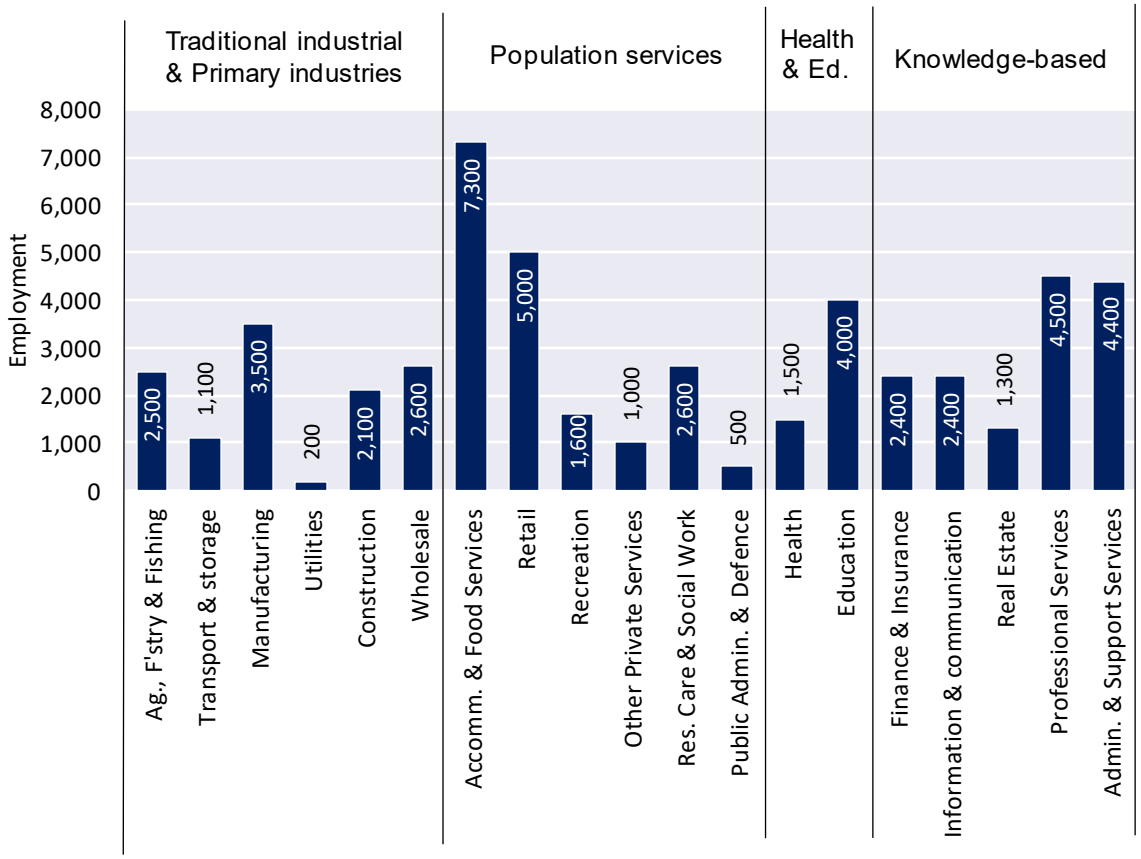
Productivity

2.37 By combining data on GVA and employment, it is possible to estimate the productivity of Cotswold's economy. Our analysis shows GVA of around £69,400 per job. This is well above the results for Gloucestershire (£55,500) and the South West (£55,000), and even above the England-wide level which will capture high productivity jobs in larger cities like London (£62,600). This is a very strong result for a non-urban authority, and the evidence indicates it is a function of both the quality of jobs and strong economic participation.

2.38 As shown in the figure below, Cotswold's productivity has consistently sat above that seen in benchmark areas over the last 20 years. There has been a relatively high level of volatility in the productivity results for Cotswold, which likely reflects issues with economic modelling for smaller authorities rather than underlying economic reality.

Figure 2.4 Trends in productivity (GVA / jobs)

Source: Iceni analysis of Experian Forecasts 2025



2.39 Forecasts are for accelerating growth in productivity for Cotswold, and more broadly across Gloucestershire, the South West and England as a whole. This reflects the impact of technological shifts (e.g. AI), an increase in business investment, and shifts in the sectoral composition of the economy towards higher value sectors. However, given recent trends of relatively sluggish productivity growth since the Global financial Crisis of the last 2000s, this forecast may be optimistic.

Sectoral Structure

2.40 Cotswold has a broad-based economic structure with jobs spread across a variety of sectors. As shown in the figure below, the largest sectors in terms of total employment are accommodation and food services (7,300 jobs, likely related to tourism), retail (5,000 jobs), ,

professional, scientific and technical services (4,500 jobs), and administrative and support services (4,400), with high levels of employment also in education and manufacturing.

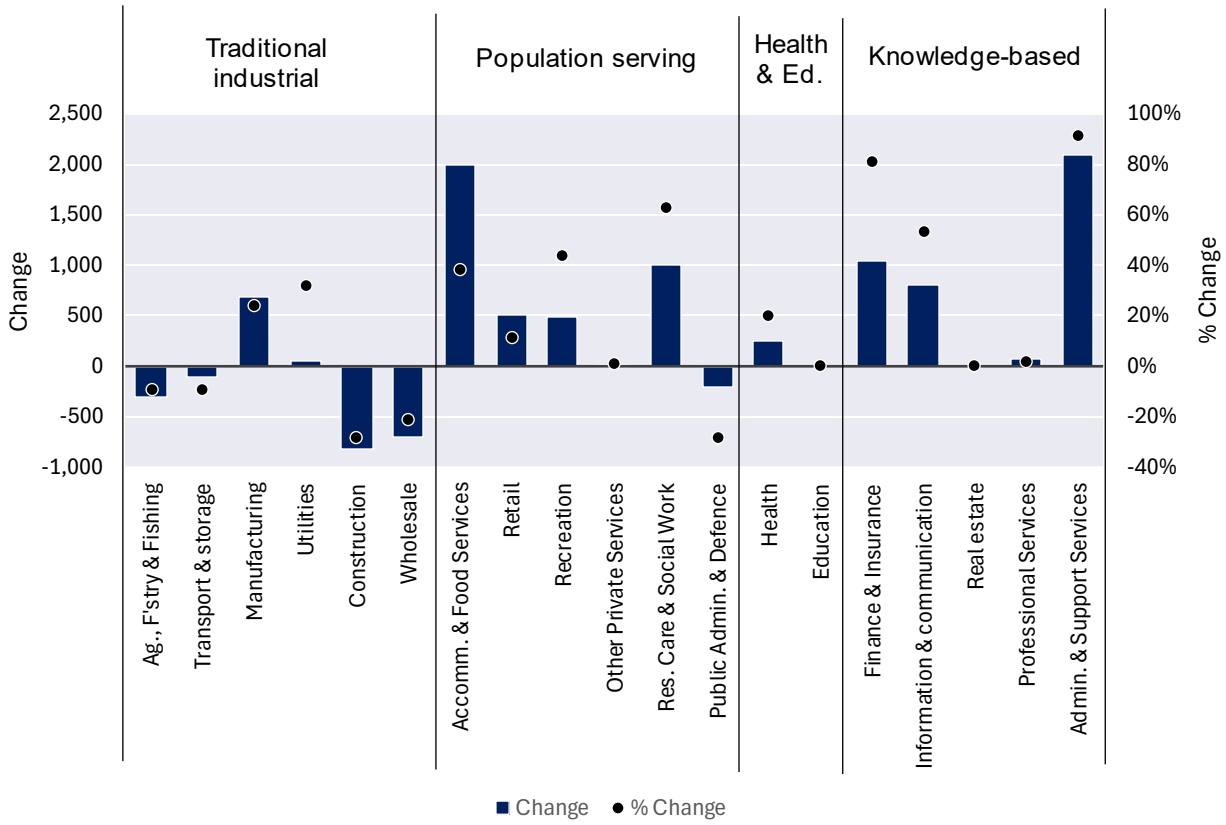


Figure 2.5 Cotswold employment by sector (2024)

Source: ONS Business Register and Employment Survey (2024)

2.41 While overall employment has been growing over time, there is a more mixed picture by sector. Between 2015-2024 (the time period over which consistent data is available from BRES), there has been mixed performance in traditionally industrial and related sectors and limited growth in health and education, while population serving and knowledge-based sectors have grown more strongly.

Figure 2.6 Change in employment 2015-2024 (Cotswold)

Source: ONS Business Register and Employment Survey

2.42 More specifically:

- Employment in **manufacturing** grew (+685 jobs or 24%), while **transport and storage**, the other primary industrial sector, shrank slightly (-105 jobs or 9%).

- **Wholesale** and **construction** can be regarded as secondary industrial sectors, with some activity in these sectors taking place in industrial premises. Employment in both of these sectors contracted (-825 jobs or 29% and -700 jobs or 22% respectively).

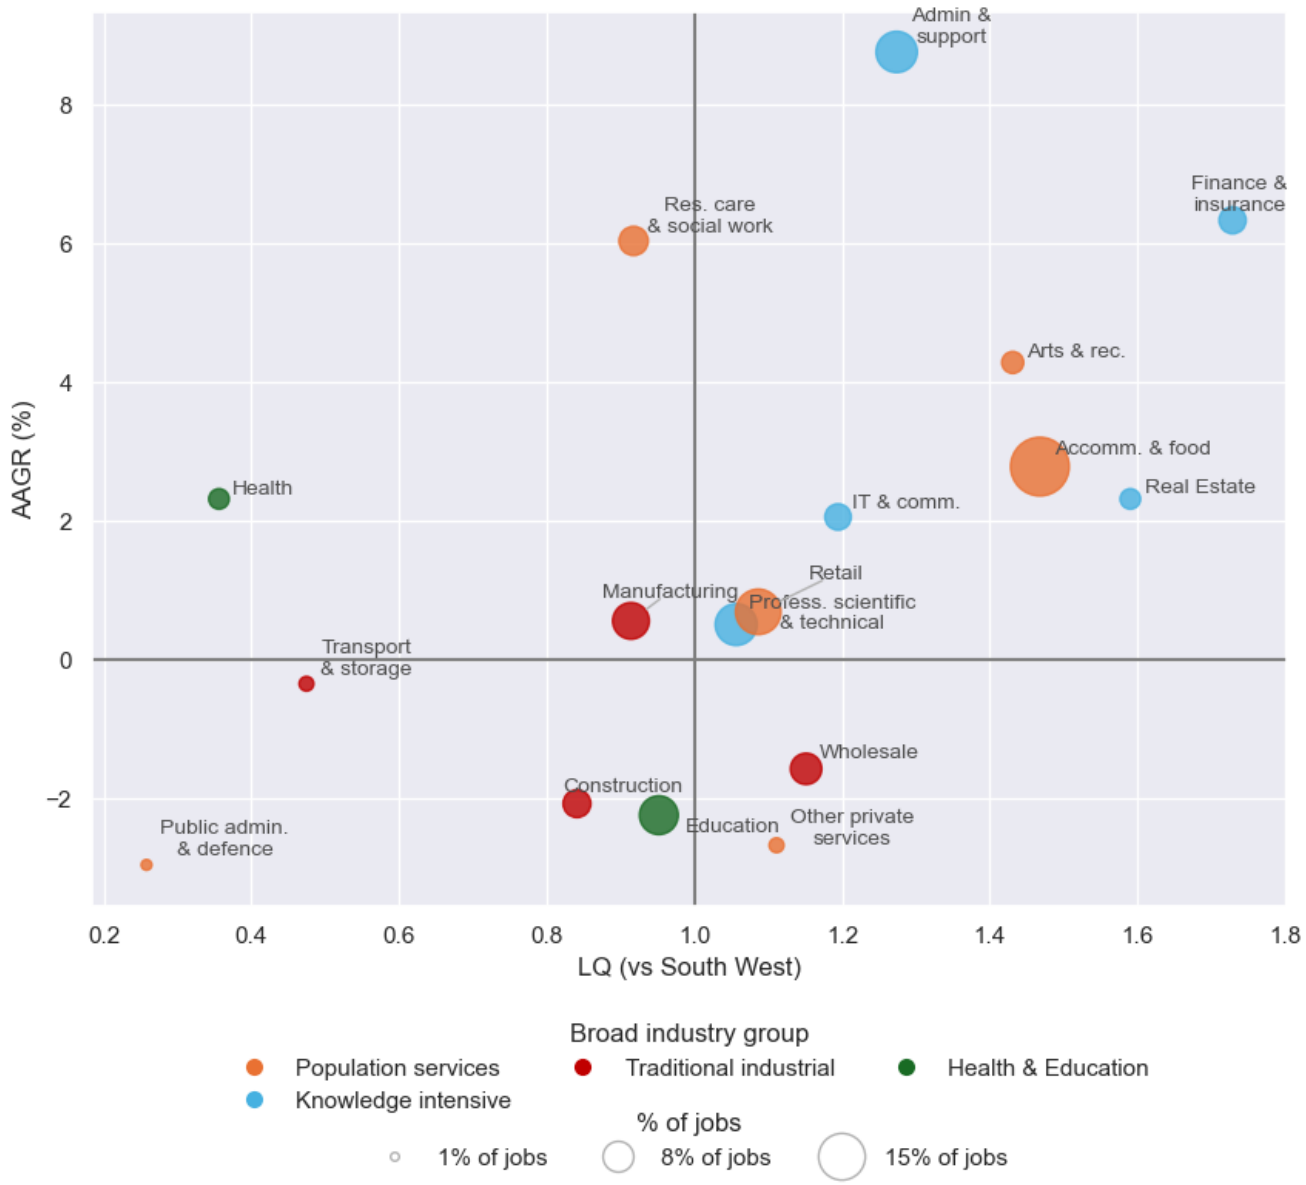
- **Agriculture, forestry and fishing** was recorded as shrinking, although this result should be treated with caution as BRES data is relatively poor at capturing agricultural employment.

- In population serving sectors, there was very strong growth in **accommodation and food services** (+2,000 jobs or 38%), **residential care and social work** (+1,000 jobs or 63%) and in **recreation** (+480 jobs or 43%), with lower growth in retail (+500 jobs or 11%) and a small contraction in **public administration and defence** (-200 jobs or 29%).

In recent years, there has been a national shift away from retail employment and towards food and hospitality services. However, the growth in accommodation and food services in Cotswold is particularly high and reflects strength in the local tourism sector. It is also notable that in contrast to general trends, the retail sector grew.

- There was strong growth in the knowledge intensive sectors of **finance and insurance** (+1,050 jobs or 81%), **information and communication** (+815 jobs or 53%, predominately in computer programming, consultancy and related activities) and **administrative and support services** (+2.085 jobs or 91%).

2.43 The relative representation of sectors in the local economy can be considered using a location quotients (LQ) analysis. A LQ value of 1.0 indicates that a sector makes up the same proportion of employment as in the broader economy (in this case the South West), while a lower LQ indicates relative under-representation of a sector in the District and a higher LQ indicates specialisation. Error! Reference source not found. below shows LQs, overlaid with recent growth rates.



2.44 This analysis shows a clear pattern with most knowledge based and population serving sectors being specialised in the local economy, while traditionally industrial sectors and some services which are more commonly concentrated in larger towns and cities (health, education and residential care) are less specialised. All of the most specialised sectors are also growing, indicating likely increasing specialisation and performance over time.

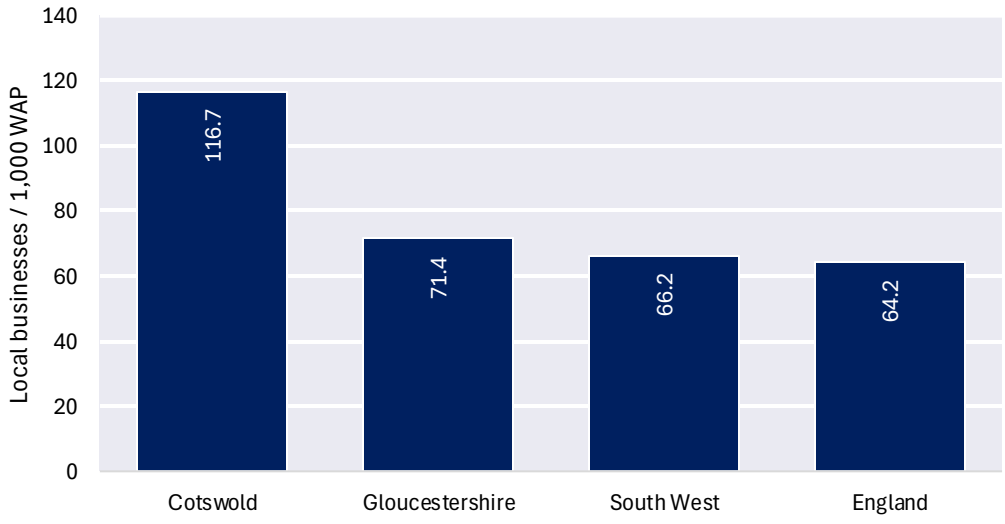
2.45 Finance and insurance, real estate, accommodation and food services, and arts and recreation are the most specialised sectors, with accommodation and food services also the largest sector by employment (as noted above). Retail and professional, scientific and technical services are also specialised (although only slightly).

2.46 Public administration, health and transport and storage are not specialised (noting the absence in Cotswold of large central government or county council facilities, a hospital or large logistics premises). Manufacturing, residential care and social work are also not

specialised, but growth in these sectors suggests that specialisation may increase in the future.

Figure 2.7 Cotswold employment location quotient (2024) and average annual growth rate (AAGR)

Source: Iceni analysis of ONS Business Register and Employment Survey



2.47 Overall, the sectoral analysis points to a strong local economy with particular strengths in high-value knowledge-based sectors, in tourism and in some population services. There is also a small but robust manufacturing sector, and some employment in secondary industrial sectors.

Business Base

2.48 In 2025, there were 6,075 local businesses (i.e. enterprises) based in Cotswold, and 6,750 local units (i.e. local branches, premises and employers regardless of whether the overall business is based locally).

2.49 Relative to the number of working-age people, Cotswold has a very high number of local businesses when compared to the regional and national benchmarks (117/ 1,000 working age people vs 61.4 in Gloucestershire, 66.2 in the South West and 64.2 in England). Cotswold's result in this metric is the highest seen in any local authority in England outside of London boroughs and the Isles of Scilly, and is close to double the England-wide rate.

Figure 2.8 Business ownership rate (per 1,000 working age people)

Source: Iceni analysis of ONS Business Counts, Population Estimates

2.50 Cotswold has a small-business focussed economy, with only 15 large local businesses employing 250 or more people. These make up only 0.2% of all businesses, around half of the national benchmark (0.4%).

2.51 The vast majority of businesses are micro businesses. While this is the same across the region and nation, the small overall size of Cotswold's economy means that there are relatively few large locally-based employers.

Table 2.3 Local business base by number of employees

	Cotswold number	Cotswold %	South West %	England %
Micro (0 – 9)	5,380	89.1%	89.0%	89.2%
Small (10 – 49)	560	9.3%	9.1%	8.7%
Medium (50 – 249)	85	1.4%	1.5%	1.6%
Large (250+)	15	0.2%	0.3%	0.4%

Source: ONS Business Counts

2.52 The following two tables provide the absolute and percentage change in local businesses over the last ten years. Cotswold has seen only modest growth in local businesses numbers (185 businesses or 3.2%). This is well below regional and national growth rates (6.6% in the South West and 12.3% in England), although this may reflect Cotswold's already very high level of local businesses relative to the local population.

Table 2.4 Change in local businesses (2015-2025)

	Cotswold change	Cotswold % change	South West % change	England % change
Micro (0 – 9)	135	2.6%	6.9%	12.8%
Small (10 – 49)	25	4.7%	1.7%	6.3%
Medium (50 – 249)	20	30.8%	14.1%	13.8%
Large (250+)	0	0.0%	12.2%	23.6%
Total	185	3.2%	6.6%	12.3%

Source: Iceni analysis of ONS Annual Population Survey, ONS Model-based estimates of unemployment

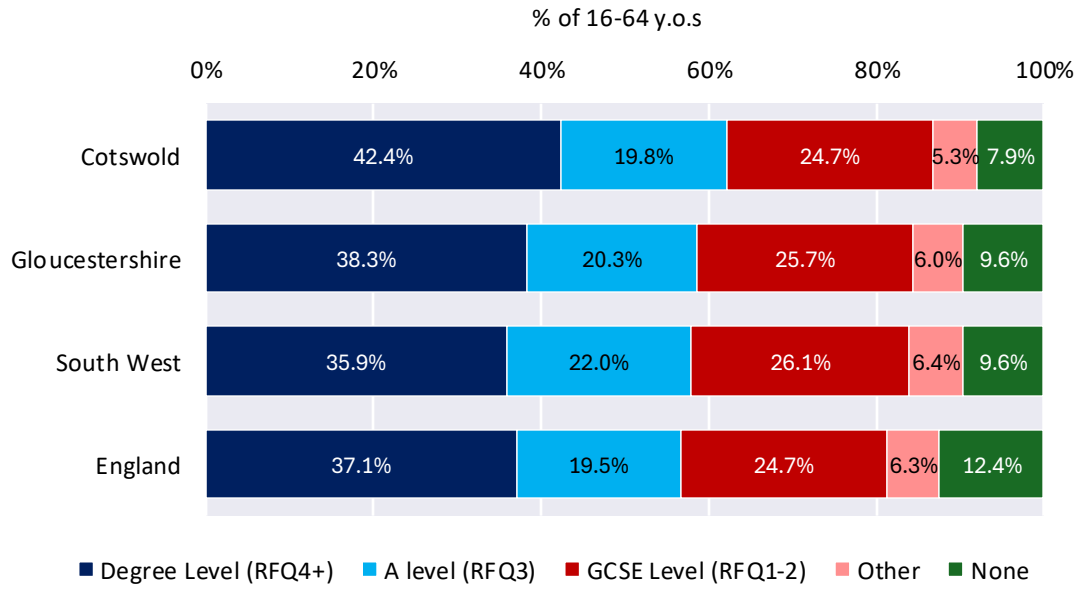
Labour Market

2.53 Economic participation in Cotswold (79.1%) is below the positions Gloucestershire-wide (83.4%) or across the South West region (80.9%), although above the result for England as a whole (78.8%). This may reflect the presence of a high number of early retirees in Cotswold.

Table 2.5 Economic participation and unemployment rates (3-year average))

	Economic participation rate (% of 16-64 y.o.s)	Unemployment rate (% of economically active 16-64 y.o.s)
Cotswold	79.1	2.3
Gloucestershire	83.4	2.6
South West	80.9	2.8
England	78.8	3.8

Source: Iceni analysis of ONS *Annual Population Survey,* ONS *Model-based estimates of unemployment*



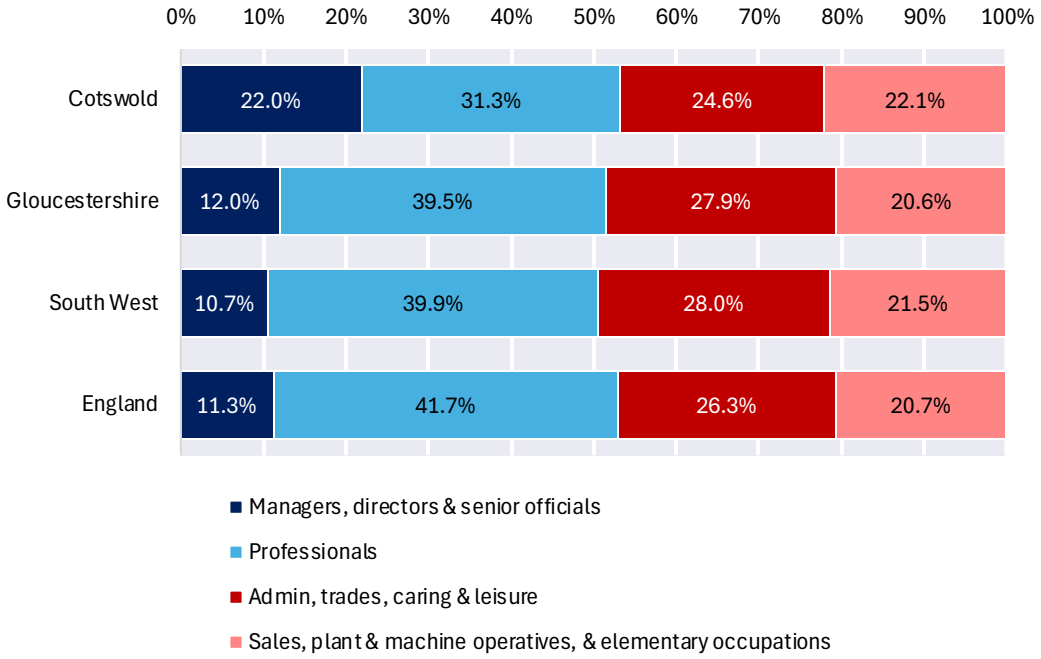
Note: values shown are averages of the 12-month periods ending September 2022 – June 2025

2.54 In keeping with its strong local employment and relatively affluent population, Cotswold has a low unemployment rate (2.3%), below the County-wide (2.6%) and regional (2.8%) rates, and well below the rate seen England-wide (3.8%).

Qualifications

2.55 Cotswold has a highly educated population, with 42.4% of the working age population having a degree level or above qualification, compared to 35.9% across the South-West and 37.1% in England. A relatively small proportion of the working age population has no qualifications (7.9% vs 9.6% in the South West and 12.4% in England) or GCSE level qualifications only (5.3% vs 6.4% in the South West and 6.3% in England).

Figure 2.9 Qualifications of working age people



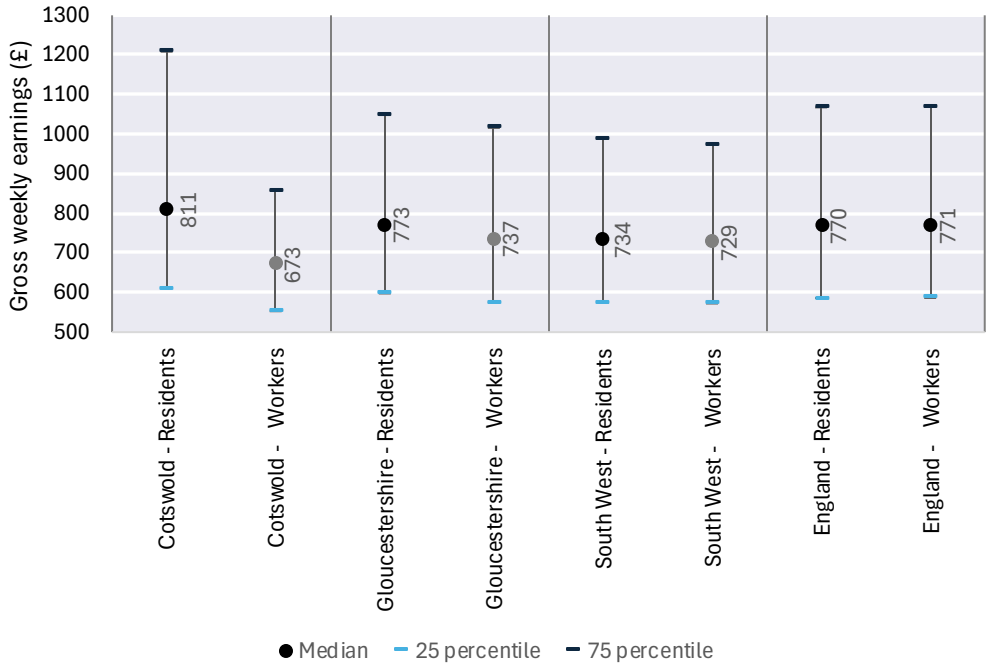
Source: ONS Census 2021

Occupations

2.56 A very high proportion of resident workers in Cotswold work as managers, directors and senior officials (22.0%), over twice the rates seen across the South West (10.7%) or England as a whole (11.3%). There is a correspondingly smaller proportion of people in professional

roles, although profession roles and above still make up 51.3% of workers in Cotswold, above the rate seen in the South West (50.6%).

Figure 2.10 Occupations of resident workers



Source: ONS Annual population survey
Note: Average taken across the most recent three years of results (Oct 2021-Sep 2022 to Jul 2024-Jun 2025)

Earnings

2.57 As shown in the figure below, typical full-time wages for Cotswold District residents (median of £811 per week) are well above those seen across the South West (£734 per week) or England as a whole (£770 per week). The 75th percentile of earnings in Cotswold is also substantially above these benchmarks (£1,208 vs £989 and £1,068 respectively). This reflects the very high proportion of residents working in managerial and senior professional roles.

Figure 2.11 Earnings of full-time workers

Source: ONS *Annual Survey of Hours and Earnings*

2.58 By contrast, wages for workers in jobs within Cotswold are well below those for resident workers, with median earnings of £673 per week for residents compared to £811 per week for local workers. The difference is even more pronounced at the upper end of the income spectrum, with 75th percentile values of £858 vs £1,208.

2.59 Higher resident wages is a common phenomenon in rural areas and generally reflects net out-commuting of highly paid professionals to office jobs in nearby urban areas and larger towns. The reason for the discrepancy in Cotswold is however different, as shown in the following section, and reflects instead net in-commuting of lower-skilled workers to the District. This is likely to be influenced by housing affordability dynamics.

Commuting Dynamics

2.60 The table below shows summary data about commuting to and from Cotswold from the 2011 and 2021 Censuses. Data from both sources

are used, as the 2011 data is quite old, but the COVID-19 pandemic may influence the dynamics shown in the 2021 data.

2.61 The balance between in and out commutes is shown by the commuting ratio in the final row of the table. This ratio is calculated as the number of workers living in an area divided by the number of people working in the area. A result above one indicates more resident workers, and so net out-commuting, while a result below one indicates more jobs and net in-commuting.

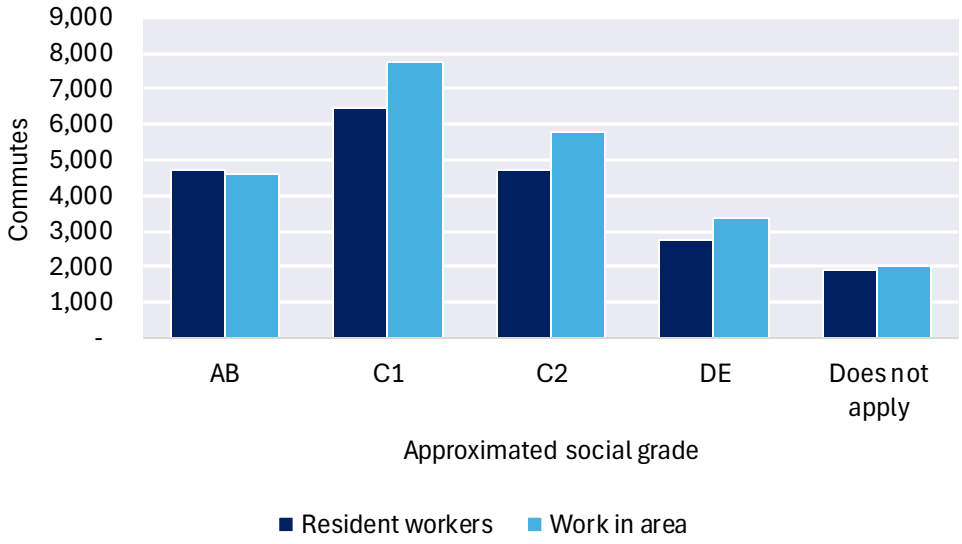
2.62 Data from both the 2011 and 2021 censuses for Cotswold indicate more local jobs than workers, and consequently net in-commuting from elsewhere. This effect is stronger in 2021 than 2011, potentially reflecting the increase in the jobs ratio (explored earlier in this chapter), although noting caveats around the 2021 census. This is unusual for a rural area, with most rural areas acting to some degree as dormitories for nearby towns or cities.

Table 2.6 Commuting ratios (Cotswold)

	2011	2021
Live and work in District	16,221	11,232
Home workers / No fixed workplace	12,007	23,432
In commutes	15,709	12,239
Out commutes	13,820	9,430
Total working in LA	43,937	46,903
Total living and LA and working anywhere	42,048	44,094
Commuting ratio	**0.957**	**0.940**

Source: Iceni analysis of ONS Census

2.63 To explore the reason for this net in-commuting in more detail, Iceni has broken Cotswold commuters down by approximated social grade. Approximated social grade is an ONS-derived classification that assigns households to standard socio-economic groups based on available



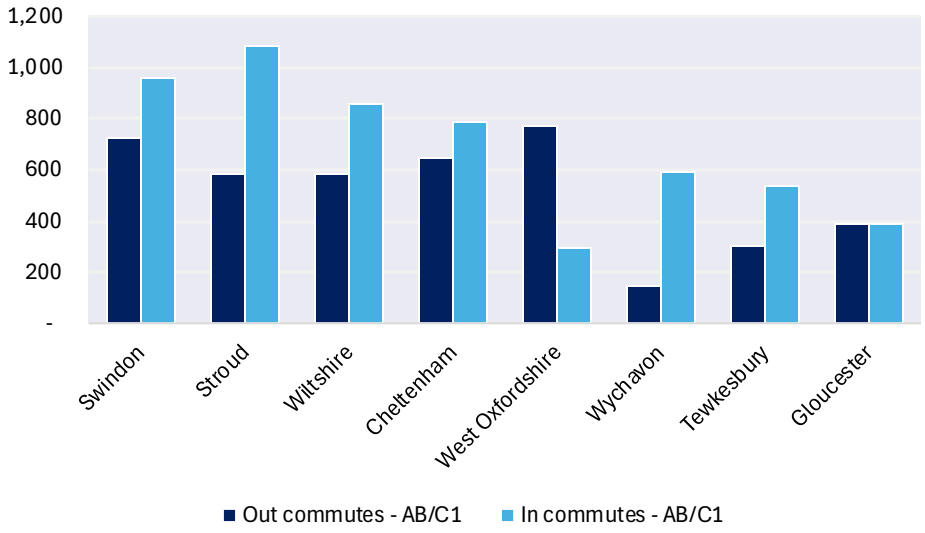
census variables for the household reference person (primarily occupation). The categories that commuting data is provided for are:

- AB - higher and intermediate managerial, administrative, and professional occupations,
- C1 - supervisory, clerical, and junior managerial roles,
- C2 - skilled manual workers, and
- DE - semi-skilled and unskilled workers, plus those not in employment.

2.64 As this assignment is carried out at the household level, it should only be regarded as a high-level proxy only for skill/occupation levels of individual workers. It nonetheless provides an indication of how commuting behaviour differs for different segments of the population.

2.65 For Cotswold, there are substantially more local jobs than workers across the three lower approximated social grades (as shown in the figure below), while there is a smaller surplus of resident workers compared to local jobs in the professional/managerial AB grade. This means that Cotswold needs to import a wide range of non-professional workers from other areas to fill local jobs.

Figure 2.12 Approximated social grade of Cotswold resident workers vs those who work in the District



Source: ONS Census 2021

2.66 This is likely to reflect low local housing affordability, with lower paid and younger people unable to afford local housing and needing to live elsewhere. Higher housing delivery – and in particular the delivery of affordable housing as part of this – is important to addressing this.

2.67 The following two figures break down in and out commuting to and from Cotswold by origin/destination authority, providing more detail on the spatial implications of this labour imbalance.

2.68 For professional, managerial, supervisory and clerical roles (grades AB and C1, shown in the figure below), the strongest gross flows are with Swindon, Stroud, Wiltshire and Cheltenham. The largest numbers of outward commutes are to West Oxfordshire (a large part of this is related to employment at and around Brize Norton), and to Swindon and Cheltenham where there are large office markets. Despite this, there is net inward-commuting to Cotswold at these grades from these authorities, as well as from Stroud, Wiltshire, Wychavon and Tewkesbury.

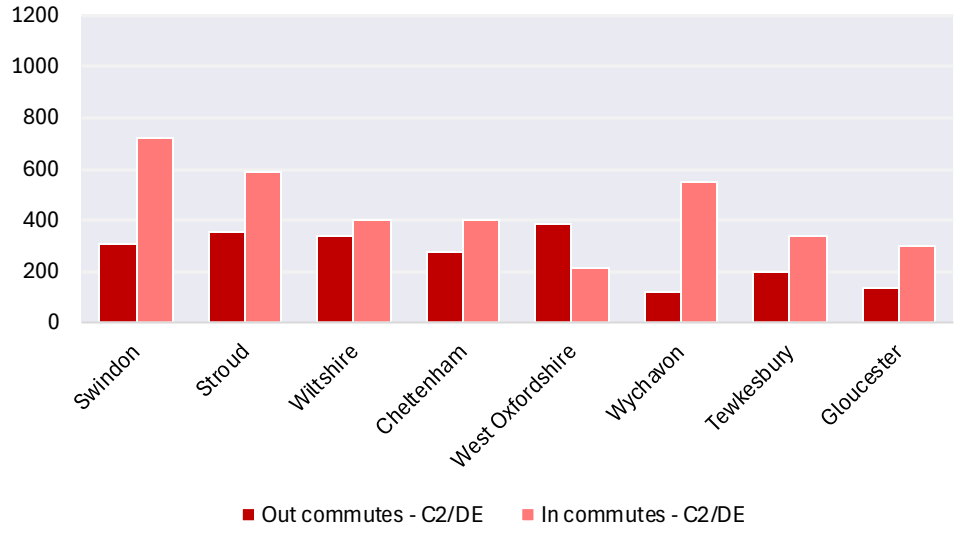


Figure 2.13 Cotswold in commutes vs out commutes for professional approximated social grades (AB and C1)

Source: ONS Census 2021

2.69 At the lower approximated social grades, corresponding broadly to manual and unskilled workers (C2 and DE, shown in the figure below), the highest inwards commuting is from Swindon, Stroud and Wychavon, authorities which have more affordable housing markets than Cotswold.

Figure 2.14 Cotswold in commutes vs out commutes for manual and unskilled workers approximated social grades (C2 and DE)

Source: ONS Census 2021

Economic Geography

2.70 The following table breaks down the sizes of the largest settlements in Cotswold based on number of households, total population and estimated number of jobs[2].

2.71 By far the largest settlement is Cirencester. While it has over three times the population of the next largest settlement (Tetbury). The next largest settlements are Moreton-in-Marsh and Bourton-on-the-Water, but the scale of employment is significantly higher in Cirencester than other locations in the District, as **Table 2.5** shows. These figures underline the dominant position of Cirencester in the local economy, and as the most viable location for any higher order services and

[2] Job data is produced from ONS BRES at the LSOA level. The best fit for settlement boundaries has been made using LSOAs, but in some cases some employment within settlements may be excluded and other employment included.

employment. Cirencester in particular has a larger population and critical mass of economic activity.

Table 2.7 Major towns in Cotswold

	Households (2021)	Population (2021)	Jobs (2023)
Cirencester	9,228	20,185	14,900
Tetbury	2,988	6,455	1,700
Moreton-in-Marsh	2,359	5,010	2,400
Bourton-on-the-Water	1,873	4,181	2,400
Fairford	1,811	4,249	1,000
South Cerney	1,598	3,998	*
Lechdale-on-Thames	1,490	3,138	*
Chipping Campden	1,139	2,377	*
Stow-on-the-Wold	968	1,901	1,100

Note: * The shape of LSOAs means that job data for these towns was not able to be isolated from data for other towns or the surrounding areas
Source: Iceni analysis of ONS Census 2021, BRES

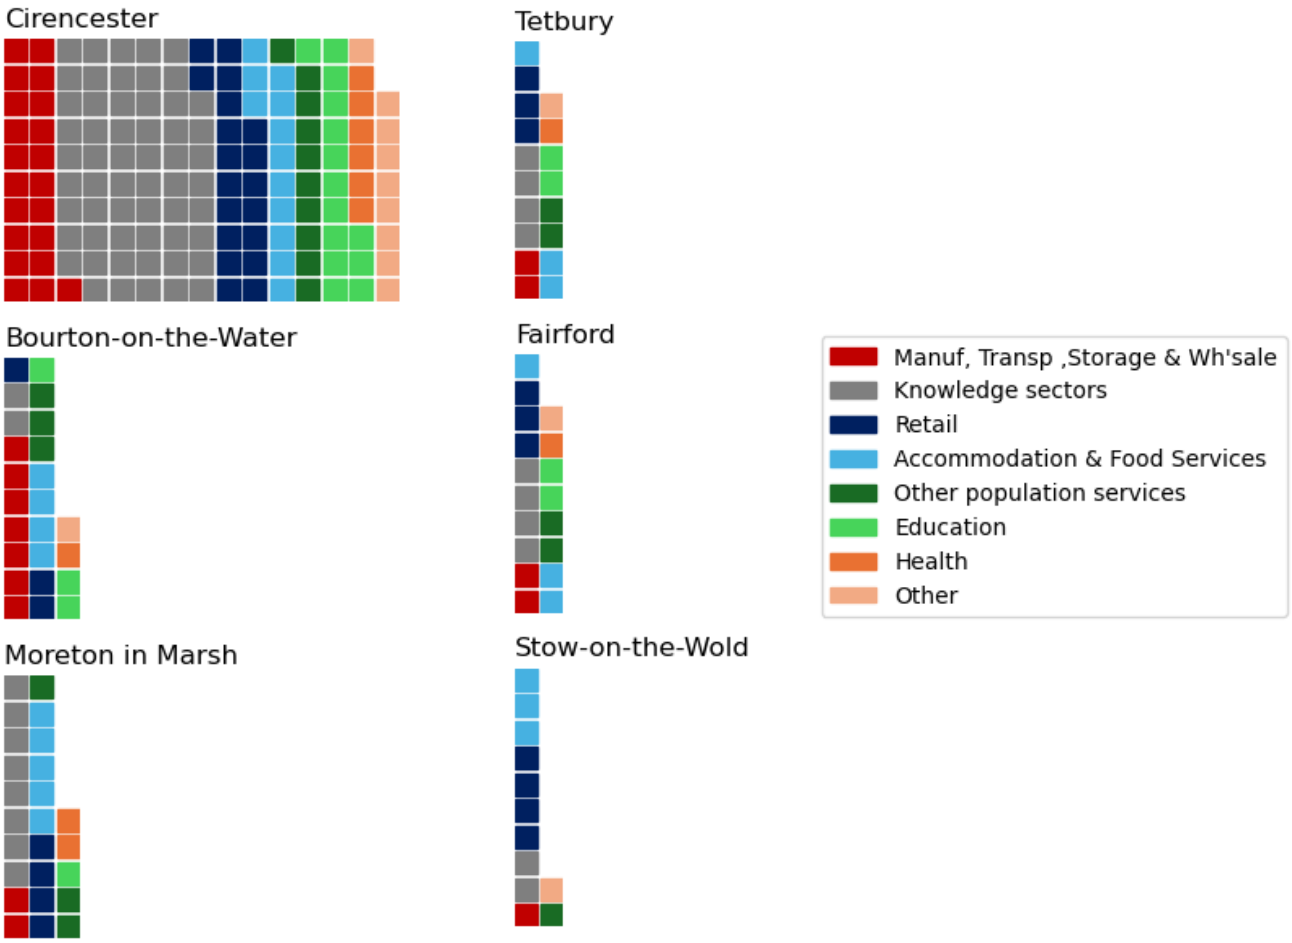
Employment

2.72 More information on the size and sectoral composition of employment in the largest settlements is provided in the figure below, which represents each 100 jobs with one square. As with the table above, information for South Cerney, Lechdale-on-Thames and Chipping Campden could not be shown due to the shape of LSOA boundaries.

2.73 By settlement, the following observations can be made:

- **Cirencester**, as noted above, has by far the most employment. It also hosts the most diverse economy, the largest knowledge sectors, and provides a broad range of services.

- Almost all settlements have large retail and accommodation and food services sectors, reflecting the broad-based visitor economy in the District



- **Bourton-on-the-Water** accommodates a relatively large industrial area (relative to what is present in the District), and so has a high

proportion of manufacturing, transport, storage and wholesale jobs, alongside its tourism economy.

- **Moreton-in-Marsh**, **Tetbury** and **Fairford** have fewer industrial jobs, but moderate knowledge sectors (although substantially smaller than Cirencester).

- **Stow-on-the-Wold** has lower employment than the other settlements considered and is very tourism focused.

Figure 2.15 Employment by town (2024) - Each square represents 100 jobs

Note: Analysis conducted by LSOA. Data for other towns is not available as LSOA boundaries do not align well with town boundaries.

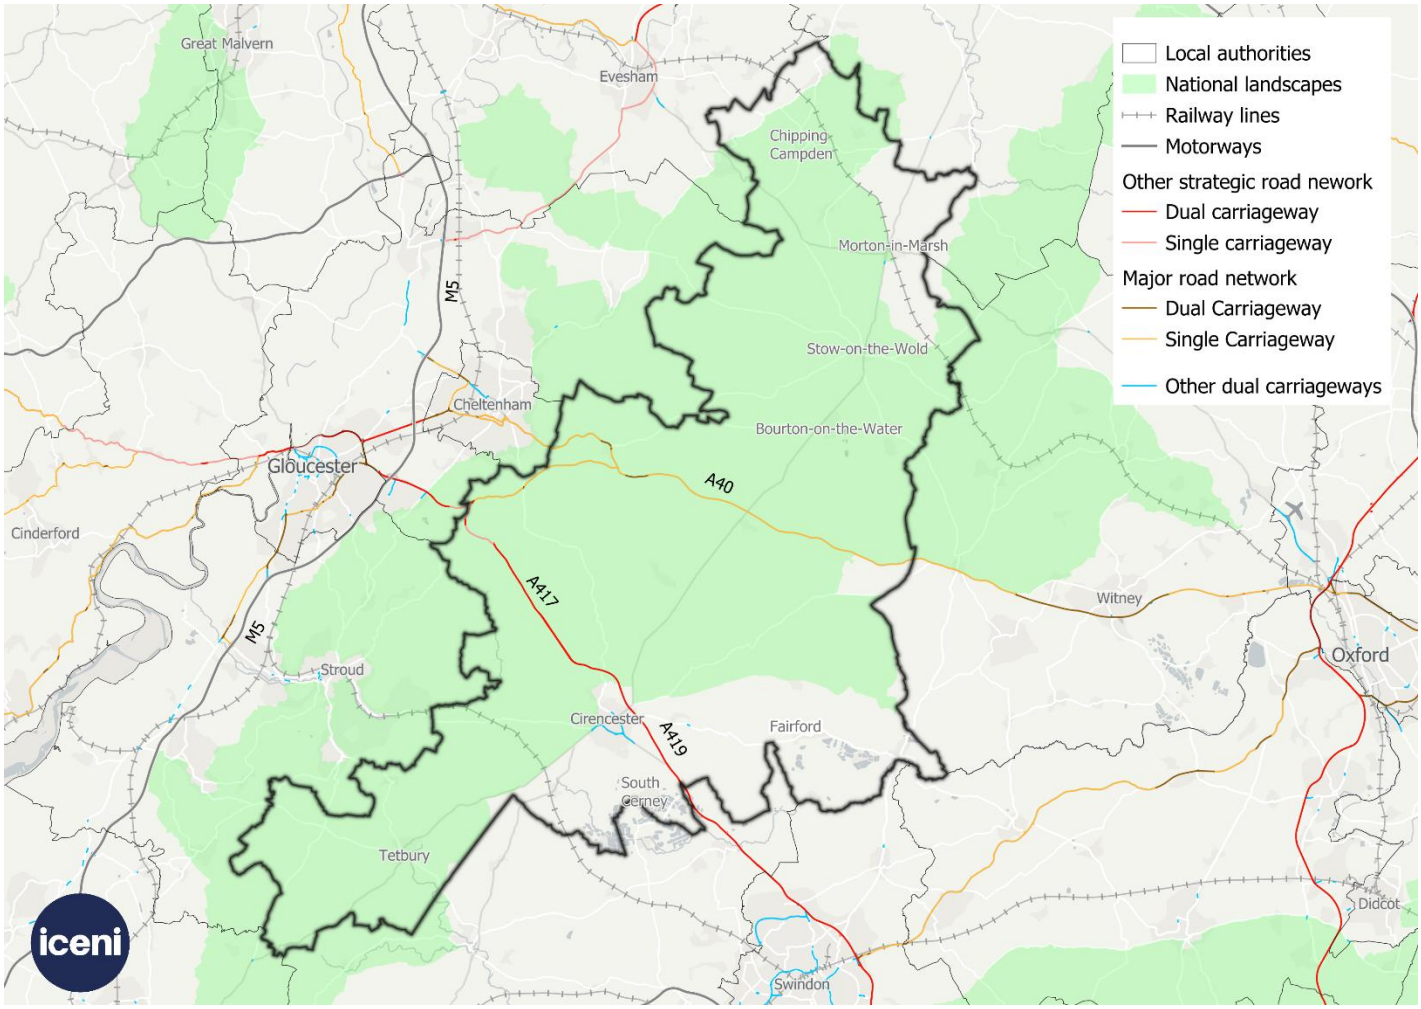
Source: Iceni analysis of ONS BRES data

Transport networks & strategic constraints

2.77 The following figure illustrates the major transport networks within and around Cotswold Districts, superimposed with the boundaries of the Cotswold National Landscape.

2.78 The most significant road connection within the District is the A417/A419, which is part of the Strategic Road Network and connects the M4 at Swindon with the M5 at Gloucester.

2.79 National Highways is currently progressing the dualling of the 'Missing Link' – a three mile stretch of single carriageway road between the Brockworth bypass and the Cowley Roundabout. This scheme falls on the western side of the District and extends across the district boundary into Tewkesbury District. It is due to be completed in 2027; and this can be expected to support improved accessibility along this corridor and increase its attractiveness – and that of Cirencester in particular (as the major settlement along the Corridor) – for employment development.



2.80 The A40 is the next most significant road connection and is part of the Major Road Network (the next step down from the Strategic Road Network). It connects east-west to Cheltenham and Oxford but is mostly single carriageway.

2.81 Other A and B roads within the district are single carriage-way and are not part of the nationally designated major and strategic road networks. These include the A433/A429 which runs north/south and connects most of the District's major settlements; and the A44 which connects Moreton-in-Marsh to Oxford.

2.82 The District is also served by railway connections, notably the Cotswold Line which connects to Oxford and Evesham, and on to Hereford. This line has a stop within the district at Moreton-in-Marsh. There is also a railway station on the Golden Valley Line at Kemble, near Cirencester. This line connects Gloucester to the GWR mainline at Swindon.

2.83 80% of the District falls within the Cotswolds National Landscape. National planning policies, as set out in the NPPF 2024, set out that great weight should be given to conserving landscape and scenic beauty; and indicate that the scale and extent of development in these areas should be limited. The NPPF sets out that when considering applications for development in such areas, permission should be refused for development other than in exceptional circumstances and where it can be demonstrated to be in the public interest (see 2024 NPPF Para 190).

Figure 2.16 Geography of Cotswold

2.84 Major transport connections are highly significant to the attractiveness and suitability of locations for employment use. Industrial uses, and logistics in particular, typically seek locations on or close to the strategic road network, and preferably near motorways and dual carriageways.

Other commercial uses including offices also benefit from the access to a broad labour pool and customer base that good transport connections bring, but dual carriageway access is less significant than it is for industrial uses.

2.85 As a result, there are clear implications for potential employment locations within the District from the geography of major transport connections, the boundaries of the national landscape, and the size and composition of local economies:

- Locations on or near the A417 and A419 are likely to be the most attractive, particularly for industrial uses, with locations along the A40 or around Moreton-in-Marsh secondary and more focused on accommodating local business needs.

- Cirencester is likely to be by far the most attractive location for office uses (apart from those with a very local focus) given its size and transport connectivity, and role as the District's only higher-order service centre. Viability considerations are addressed in the next section.

- The national landscape also means that Cirencester and surrounds are also likely to be able to accommodate the most housing and population growth in the future, making it attractive for businesses providing services to the population.

- The number of jobs by settlement (as shown in Table 2.5 and Figure 2.15) suggests that some potential expansion of employment uses in Moreton-in-Marsh and Bourton-on-the-Water. Tetbury has a smaller economy and is entirely within the National Landscape.

- There is likely to be less demand for employment space elsewhere in the District, although some settlements may still see a degree of need – in particular to support growth of individual local businesses.

3. Commercial Market Assessment

1.1 This chapter provides an assessment of the commercial property market in Cotswold District, benchmarked against Gloucestershire and the United Kingdom. It is split into an office section and an industrial market section (where industrial refers to general industrial, light industrial and warehousing).

3.28 The assessment combines quantitative analysis with qualitative elements to build up a picture of the level and nature of demand. The quantitative analysis uses CoStar data - one of the UKs largest providers of commercial property data. Valuation Office Agency data has also been used which provides the best indication of the amount of commercial floorspace in the area. The qualitative analysis has been informed by stakeholder engagement with local agents.

UK Commercial and Economic Dynamics

3.29 At the time of writing in Spring 2026, the commercial market is facing a number of recent challenges including high build costs (influenced in part by the cost of energy) and higher finance costs (driven by higher interest rates) which have placed pressure on the viability of new-build commercial development.

3.30 The commercial market is set against a backdrop of weak national economic performance and a range of fiscal and economic uncertainties which are continuing to inhibit business investment. At the time of writing underlying economic performance is relatively weak: with UK GDP increasing for instance just 0.1% in Q3 2025, 0.3% in Q4 2025 and estimates of 0.5% in Q1 2026. There are economic risks associated with the impacts of the war in Iran, including on energy costs and inflation which could in turn dent consumer demand.

National Office Market Dynamics

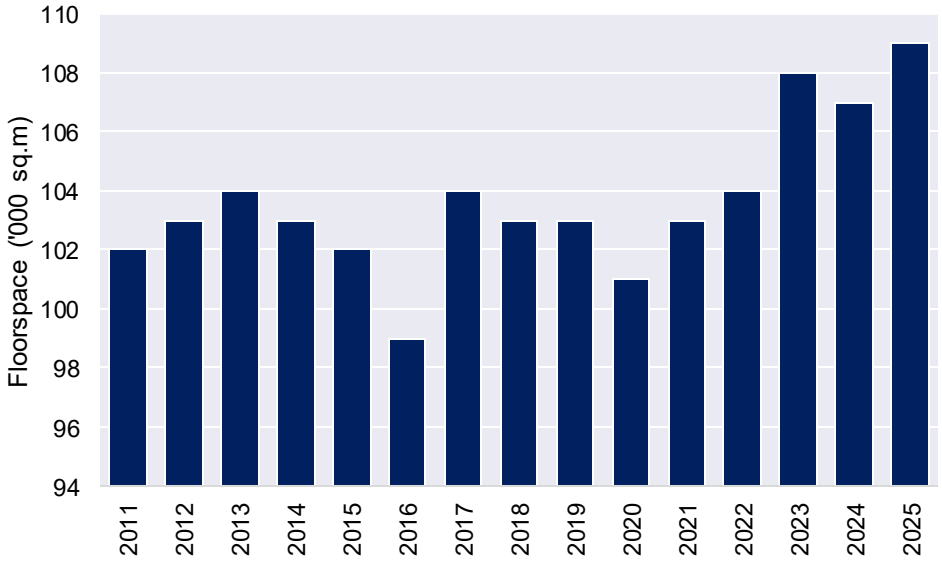
3.31 Heightened global uncertainty failed to derail the office market recovery in 2025, as take-up held steady and net absorption turned positive, with more firms occupying than vacating space at a national level. The heavy demand losses of the five years preceding 2025 has ended, as firms right-size their footprints and some begin expanding again.

3.32 While firms have generally leased less space in recent years (post Covid), notable expansions are emerging as return-to-office momentum builds. There is no data specific to the Cotswolds or Gloucestershire; but data from Remit Consulting and Transport for London for instance confirm office attendance at its highest since the pandemic began.

3.33 The office market in recent years has become polarised – and focused in particular towards Grade A space. Landlords of 'best-in-class' assets have weathered recent years well, with prime rents still rising. Older 'secondary' office space, however, remain under pressure in a bifurcated (or two speed) market. Landlords of high-quality new-build or refurbished buildings will benefit, and see demand persisting; whilst older office stock becomes unlettable under new energy efficiency rules from 2027.

3.34 Viability of new-build development is highly varied and focused on the larger, established markets where values of over £25-30 per sq.ft can be achieved.

3.35 Vacancy rates within the office stock have remained modest: whilst they have grown since 2020; in many areas they have done so from a very low base influenced by losses of office space to housing (including through permitted development) over the last decade.



Cotswold Office Market

3.36 The Valuation Office Agency (VOA) provides information on the volume of rateable office floorspace by administrative area. Taking account of the rural characteristics of the district, Cotswold has a reasonable quantum of office stock - as of March 2025, there was 109,000 sqm of office space within Cotswold District.

3.37 Office floorspace has been on a long-term upwards trend. There was a limited reduction of 2,000 sq.m 2014-16 as a result of permitted development rights, however office stock levels have been increasing year on year since 2020. The total office stock has increased by 7% over the past decade.

3.38 A majority of office stock is concentrated within Cirencester, within and around the town centre, at Cirencester Office Park and on Love Lane Industrial Estate. Key office premises include Watermoor Point and the St James' Place offices. There is also clustering of office premises at Moreton-in-Marsh at Cotswold Business Village, Cotswold Business Centre in Upper Rissington and Campden Business Park in Chipping Campden.

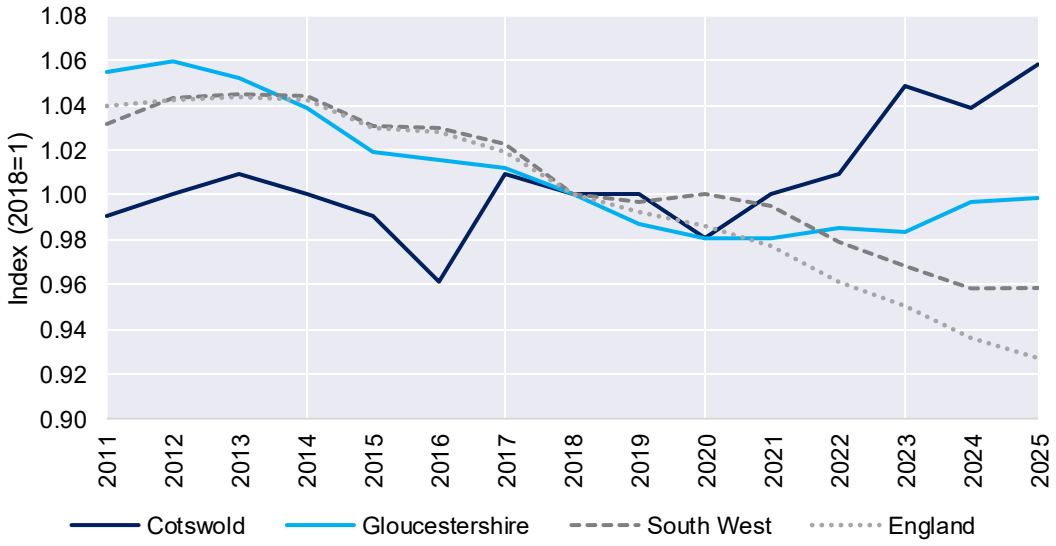


Figure 3.1 Cotswold Office Floorspace (sq.m)

Source: Iceni analysis of VOA data

3.39 The figure below compares the change in Cotswold's office space in comparison to Gloucestershire, the South West and England since 2011. Since 2016 office stock in Cotswold has grown at a faster rate than the wider comparators, which have seen a persistent decline in office space. This wider trend is influenced by changing working patterns and loss of space, particularly through permitted development. It is evident that the stock of office space in the District has held up well.

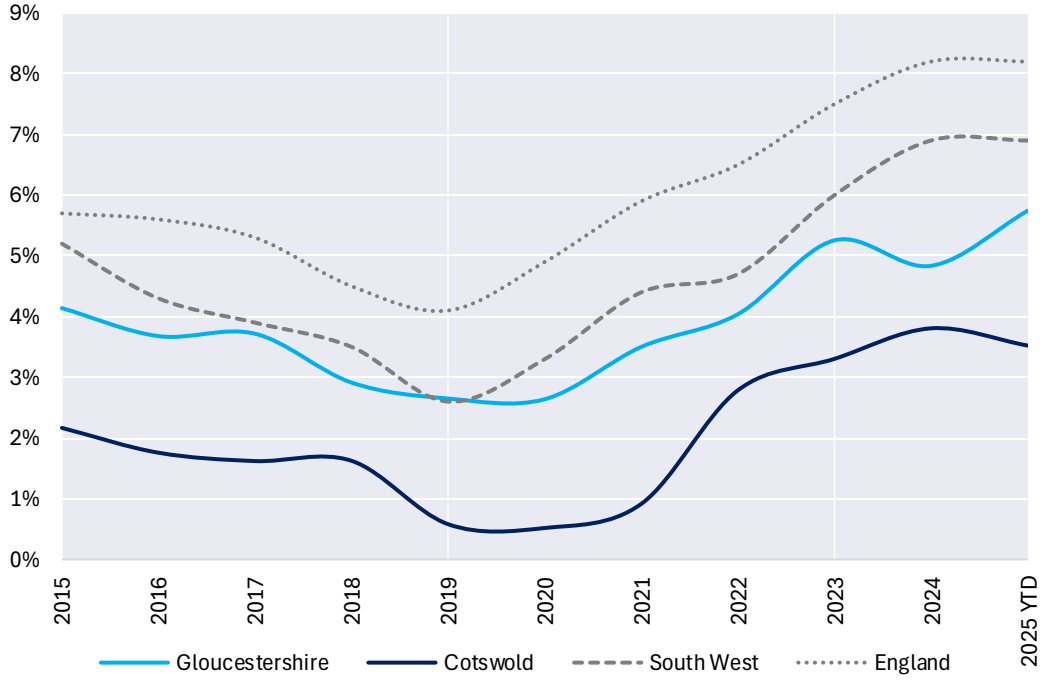
Figure 3.2 Indexed office floorspace stock 2001-2023

Source: Iceni analysis of VOA data

3.40 The table below provides analysis on the age of Cotswold office stock. Out of the 223 office properties on CoStar's database, around 68% are dated pre-1980, accounting for just under half of the district's office stock. Around 25% of the district's office floorspace has been delivered since 2000, reflecting the district's strong supply of modern office stock, however only 5% of this has been delivered since 2010.

Table 3.3 Office Stock by Age

Age Band	No. of Properties	Floorspace
Pre-1980s	151	63,939
1980-90	6	25,215
1990-2000	15	11,177
2000-10	37	26,643
Post-2010	14	7,251
Total	**223**	**134,226**



Source: Iceni analysis of CoStar 2025

3.41 The figure below shows the vacancy rate in Cotswold District compared to Gloucestershire, the South West and England. As of November 2025, the vacancy rate in Cotswold was 3.5%, below the Gloucestershire average of 5.7% and significantly below the wider region at 6.9% and national rate of 8.2%.

3.42 In line with comparator trends, the rate has been steadily rising since its historical low in 2020 of 0.5%, following the reduction in the demand arising from the pandemic and the subsequent restructuring of occupier demand in light of home and hybrid working patterns.

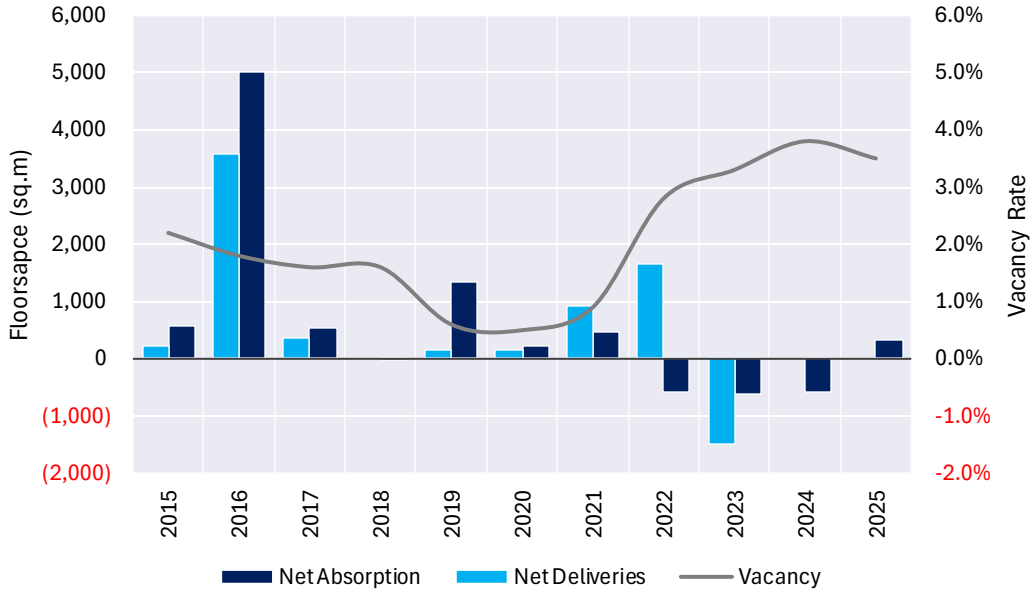
3.43 Despite the recent rises in vacancy, the office vacancy rate in Cotswold remains below the optimum 5-10% vacancy rate implying relatively 'tight' market conditions.

Figure 3.3 Office Vacancy Rate

Source: CoStar 2025

3.44 CoStar provides data on net absorption which is the balance between the amount of space moved into and moved out of (i.e. Net absorption = Move Ins – Move outs). A positive net absorption figure indicates

growing demand and leads to a falling vacancy rate (unless it is outweighed by net deliveries). On the other hand, a negative net absorption figure indicates weaker demand and leads to a rising vacancy rate (unless it is outweighed by negative net deliveries).



3.45 Net deliveries describe the difference between floorspace delivered (i.e. constructed and brought onto the market) and demolished (or otherwise taken out of use and removed from the market).

3.46 The figure below shows net absorption, net delivery and vacancy of office floorspace in Cotswold District. Between 2022 and 2024 net absorption of office space was negative – with reduced demand for office space as a result of the economic backdrop and the pandemic's influence on working patterns, leading to the increase in the vacancy rate – in particular as occupiers downsized and reduced their office floorspace.

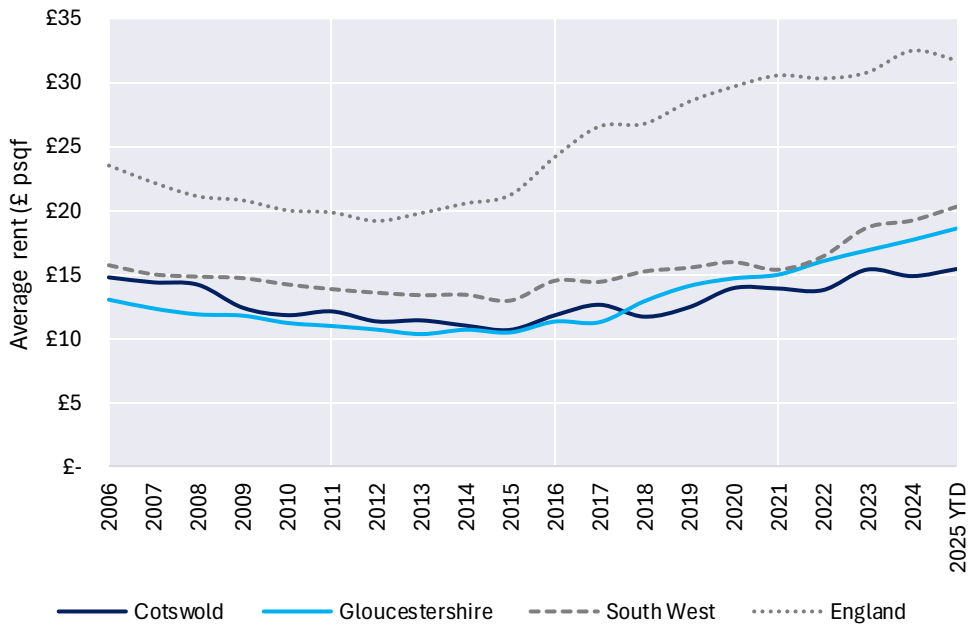
3.47 There has been a turn in market conditions recently: net absorption in 2025 saw a small net positive uptake of 340 sq.m indicating a strengthening of demand as the market settles into a new equilibrium.

3.48 CoStar data typically captures larger transactions but may not record all deals – particularly for smaller space and in more rural local markets such as in Cotswold District. CoStar notes a number of deliveries, most notably the completion of St James' Place Phase II in Cirencester in 2016 of c.3,500 sq.m. It however indicates that there have been limited deliveries since 2019, with the main development being of Elkstone Studios (incl. 2,500 sq.m offices) in the A417 Corridor, alongside other minor deliveries at Cotswold Airport, Guiting Power and Batsford. CoStar notes the demolition of 1,500 sq.m of offices in 2023 however the property is not identified by the database.

Figure 3.4 Net Absorption, Net Deliveries, Vacancy - Cotswold

Source: CoStar 2025

3.49 The figure below shows how average office rental prices in Cotswold District have changed over time compared to Gloucestershire, the South West and England. As of November 2025, the average office rent in Cotswold District was £15.40 per sq.ft. This is lower than the average Gloucestershire office rent of £18.57 per sq.ft (driven by stronger office markets in Cheltenham and Gloucester), and lower than the South West (£20.27 per sq.ft) and national average (£31.73 per sq.ft), driven by prime rents in London and Manchester.



3.50 Office rents in Cotswold District have grown modestly at an average annual rate of 4.0% over the last 10 years, compared to 6.0% in Gloucestershire and 4.7% across the South West.

3.51 Agents note that the lack of new build office space in Cotswold influences this lower rental tone. However fundamentally there has been a lack of new-build office development in the District, as office development would generally require rents of £30 per sq.ft (psf) (and a minimum of £25 psf). Agents estimate that Grade A space in Cirencester would achieve £20-22 psf, which does not each this threshold.

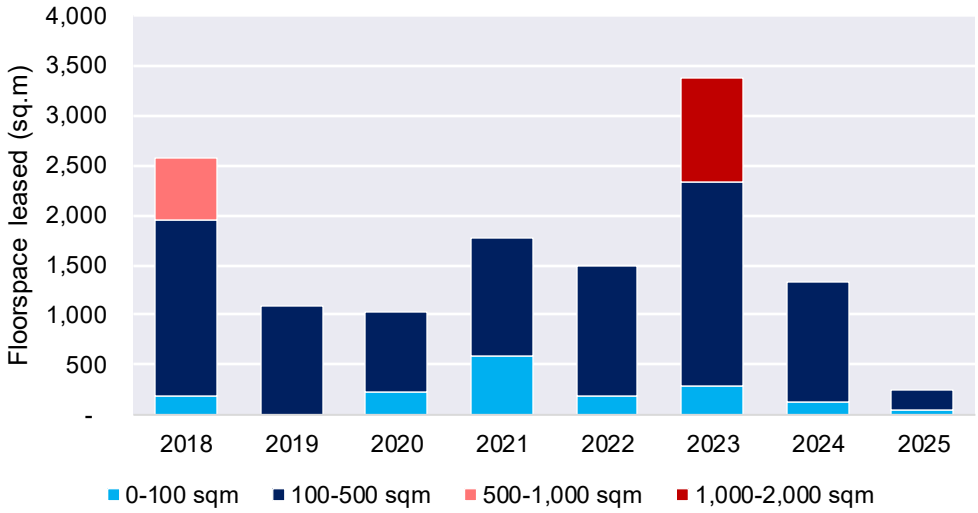
3.52 This means that there is unlikely to be speculative office development in the District, and in most cases new-build office development will not be viable. This is the case at least in the short-to-medium term (noting some potential for rents to rise). There is some limited potential for freehold development of space for owner occupiers who might pay a premium to support delivery of new-build space; however it is realistic to expect that the rental tone will make ultimately limit the scale of delivery of new office development which is more likely to be focused in the more established markets around Gloucester and Cheltenham.

3.53 This rental tone means that extant commitments such as the office component at the Steadings and Kingshill, both of which are in Cirencester, are unlikely to be fully built out as standalone offices – and there is a need to consider delivery of wider E(g) uses which captures development of space for research and development (R&D) and light industrial uses.

Figure 3.5 Trends in average office rents

Source: CoStar 2025

3.54 There is therefore a need to consider and support other means of delivering new office space, including through conversions of existing buildings. This might include the conversions of barns or other



agricultural buildings in rural areas; and of former retail premises in town centre locations – in particular where the buildings offer scope to provide open plan office floorplates. **Conversions and development for owner occupiers provide key means of supporting the delivery of office floorspace in the District, and it will be important that policies in the local plan are crafted to support this** in appropriate locations and subject to wider plan policies.

3.55 The figure below shows the volume of office floorspace leased in Cotswold District by size band. The volume of floorspace leased averaged 1,600 sq.m per annum, peaking in 2023 at 3,400 sq.m and has since been declining. Leasing activity in 2023 was driven by one deal in particular at 33 Sheep Street, Cirencester, where Pegasus leased 1,040 sq.m.

3.56 There were 85 lease deals signed over the 2018-25 according to CoStar data, of which over half (42 deals) were less than 100 sq.m, closely followed by 100-500 sq.m with 38 deals (45%). This highlights that office demand is strongly concentrated at the smaller end of the market within sub-500 sq.m units, with limited demand for larger office premises. This is echoed by agent engagement which highlighted that **the office market demand in the district is strongly focussed towards flexible space for small businesses**, able to accommodate up to c.35 staff.

3.57 Demand has more recently been focused on quality, with Grade A space with strong ESG (environmental, social, governance) credentials and enhanced amenities seeing stronger demand. In contrast, older secondary stock has had difficult letting.

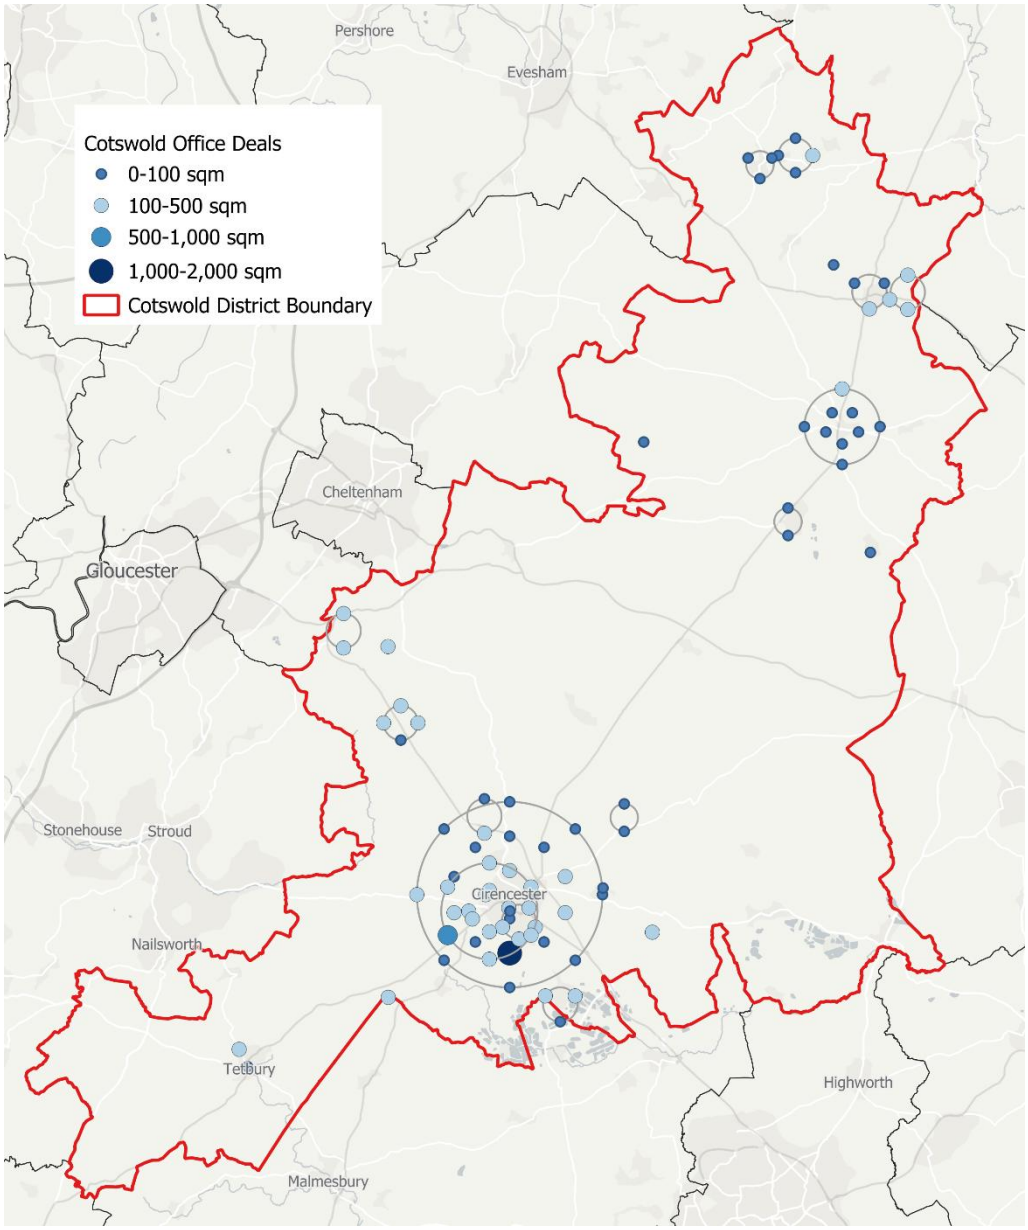


Figure 3.6 Office Space Leased by Size Band - Cotswold

Source: CoStar 2025

3.58 In terms of the spatial distribution on leasing activity, there is an evident concentration in Cirencester, however modest activity has occurred around Stow-in-the-Wold and Moreton-in-Marsh – with key developments including the Cotswold Business Centre and Cotswold Business Village.

Figure 3.7 Office Deals 2018-25

Source: CoStar 2025

National Industrial Market Dynamics

3.59 The UK industrial property market is navigating a period of adjustment, with the national vacancy rate rising to 5.6% at the end of 2025, its highest in over a decade. Early signs suggest stabilisation, as demand losses ease and vacancies are expected to peak soon.

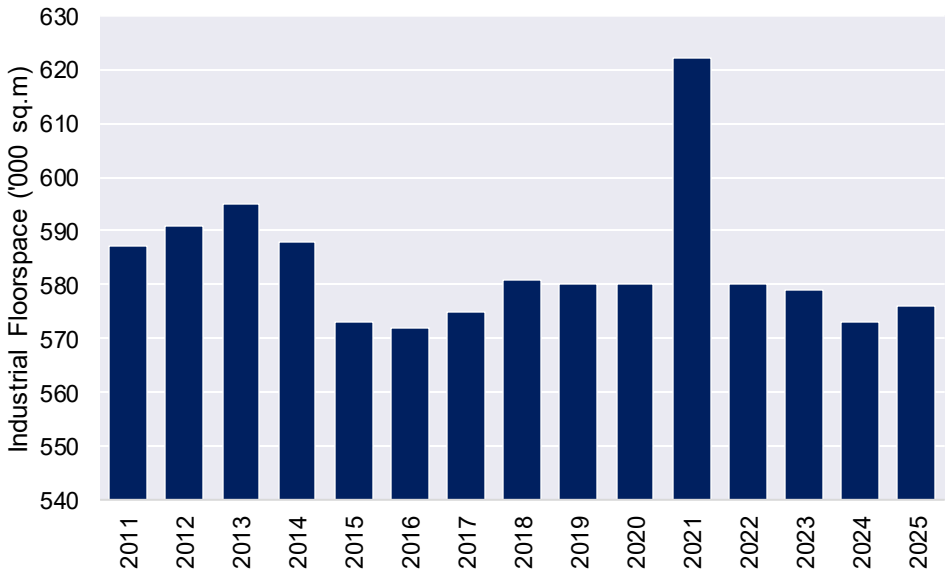
3.60 Demand is being supported by the return of larger leasing deals from third-party logistics providers (3PLs) and expanding retailers. The defence sector has become a major demand driver for industrial space, underpinned by increased government spending and Europe's rearmament efforts, while appetite from Chinese firms surged in 2025.

3.61 Despite these positive factors, business consolidation is keeping the availability of space to sublet high, with tenant space on the market doubling over the past four years. This is most evident in both large and small unit sizes, and landlords continue to report elevated insolvency rates in multi-let portfolios. Although economic growth and retail sales should provide some support, occupiers remain cost-conscious, tempering near-term demand.

3.62 On the supply side, construction activity has moderated from its 2022 peak, with speculative completions declining. Both completions and starts have slowed sharply due to higher construction and finance costs and greater caution among developers. As a result in Q3 2025, construction starts fell to their lowest level in 12 years, signalling a more measured approach to new supply.

3.63 Some UK markets face temporarily high vacancies due to recent deliveries of new space, but these are expected to be absorbed as the pipeline thins. ESG-focused refurbishments of existing industrial space are a key theme, as owners upgrade older stock ahead of tighter energy regulations.

3.64 In the context of some weakening of demand, rental growth has slowed to 3.5% year-on-year, with small- to mid-box units outperforming big box units of over 9,200 sq.m amid limited new supply. Incentives have risen but remain below pre-pandemic levels. Looking ahead, rent growth is expected to moderate further, constrained by high costs and cautious occupiers, though tight supply in some market segments will offer support to rents. Overall, despite near-term headwinds, structural drivers such as



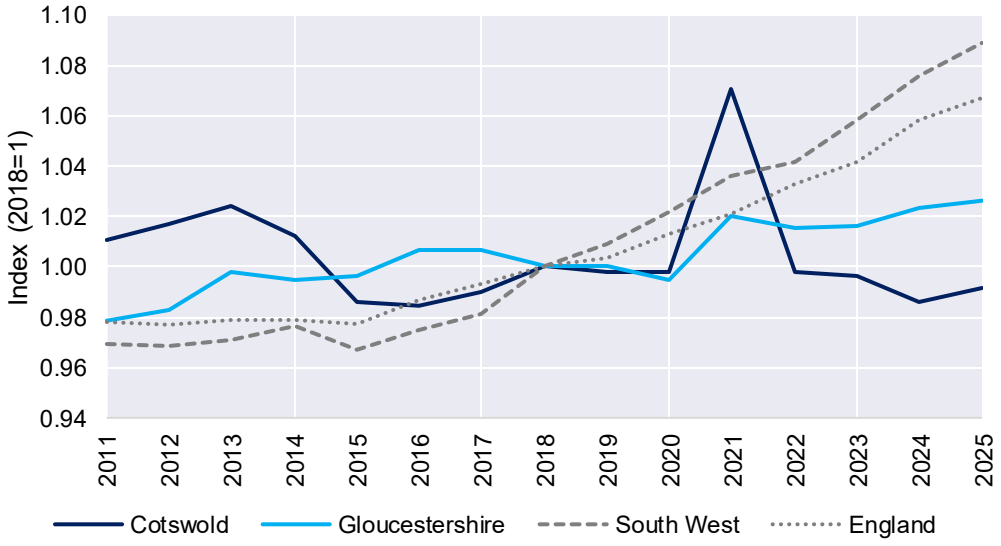
supply chain reconfiguration, defence spending, and ESG imperatives should underpin long-term resilience.

Cotswold Industrial Market

3.65 The Valuation Office Agency (VOA) provides information on the volume of rateable industrial floorspace by administrative area. As of March 2025 (the most recent available data), there was 576,000 sqm of industrial space within Cotswold District.

3.66 Industrial floorspace saw a sharp decline between 2013 and 2015, before increasing to 2018. There has been a fall in industrial stock recorded since 2023. The last decade overall has seen a modest 0.5% growth in industrial stock across the District. The data for 2021 is considered anomalous.

Figure 3.8 Cotswold Industrial Floorspace (sq.m)



Source: Iceni analysis of VOA data

3.67 The figure below compares the change in Cotswold's industrial floorspace in comparison to Gloucestershire, the South West and England since 2011. Cotswold's decline in industrial space is contrary to the upwards trend seen in the Gloucestershire, the region and

nationally, which have all seen a steady increase in industrial space from 2016 onwards – albeit that this has been weaker in Gloucestershire relative to the regional and national trend.

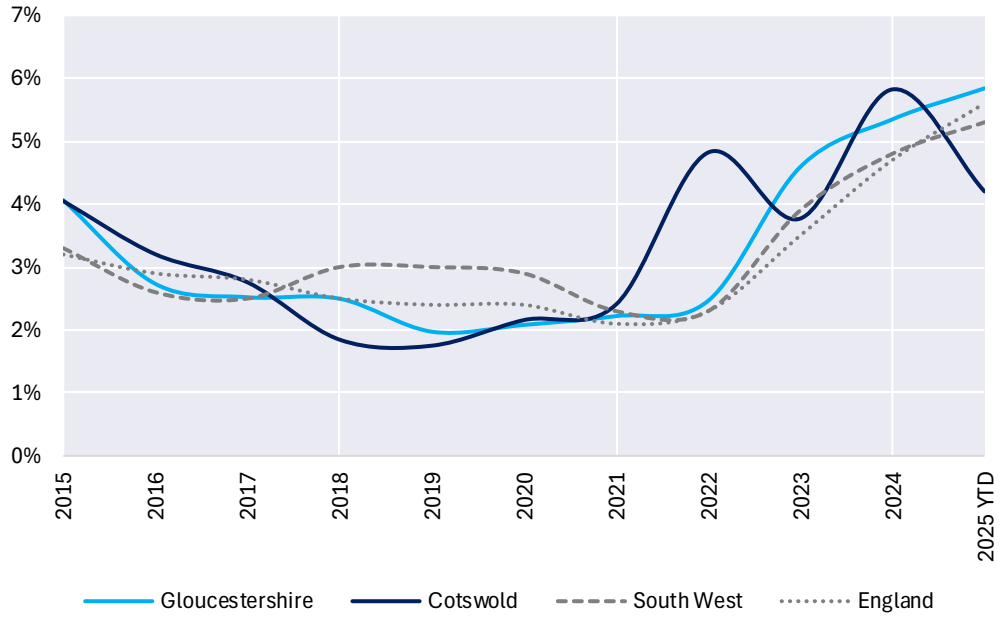
Figure 3.9 Indexed industrial floorspace stock 2011-25

Source: Iceni analysis of VOA data

3.68 The table below provides analysis on the age of Cotswold industrial stock. It is of note that out of Cotswold's 576,000 sq.m of stock, CoStar only has data for 345,100 sq.m of stock due to the District's rural nature, where data for smaller rural properties is less readily captured.

3.69 Around half of Cotswold's industrial stock and floorspace is dated pre-1990. As discussed further in Section 4, the incoming minimum energy efficiency standards will mean a lot of this older stock will become obsolete during the plan period. There has only been a delivery of 29 properties since 2010, accounting for just 10% of the district's floorspace, indicating that the district has seen an under-delivery of modern industrial premises.

Table 3.4 Industrial Stock by Age



Age Band	Floorspace (sq.m)	No. of Properties
Pre-1980s	99,375	88
1980-90	72,327	51
1990-2000	79,365	58
2000-10	59,443	43
Post-2010	34,585	29
Total	345,095	269

Source: Iceni analysis of CoStar 2025

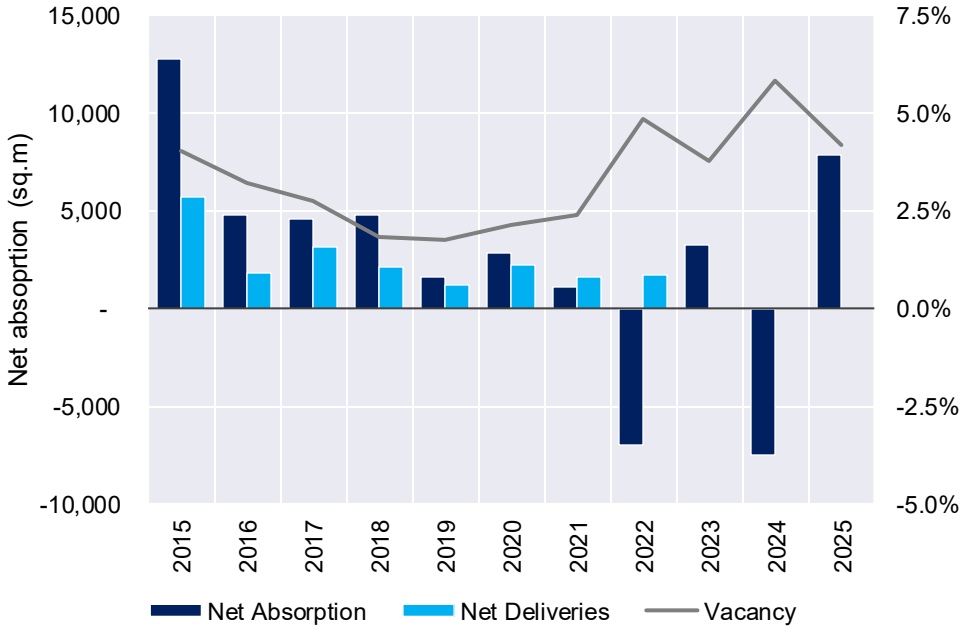
3.70 The figure below shows the vacancy rate in Cotswold District compared to Gloucestershire, the South West and England. As of November 2025, the industrial vacancy rate in Cotswold was 4.2%, slightly below the Gloucestershire average of 5.8%, the South West (5.3%) and England (5.6%). Broadly in line with comparator trends, the rate has risen from a very low level of 1.8% in 2019; but has fallen from 5.8% in 2024.

3.71 A vacancy rate of 5-10% is considered optimum, allowing for movement in the local market and occupier choice – the industrial vacancy rate in Cotswold District has historically remained below this, with the exception of 2024, indicating that historically there has been an undersupply of industrial space. The market has been relatively tight for a considerable period of time with potential therefore for latent demand.

Figure 3.10 Industrial Vacancy Rate

Source: CoStar 2025

3.72 CoStar provides data on net absorption which is the balance between the amount of space moved into and moved out of (i.e. Net absorption = Move Ins – Move outs). A positive net absorption figure indicates growing demand and leads to a falling vacancy rate (unless it is outweighed by net deliveries). On the other hand, a negative net absorption figure indicates weaker demand and leads to a rising vacancy rate (unless it is outweighed by negative net deliveries).



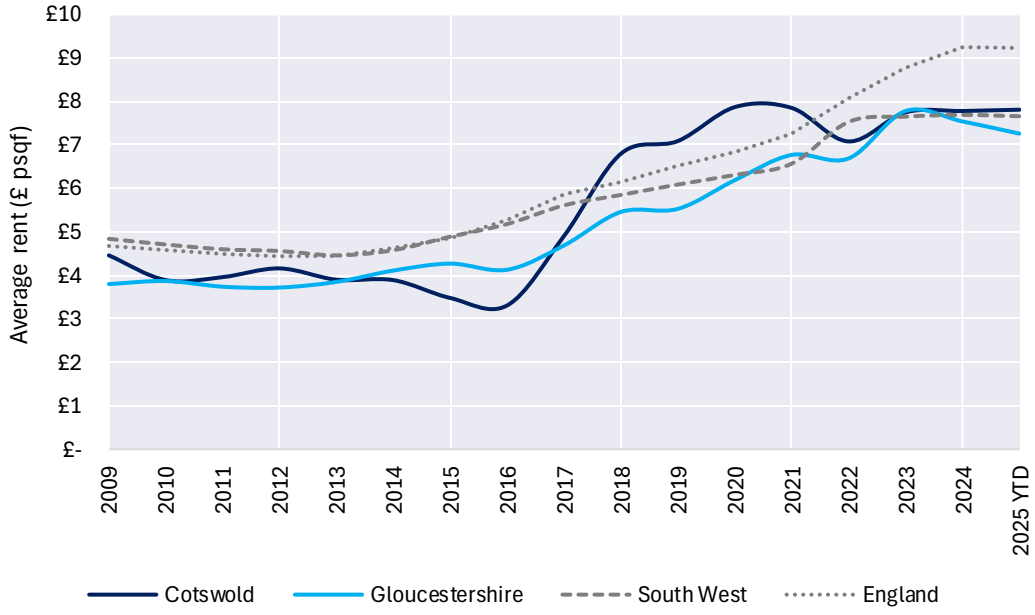
3.73 Net deliveries which is the difference between floorspace delivered (i.e. constructed and brought onto the market) and demolished (or otherwise taken out of use and removed from the market).

3.74 The figure below shows net absorption, net delivery and vacancy of industrial floorspace in Cotswold District. Over the past decade, net absorption has outpaced net delivery of industrial floorspace which has led to a declining vacancy rate and an increasingly suppressed market, leaving occupiers with limited choice and flexibility to move within the market.

3.75 There have been no substantive delivery of industrial space recorded by CoStar since 2022, as higher borrowing costs since Autumn 2022 combined with construction cost inflation has significantly dampened development activity. A continued lack of development in the short-term will continue to tighten market conditions.

3.76 Net absorption was negative in 2022 and 2024, however this is more likely driven by a lack of available space, leading to occupiers moving out of the district, rather than a lack of demand for industrial premises.

Figure 3.11 Industrial Net Absorption, Net Deliveries, Vacancy - Cotswold



Source: CoStar 2025

3.77 The figure below shows how average industrial rental prices in Cotswold District have changed over time compared to Gloucestershire, the South West and England. As of November 2025, the average industrial rental price in Cotswold District was £7.81 per sq.ft. This is closely aligned with the Gloucestershire average of £7.26 per sq.ft and the South West (£7.66 per sq.ft) but below the national average of £9.23 per sq.ft.

3.78 Industrial rents in Cotswold District have been growing at an annual average rate of 7.9% over the past decade, greater than growth seen across Gloucestershire (5.6% per annum) and the South West and England at 4.9% and 6.5% per annum respectively. Increasing rents indicate persistent demand for industrial space and a supply-demand imbalance, which is particular driven by the lack of available supply within the Cotswold market.

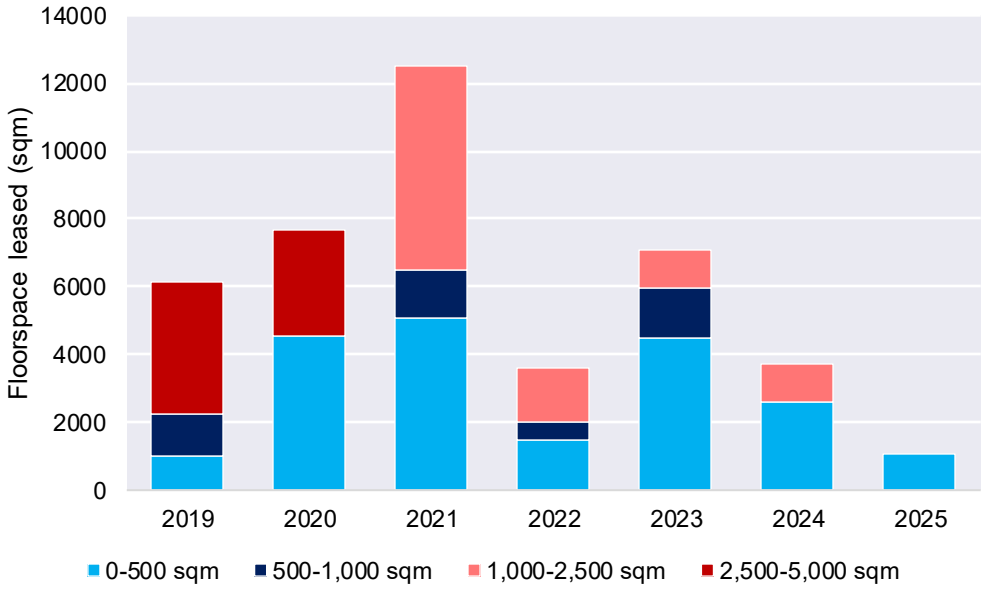
3.79 Agents indicate that headline rents of c.£13 per sq.ft are achieved on larger units of 1,000+ sq.m, a similar level seen to industrial rents in Swindon. These rental levels make new build industrial development economically viable and supports positive land values.

Figure 3.12 Industrial Rents

Source: CoStar 2025

3.80 The figure below shows the volume of industrial floorspace leased in Cotswold District by size band. The volume of floorspace leased averaged 6,000 sq.m per annum, with activity declining since 2021. A majority of leasing activity has been concentrated within the sub-500 sq.m size band.

3.81 There were 120 deals over the 2019-25 period, of which over half (67 deals) were within the 100-500 sq.m size band. This was followed by 37 deals (31%) within the sub-100 sq.m category.



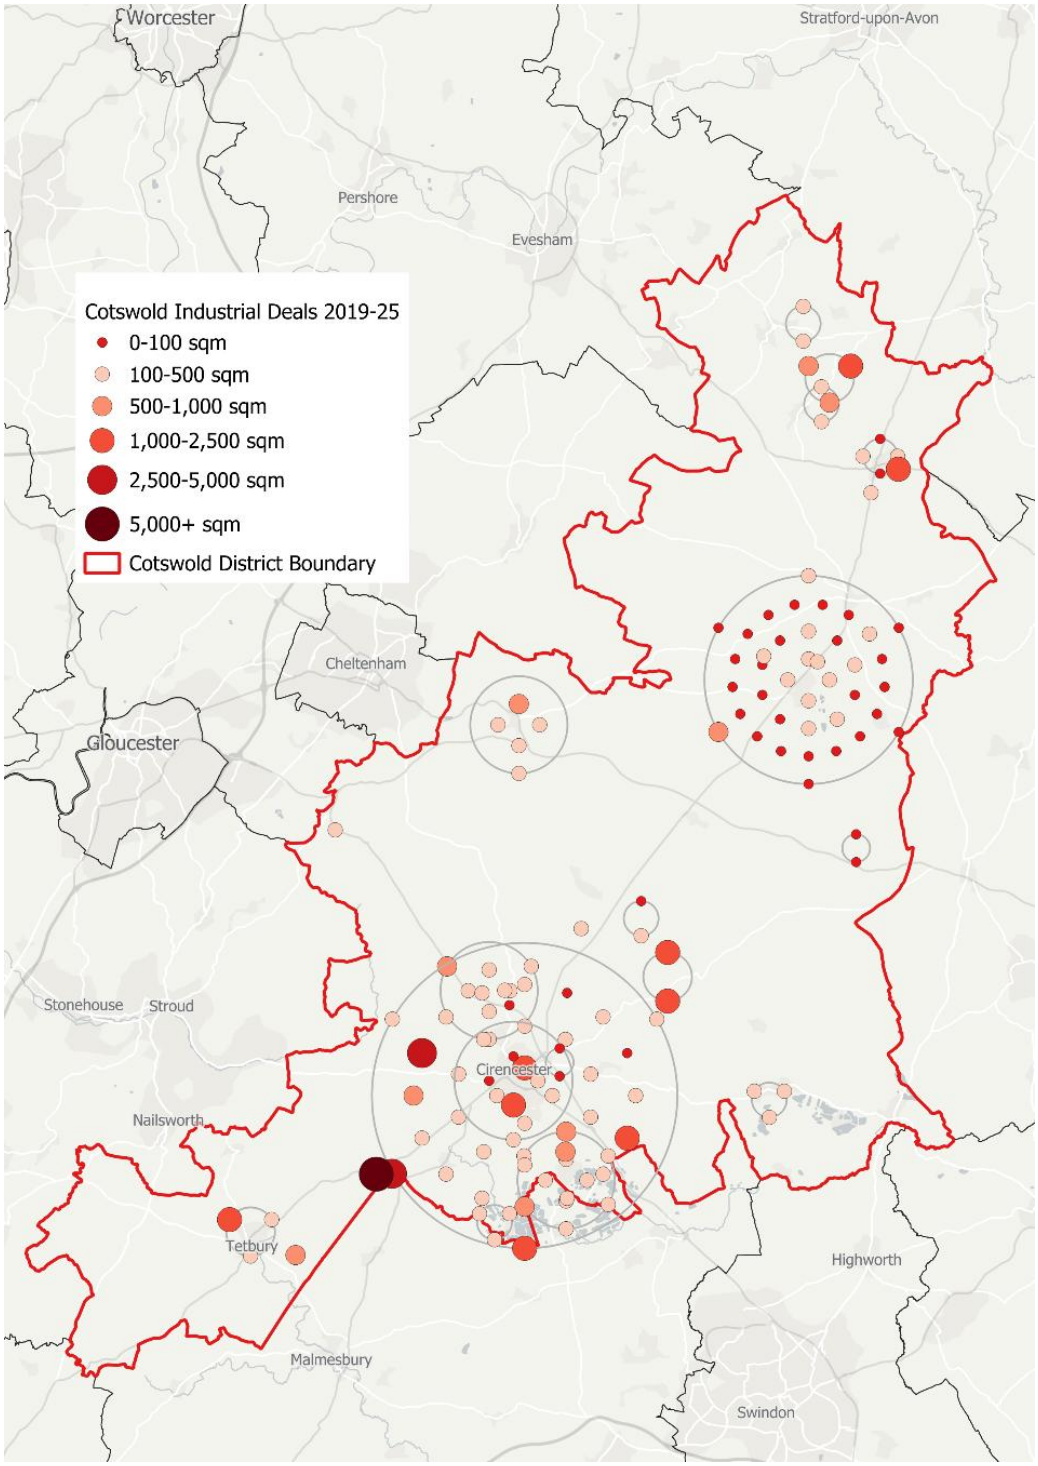
3.82 The industrial market in Cotswold District is rural focused, with a distinct focus on SMEs. Agents state that there is demand for both freehold and leasehold space within this market segment.

3.83 There have been no deals over 2,500 sq.m since 2020, with just 2 deals prior to that – 3,900 sq.m leased by Wickes at Love Lane Industrial Estate Cirencester in 2019 and 3,115 sq.m leased by Resource Group Training Solutions at Cotswold Airport in 2020.

3.84 This is reinforced by agent feedback which indicated there is no big box market for units of over 9,000 sq.m within Cotswold District with larger unit demand and investor appetite focussed towards the M5 corridor and Swindon where there is strong accessibility to the Strategic Road Network and a broader local labour pool. The largest enquiries seen within the district are for units of 30,000 to 40,000 sq.ft (c.3,000 to 4,000 sq.m), with enquiries for 50,000+ sq.ft (4,650 sq.m) limited. The strongest demand is for smaller units of < 20,000 sq.ft (i.e. up to 1,850 sq.m) reflecting the structure of the local economy and its focus on small businesses.

3.85 Agents noted that there is demand for freehold development opportunities, however freeholder demand is focused on units below 20,000 sq.ft (1,900 sq.m).

Figure 3.13 Industrial Space Leased by Size Band - Cotswold



Source: CoStar 2025

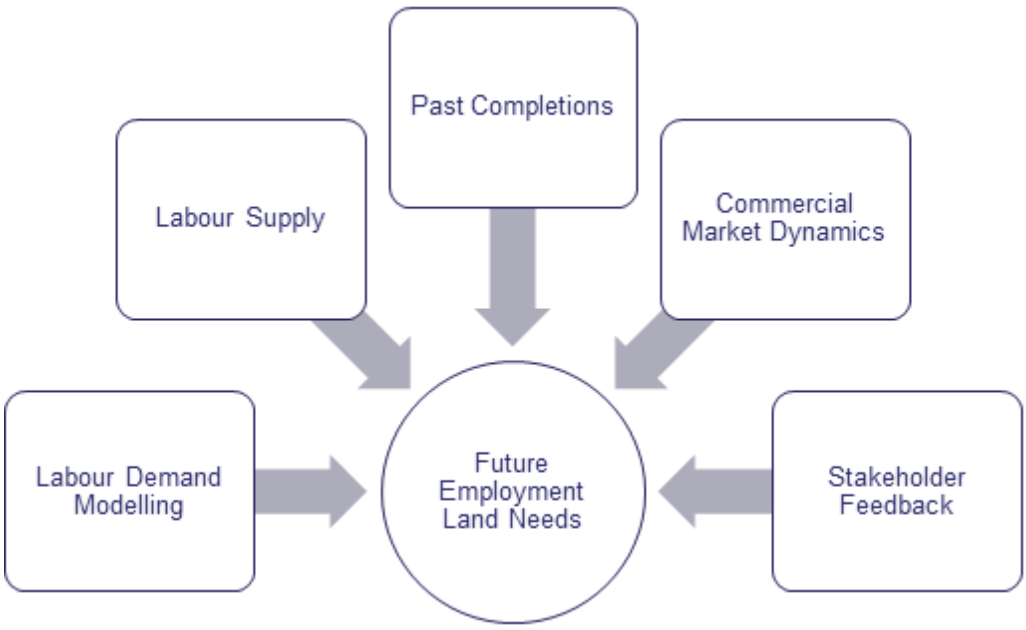
3.86 In terms of the spatial distribution of demand, Cirencester is the strongest industrial location within the District, driven by its critical mass of stock and population. The town's linkages via the A417 (SRN) corridor to M4 at Swindon and M5 and Gloucester drives its market attractiveness. The commercial attractiveness of Cirencester has been improved by the dualling of the A417 and will further be supported by the completion of the A417 Missing Link Scheme from 2027 onwards. There is particular potential to bring forwards new development on sites at Cirencester which benefit from strong accessibility to the A417/A419 dual carriageway; and can accommodate both B2 and B8 uses.

3.87 Other industrial locations within the District see more modest demand, focused more towards the smaller end of the size spectrum (in terms of units size) catering for local business needs and growth (as opposed to being particularly attractive for inward investments). Some demand is generated for business activities associated with Cotswold Airport – on the airport site and the adjoining Kemble Business Park. However key types of activities are price sensitive and new-build development is expected to be challenging.

Figure 3.14 Industrial Deals 2019-25

Source: CoStar 2025

4. Employment Land Requirements



1.1 In this section we provide an assessment of future needs for employment land and floorspace between 2025-43 – the proposed plan period. The analysis considers the need for office, industrial and warehouse/distribution uses.

4.28 The PPG on Housing and economic needs assessment provides broad guidance on assessing future employment land needs, and outlines in Para 2a-027 a number of different approaches:

- sectoral and employment forecasts and projections which take account of likely changes in skills needed (labour demand)
- demographically derived assessments of current and future local labour supply (labour supply techniques)
- analysis based on the past take-up of employment land and property and/or future property market requirements
- consultation with relevant organisations, studies of business trends, an understanding of innovative and changing business models, particularly those which make use of online platforms to respond to consumer demand and monitoring of business, economic and employment statistics.

4.29 Iceni's approach has been to consider different methodologies and evidence. Outcomes are compared and triangulated to draw conclusions on future employment floorspace and land needs. This approach is summarised in the figure below.

Figure 4.1 Triangulating different forecasting approaches

4.30 Different forecasting techniques have their advantages and disadvantages. Econometric forecasts take account of differences in expected economic performance moving forward relative to the past. However, a detailed model is required to relate net forecasts to use classes and estimate gross floorspace and land requirements.

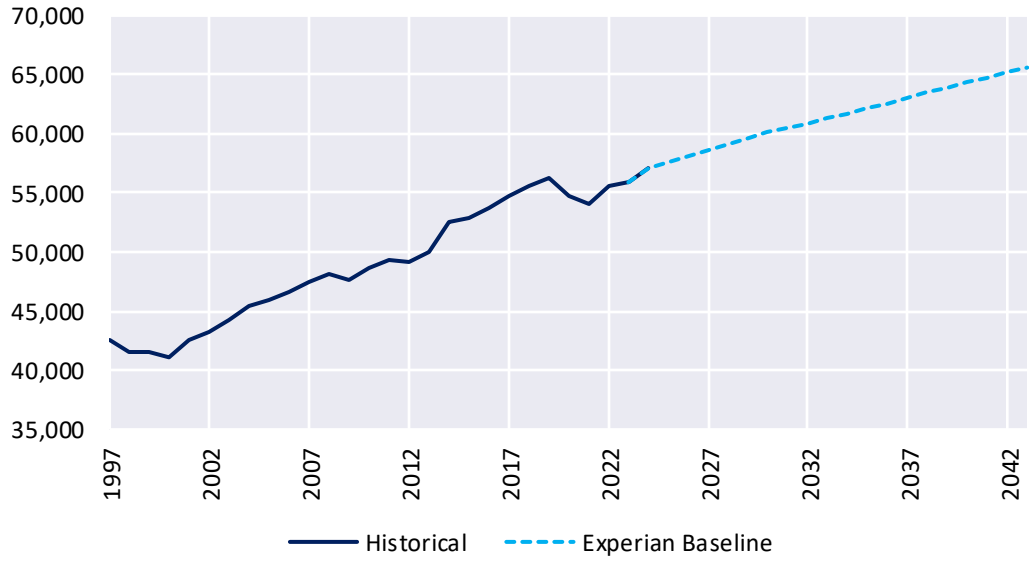
4.31 For office-based sectors consideration needs to be given to the impacts of trends in home working. For industrial sectors however the relationship between floorspace needs and employment trends may be weak – influenced by productivity improvements whereby a sector may be growing but increased automation of processes means that the scale of growth is not reflected in jobs growth.

4.32 In contrast, past take-up is based on actual delivery of employment development; but does not take account of past supply constraints, and housing or labour supply growth – including in how this may differ from the past.

4.33 As a result, an appropriate approach is to use a range of different forecasting techniques alongside local intelligence and an

understanding of the merits of different approaches in drawing conclusions. This approach of triangulating different approaches and testing findings, which Iceni adopts, is consistent with the PPG.

Baseline Labour Demand Forecast



4.34 In this sub-section we consider a labour demand forecasts, which are based on a trend-based scenario for employment growth from which we then model the implications for employment land provision.

Baseline employment forecast

4.35 We have used employment forecasts from Experian to provide a baseline employment growth position. The discussion below starts from 2024, which is the last year in the Experian forecasts based on real-world data (i.e. not forecasted), and runs until 2043.

4.36 The Experian baseline forecast is shown in the figure below and compared to historical employment data (also from Experian). Between 2025 and 2043 this forecast would see employment grow by 8,000 or 13.9% with total employment rising from 57,600 in 2025 to 65,600 in 2043. This amounts to growth of around 440 jobs on average per year, or a compound annual growth rate of 0.73%.

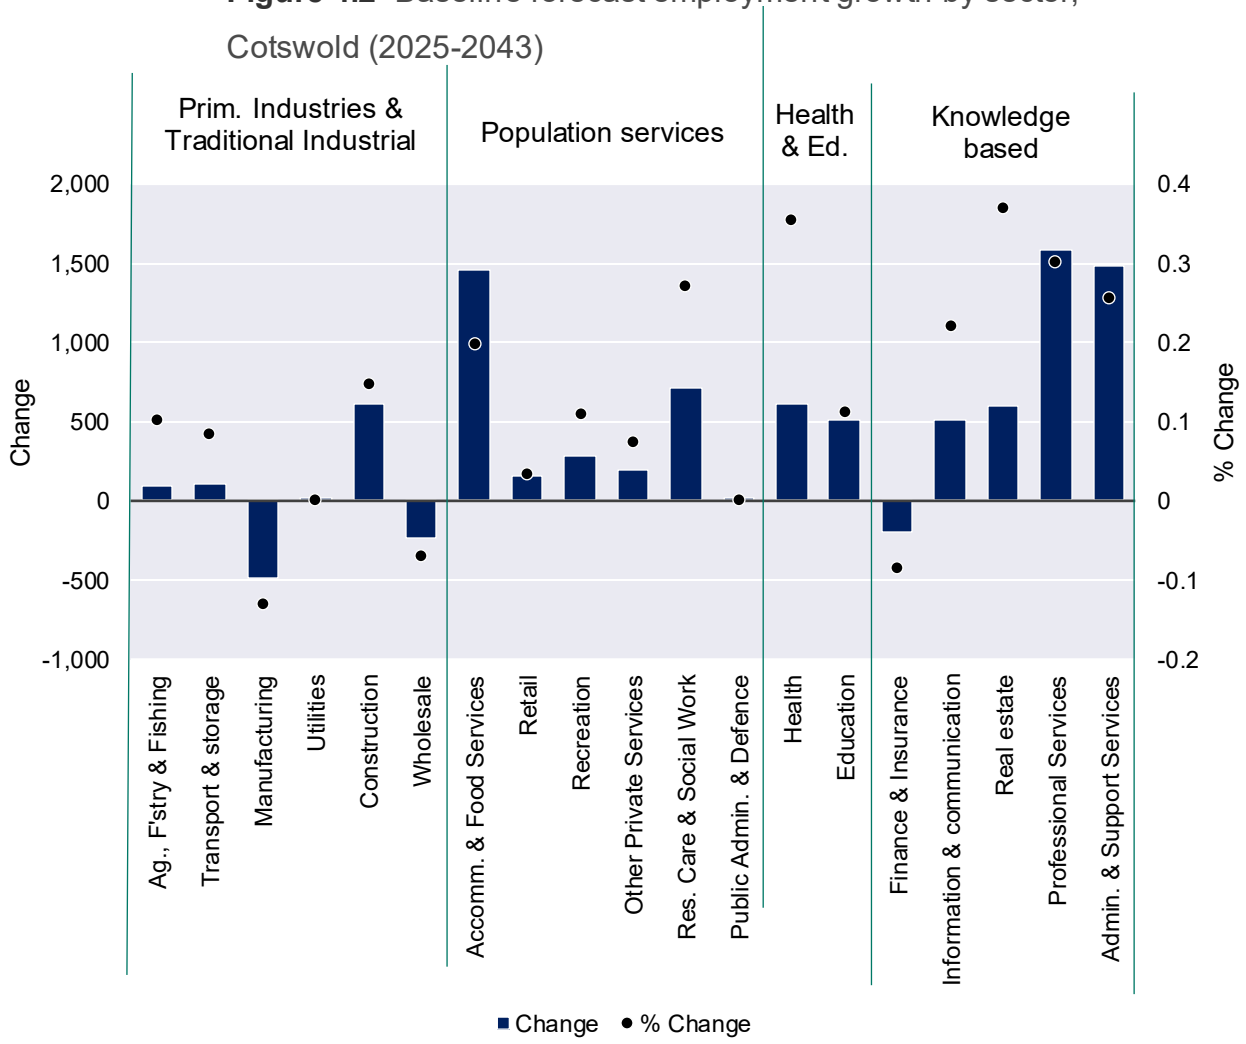
Figure 1.1 Forecast employment growth – Cotswold District

Source: Experian/ Iceni

4.37 By comparison, over the 18 years leading up to 2024, Experian estimate that 10,400 jobs have been added to the Cotswold economy, equating to growth of around 22.3%. This translates to around 580 per year, or a compound annual growth rate of 1.12%. As such, the baseline forecast would see a slowing of growth from the rates seen over the last 18 years of historical jobs data – influenced in part by the assumptions within Experian's model on productivity improvements. A comparison between forecast and historical performance is summarised in the table below.

Table 4.3 Comparison of historical jobs growth with baseline forecast - Cotswold

	Experian Baseline Forecast (2025-43)	Historical (2006 – 2024)
Change in jobs	8,000	10,400
% Change	13.9%	22.3%
Average yearly change	440	580
Compound annual growth rate	0.73%	1.12%



Source: Iceni analysis of Experian forecasts 2025

4.38 Figure 4.2 breaks the jobs 8,000 jobs forecast to be added in Cotswold District down by sector. The highest growth sectors in absolute terms under this baseline forecast are professional, scientific and technical services (+1,600 jobs or 30%), administrative and support services (+1,500 jobs or 26%), and accommodation and food services (+1,450 jobs or 20%). Higher percentage growth rate is forecast for real estate (+37%) and for health (+36%) although these are forecast to remain relatively small sectors locally.

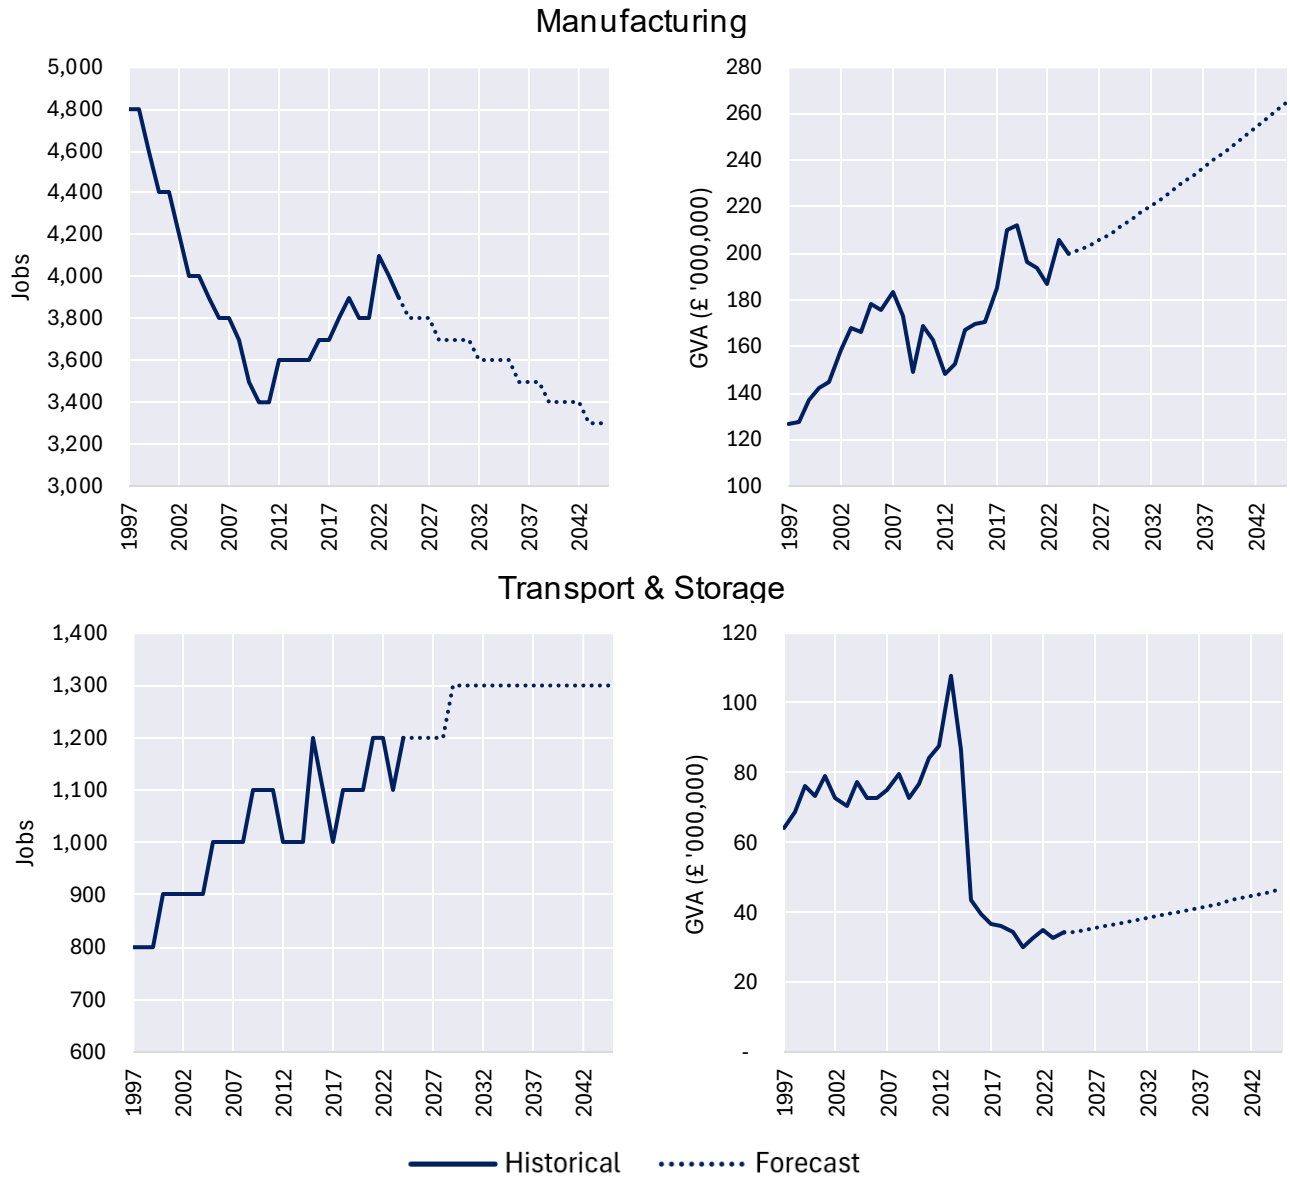
4.39 Employment growth is also forecast broadly across other knowledge-based sectors (apart from finance and insurance), population services and in education, although at lower rates than for sectors highlighted above.

4.40 In traditional industrial sectors, the baseline forecast predicts mixed employment outcomes, with growth in construction (+600 jobs some of which would be industrial in nature, but some are likely to have no fixed place of work) and transport and storage (+100 jobs), but contraction in manufacturing (-500 jobs) and wholesale (-200 jobs).

Figure 4.2 Baseline forecast employment growth by sector, Cotswold (2025-2043)

Source: Experian Forecasts 2025

4.41 The difficulties in using employment forecasts to predict industrial land need are illustrated by comparing employment and GVA forecasts for the two primary industrial sectors of manufacturing and transport and storage. This comparison is shown in the figure below for Cotswold District. Note that the job forecasts appear uneven because they are rounded to the nearest 100.



4.42 While manufacturing employment is forecast to decline, GVA is forecast to grow driven by automation and broader productivity improvements. This means that even though employment is declining, additional floorspace and land may be needed to facilitate the growth of the sector. Productivity improvements would also increase the need for new modern and fit for purpose industrial space, as opposed to older

premises which may lack the height, power or adaptability to support more efficient operations..

4.43 The difference between employment and GVA forecasts for transport and storage is not as stark as the difference in manufacturing, and this is a much smaller sector locally. Again while employment is forecast to fall, the sector overall is growing. The evidence indicates that productivity improvements (in particular automation) are also likely in transport and storage, increasing the need for modern industrial premises.

4.44 These productivity effects mean that labour demand forecasts need to be treated with some care in considering needs for industrial and warehouse/distribution sectors, with the need to consider 'replacement demand' issues associated with the need to provide modern industrial floorspace (such as those with sufficient height and power to facilitate automation). For manufacturing in particular, employment is expected to fall whilst the sector is expected to grow relatively strongly.

Figure 4.3 Comparison of baseline employment and GVA forecasts for primary industrial sectors (Cotswold)

Source: Experian forecasts 2025

Baseline labour demand

4.45 Iceni has used a model to predict the floorspace needed to support forecast employment outcomes. This model includes the following steps.

4.46 First, total jobs forecast are converted into forecasts of full-time equivalent (FTE) jobs, using locally specific data from the ONS BRES dataset. FTE jobs are then discounted using subsector-specific

assumptions to reflect a proportion of people working from home, or working in a hybrid arrangement which decreases overall floorspace needs.

4.47 Discounted FTE job forecasts are attributed by industry category to different uses using a matrix with use-class breakdowns for each subsector. This matrix assumes that some sectors (e.g. information and communications) are primarily office based while others (e.g. manufacturing) are based in industrial spaces or contribute to non-B class space requirements (e.g. retail).

4.48 The total employment and FTE results stepping through this calculation are shown in the table below. There is a relatively large discount between total jobs and FTE jobs due to the high level of forecast growth in accommodation and food services, health and education, each of which has a relatively high proportion of part-time employees. Similarly, very little of the economic activity in these sectors takes place in B-class uses.

Table 4.4 Employment change for baseline forecast (Cotswold), 2025-43

	Total employment	Total FTE jobs	FTE jobs after WFH discount	FTE jobs in B-class uses
Change in jobs	8,000	6,200	5,800	1,700

Source: Iceni analysis

4.49 The following table shows in more detail the results in the last column of the above table, breaking them down by use class. By far the largest category in terms of increase in FTE is office and R&D. While these results show a reduction in B2 FTE employment, this is driven by the forecast decrease in manufacturing employment, and as noted earlier in this chapter forecasts of industrial land need based on employment forecasts such as this should be treated with caution and does not necessarily imply a reduction in floorspace need.

Table 4.5 FTE change by broad use for baseline forecast (Cotswold), 2025-43

	Office & R&D	Industrial (B2)	Warehouse/ Distribution (B8)	Employment Uses Total
Change in jobs	2,000	-400	50	1,700

Source: Iceni analysis

Note column values may not sum to total values due to intermediate rounding.

4.50 Floorspace needs are then calculated by applying employment density assumptions, before being converted into land needs using indicative plot ratios. The assumptions used in these steps are set out in the table below.

4.51 The employment density assumptions take the Homes England guidance as a starting point, with adjustments to convert net internal areas (NIA) to gross external area (GEA) equivalent figures.

4.52 A plot ratio of 0.5 has been used for offices, assuming that most office space is delivered at business park rather than town centre densities having regard to the nature of the area, market and viability considerations. A plot ratio of 0.4 is adopted for industrial uses. These assumptions are consistent with those adopted in the parallel Gloucestershire HENA work.

Table 4.6 Floorspace density and plot ratio assumptions for labour demand modelling

Use / Use class	Office	R&D	Industrial (B2)	Warehouse/ Distribution B8
Floorspace per FTE (sqm)	14	60	38	74
Plot ratio	0.5	0.5	0.4	0.4

Source: Iceni

4.53 Applying these floorspace density assumptions to the FTE by use class results in Table 4.43**Error! Reference source not found.** generates the following floorspace need results, which amount to 32,800 sqm of office/R&D and 3,600 sqm of additional B8 space by 2043 in net terms using this baseline labour demand scenario. The contraction in B2 FTE shown above translates to the negative floorspace result here, but as noted above this result should be treated with caution.

4.54 To calculate land requirements, a plot ratio of 0.5 has been used for offices, assuming that most office space is delivered at business park rather than town centre densities having regard to the nature of the area, market and viability considerations. A plot ratio of 0.4 is adopted for industrial uses.

Table 4.7 Floorspace and need – Baseline labour demand (without margin or replacement demand) – 2025-43

	Office & R&D	B2	B8	Total
Floorspace (sqm)	32,800	-15,300	3,600	21,200
Land (ha)	6.6	-3.8	0.9	3.7

Source: Iceni analysis

Note column values may not sum to total values due to intermediate rounding.

Flexible margin

4.55 Iceni consider that there is then a need to provide a margin to support choice and competition in the market for employment land. This would also allow for potential issues and delays with the delivery of employment sites, seeking to ensuring that economic growth is not constrained.

4.56 We have assumed a 5-year margin for industrial and 2-year margin for office/R&D is provided based, on trends in gross completions by use . This amounts to around 2,150 sqm of office/R&D space and 13,600 sqm of industrial space over the plan period. The larger margin for industrial space reflects greater variance in the types/sizes of industrial

units and the evidence of potential suppression of demand (as described in Section 3).

Replacement demand

4.57 The modelled forecasts are net changes and do not take account of replacement demand, such as from existing companies requiring upgraded floorspace or for existing or allocated sites for employment lost to other uses such as residential (and where businesses may require relocation). In considering how much employment land to allocate, it is therefore appropriate to consider this as an additional influence.

4.58 In modelling the potential for replacement demand, Iceni has also taken into account the potential for a level of latent demand for new employment space to have arisen whereby businesses have not been able to relocate because of a lack of available supply taking account of the low vacancy rate and limited new-build development in recent years.

4.59 For Cotswold District specifically, the evidence indicates that there are likely to have been some constraints on employment land supply taking into account the limited progress in delivery of some of the major allocations in the 2018 Local Plan to date – including in particular the larger allocations at the Strategic Site south of Chesterton (the Steedings) at Cirencester and the Fire Service College in Moreton-in-Marsh. This is borne out in the market signals evidence – in particular in terms of the low vacancy levels amongst existing stock and growth in rents (particularly for industrial premises).

4.60 A further consideration in driving replacement demand is prospective changes to legislative requirements requiring commercial premises to meet Minimum Energy Efficiency Standards (MEES).

4.61 Longer-term and comprehensive time-series data on the loss of employment floorspace in Cotswold is not available. As a result, and

taking into account the above considerations, it is therefore assumed that replacement demand over the plan period will be the equivalent to one third of the older industrial stock listed on CoStar dating to before the 1990s. The total amount of such stock according to the CoStar database is 171,765 sqm. As set out in the table below, this results in an estimated replacement demand of 57,234 sqm.

Table 4.8 Replacement demand calculation

A: Industrial stock from before the 1990s (sqm)	171,265 sqm
B: Proportion of older industrial stock assumed to require replacement	1/3
C: Replacement demand for industrial stock (C = A x B)	57,234 sqm

Source: Iceni analysis

4.62 It is appropriate to assume that only a portion of the pre-1990s industrial stock requires replacing due to the small-business focus of the Cotswold economy and the small size of many industrial premises. Small businesses are typically more cost conscious and may be less likely to move.

4.63 No replacement demand has been assumed for office and R&D space due to the limited amount of standalone office space in the District; and recognising that whilst there is occupier demand for Grade A space, the evidence that viability considerations are likely to restrict new development.

Results

4.64 The following table shows the floorspace and land needs resulting from baseline labour demand modelling, after adding the margin for flexibility and an allowance for industrial replacement demand.

Table 4.9 Floorspace need – Baseline labour demand (with margin and replacement demand) – 2025-43

	Office & R&D	Industrial	Total
Floorspace (sqm)	37,300	83,900	21,200
Land (ha)	7.5	21.0	28.4

Source: Iceni analysis

Note column values may not sum to total values due to intermediate rounding.

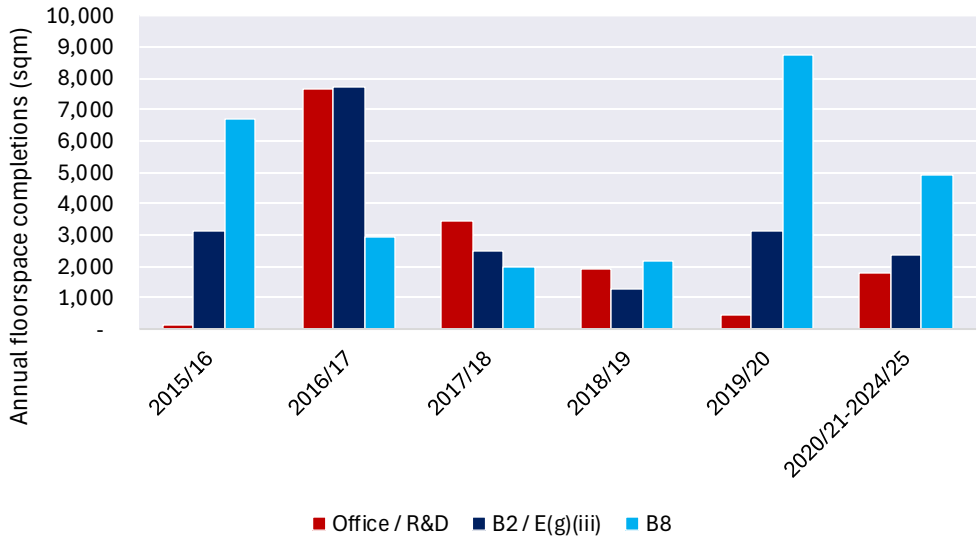
Take-up and Net absorption methods

4.65 Iceni have also forecasted future employment land needs using three metrics which use market signals in the form of employment land supply trends – in terms of gross and net completions - and net absorption.

4.66 Historic completions, based on the Council's monitoring data, have been considered and projected forward to provide an indication of future floorspace needs. Both gross and net historic completions have been considered.

4.67 **Gross completions** (all employment land/floorspace completions, or gains) are useful as they inherently take into account all demand including replacement demand (on-site and off-site redevelopment and redeployment). However, using gross completions can overestimate the demand for additional land given some historic gross completions may have been on plots where the previous use was the same (i.e. re-development for the same use but with newer stock) or on existing employment sites. Such redevelopments may continue in the future and do not need 'new' land provision.

4.68 A net completions model would also commonly be considered, using historical data deducting losses from all gross completions to identify total stock change.



4.69 Depending on the types of losses that have taken place, net stock change can significantly underestimate needs – for instance as it can be in part influenced not by demand for commercial space but by higher land values which can be achieved for other uses (such as residential).

Gross completions

4.70 Iceni has considered Council monitoring data from 2015/16 onwards in order to assess gross completions. This data has been checked and amended to correct for differing methods of assessing floorspace totals and types over time, and to remove changes of use between industrial land uses (which shouldn't be counted in future industrial land needs).

4.71 The chart below shows the resulting estimates of gross employment floorspace completions over the last 10 years in Cotswold. Council statistics present data from 2020/21 – 2024/25 in a single monitoring report and do not further disaggregate completions over this period by year.

Figure 4.4 Gross employment floorspace completions - Cotswold

Source: Iceni analysis of Council monitoring data

4.72 Office and R&D completions peaked in 2016/17 but have otherwise been relatively low at around 2,000 sqm per year or less (apart from

2017/18). Many of these are smaller offices within existing buildings, and there was very limited development of standard-alone offices.

4.73 B2 / E(g)(iii) completions similarly peaked in 2016/17, but have been delivered more consistently year to year than office space. B8 space delivery was highest in 2019/20 followed by 2015/16, although delivery was also high in the five year period 2020/21 – 2024/25 with several new warehouse buildings delivered.

4.74 As well as traditional industrial development, a large amount of the additional B2, E(g)(iii) and B8 floorspace was added through the conversion of agricultural buildings and barns for more general commercial use. This has also contributed to office floorspace stock, although to a lesser degree.

4.75 On average over this ten-year period there have been annual gross completions of 2,237 sqm of office and R&D space, 2,941 sqm of B2 / E(g)(iii) space and 4,729 sqm of B8 space.

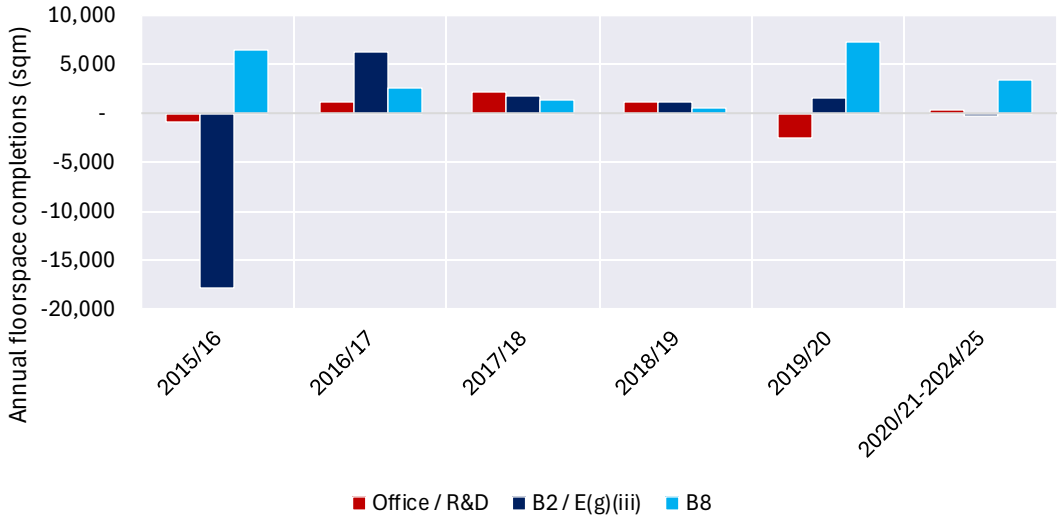
4.76 These averages have been used to estimate floorspace need over an 18-year plan period by multiplying average annual completions by 18. Results are shown in the figure below. Margin and plot ratio assumptions are consistent with those made for the baseline labour demand modelling.

Table 4.10 Floorspace and Land Need, Gross Completions Model, 2025-43

	Floorspace need 2025-43 (sqm)	Land need 2025-43 (ha)
Office	40,300	8.1
Industrial	52,900	13.2
	85,100	21.3
Total	178,300	21.3
Including margin for flexibility & replacement demand		
Office	40,500	8.1
Industrial	233,600	58.4
Total	274,100	66.5

Source: Iceni modelling using Council monitoring data

Net completions



4.77 Monitoring data from Council also shows losses of floorspace, including through demolitions and conversions to other uses. As with gross completions, Iceni has compiled this monitoring data from the last 10 years with checks and corrections where necessary to ensure a consistent format and approach. The results are shown in Figure 4.5 below.

4.78 Net office and R&D floorspace completions are substantially lower than gross completions. This is due in large part to the loss of small-scale office stock through conversion to other uses, principally residential.

4.79 There is a large net loss of B2 floorspace in 2015/16 due to the redevelopment of three large former factory sites for residential purposes. Otherwise, there was a large net addition of B2 stock in 2016/17 and smaller additions in other years.

4.80 There has been a net addition of B8 floorspace year on year, with the largest additions in 2015/16 and 2019/20, consistent with the picture for gross completions presented above.

Figure 4.5 Net employment floorspace completions - Cotswold

Source: Iceni analysis of Council monitoring data

4.81 Averaging over these ten years, but excluding 2015/16 for B2 / E(g)(iii) floorspace as an anomalous year, there have been average annual net additions of only 264 sqm of office / R&D space, but 1,096 sqm of B2 / E(g)(iii) space and 3,479 sqm of B8 floorspace.

4.82 The resulting estimates of floorspace need based on these changes are shown in the table below, with the calculation again performed by multiplying the average historical yearly figure by 18. Margin and plot ratio assumptions are again consistent with those made for the baseline labour demand modelling.

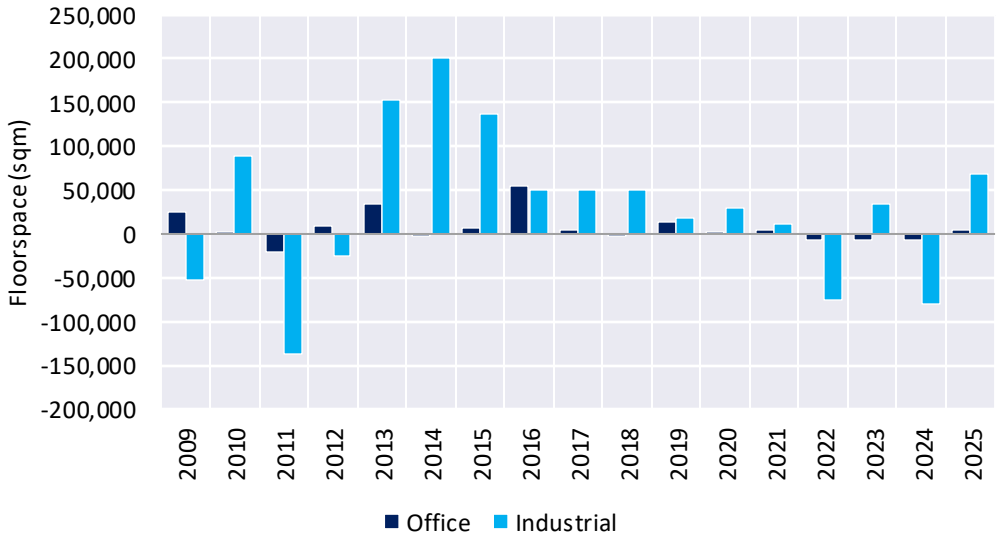
Table 4.11 Floorspace and land need, gross completions Model, 2025-43

	Floorspace need 2025-43 (sqm)	Land need 2025-43 (ha)
Office	4,800	1.0
B2	19,700	4.9
B8	62,600	15.7
Total	87,100	5.9
Including margin for flexibility & replacement demand		
Office	9,200	1.8
Industrial	177,900	44.5
Total	187,200	46.3

Source: Iceni modelling using VOA *NDR Business Floorspace Tables 2025*

Net absorption

4.83 A third supply-based calculation looks at past take-up of space occupied (rather than land delivered), measured by net absorption using CoStar data. As explained in the Chapter 3, the net absorption is the balance between the amount of space moved into and moved out of (i.e. Net absorption = Move ins – Move outs), equating to the change in occupied space.



4.84 This differs from the net stock change-based calculations in that it predicts future floorspace requirements directly based on market demand for floorspace rather than past completions of floorspace (which is only a proxy for floorspace demand).

4.85 Net absorption per year for Cotswold is shown in the figure below. As discussed in Chapter 3, there have been some negative net absorptions of industrial space in recent years, and minimal changes in occupied office stock.

4.86 Given higher net absorption results in the mid-2010s, a 15-year time period has been considered to capture floorspace absorption across

market cycles. During the most recent 15 years (i.e. 2011-2025), there has been a net absorption per year on average of 582 sqm of office space and 3,044 sqm of industrial space.

Figure 4.6 Net absorption over time - Cotswold

Source: Iceni modelling using CoStar

4.87 The resulting estimates of floorspace need based on net absorption per year are shown in the table below. Margin and plot ratio assumptions are again consistent with those made for the baseline labour demand modelling.

Table 4.12 Floorspace and Land Need, Net Completions (VOA) Model, 2025-43

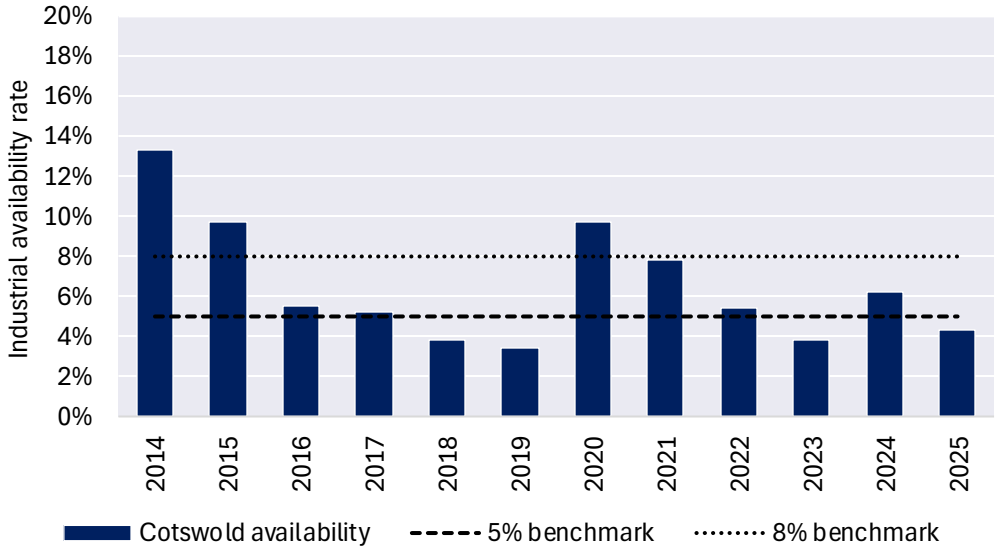
	Floorspace need 2025-43 (sqm)	Land need 2025-43 (ha)
Office	10,500	2.1
Industrial	54,800	13.7
Total	65,300	15.8
Including Margin for Flexibility		
Office	12,600	2.5
Industrial	125,700	31.4
Total	138,300	33.9

Source: Iceni modelling using CoStar

Suppressed demand

4.88 An alternative to a margin for flexibility is an adjustment for 'suppressed demand'. This reflects the concept of insufficient supply in the market, leading to demand not being accommodated and therefore can be considered 'suppressed', with prospective occupiers unable to find suitable space. Ongoing supply shortages can deter inward investment and growth.

4.89 it is widely considered that a 5% - 10% vacancy (and availability) is a healthy market[3], allowing new occupiers to enter and existing occupiers to find new space or expand, with 8% being a typical optimum. Evidence of vacancy rates consistently below optimum levels combined with rent increases can indicate the potential for supressed demand, with the result that market trends do not provide a good indicator of future land need.



4.90 Issues of suppressed demand have been considered in the wider parallel Gloucestershire HENA work, with a calculation of the implications for industrial land need considered principally for the M5 corridor authorities (Stroud, Tewkesbury, Gloucester and Cheltenham) given there is a degree of interchangeability of strategic sites along or near the M5, and that strategic employment growth in Tewkesbury and Stroud is meeting some needs unable to be met in Gloucester and Cheltenham.

4.91 Suppressed demand is most relevant at a market area or corridor level. It is less appropriate to be applied to an individual local authority such as Cotswold which sits within a broader property market. Nonetheless, for completeness the Gloucestershire HENA provides suppressed demand results for Cotswold, and so they are also provided below for the 2025-43 plan period.

[3] Found in a number of publications, including GLA's Land for Industry and Transport Supplementary Planning Guidance (SPG) and British Property Federation Levelling up of Logistics 2021

4.92 The following figure shows the industrial availability rate in Cotswold over the 2014-25 period. It has fallen below 8% in most years, and below 5% in four of the 11 years shown. Nonetheless, this data does not present a picture of a consistently low availability rate.

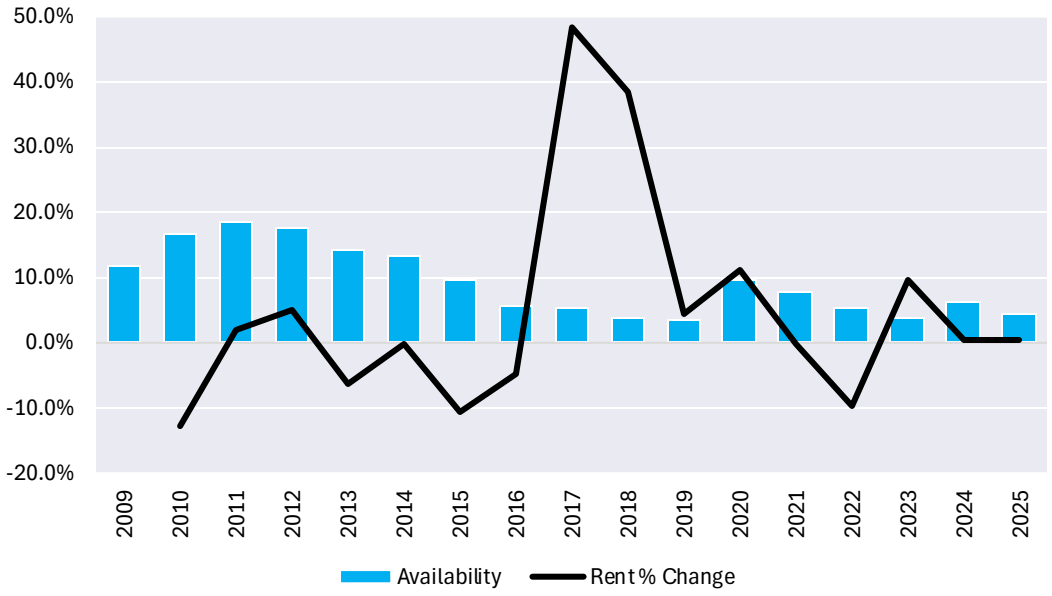


Figure 4.7 Industrial availability rate compared to suppressed demand benchmarks

Source: CoStar

4.93 Further evidence for demand suppression would be provided by high rental growth during periods with stock availability of 5% or less. As shown in the figure below, industrial rental change in Cotswold is relatively variable year to year depending on the stock rented (this is to be expected given the size of the market). While the largest rent rises occurred in 2017 and 2018 during periods of somewhat lower availability, there does not appear to be a consistent relationship between industrial rental growth and periods of low stock availability.

Figure 4.8 Industrial availability rate compared to suppressed demand benchmarks

Source: CoStar

4.94 A 'suppressed demand' model has been developed by Savills and set out in the British Property Federation's Levelling up of Logistics 2021 report[4]. This 'tops up' historic take-up to where it would have been at 8% availability. Whilst the model is not established in Planning Practice Guidance, it is considered useful as a sensitivity scenario in this study, where the market appears to have been consistently suppressed over several years. It assumes that the market 'wanted and will want' this level of take-up consistently, which may not be the case.

4.95 Savills' preference for the availability 'target' is 8%, with 5% being a recognised minimum. However, for strategic units and strategic sites, this 8% is considered by Iceni to be more optimistic than the wider market, partly as build-to-suit rather than spec build is more common for very large units due to higher costs, which would mean typically lower vacancy and potentially lower availability depending on marketing and pre-let strategies. As a result, it is considered that a rate below 8% is a reasonable minimum, and an availability rate of 5% has been carried

[4] https://bpf.org.uk/our-work/research-and-briefings/

forward under a 'Low' scenario, and an 8% rate under a 'High' scenario and a suppressed-demand scenario. The steps involved in the calculation are:

- Available floorspace (C) is calculated by multiplying the inventory by the availability rate.
- To calculate the floorspace required to achieve an 5/8% availability rate for each year, the availability rate (B) is taken away from 5/8%, and the residual is multiplied by the inventory (A). This produces the figure in column F.
- The ratio of net absorption and available floorspace is calculated for each year (E = D/C), and the average is produced.
- For each year that the availability is below 5/8%, the average ratio is multiplied by the floorspace required to reach 5/8% availability to estimate each year's suppressed net absorption (G=X%*F) and then the average of this is calculated.

4.96 The suppressed demand need at 5% and 8% availability has been run for the 10-year (2015-24 inclusive) period, and the results are detailed in the table below. The average annualised suppressed demand is rolled forward from 2025-43 (multiplied by 18) to provide a 'top-up' in addition to the base 10-year historical net absorption trend.

Table 4.13 Industrial floorspace need calculation using suppressed demand model

Benchmark availability rate	A: Yearly need based on net absorption	B: Yearly supressed demand adjustment	C: Yearly need with adjustment (C = A + B)	D: Need to 2043 with adjustment (D = C x 18)
5%	2,114	146	2,261	40,700
8%	2,114	834	2,948	53,100

Source: Iceni modelling using CoStar

Beyond Historical Trends

4.97 There are a number of reasons to consider additional scenarios reflecting Cotswold-specific economic prospects as an alternative to the baseline forecasts and trend-based modelling set out above.

4.98 Off-the-shelf baseline forecasts largely share national and regional growth down to a local level using the relative strength of each sector locally influenced by past performance. Where there are planned growth initiatives or inward investment opportunities these will not be reflected (particularly in as far as they may result in a different outcome from historical trends. They can also introduce distortions by applying national or regional assumptions that are not appropriate for local circumstances and therefore should not be used uncritically.

4.99 In addition, there is the potential for the completion of the A417/A419 Missing Link scheme to support the attractiveness of Cirencester for employment development by improving connectivity to the M5; and along this corridor between the M4 and M5.

4.100 Furthermore, the PPG sets out that demographically derived assessments of current and future local labour supply should be considered as an approach when modelling future employment land needs.

4.101 As set out below, recent revisions to the Standard Method have substantially increased Cotswold's housing need, and are likely to result in an increase in the housing requirement in the Local Plan.. This means that a much higher level of employment growth than the baseline forecast would be required to keep jobs and homes aligned. Equally the evidence (as set out in Section 2) points to an imbalance in recent years whereby employment growth has run ahead of housing delivery; and with net in-commuting pointing to labour supply to have potentially placed some constraint on economic growth and employment development historically.

4.102 It is also worth noting that a large increase in housing development and population growth would be expected to increase jobs growth in sectors that provide services to the local population (e.g. retail), in construction, and to a lesser degree across the supply chain.

Housing Needs

4.103 The Government, through revisions to the NPPF in December 2024, has revised the standard method. Its ambitions in doing so are to increase housing delivery, delivering 1.5 million homes across England over the next 5 years with growth in all areas of the country.

4.104 The NPPF specifies that the Standard Method should be used to calculate the local housing need, and that plans should aim to provide a sufficient supply of housing to meet this need, where this is consistent with achieving sustainable development. There are however different factors which are brought together in setting a housing requirement within the Local Plan, which requires the Council to overlay land availability, infrastructure and delivery constraints alongside any potential unmet need from neighbouring authorities. These are issues for the Council in bringing together the evidence as part of the plan-making process.

4.105 The PPG sets out the revised standard method in the section on Housing and Economic Development Needs Assessments which needs to be used to calculate housing needs. Para 2a-006 therein sets out the methodology, which takes a baseline of 0.8% of existing housing stock in the area (Step 1); to which an affordability adjustment is then applied (Step 2) which is calculated by taking the average affordability ratio figure over the 5 more recent years for which data is available, and applying a 0.95% increase for each 1% of which the averaged affordability ratio is above 5.

4.106 This calculation of the Standard Method housing need for the Cotswold District is shown in the table below and yields a need for 1,055 dwellings per annum (dpa). By comparison, the need under the

previous Standard Method was 504 dpa, and the current adopted local plan includes a housing requirement of 420 dpa. Historical housing delivery over the period since 2011 have averaged around 525 dpa.

Table 4.14 Cotswold District Standard Method Calculation (2025)

Housing Stock, 2024	46,588
0.8% Stock Baseline	373
Average Median Affordability Ratio, 2020-24	14.64
Affordability Uplift	283%
Local Housing Need (dpa)	1,055

4.107 New data becomes available annually, and we estimate the need calculated in Spring 2026 will be 1054 dpa. This is not materially different to the above and is well within the error margins associated with long-term modelling of labour supply growth.

4.108 As a result, the revised standard method represents a substantial uplift in housing requirements for Cotswold. If delivered in full, they would support broadly **a doubling of housing delivery** relative to historical trends over the 2011-24 period.

4.109 The Local Plan Preferred Options Consultation Document (Nov 2025) set out an emerging preferred scenario (Scenario 5) which would see delivery of 14,660 homes. This is broadly equivalent to 80% of the Standard Method housing need. This scenario took account of strategic constraints to development in the District, including the position whereby 80% of the District falls within the Cotswold National Landscape where national policies expect development to be restricted.

4.110 The Council, in bringing together the evidence base, is testing further the potential scale of growth which could be accommodated. A central scenario is therefore tested herein which aligns to provision of housing at 80% of the standard method (i.e. around 844 dpa). This would still be a substantial increase on past housing requirements and delivery.

Sensitivity analysis is however provided on accommodating 70%, 90% and 100% of the standard method housing need. This report does not see to prejudge decisions on the appropriate scale of housing provision, but seeks to provide a basis for considering how employment land provision may align to different potential scales of housing growth.

Implications for Labour Supply

4.111 A demographic model has been developed to assess the potential implications of delivering 844 dwellings per annum in the 2025-43 period (i.e. 80% of the Standard Method), and of delivering the full Standard Method need of 1,055 dpa. More information on the modelling and the assumptions used is given in **Appendix A4**.

4.112 The population modelling starts with the most recent (2022-based) subnational population projections (SNPP), which have been updated by reference to mid-year population estimates (MYE) data up to 2024 (looking at more recent data about births, deaths and migration).

4.113 The modelling then considers the levels of migration likely to be needed to fill homes and also the possibility of seeing higher levels of household formation in younger age groups (where there is evidence of a historical constraint in formation).

4.114 The following table shows the resulting estimates of population change if 844 dwellings are delivered per annum.

Table 4.15 Projected population change 2025 to 2043 by broad age bands – Cotswold (80% of Standard Method)

	2025	2043	Change in population	% change
Under 16	14,266	16,812	2,546	17.8%
16-64	52,051	66,166	14,115	27.1%
65 and over	25,785	36,926	11,141	43.2%
Total	92,101	119,904	27,802	30.2%

Source: Iceni analysis

4.115 To look at estimates of the job growth which could be supported by different scale of housing provision in Cotswold District, a series of stages are undertaken. These are to:

- Estimate changes to the economically active population (this provides an estimate of the change in labour supply) using assumptions from the OBR March 2025 Fiscal Sustainability Report, applied to a 2021 Census baseline for Cotswold District;
- Overlay information about commuting patterns, double jobbing (i.e. the fact that some people have more than one job) and potential changes to unemployment rates; and
- Bringing together this information to provide an estimate of the potential job growth which could be supported by the population projections.

Economically active population

4.116 The assumptions used to calculate the economically active population from the overall population change projection are set out in Appendix A4. Broadly the modelling assumes some increase in labour force participation rates.

4.117 The results for the economically active population are shown in the table below for delivery of both 80% and 100% of the Standard Method housing need.

Table 4.16 Estimated change to the economically active population – Cotswold

	2025	2043	Change	% Change
80% of Standard Method	45,757	61,415	15,658	34.2%
100% of Standard Method	46,881	67,606	20,726	44.2%

Source: Iceni Analysis

Commuting and double jobbing

4.118 The table below shows summary data about commuting to and from Cotswold District, drawn from the 2011 and 2021 Censuses. Data from both sources are used, as the 2011 data is quite old and the COVID-19 pandemic is likely to have influenced the 2021 data.

4.119 The Census data shows a net in-commuting in both 2011 and 2021. It shows around 4.5% more people working in the District than living in the District and working in 2011, increasing to 6.4% more in 2021.

4.120 When comparing the two sources, it is worth reflecting on a significant increase in the number of home workers (or those of no fixed workplace) in 2021 compared with 2011. In 2011, a total of 12,007 people were recorded as home workers or with no fixed workplace; in 2021, this figure had nearly doubled (to 23,432). As the country has moved away from the pandemic, it is possible this figure has started to reduce slightly, with possible implications on commuting dynamics. However, home working has probably not fully reverted to 2011 levels.

Table 4.17 Commuting Patterns – Cotswold

	2011	2021
Live and Work in Borough/District	16,221	11,232
Home Workers or No Fixed Workplace	12,007	23,432
In Commute*	15,709	12,239
Out Commute*	13,820	9,430
Total Working in LA	43,937	46,903
Total Living in LA and Working Anywhere	42,048	44,094
Commuting Ratio	0.957	0.940

Source: Census 2011, 2021

4.121 The analysis below looks at both sets of Census data with a further sensitivity of a balanced (1:1) commuting ratio (i.e. the increase in the

number of people working in the area is equal to the number of people living in the area who are working).

Double jobbing and unemployment

4.122 The analysis also considers that a number of people may have more than one job (double jobbing). Data from the Annual Population Survey (available on the NOMIS website) for the past 5 years suggests that across Gloucestershire, typically about 3.8% of workers have a second job. It has therefore been assumed that around 3.8% of people will have more than one job moving forward – this means the number of jobs supported by the workforce will be around 3.8% higher than workforce growth. It has been assumed in the analysis that the level of double jobbing will remain constant over time.

4.123 The Gloucestershire-wide figure has been applied for Cotswold, as for smaller areas the data is less specific, and a full-time series of data is not available due to high error margins.

4.124 Finally, the analysis considers unemployment. Essentially, this is about whether there is any latent labour force that could return to employment to take up new jobs. The latest model-based unemployment data from the Annual Population Survey (for July 2024-June 2025) puts unemployment in Cotswold at around 2.4%, well below the national average of 4.1%. On the basis of this data, we consider it is unlikely that there is any significant latent labour supply. No further adjustment is therefore made to the data to take account of unemployment.

Jobs Supported

4.125 The tables below shows how many additional jobs might be supported by population growth under the different scenarios. Between 2025-43 it is estimated that between around 16,300 and 17,300 additional jobs could be supported by housing development of 844 dpa (80% of the standard method), and between around 21,500 and 22,900 with the delivery of the standard method in full (1,055 dpa), depending on the

assumptions made about commuting. Other scenarios for housing provision are considered in Table 4.17.

Table 4.18 Jobs supported calculation by demographic projections (2025-43) – Cotswold (1055 dpa – 100% of Standard Method)

Commuting ratio	Total change in the economically active	Allowance for double jobbing	Allowance for net commuting (jobs supported)
2021	20,726	21,544	22,900
2011	20,726	21,544	22,500
1:1	20,726	21,544	21,500

Source: Iceni analysis

Table 4.19 Jobs supported by demographic projections corresponding to different housing development levels (2025-43) – Cotswold

Commuting ratio	70% of SM (739 dpa)	80% of SM (844 dpa)	90% of SM (950 dpa)	100% of SM (1,055 dpa)
2021	14,500	17,300	20,100	22,900
2011	14,300	17,000	19,800	22,500
1:1	13,600	16,300	18,900	21,500

Source: Iceni analysis

Growth scenario employment

4.126 A growth scenario has been created which aligns to the growth in labour supply arising from housing provision in line with 80% of the Standard Method (i.e. 844 dpa). To do this, uplifts have been applied to baseline employment forecasts in specific sectors reflecting local economic strengths and prospects. Assumptions regarding the level of uplift to apply to each sector have been determined through consideration of:

- Extrapolation of past 10-year and 20-year trends in employment at the Cotswold level, as well as trends since 2015 suggested by BRES data;

- Extrapolation of 10-year employment growth trends (on a percentage basis) at the wider Gloucestershire, South West and England level;

- Findings from the stakeholder engagement and policy review regarding sectoral strengths and opportunities, largely undertaken by Iceni as part of the parallel Gloucestershire HENA evidence;

- Population-driven sectors which are likely to see high levels of growth compared to past trends given likely higher housing delivery; and

- Commercial market dynamics and market signals as considered in Section 3.

4.127 Agent consultation and market intelligence has indicated that the strongest prospects for growth (in employment land terms) are in industrial sectors. Stand-alone office development is unviable in Cotswold, and there has been very little office space completed in recent years with viability of new-build office development challenging. Recent strong performance in knowledge-based sectors appears to be more related to the strength of the small business sector and includes significant home-based/remote working. By contrast, parts of the District will become more attractiveness to industrial uses as a result of the completion of the A417/419 Missing Link highways scheme in 2027.

4.128 As a result, an uplift using population-job multipliers in population-related sectors has first been applied. Further uplifts have then been applied in traditionally industrial and knowledge-intensive sectors, but with greater levels of uplift for industrial-related sectors.

4.129 The growth scenario sees a change in employment across the District of approximately 16,400 between 2025-43, compared to 10,400 under the Experian baseline.

4.130 This scenario therefore aligns with the jobs supported by 80% of the Standard Method under a 1:1 commuting assumption. Using the 2011 or 2021 commuting ratios would further increase overall in-commuting levels, and so a 1:1 ratio is considered a more sustainable assumption reflecting the rural character of the District. This seeks to improve the balance between jobs and homes over time; rather than replicate past trends which are in part a reflection of under-supply of housing relative to growth in the District's economy.

4.131 The following table breaks down the baseline and growth scenarios by sector for the baseline and synthesis growth scenario at 80% of the Standard Method.

Table 4.20 Forecast employment growth, Experian Baseline and Synthesis Growth Scenario, 2025-43

Sector	Experian Baseline	Synthesis Growth Scenario
Agriculture, Forestry & Fishing	100	100
Food, Drink & Tobacco (manufacture of)	-120	320
Wood & Paper (manufacture of)	-120	240
Non-Metallic Products (manufacture of)	-120	0
Metal Products (manufacture of)	-10	60
Machinery & Equipment (manufacture of)	0	0
Computer & Electronic Products (manufacture of)	-120	0
Other Manufacturing	-20	260
Utilities	0	280
Construction of Buildings	210	670
Specialised Construction Activities	410	850
Wholesale	-230	410
Retail	160	470
Land Transport, Storage & Post	100	640
Accommodation & Food Services	1,450	1,950
Media Activities	0	0

Sector	Experian Baseline	Synthesis Growth Scenario
Computing & Information Services	510	890
Finance	-70	210
Insurance & Pensions	-130	170
Real Estate	600	880
Professional Services	1,590	1,890
Administrative & Supportive Services	1,490	1,750

Education	520	1,080
Health	610	820
Residential Care & Social Work	710	1,330
Recreation	280	620
Other Private Services	190	450
Total	**8,000**	**16,400**

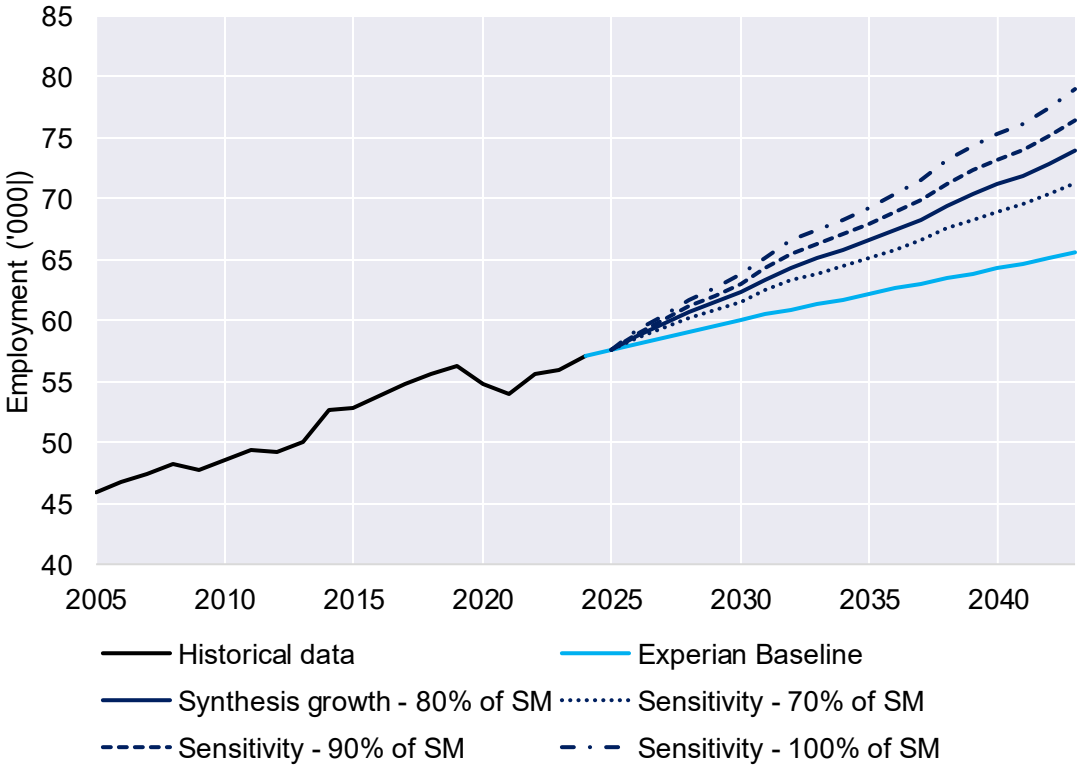
Source: Iceni/Experian

Note: Cells have been rounded, and so the total may differ from the sum of the rows

4.132 The synthesis growth scenario presented in the table above provides 16,400 jobs, which is aligned with the 16,300 jobs supported under housing development of 80% of the Standard Method using a 1:1 commuting ratio (as shown in Table 4.16). To reflect different potential housing development outcomes, employment scenarios have been created supporting around 13,600, 18,900 and 21,500 additional jobs, aligned with a 1:1 commuting scenario and housing development of 70%, 90% and 100% of the standard method respectively (with jobs supported results as shown in Table 4.17).

4.133 To create these sensitivity scenarios, the following process has been followed:

- Calculate the level of employment uplift by sector between the two scenarios shown in Table 4.18 (for example, there is an uplift of 620 – 280 = 340 jobs between 2025-43 in the Recreation sector).



- Calculate a scaling factor to these uplifts so that the total jobs growth will match the number required under a given scenario (e.g. 18,900 jobs for 90% of the Standard Method housing growth)

- Scale the employment uplift figures in each sector using the calculated scaling factor.

4.134 This scaling process means that baseline employment growth by sector in each scenario will equal to at least the level of growth forecast by Experian (and shown as the Experian baseline above), with only the uplift above this baseline scaled to reflect different growth expectations in different scenarios.

4.135 Total employment growth over time in each scenario is shown in the Figure below.

Figure 4.9 Employment scenarios - Cotswold

Source: Iceni analysis, Experian forecasts (2025)

Growth scenario labour demand

4.136 In line with the methodology used for the baseline labour demand land needs, these employment forecasts have been converted to FTE, and

then allocated into use classes with a discount applied for remote working and jobs with no fixed address. The methodology used in each case is consistent with the baseline modelling, with conversions and discounts applied sector by sector.

4.137 For the Synthesis Growth Scenario at 80% of the Standard Method, this results in an increase of around 12,300 FTE jobs after the working-from home adjustment, of which 4,800 are in B-class uses. The following table provides the corresponding results for different employment growth scenarios.

Table 4.21 Employment change for baseline forecast (Cotswold), 2025-43

	Total employment	Total FTE jobs	FTE jobs after WFH discount	FTE jobs in B-class uses
Sensitivity - 70% of SM	13,600	11,000	10,200	3,800
Growth scenario - 80% of SM	16,400	13,200	12,300	4,800
Sensitivity - 90% of SM	18,900	15,300	14,300	5,700
Sensitivity - 100% of SM	21,500	17,400	16,300	6,600

Source: Iceni analysis

4.138 The Table below then breaks the FTE jobs in B-class uses down into individual use categories. The differences in allocation of FTE growth into use types between the scenarios is the result of differences in sectoral composition caused by the scaling process outlined above. As the growth scenarios favour higher levels of growth in typically industrial rather than office based sectors, a higher proportion of FTE growth is assigned to B2 and B8 where housing development and so overall employment growth are higher.

Table 1.1 FTE increase for growth scenarios (Cotswold), 2025-43

	Office & R&D	Industrial (B2)	Warehousing & Distribution (B8)	Total in Employment Uses
70% of SM	2,800	600	400	3,800
80% of SM	3,200	1,000	600	4,800
90% of SM	3,500	1,400	800	5,700
100% of SM	3,800	1,800	1,000	6,600

Source: Iceni analysis

Note column values may not sum to total values due to intermediate rounding.

4.139 The next stage in the modelling is then to apply employment densities and floor-area ratios to estimate the net change in floorspace and land. Consistent assumptions have again been made with the baseline labour demand modelling (with the densities and ratios used shown in Table 4.4 earlier in this chapter). Results are shown in the table below.

Table 4.22 Floorspace need in sqm – growth scenario labour demand (without margin or replacement demand) – 2025-43

	Office & R&D	B2	B8	Total
Sensitivity - 70% of SM	44,300	23,400	32,900	100,600
Growth scenario - 80% of SM	49,700	38,800	47,300	135,800
Sensitivity - 90% of SM	54,800	53,000	60,700	168,400
Sensitivity - 100% of SM	60,000	67,700	74,500	202,200

Note column values may not sum to total values due to intermediate rounding.

Drawing the evidence together

4.141 The modelling in above has been conducted for a 2025 to 43. Employment floor space completions for the 2024/25 monitoring year are shown in the table below. These figures have been deducted from the modelled need from 2025-43 in order to provide a 2026-43 needs result aligned with Council's plan period.

Table 4.3 Employment floorspace completions (2024/25)

Use class	Net change (sqm)
E(g) – Office / R&D / Industrial Processes	293
B2 – General Industrial	-1,916
B8 – Storage & Distribution	-1,039
Total	**-2,662**

Source: Cotswold District Employment Land Monitoring Statistics Report

4.142 The tables below summarise the total employment floorspace and land needs between 2026-43 for each broad use using the various approaches and models discussed above. This includes a margin for flexibility in each case.

4.143 This shows a range of outcomes generated by applying different approaches, assumptions and models. Each method captures a different aspect of potential future demand. Presenting these results side-by-side allows the different estimates to be compared on a consistent basis and helps identify the extent to which the assessment is sensitive to the method and assumptions used.

4.144 Considering the different results, we can draw conclusions on what level of employment land provision is appropriate to plan for. This is considered in the following sections.

Table 4.4 Summary of employment floorspace need results 2026-43 (including margin and replacement demand)

Floorspace (Sqm)	Baseline labour demand	Growth scenario labour demand (80% of SM)	Growth scenario labour demand (100% of SM)	Gross completions	Net completions	Net absorption	Suppressed demand – 5% benchmark rate	Suppressed demand – 8% benchmark rate
Office & R&D	37,000	53,900	64,200	40,200	8,900	14,600	N/A	N/A
Industrial & Warehousing	86,900	184,700	240,800	236,600	180,900	153,400	43,700	56,000
Total*	**123,900**	**238,600**	**305,000**	**276,800**	**189,800**	**168,000**	N/A	N/A

Office & R&D	9.7	11.8
Industrial & Warehousing	38.7	53.0
Total*	**48.4**	**64.8**

Source: Iceni analysis – Experian/CoStar/Authority Monitoring Data

Industrial and warehousing

4.146 The baseline labour demand result showed a need for 21.7 ha of industrial employment land, driven by replacement demand and the margin. The net absorption and completions trends however point to a higher level of need of between 41.3 – 67.2 ha and would be preferrable as providing a trend-based position given the weak relationship between floorspace needs and jobs.

4.147 The substantial increase in housing development and population growth required by the revised Standard Method would be expected to

translate into increased need for industrial premises, particularly in construction, population-serving industrial uses, and in the supply chain of other local economic sectors. The upcoming completion of the duplication of the A417/A419 would also be expected to support demand for industrial space within Cotswold above historical trends.

4.148 As such, it is considered appropriate to plan for industrial land needs above the net trend-based positions (i.e. the net absorption and net completions). While the gross completions result is higher, it is noted that it includes a large amount of use of former buildings and space on agricultural properties for industrial purposes, and given that this is likely to continue there is not a need to account for dedicated employment land to account for this.

4.149 The suppressed demand results are substantially below all other results. Given the lack of strong evidence of consistent supressed demand in Cotswold over time, and the relative unsuitability of this model for an individual local authority, the supressed demand results do not provide a realistic reflection of likely future industrial land need.

4.150 The growth scenario labour demand results sit above the net trend-based positions, and therefore appears to provide the most appropriate result. **This would indicate an industrial land need of 46.2 ha if 80% of the Standard Method housing need is provided, increasing further to 53.0 ha and 60.2 ha if 90% and 100% respectively of the Standard Method housing need is met.**

4.151 It is not possible to provide separate need results for B2 and B8 as the replacement demand component of the calculation does not distinguish between these use classes. However, it is noted that the growth scenario labour demand results with margins for flexibility added to them indicate a split of around 40% - 45% of industrial need being for B2 and the remainder for B8.

Offices

4.152 In contrast with industrial results, the office labour demand results (7.4 ha under the baseline and 10.8-12.8 ha under the growth scenarios) are substantially above the net trend-based results, which fall within a narrow range (1.8 – 2.9 ha) and reflect the challenging viability of standalone office floorspace provision.

4.153 The latter scenarios are thus potentially more realistic in the District based on current market conditions. However, there are opportunities for development of R&D activities as well; and Iceni notes the recent submission of a planning application by the Royal Agricultural University for an Innovation Village (24/01143/OUT) which includes 27,000 sq.m of office and R&D space[5]. As of the time of writing (June 2026), Council's Planning Committee has resolved to permit this application.

4.154 Drawing the scenarios together, it would be advisable to plan for a minimum provision for office / R&D of 8.3 ha– based on the net absorption scenario (2.9 ha) plus provision for additional R&D growth associated with the University (i.e. the innovation village, equivalent to 5.4 ha at a plot ratio of 0.5).

4.155 At the higher end of the spectrum, there is a case for adopting the Growth Scenario to take account of some potential for viability to improve over the plan period and to see to balance jobs and homes. This would equate to 10.8 ha of land, or 53,900 sq.m of floorspace with housing delivery at 80% of the Standard Method, or 12.8 ha / 64,200 sqm with housing delivery at 100% of the Standard Method.

4.156 However given the challenges associated with standalone office development, where the Council is allocating sites for development, it should provide flexibility to accommodate broader employment uses within the E(g) use class, and B2/B8 development as appropriate

[5] This is equivalent to 5.4 ha of land at a 0.5 plot ratio

(recognising that not all sites will be suitable for B2/B8 use), to support deliverability (rather than making standalone allocations for office use).

5. Review of Existing Employment Allocations

1.1 In this section, we have sought to review existing employment allocations in the 2018 Local Plan and consider whether these should be retained in the forthcoming Local Plan. The sites considered are:

- Strategic Site South of Chesterton, Cirencester (Policy S2);
- Land north of Butlers Court, Lechdale (Policy S7);
- Land North of Bourton Industrial Estate, Bourton-on-the-Water (Policy S11);
- Battle Brook/ Extension to Campden Business Park (Policy S16);
- Fire Service College, Morton-in-Marsh (Policy S18); and
- Land north of B4632, East of Willersey (WILE3C).

5.28 This section considers the progress made on these sites, together with their suitability and deliverability. The policy references above relate to those in the 2011-31 Local Plan, which was adopted in 2018 ('the 2018 Local Plan').

Strategic Site: South of Chesterton, Cirencester

5.29 The adopted 2018 Cotswold Local Plan allocated this strategic site for sustainable, mixed-use development including up to 2,350 dwellings (net) and approximately 9.1 ha of B1, B2 and B8 employment land on the south-western edge of Cirencester. The allocation requires the development to be brought forward on a comprehensive, masterplan-led basis – ensuring the timely delivery of housing and employment land across the plan period. The Plan expected this site to deliver a

significant part of the District's employment land requirement over the plan period to 2031 and to accommodate a broad range of employment uses..

5.30 Outline consent was granted for the development of the site in April 2019 (16/00054/OUT) which includes provision of 9.1 ha of employment land (B1, B2, B8) in line with Policy S2.. This included provision (indicatively) for 30,658 sq.m of B1 / E(g) floorspace and 13,006 sq.m of B2 and B8 floorspace.

5.31 The illustrative masterplan supporting the planning application sets out three areas of employment development:

- to the eastern side of Wilkinson Road/ Spratsgate Lane;
- to the south-west of the new roundabout on Spratsgate Lane; and
- to south of A429 Tetbury Road (adjoining the existing Cirencester Office Park).

5.32 Employment land to the east of Wilkinson Road/ Spratsgate Lane falls within Main Phase 1 of the development; with the land to the SW of the now delivered roundabout on Spratsgate Lane falling in Main Phase 2; and that South of Tetbury Road in Main Phase 3. The land is controlled by Bathhurst Developments, who are acting as a master developer in coordinating the overall delivery of the site, its component land uses and infrastructure provision.

5.33 The first two elements of employment development, either side of Spratsgate Lane, are accessed from it. A new roundabout on Spratsgate Lane/ Wilkinson Road has now been delivered opening land up for development; together with a spine road to serve the Phase 1 residential development.

5.34 In respect of land East of Spratsgate Lane, the Council granted consent for revised access arrangements in September 2022 (22/01649/NONMAT). However a subsequent Reserved Matters application for B2/B8 development (22/02749/REM), totalling 2.9 ha,

was refused by the Council and the application was dismissed on appeal[6] in September 2025, with the Inspector concluding that proposed scheme would have an unacceptable impact on the living conditions of neighbouring residential properties and did not provide satisfactory landscaping along the western side boundary. Iceni note that the Inspector adopted a precautionary approach and sought to consider the worst case scenario in respect of noise impacts. She concluded that the hours of operation should be restricted to 0700 to 2300.

5.35 The effect of the interpretation of the noise condition within the outline scheme through the appeal decision, and the approach adopted therein, means that the outline consent which envisages B2/B8 development on this part of the site is effectively not implementable. We understand from engagement with Bathhurst Estate that its development partner, Carbide Properties, has withdrawn from the scheme and can no longer proceed with pre-lets . The Estate is now considering potential development options, such as how it can potentially sell individual plots of this part of the site to developers or owner occupiers, given the restrictive nature of industrial activities which can be accommodated. This is likely to slow the delivery of employment land in this location.

5.36 The second commercial element of the scheme, to the south-west of the Spratsgate Lane roundabout, is currently traversed by the construction access supporting the delivery of the Phase 2 residential development (Phases 2a/b/c). This appears therefore unlikely to be available for employment development until c. 2032 when these residential phases will be substantially progressed. This is envisaged to principally comprise light industrial development; but does benefit from greater separation from residential uses and therefore could feasibly accommodate wider industrial uses as well.

[6] Appeal ref APP/F1610/W/25/3359082

5.37 The third element of the scheme is located close to Tetbury Road, adjoining the existing Cirencester Office Park. We understand that there are significant highways works which are required to support the delivery of the northern part of the Steadings scheme – including the delivery of two new roundabouts on the A433 Tetbury Road and dualling part of this road. Based on engagement with Bathhurst Estate, we understand that the prospective delivery timescales for these highways works necessary to facilitate the employment development here are envisaged to be delivered around the mid 2030s.

5.38 This element of the scheme was envisaged in the masterplan to be focused on E(g) development and adjoins residential development. Based on current values, standalone office development is unlikely to be viable and whilst there may be some potential for this to improve over time, it is more likely that this element of the scheme will include a broader range of E(g) uses – including light industrial and R&D. It benefits from proximity to the Royal Agricultural University.

5.39 Cirencester is the largest town in the District and relates well to the A417 which sits on the Strategic Road Network. Cirencester can be expected to be a focus for residential growth through the new Local Plan which will support demand for employment development and workforce availability.

5.40 Overall, the evidence points to the likelihood that employment development on the site will progress, but is likely to do so more slowly than previously envisaged. It will nonetheless support delivery over the plan period.

Land north of Butler's Court, Lechlade-on-Thames

5.41 The 2018 Local Plan allocated this site (1.25 ha) for B1/E(g) employment development (LEC_E1), extending the settlement boundary to include it. Employment development is also supported by

the Lechlade Neighbourhood Plan 2016. It sits on the western side of Lechlade. The land comprises the disused Butler's Court Farm buildings and associate hardstanding and is currently accessed via a farm track which connects the site to The Wern and the A417.

5.42 In January 2024, an outline application (23/02916/OUT) for 54 residential dwellings, 70-bed care home and E(g) employment uses (1,500 sq.m) was refused for a number of reasons including the site falling outside of the Lechlade Development Boundary and it would result in the loss of a major part of the allocated employment site.

5.43 The site has not been actively promoted or marketed for employment in recent years; and is continuing to be promoted as part of a wider development (Land West of Lechdale) for residential development. It is not necessarily therefore available for employment development.

5.44 Iceni consider that this is not a commercially attractive location for employment development, having regard to the size of the settlement and accessibility of the settlement and the site; together with the site's limited scale. Whilst the site has previously had planning consent historically, there has been no progress in bringing it forward for employment development. **We therefore do not recommend that the extant allocation is rolled forwards.**

Land North of Bourton Industrial Estate/ Business Park

5.45 The 2018 Local Plan allocates this site (3.38 ha) for employment development (BOW_E1). It provides a northwards extension to the existing Bourton Industrial Estate.

5.46 Outline consent was granted in 2018 (15/03318/OUT) for the extension of Bourton Industrial Park to provide B1/B2/B8 employment units. The application site is 5.6ha, encompassing the allocated site and extending beyond to the east. A reserved matters application (18/04764/REM)

was permitted in June 2019 addressing site layout, design, landscape and ecology.

5.47 The site has been part built out (c.0.7ha), providing two terraces of industrial units occupied by a number of trade counters including Howdens, City Plumbing, Screwfix, The Bathroom Showroom and Cotswold Home Improvements Supercentre.

5.48 There is a pending application (25/03800/FUL), on the 1.4ha parcel in the south of the site fronting the A429, for the erection of an Aldi food store, a Costa drive-thru, associated car parking and other associated works. Linked to this application, a further reserved matters application (25/03770/REM) was permitted in January 2026, removing the proposed food store and drive thru site from the plan and reconfiguring the layout.

5.49 It is recommended that the allocation boundary is extended to the east to reflect the permitted site area. **We recommend that this remaining land (4.9 ha) is retained for E(g) and B-class employment uses.** In the event that the proposed food-store and drive thru is permitted, this should be removed from the allocation boundary. This will reduce residual capacity to 3.5ha.

Battle Brook/ Extension to Campden Business Park

5.50 The 2018 Local Plan allocates this site (0.67 ha) as an extension to the Campden Business Park. It is identified as suitable for B1, B2 and/or B8 uses.

5.51 The site is part complete – the south of the site has been built out, containing four business units across two buildings. The remainder of the site had an outline permission (21/03116/OUT) for E(g)/B2/B8 development. This was followed by a reserved matters application (23/03625/REM) for a B8 commercial storage scheme (1,404 sq.m), which was permitted in March 2024 but has not been implemented.

5.52 Following this there has been a further reserved matters application (25/02476/REM) for a B8 storage facility (442 sq.m) and a respite office building (143 sq.m) ancillary to the storage facility. The application was permitted in December 2025 and it is assumed it will provide a purpose-built facility for the applicant – BKS Assets.

5.53 The allocation of the remaining land (0.65 ha) should be retained to support the delivery of the proposed development.

Fire Service College, Moreton-in-Marsh

5.54 The 2018 Local Plan allocates 7ha of land on the south-western side of the Fire Service College site for B1/ E(g) employment development (MOR_E6). The supporting text identified the potential to provide a high quality business park to meet the requirements of Moreton and support the FSC, and its proximity to the established and successful Cotswold Business Village. However, no planning applications or development have since been brought forward on the allocated site.

5.55 The Fire Service College site is located on flat land on the eastern side of the Town and was formerly an RAF Airfield. The College is one of the District's largest employers and is a key location nationally for emergency services training, with conferencing, accommodation and leisure facilities on-site as well as specialist facilities related to the use. The A44 runs along the southern side of the site. The College was sold by Government to Capita in 2013.

5.56 Proposals for the site have continued to evolve, and in discussion with Capita we understand its current proposals for the southern part of the site (including the land included within the extant employment allocation) are for residential-led development together and hotel and convenience retail around the site entrance/access. The core campus buildings would be retained as well as an incident ground, but of a

reduced scale – with the potential lease of land at the southern end of the site supporting reinvestment in the retained College facilities.

5.57 Capita have indicated constraints to some forms of employment development on the site including power supply capacity in the area – limiting the potential for more energy-intensive uses such as data centres – as well as site conditions/ land contamination issues. Weak accessibility to the Strategic Road Network influenced potential values and the form of employment development which could be supported. They report that market interest in industrial development has been limited.

5.58 The site is not however controlled by a commercial developer and there is limited evidence of any active marketing for employment uses. The Cotswold Business Village on the opposite side of the A44 supports a range of employment uses, is well occupied and performs well overall. There is no other employment land available in the settlement which could support business growth. In a local context, the site is well located – adjoining and with potential for direct access to the A44. Furthermore, employment development is a form of development which can comfortably co-exist alongside the potential noise and visual disturbance impacts associated with the use of the incident ground.

5.59 Iceni recommend that around 7ha of land on this site is retained for employment use as part of wider mixed-use development or an alternative employment allocation is made in Moreton-in-Marsh as part of the wider masterplan. Policy should allow a wider range of uses than extant allocation, including E(g)/B2/B8.

Land north of B4632 & east of Willersey Industrial Estate

5.60 The 2018 Local Plan allocates this site for mixed-use development including 1.97 ha of land for employment development (B1, B2 and/or B8).

5.61 The employment component of the site in the west has planning permission (22/03534/FUL) for employment development comprising of new production office, workshop and service buildings. This site will form an extension for existing occupier Auto Sleepers. The residential component in the east has a pending application (25/02687/FUL) for 60 dwellings.

5.62 Given access can be provided through the existing industrial estate, it is assumed that this site will come forward in the short-term, contingent on Auto Sleepers expansion timescales. **The employment allocation (2.0 ha rounded) should be retained to support the delivery of the proposed development.**

6. Employment Land Supply

6.1 This section summarises the employment land supply position in Cotswold District as of April 2026, including commitments and the assumed supply from extant allocations reflecting the recommendations within the previous section.

Existing Allocations

6.2 The table below summarises the status of the extant employment allocations, excluding those that are recommended for release within the previous section.

6.3 The allocation at Moreton-in-Marsh has not been included at this stage given uncertainty around the quantum of employment land being retained within the Moreton-in-Marsh masterplan. Overall, there is a total supply of 16.7ha remaining.

Table 6.3 Summary of Extant Allocations

Site	Settlement	Remaining Supply (Ha)	Notes
The Steadings	Cirencester	9.2	Retain allocation
Land North of Butler's Court	Lechdale-on-Thames	0	Release allocation
Land North of Bourton Industrial Estate (BOW_E1)	Bourton-on-the-Water	4.9	Extend allocation boundary to reflect application boundary
Battle Brook (CCNE1)	Chipping Campden	0.65	Retain residual allocation
Fire Services College (MORE6)	Moreton-in-Marsh	0	Not included
Land North of B4632 and east of employment estate (WILEC3)	Willersey	1.97	Retain allocation
Total		**16.7**	

Source: Iceni analysis

Extant Commitments

6.4 The table below shows that latest employment monitoring data for 2025/26.

Table 6.4 Employment Land Monitoring 2025/26

Type	Net land gained / lost (ha) (2016-2025)	Net committed land (ha) at 01-Apr-26	Net remaining allocated land (ha) at 1 April 2026	Total	Requirement (ha)	Shortfall?
E(g)	9.16	19.98	8.25	37.39	16.60	No
B2	2.07	8.89	0	10.96	-2.10	No
B8	17.89	11.82	0	29.71	9.90	No
Total	**29.12**	**40.69**	**8.25**	**78.06**	**24.40**	No

Source: Cotswold Annual Monitoring Report 2025/26

6.5 The net committed land total includes extant allocations with planning permissions. Within this report these have already been accounted for above and therefore these are excluded from the committed supply[7].

6.6 In addition, 11.85ha of the committed supply is attributed to The Triangle Site at the Royal Agricultural University. This permission dates back to an original application[8] granted in 2013 and was renewed in 2018[9]. Since then, a further application has been submitted for a new scheme (discussed in detail below). As such this commitment is excluded from the committed supply and considered separately below.

6.7 Adjusting the extant commitments in light of the above results in a total **committed employment supply of 13.7ha**

6.8 Larger committed sites over 1ha include:

- Land between A419 and A417 Kingshill Road (13/02942/OUT). The mixed use site, permitted in April 2014, has permission for **5,000 sq.m of B1 use** (now E(g)) and up to 100 dwellings. The residential component of the site has been built out in full. The commercial phase (**1.64ha**) remains not started. The masterplan shows that the commercial element is located in the west of the site, where the overhead power lines run. This site is unlikely to be suitable for residential uses, has an implemented consent and we consider should be retained.

- Former Composting Site, Welsh Way, Poulton (24/00260/FUL) – change of use of former mushroom composting facility to provide Blass B2 vehicle workshop (1.64ha).

Pending Applications

6.9 There is a pending application at the Royal Agricultural University (24/01143/OUT) located between to A419 and the A429. The outline application proposes a mixed use development including 27,000 sq.m

[7] 15.12ha under their adopted Local Plan status and size (40.69-15.12 = 25.57ha)

[8] 10/00964/OUT

[9] 18/01104/FUL

of office and R&D space, which using a 0.5 plot ratio is equivalent to 5.4 ha of land. The development will form part of the wider university masterplan, supporting research and innovation in food production, climate change and land management.

6.10 As of June 2026, the Cotswold Planning Committee has resolved to grant this application subject to legal agreement, so it has been included in the supply position.

Supply Summary

6.11 The table below summarises the supply position, indicating a total supply of 42.8ha.

Table 6.5 Supply Summary (Ha)

	Land (Ha)
Allocations	16.7
Extant Commitments	13.7
Pending Applications - RUA	5.4
Total Supply	**35.8**

Source: Iceni analysis

7. Bringing the Evidence Together

7.1 In this section we seek to bring the evidence together to address the supply-demand balance for employment land and consider how policies for employment land provision should be drafted.

Gross Need

7.2 This report has triangulated different modelling approaches to consider future employment land needs.

7.3 Trend-based scenarios (i.e. net completions and net absoprtions) imply a need for between 41 - 47 ha of employment land over the plan period to 2043. However, there are clear factors which can be expected to support an increased need for employment space over the plan period.

7.4 These factors include the potential for the completion of the A417/A419 Missing Link scheme to support the attractiveness of the District (and particularly Cirencester) by improving connectivity to the M5; and the potential for a substantial increase in housing delivery which can both address historic labour supply constraints and help facilitate additional economic growth, including in the construction sector and the supply chain. The scale of impact is modelled taking account of potential scenarios for the scale of housing growth.

7.5 The modelling undertaken indicates that housing provision at 80% of the Standard Method would support a need for 54 ha of employment land (rounded) over the plan period to 2043. This would increase to around 69 ha if 100% of the Standard Method housing need is delivered. This is set out in the table below.

Table 7.3 Recommended Employment Land Provision (Land in ha)

Housing provision	80% of SM	100% of SM
Office & R&D	8.3	8.3
Industrial & Warehousing	46.2	60.2
Total*	**54.5**	**68.5**

7.6 This is an uplift on the net trend-based scenarios but these scenarios reflect essentially a doubling of the rate of housing provision. Iceni conclude that this is an appropriate level of employment land provision to plan for to align the strategies for homes and jobs within the local plan; and is the core scenario taken forward in drawing conclusions.

Current Supply Position and Residual Need

7.7 Drawing on the analysis in Section 4, we can consider the existing supply position against this. The evidence on existing supply of 35.8ha ha (drawn from Table 6.5), leaving aside at this stage the pending application at the Royal Agricultural University. This principally comprises the following sites:

- Steadings Strategic Site, Cirencester: 9.2 ha
- North of Bourton Industrial Estate: 4.9 ha
- Battle Brook, Chipping Campden: 0.65 ha
- East of Willersey Industrial Estate: 1.97 ha
- Kingshill Road, Cirencester – 1.64ha
- Former Composting Site Poulton – 1.64ha

7.8 We recommend that the local plan supports the above employment allocations, and allocates Kingshill Road, Cirencester for employment development to ensure delivery.

7.9 The supply demand balance is shown in the table below and indicates a need to allocate a further 18.7 – 32.7 ha of employment land provision (on top of the allocations listed above) to align housing and employment in the emerging Local Plan.

Table 7.4 Supply-Demand Balance (land in ha)

	80% of SM	100% of SM
Employment Land Need, 2026-43 (A)	54.5	68.5
Extant Commitments (B)	13.7	
Extant Allocations to be retained (C)	16.7	
Pending Application – RAU (D)	5.4	
Residual to Allocate (E = A – B – C – D)	**18.7**	**32.7**

Spatial Considerations

7.10 Key considerations in assessing appropriate locations for further employment allocations include the District's geography, the relative commercial attractiveness of different locations, the alignment of the strategies for homes and jobs and the viability of different forms of employment development.

7.11 The Council's Settlement Role and Function Study (Nov 2025) describes the economic role and function of different settlements in the District. It sets out that Cirencester is by far the most important settlement for employment, with the largest working population and employment base by some margin. It is located on the A417/A419 Corridor and is the most commercial attractive location for new employment development in the District.

7.12 Cirencester's location on the Strategic Road Network provides potential to attract larger mid box industrial development. It has a greater critical mass of population currently, by some margin, than other settlements in the District; and is expected to see significant residential growth moving

forwards. To support the delivery of employment development and to reflect these issues, we consider that Cirencester should be a focus for further employment allocations.

7.13 In particular we consider that there is a need to bring forward additional allocations which are capable of supporting industrial development – including in the B2 and B8 use classes – where the supply of land is in particular restricted. Suitable sites for allocation would be located on the eastern side of the settlement along the A417 and A419 Corridors, including the A419 Cirencester Road. We recommend provision of around 20 ha of employment land at this broad location.

7.14 In addition, it would be appropriate to make modest provision for employment land as part of further major urban extensions at Cirencester.

7.15 Tetbury is the second largest employment hub in the District, but only has a quarter of the jobs of Cirencester. It contains a number of existing employment sites; with some potential for renewal and intensification of these. However, it is locationally not as attractive as Cirencester with employment demand modest, driven by local SME businesses.

7.16 The third and fourth largest settlements are Moreton-in-Marsh and Fairford which are similar in size. Moreton-in-Marsh has an employment density close to 100% with potential for development at the Fire Service College site. Fairford on the other hand is anticipated to see substantial residential growth, and it would be appropriate to include further employment land provision aligned to this. We recommend provision of around 4 ha of employment land is provided as part of mixed-use urban extensions where the residential development can help to support infrastructure delivery.

Assessment of Potential Employment Sites

7.17 A number of SHLAA sites suitable for employment use have been assessed for their suitability and deliverability for employment use in a

separate appendix. A number of sites were rated 'green' within the overall assessment and should be considered for further assessment to meet the identified employment need as set out above. The green rated sites are as follows:

- C164A – East of Kingshill
- C190 – South East of Tetbury Road
- R650 – Land to the North of Cirencester Road
- R644 – Land at Fosse Farm
- M31 – Land North of Todenham Road
- M78 – Land West of Roman Road
- M89 - What about site M89 Land to south of Moreton- in- Marsh Sewage Treatment Works. Does not look as if it has been assessed. Proposed as an allocation.

Employment Land Policies

7.18 The policies in the existing Local Plan provide useful starting point for considering wider policies for employment development.

Established Employment Areas

7.19 Policy EC2 sets out that within established employment areas, B-class employment development (including intensification of sites) will be permitted. It indicates that such sites will be retained for B-class employment, unless there is no realistic prospect of the site being used for that purpose.

7.20 The Established Employment Sites Review 2025 carried out a full review of the district's established employment areas and Iceni has reviewed the findings within this. A majority of sites were recommended for the continued protection for employment use, however there was

one site recommended for release – Old Brewery, Northleach (EES36). Whilst the site is currently occupied by a single occupier, in the event that the site becomes vacant, the site would be suitable for residential redevelopment due to neighbouring residential uses.

7.21 A number of boundary amendments to the existing employment site boundaries were recommended as follows:

- Babdown Airfield (EES41) – Boundary should be extended to include recent development / consents
- Draycott Business Village (EES11) – Boundary should be amended to reflect the geography of the site on the ground
- Cirencester Office Park (EES16) – Amend boundary to include curtilage parking provision
- TT Electronics Fairford (EES29) – Remove Quest House from site boundary due to residential use
- Seyfried (Bird Industrial Estate) (EES8) – Amend boundary to remove land to the northeast
- Fosse Cross (EES23) – Tighten boundary to include existing developed area only
- Old Brewery Northleach (EES36) – Release as protected employment site

Small Scale Employment Development in the Rural Area

7.22 Rural areas provide an important contribution to the District's overall economic performance, and it will be important that the emerging Local Plan continues to support the growth and development of rural enterprises.

7.23 Policy EC3 in the 2018 Local Plan sets out that outside development boundaries and established employment areas, small scale employment development appropriate to the rural area will be supported where:

a. do not entail residential use as anything other than ancillary to the business; and

b. are justified by a business case, demonstrating that the business is viable; or

c. facilitate the retention or growth of a local employment opportunity.

7.24 We consider that a policy framework which supports the expansion of existing businesses on their existing or adjoining sites, or which facilitates growth of or investment from businesses which evidently need to be in a rural location to be appropriate. Such as policy responds appropriately to the small-business nature of the local economy and the district's rural geography.

Use Class Flexibility

7.25 Employment activities often space different planning use classes; whilst flexibility regarding the range of uses acceptable on employment sites help support their delivery by being able to accommodate a range of different business needs. We therefore recommend that employment allocations generally should support E(g), B2 and B8 uses.

7.26 Land should only be restricted to an E(g) use where this is required to avoid 'bad neighbour' effects such as to limit disturbance to adjoining residential uses, or residential uses on access roads/ routes to a site mean that the site would be unsuitable for HGVs.

Delivery of Office Floorspace

7.27 In the context of viability challenges which are expected to inhibit the delivery of standalone office floorspace, it is appropriate to consider how the policy framework within the Plan can support office floorspace development.

7.28 Iceni consider that there is potential for conversions of buildings from other uses to viably support the delivery of new office floorspace, with potential for instance for conversions of barns and other agricultural

buildings in the rural area; as well as retail floorspace in town centre locations across the District. In town centres this is realistic in particular for buildings which offer the potential to create open plan floorplates. Policies within the plan should be drafted to support this, recognising that this is a key means of supporting the delivery of office space.

A1 – A3 Site Assessment

Provided under separate cover

A4. Population modelling

A4.1 The modelling is essentially split into two components: a population projection, which is then converted into estimates of household growth based on household representative rates (HRRs) – essentially the chance of a person in a particular age/sex group being considered as the 'head of household'.

A4.2 When looking at household growth, data about the communal population and household formation are taken from the 2021 Census. This data is broadly the same as that used in the 2022-based subnational household projections (SNHP), with the Census source used to enable a consistent analysis when examining older data releases (from previous Censuses in 2001 and 2011). It is also assumed that around 3% of new stock will be vacant at any time (to allow for movement within the stock).

A4.3 Following these steps leads to a base demographic model, which can then be flexed to see how the population and households might change with housing delivery in line with the Standard Method.

A4.4 Within the modelling, migration assumptions have been changed so that across each local authority, the increase in households matches the housing need (including a standard 3% vacancy allowance). Adjustments are made to both in- and out-migration (e.g. if in-migration is increased by 1%, then out-migration is reduced by 1%).c

A4.5 The general assumption in this report is that additional housing delivery linked to the Standard Method will be driven (at least in part) by in-migration, and this does seem to be the main expectation of Planning

Practice Guidance[10] (see discussion below). Paragraph 006 (Reference ID: 2a-006-20241212) states:

> *'Why is an affordability adjustment applied?*
>
> *An affordability adjustment is applied, as housing stock on its own is insufficient as an indicator of future housing need because:*
>
> *housing stock represents existing patterns of housing and means that all areas contribute to meeting housing needs. The affordability adjustment directs more homes to where they are most needed people may want to live in an area in which they do not reside currently, for example to be near to work, but be unable to find appropriate accommodation that they can afford.*
>
> *The affordability adjustment is applied in order to ensure that the standard method for assessing local housing need responds to price signals and is consistent with the policy objective of significantly boosting the supply of homes. The specific adjustment in this guidance is set at a level to ensure that minimum annual housing need starts to address the affordability of homes.'*

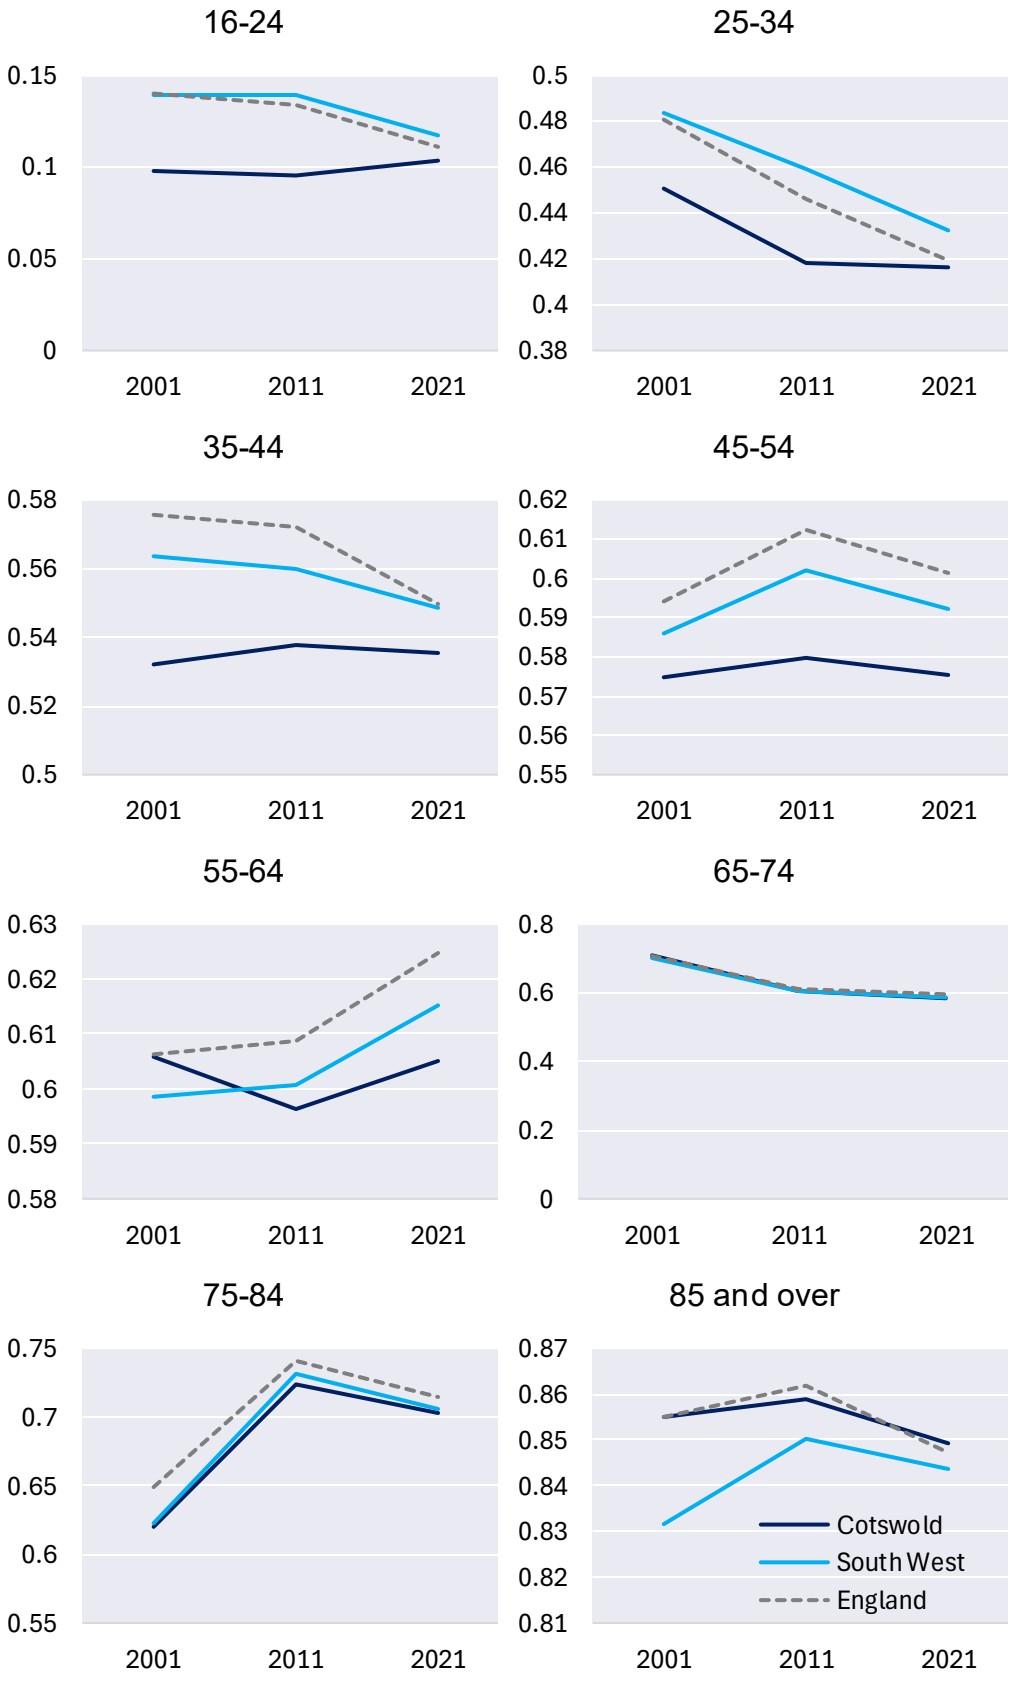
A4.6 The previous PPG also stated that an affordability uplift is required because '*household formation is constrained to the supply of available properties – new households cannot form if there is nowhere for them to live'*.

A4.7 Essentially, the Government considers that by providing more homes, there is the opportunity for increased migration to an area to fill the homes, whilst equally, one of the Government's core objectives in

[10] https://www.gov.uk/guidance/housing-and-economic-development-needs-assessments

planning for the delivery of 370,000 homes a year nationally is to improve affordability. Increased housing provision should create opportunities for additional household formation.

A4.8 The modelling therefore considers the possibility of additional housing delivery, allowing the opportunity for additional households to form. The figure below shows a summary analysis of changes in HRRs by age for the last three Census points (2001, 2011, and 2021).



A4.9 Arguably, the key groups to look at are younger age groups where there may have been a degree of suppression in household formation (due to affordability), and this does appear to be the case in Cotswold particularly for those aged 25-34 – although to a lesser degree than seen regionally and nationally.

A4.10 Continuing this trend in the projection would therefore potentially build in further suppression and would not be a positive reaction to the Standard Method seeking to improve affordability.

A4.11 For some older age groups, there does also appear to be a trend of increasing or decreasing HRRs – particularly the 65-74 and 75-84 age groups (and mainly in the 2001-11 period).

A4.12 For these age groups, it is considered that the ‘trends’ are more likely to be due to cohort effects rather than any trend that should be modelled moving forward.

Figure A1: Change in household representative rates by age 2001-21

Source: ONS

A4.13 Given this analysis, the modelling therefore considers the possibility of housing delivery, allowing the opportunity for additional households to form.

A4.14 It has been modelled that HRRs for 25-34 year olds could return to the levels seen in 2001 (and shown on the figure above), with the HRRs for other age groups being held at the levels observed in 2021. The increase in HRRs is projected to start from 2024 (the start of the projection period).

A4.15 In developing this projection, the population is projected to increase by around 36,800 people over the 2025-43 period (a 39.2% increase) if the Standard Method is fully met, or around 27,800 (a 30.2% increase) at 80% of the Standard Method.

Table A1: Projected population change 2025 to 2043 by broad age bands – Cotswold – 80% of Standard Method

	2025	2043	Change in population	% change
Under 16	14,266	16,812	2,546	17.8%
16 – 64	52,051	66,166	14,115	27.1%
65 +	25,785	36,926	11,141	43.2%
Total	92,101	119,904	27,802	30.2%

Source: Iceni analysis

Table A2*:* Projected population change 2025 to 2043 by broad age bands – Cotswold – 100% of Standard Method

	2025	2043	Change in population	% change
Under 16	14,489	18,945	4,456	30.8%
16 – 64	53,401	73,146	19,744	37.0%
65 +	25,993	38,550	12,556	48.3%
Total	93,883	130,640	36,757	39.2%

Source: Iceni analysis

A3.16 When looking at age structure changes, the increase is projected to be largest in either case in the 16-64 age group. Migrants are likely to fall within this age group, so it shows the greatest difference between the two modelling housing outcomes. However, the greatest proportionate change is projected in the 65 and over age group.

Growth in Resident Labour Supply

A4.16 The approach taken in this report is to derive a series of age and sex specific economic activity rates (EARs) and use these to estimate how many people in the population will be economically active as projections develop.

A4.17 This is a fairly typical approach with data being drawn in this instance aligned to the Office for Budget Responsibility's (OBR's) March 2025 Economic and Fiscal Outlook. The OBR data shows changes in economic participation by age over time. The incremental changes forecast have been applied to the 2021 Census data on economic participation (by age) for Cotswold to forecast future changes for the District.

A4.18 The OBR forecasting approach uses a cohort-based model to provide an initial baseline for how population participation rates could evolve over time considering data on historical changes to economic participation for men and women from the ONS Labour Force Survey. It additionally takes account of changes in State Pension Age which may result in the timings of workforce exits as people leave the labour force changing relative to historical behaviour; but models that the impacts of this will be greater for those cohorts which are further from retirement as the changes are implemented.

A4.19 The result is a forecast for the participation rate which sits midway between assuming no state pension age changes; and a full impact of state pension age changes on participation. OBR then applies a number of sense checks in drawing conclusions including considering

trends in inactivity (including long-term sickness), which mean for instance that its implied changes to participation rates for those aged 50-64 remain below its pre-pandemic forecasts. The figures also forecast higher numbers of women in the workforce linked to falling birth rates and policy measures to support childcare provision.

A4.20 The table below shows the assumptions made for Cotswold. The analysis shows that the main changes to economic activity rates are projected to be in the 60-69 age groups – this will, to a considerable degree, be linked to changes to pensionable age, as well as general trends in the number of older people working for longer (which in itself is linked to general reductions in pension provision).

Table A3*:* Projected changes to economic activity rates – Cotswold

	2025	2043	Change
16-19	39.9%	39.5%	-0.4%
20-24	76.1%	75.0%	-1.1%
25-29	88.2%	87.0%	-1.2%
30-34	91.1%	89.2%	-1.9%
35-39	87.3%	86.3%	-1.0%
40-44	88.5%	89.1%	0.6%
45-49	90.5%	91.1%	0.6%
50-54	87.0%	89.7%	2.6%
55-59	79.9%	83.5%	3.6%
60-64	67.1%	72.6%	5.5%
65-69	38.8%	50.3%	11.6%
70-74	16.0%	22.5%	6.5%
75+	5.8%	6.6%	0.8%

Source: Based on OBR and Census (2021) data

A3.22 Working through an analysis of age and sex specific economic activity rates, it is possible to estimate the overall change in the number of economically active people in the area – this is set out in the table below and shows the increase in the economically active population is

projected to be around 15,700 (a 34% increase) at housing provision of 80% of the Standard Method, increasing to around 20,700 (a 44% increase) at 100% of the Standard Method.

Table A4*:* Estimated change to the economically active population – Cotswold

	Economically active (2025)	Economically active (2043)	Total change in economically active	% Change
80% of Standard Method	45,757	61,415	15,658	34.2%
100% of Standard Method	46,881	67,606	20,726	44.2%

Appendices

A1. Introduction

A2. Site Assessment – Existing Allocations

A3. Site Assessment – Call for Sites

A1. Introduction

1.2 This appendix contains the assessments of the existing allocations, supporting the recommendations made in the main report to retain or release, followed by an assessment of potential employment sites for their suitability, market attractiveness and deliverability.

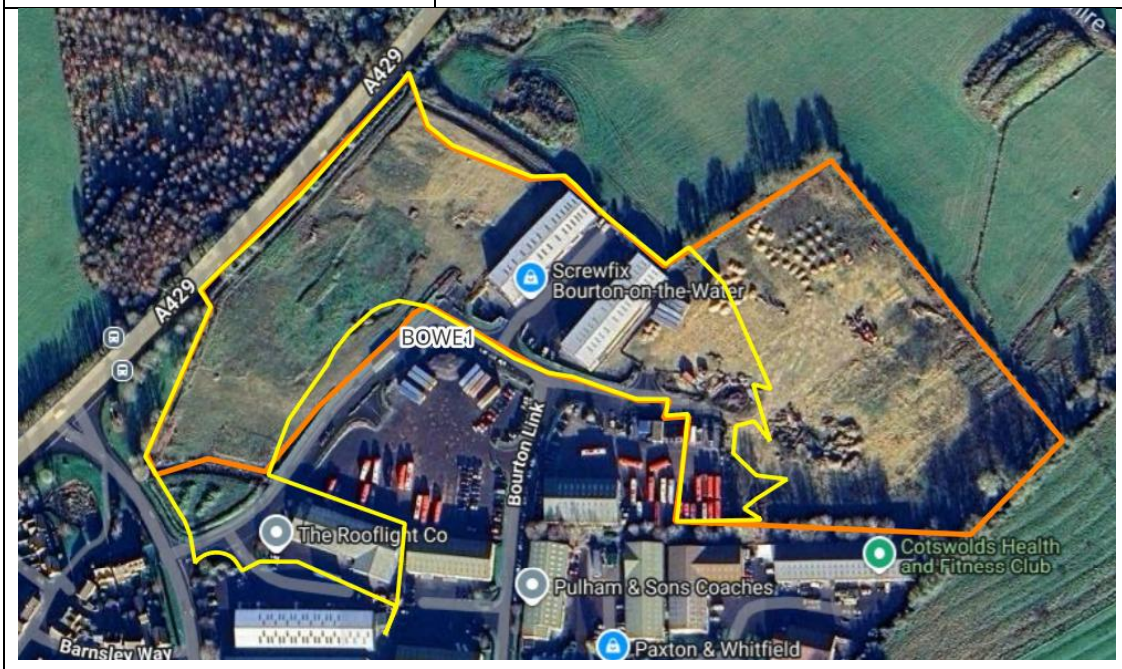
1.3 The assessment of these sites informs the recommendations made within the Employment Land Review on which sites should be allocated for employment use.

1.4 The methodology involves the assessment of a number of key considerations:

- Strategic Road Access
- Local Access
- Public Transport Accessibility
- Labour Access
- Spatial Strategy Considerations
- Physical Constraints – environmental constraints, flood risk, topography, heritage assets, infrastructure on-site
- Current Policy and Planning Position
- Local Demand Factors
- Surrounding Uses
- Potential Employment Uses
- Landownership and Control
- Infrastructure Requirements
- Deliverability and Timescales

1.5 This is brought together in an overall assessment of the site for its suitability, delivery and market attractiveness for employment development and attributed a red, amber or green rating.

A2. Site Assessment – Existing Allocations

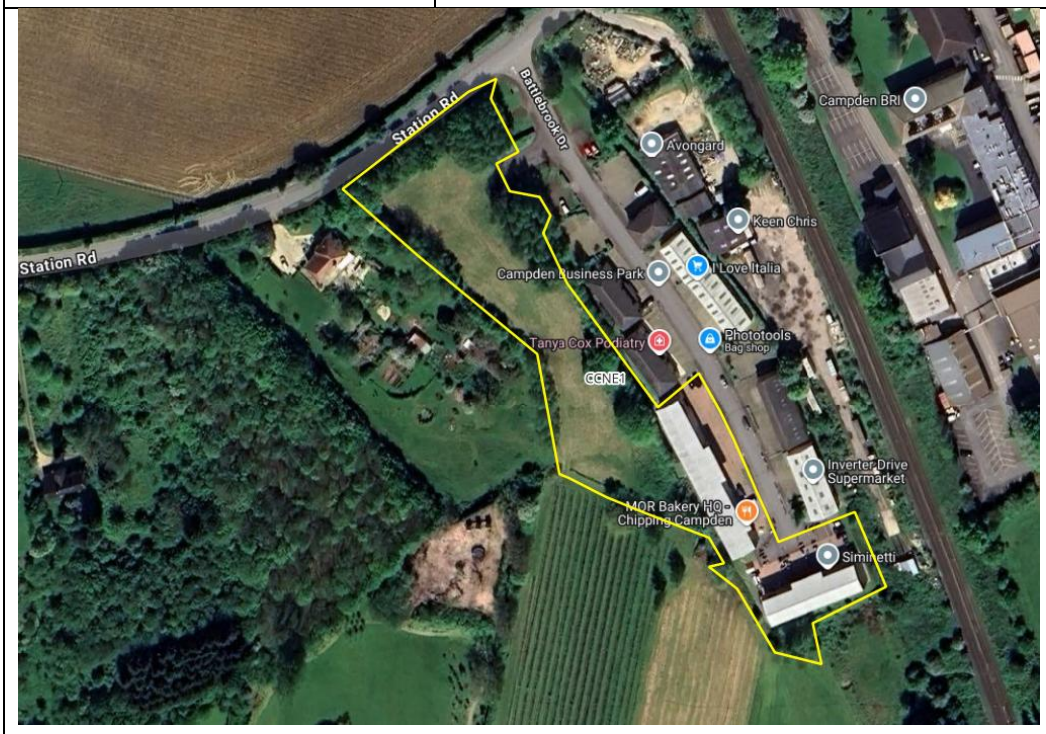


Ref	Policy S2
Site	Land to the South of Chesterton, Cirencester
Size (Ha)	120 (9.1 employment)
	
Locational Factors	
SRN Access	The Spratsgate Lane employment components are located c.4km from the A417 via Swindon Road and Burford Road. Employment located on Tetbury Road is c.5km from the A417.
Local Access	Masterplanning shows the site has two access points – off Spratsgate Lane and Tetbury Road (A429). Improvements have already been implemented on Spratsgate Lane to

	provide a new roundabout allowing access both east to employment site and west into residential component. Further planned improvements will need to be made on Tetbury Road to allow the western phase of the development to come forward.
Public Transport	The bus stop adjacent to the northeast border of the site on Berkeley Road is served by route 93 which provides services between Cirencester and Malmsbury bi-hourly. Tetbury Road is served by multiple routes (93, 882, C60, C62 and C69) travelling into Cirencester, Gloucester, Wotton, Malmsbury and Stroud hourly.
Labour Access	Close proximity to large population centre in Cirecencester
Spatial Strategy Considerations	Cirencester – principal settlement
Market Demand Factors	
Physical Constraints	There are a number of TPOs on the boundaries of the site and running through centre. There are two Grade II listed buildings in the centre of the site.
Current Policy / Planning Position	Strategic allocation – Policy S2 The site has outline permission (16/00054/OUT) for mixed use development including 2,350 dwellings and 9.1ha of employment land. Masterplanning shows three phases of employment – to the east of Spratsgate

	Lane/Wilkinson Road, to the west of Spratsgate Lane and in the west of the site, south of Cirencester Office Park. Phase 1 of the employment land, east of Spratsgate Lane, had a reserved matters application refused at appeal in September 2025 due to noise impacts on neighbouring residential properties. No further planning applications have been submitted on the other phases of the site.
Local Demand Factors	The eastern employment components of the site are within close proximity of Love Lane Industrial Estate which has been a strong success. Further industrial development at this location would be sought after.
Surrounding Uses	The employment component east of Spratsgate Lane borders residential development to the north and east. The other two components will also border residential development once built out.
Potential Employment Uses	The parcel east of Spratsgate Lane is suitable for E(g)/B2/B8 development in line with the planning permission, given that noise issues can be managed through operational hours. Given the mixed-use nature of the site employment phase west of Spratsgate Lane is more appropriate for E(g) uses.

	The parcel on Tetbury Road is also suitable for E(g) development, forming an extension to Cotswold Office Park.
Deliverability Factors	
Landownership And Control	The site is fully controlled by the Bathurst Estate. Carbide Properties were the delivery partners on the first phase of employment development but have pulled out following the dismissed appeal on Phase 1 of the site.
Infrastructure Requirements	Road infrastructure on Spratsgate Lane has been implemented with the construction of a new roundabout providing access to the site. Further road infrastructure work on Tetbury Road to provide access to unlock the western phase of development.
Deliverability And Deliverability Timescales	Engagement with the Bathurst Estate indicates that the first phase of employment development on the eastern parcel will come forward in the short term. Individual plots or smaller parcels are likely to come forward to manage noise and operational concerns. Currently the employment plot west of Spratsgate Lane is being used as the site's construction access – it is estimated this will come forward in c.5 years once residential phases are complete. The employment component on Tetbury Road is expected to have a later delivery of c.10 years due to infrastructure works required and delivery of other residential phases.



Overall Assessment		
Summary	Delivery of employment is expected to progress in the short term with a phased delivery of other components of the plan period. Allocation of the site should be retained.	

Ref	BOWE1
Site	Land north of Bourton Industrial Estate / Business Park, Bourton-on-the-Water
Size (Ha)	3.38
	
Locational Factors	
SRN Access	The site is located 8.7km from the A40 (SRN) via the A429
Local Access	The Bourton Link provides the site with direct access to the A429, the main corridor running from Cirencester through to Moreton-in-Marsh.
Public Transport	Bourton Industrial Estate has a dedicated bus stop served hourly by route 801 running between Bourton-on-the-Water and Chipping Norton.
Labour Access	Good – site is located in Bourton-on-the-Water, a smaller town, labour may also be drawn from Moreton-in-Marsh and Cirencester.
Spatial Strategy Considerations	Bourton-on-Water is a principal settlement in the adopted Local Plan, and continues to be proposed as such in the Local Plan update.

	The site forms an extension to the existing employment area.
Market Demand Factors	
Physical Constraints	Site has no major constraints. The site is washed over by a Priority Habitat designation – floodplain grazing marsh – although it has been developed so this is unlikely to be a constraint to development. It is also within the Cotswolds National Landscape.
Current Policy / Planning Position	Allocated for employment development. Outline consent (15/03318/OUT) was granted for B1/B2/B8. Two units have been built out (18/04764/REM). There is a pending application (25/03800/FUL) on 1.4ha in the south of the site for an Aldi food store and Costa drive-thru. A further reserved matters application (25/03770/REM) was permitted in January 2026, removing the foodstore/drive-thru plot from site boundary and reconfiguring layout.
Local Demand Factors	The existing Bourton Industrial Estate s continues to experience strong market demand, and the units completed within the allocation are now fully-let.
Surrounding Uses	The site is bordered by compatible land use. It borders the existing industrial estate to the south and greenfield land to the north.
Potential Employment Uses	Suitable for industrial and warehousing use including trade counter.
Deliverability Factors	
Landownership And Control	The site is under single ownership, owned by John Hackling Transport. This landowner also owns the land to the north of the site.

Infrastructure Requirements	No abnormal infrastructure constraints are identified at this stage; however, standard on-site and off-site infrastructure will be required to support development	
Deliverability And Deliverability Timescales	The site is likely to come forward in the short-term with an active application on the west of the site for the foodstore and drive thru and recently permitted reserved matters application for the layout of the remainder of the scheme. Previous phases of the site have been built out on a speculative demand basis as demand arises.	
Overall Assessment		
Summary	The site allocation boundary should be amended to reflect the redline boundary of the permitted scheme. If the food store / drive thru is permitted this should be removed from the employment allocation boundary.	

Ref	CCNE1
Site	Battle Brook / Extension to Campden Business Park, Chipping Campden
Size (Ha)	0.67

Locational Factors	
SRN Access	The site has poor SRN accessibility – t located 14.4km from the A46 .
Local Access	The site is accessed via Station Road which runs through Chipping Campden, providing access to the A44 to the west and the A429 to the east.
Public Transport	Bus stop on Berrington Road (c.900m from site) is served by community bus routes H3B/E and H5A/B running between Mickleton, Stratford-upon-Avon and Chipping Campden once a day.
Labour Access	Labour availability is limited due to the small local population and small catchment around Chipping Campden.

Spatial Strategy Considerations	is a principal settlement in the adopted Local Plan, and continues to be proposed as such in the Local Plan update.
Market Demand Factors	
Physical Constraints	Cotswolds National Landscape
Current Policy / Planning Position	Site is allocated for employment development – the south of the site has been built out and contains two terraced units. The remainder of the site has outline permission (21/03116/OUT) for E(g)/B2/B8 development. Reserved matters permitted March 2024 (23/03625/REM) for a 78 unit B8 commercial storage scheme (1,404 sq.m) – not implemented. Additional reserved matters (25/02476/REM) permitted December 2025 for B8 storage facility (442 sq.m) and respite office building (143 sq.m) for BKS Assets.
Local Demand Factors	The site is located in a rural location with poor access to the SRN. Demand for the site is limited to local occupiers. Likely to come forward for specific occupier as indicated by latest application, rather than being speculatively built out.
Surrounding Uses	Site adjoins Campden Business Park to the east. Campden BRI (food and drink innovation) is closely located further east. The site borders a residential dwelling to the west.
Potential Employment Uses	Suitable for E(g)/B2/B8
Deliverability Factors	
Landownership And Control	Site is under single ownership. BKS Assets are site applicant – assumed to be for their use.

Infrastructure Requirements	No abnormal infrastructure constraints are identified at this stage; however, standard on-site and off-site infrastructure will be required to support development	
Deliverability And Deliverability Timescales	Site was grated planning permission in December 2025 for single occupier use – assumed to come forward in the short-term.	
Overall Assessment		
Summary	Retain allocation for employment use	

Ref	LEC1
Site	Land north of Butler's Court, Lechlade
Size (Ha)	1.25

Locational Factors	
SRN Access	Poor SRN accessibility – located 14.4km away from the A419.
Local Access	The site is accessed from the A417 which runs through a number of villages to access Cirencester.
Public Transport	Bus stop located within 600m of site on the High Street is served by route 77 running between Cirencester and Highworth – 4 times a day
Labour Access	Poor – Lechlade has a limited labour pool
Spatial Strategy Considerations	Lechlade is a principal settlement in the adopted Local Plan, and continues to be proposed as such in the Local Plan update It is also a designated District Centre providing a range and variety of shops, facilities and services.

Market Demand Factors	
Physical Constraints	No physical constraints on site – the site is adjacent to two Grade II listed buildings to the south. Scheduled Monument 'Multi-period settlement, cemetery, and ceremonial complex W of Lechlade' is located within 50m of the site.
Current Policy / Planning Position	23/02916/OUT – refused outline application for 54 residential dwellings, 70-bed care home and E(g) employment uses (1,500 sq.m). Refused in January 2024 for a number of reasons including the wider boundary falling outside of the Lechlade Development Boundary and it would result in the loss of a major part of the allocated employment site.
Local Demand Factors	Lechlade does not have an established employment area and has poor accessibility – market demand for employment space in this location would be low
Surrounding Uses	Site borders residential – two are Grade II listed.
Potential Employment Uses	Only E(g) would be suitable given residential adjacency
Deliverability Factors	
Landownership And Control	Owned by the Waden and scholars of St Mary's College of Winchester in Oxford. Refused planning application was submitted by Hallam Land, assumed to have an option on the land.
Infrastructure Requirements	Existing access roundabout on A417 in place. No abnormal infrastructure constraints are identified at this stage; however, standard

	on-site and off-site infrastructure will be required to support development	
Deliverability And Deliverability Timescales	No planning application has been permitted. Unlikely employment development will come forward at this location given small scale proposed within previous application.	
Overall Assessment		
Summary	The site is not located in a desirable or suitable located for employment use. Low market demand will prevent employment development from being deliverable. Site should not be retained as an allocation.	

Ref	MORE6
Site	Fire Service College B, Moreton-in-Marsh
Size (Ha)	7
	
Locational Factors	
SRN Access	Site is located 20km from A46 (SRN)
Local Access	Site is accessed from A44 providing east to west connections, which connects to A429 providing north to south connections.
Public Transport	Fire Service College bus stop served by route 810 providing hourly services between Cheltenham and Chipping Norton. The site is located 0.6 miles from Moreton-in-Marsh train station served by direct services to London, Oxford and Worcester.
Labour Access	Good– site is located in Moreton-in- Marsh and has access to the town's labour pool.
Spatial Strategy Considerations	Moreton-in-Marsh is a principal settlement in the adopted Local Plan, and continues to be proposed as such in the Local Plan update.
Market Demand Factors	

Physical Constraints	Site contains TPO in the south of the site.	
Current Policy / Planning Position	Allocated for B1 (now E(g)) employment use. No planning application has been submitted since allocation.	
Local Demand Factors	Moreton-in-Marsh sees a good level of demand for commercial premises. Cotswold Business Village to the south of the site sees strong demand and is well-let.	
Surrounding Uses	Allocated and surrounding site is in use as the Fire Service College in active use for emergency services training. The site includes an incident ground and a 'motorway' used for helicopter and emergency vehicle training, which can generates noise.	
Potential Employment Uses	E(g)/B2/B8	
Deliverability Factors		
Landownership And Control	Site and wider fire services college is owned by Capita. Capita are promoting a number of nearby parcels for residential development, a primary school, a neighbourhood centre, leisure centre and a hotel.	
Infrastructure Requirements	New access off A44 required	
Deliverability And Deliverability Timescales	Medium term - Engagement with Capita reveals no progress has been made on the site since being allocated for employment use in the previous Local Plan. No planning application has been submitted or is under consideration.	
Overall Assessment		
Summary	Site is located in a desirable location and would meet the local employment needs of Moreton-in-Marsh. No progress has been made towards a planning application for	

	the site given allocation for B1 uses only. The policy should be broadened to allow for B2/B8 uses which will increase deliverability of site. Alternatively, within a wider mixed-use allocation of the Fire Services College, employment allocation of 7ha could be relocated elsewhere within the site.	

Ref	W7A/WILE1C
Site	Land north of B4632 and east of employment estate, Willersey
Size (Ha)	1.97 employment
	
Locational Factors	
SRN Access	Site is located 7.4km from A46 at Evesham
Local Access	Site is accessed off B4632 which provides connection to the A44. Based on application it is assumed employment component of site will be accessed via existing industrial estate of Badsey Lane, which sees on road parking, reducing HGV accessibility
Public Transport	Bus stop within 150m of site (The Pike) is served by route 606 every two hours, providing services between Chipping Campden and Cheltenham.
Labour Access	Poor - Willersey has a limited labour pool.
Spatial Strategy Considerations	Willersey is a principal settlement in the adopted Local Plan, and is proposed to be a

	non-principle settlement in the Local Plan update.
Market Demand Factors	
Physical Constraints	Cotswold National Landscape
Current Policy / Planning Position	The employment component in the west was granted planning permission in June 2024 (22/03534/FUL) for employment development comprising of a new production office, workshop and service buildings. This site will form an extension for existing occupier Auto Sleepers. The residential component in the east has a pending application (25/02687/FUL) for 60 dwellings.
Local Demand Factors	The adjoining Willersey Industrial Estate experiences steady local demand, supported by population-serving occupier such as vehicle repair.
Surrounding Uses	Site adjoins Willersey Industrial Estate to the west, with residential in the south.
Potential Employment Uses	Suitable for E(g)/B2/B8
Deliverability Factors	
Landownership And Control	Employment site is owned by Auto Sleepers Group who intend to use the d site for their Business expansion. Eastern residential allocation is owned by Gloucester Diocesan Board of Finance.
Infrastructure Requirements	No abnormal infrastructure constraints are identified at this stage; however, standard on-site and off-site infrastructure will be required to support development

Deliverability And Deliverability Timescales	Short term – site has planning permission. Deliverability of scheme will depend on Auto Sleepers Group expansion timescales.	
Overall Assessment		
Summary	Site is expected to come forward in the short term to facilitate the expansion of an existing business. Retain employment allocation to ensure delivery of permitted scheme.	

A3. Site Assessment – Call for Sites

Cirencester

Ref	C164A
Site	East of Kingshill Lane
Size (Ha)	41.93
	
Locational Factors	
SRN Access	Site access via Kingshill Lane is currently located 1.9km from A417 / Burford Road junction. Potential to obtain direct access to A417 on eastern border.
Local Access	There is currently no access into the site, except a farm access on Kingshill Lane. Good local access from A417 via London Road.
Public Transport	Bus stop located at Kingshill School in north of site provides morning and afternoon services to Cirencester, Swindon and Tetbury. More

	regular services every half an hour (route 50 ands 58) to Cirencester and Stratton on Golden Farm Road 600m from eastern boundary of site.
Labour Access	Good - Close proximity to large population centre in Cirecencester
Spatial Strategy Considerations	Would form strategic extension of toCirencester (principal settlement),and key town.
Market Demand Factors	
Physical Constraints	No physical constraints on site. Listed building located within 400m of southern boundary of site in the village of Preston.
Current Policy / Planning Position	None
Local Demand Factors	Cirencester is one of the main employment clusters within the District. Site has strong access to the SRN (A417) which would create high market attractiveness.
Surrounding Uses	Kingshill Secondary School, Watermoor Primary School and Cirencester Football Club border the site to the west. Site borders A417 to the northeast. No other immediate adjacencies.
Potential Employment Uses	E(g) / B2/ B8
Deliverability Factors	
Landownership And Control	Site is under single ownership and promoted by RTG Chester Master Will Trust. Site is promoted for 500-1,500 homes with an element of employment, retail and community.
Infrastructure Requirements	New access on Kingshill Lane. More significant works required if new access provided on A417.

Deliverability And Deliverability Timescales	Site is available. Deliverable in the short to medium term given limited infrastructure requirements. Strong market attractiveness will support deliverability of employment.	
Overall Assessment		
Summary	The site has good accessibility in terms of the SRN and access to Cirencester and would see strong market attractiveness from B2/B8 occupiers. The site would be suitable to provide a level employment provision within a wider mixed-use development. Employment provision should be focused in the north of the site where accessibility is the strongest.	

Ref	C190
Site	South east of Tetbury Road
Size (Ha)	126.5
	
Locational Factors	
SRN Access	Access to the site off Tetbury Road (A429). Site is located 0.9km off the roundabout leading onto A419. Access to the site also available from the eastern boundary off Spratsgate Lane.
Local Access	Three access points – two on the western boundary, off Tetbury Road and the eastern boundary off Spratsgate Lane.
Public Transport	Bus stop is located 640m on Tetbury Road. Bus services are operating approximately every 2 hours providing services to Malmesbury.
Labour Access	Good - Close proximity to large population centre in Cirencester
Spatial Strategy Considerations	Preferred options – strategic extension south of The Steadings. Located in Cirecenster (principal settlement) and main town.
Market Demand Factors	

Physical Constraints	Scheduled Monument is located on the eastern area of the site. Within the setting of the Cotswolds National Landscape and the south-western part of the site is a Special Landscape Area.	
Current Policy / Planning Position	None	
Local Demand Factors	Cirencester is an employment hub in the District, alongside proximity to the SRN (A419) creating market attractiveness.	
Surrounding Uses	Residential uses to the northern boundary of the Site and Cirencester Office Park to the north-western boundary of the Site. Siddington C Of E Primary School is located towards the east of the Site.	
Potential Employment Uses	E(g) / B2/ B8	
Deliverability Factors		
Landownership And Control	Site is owned at promoted by Bathurst Estates	
Infrastructure Requirements	New access required on Tetbury Road / Spratsgate Lane, or access provided through The Steadings site.	
Deliverability And Deliverability Timescales	Long term – would provide a further phase, following the completion of The Steadings strategic allocation to the north.	
Overall Assessment		
Summary	Long term opportunity to provide further employment land in this location. It is recommended that as part of a mixed-use scheme around 1-2ha of employment land could be provided for E(g) use.	

Ref	R519
Site	Land south of Preston
Size (Ha)	18.43
	
Locational Factors	
SRN Access	Direct access to the A419 (SRN).
Local Access	Three access points off the site off Preston, Cirencester Road and Kingshill Road, leading onto Cirencester Road / A419.
Public Transport	Two bus stops located on the boundary of the Site. Both bus stops provide regular services towards Cirencester, Bridgemead, Wootton Bassett and Rushey Platt.
Labour Access	Good - Close proximity to large population centre in Cirecencester
Spatial Strategy Considerations	Site is located at Preston (proposed to be a Non-Principal Settlement in the Local Plan update) but within close proximity of Cirencester
Market Demand Factors	
Physical Constraints	No physical constraints on site.

Current Policy / Planning Position	None	
Local Demand Factors	Site is located within close proximity of Love Lane Industrial Estate, which sees strong market demand. Direct access to the A419 increases market attractiveness.	
Surrounding Uses	Residential borders to the north, garden centre and Siddington Park residential village (over 60s) to the south west.	
Potential Employment Uses	E(g) / B2/ B8	
Deliverability Factors		
Landownership And Control	Site is under single landownership.	
Infrastructure Requirements	New roundabout arm required on A419 or alternative suitable access via Kingshill Lane	
Deliverability And Deliverability Timescales	Medium term – limited access infrastructure required. Assumed to be deliverable	
Overall Assessment		
Summary	Given residential adjacency, any employment development would have to be located to the south of site. Under the assumption that thissite is brought forward for mixed development in conjunction with R650 (below), employment development would be more suitable within the southern section of R650	

Ref	R650
Site	Land to the north of Cirencester Road
Size (Ha)	81.58
	
Locational Factors	
SRN Access	Two access points located off Cirencester Road/ A419. The A419 leads onto Swindon Road, into Cirencester's urban core.
Local Access	Two access points located off Cirencester Road. Access points located towards the eastern boundaries of the Site.
Public Transport	Bus stop located on Cirencester Road, approximately 80m from the closest access point. Frequent services from the stop towards Bridgemead, Wootton Bassett, Rushey Platt and Swindon.
Labour Access	Good - Close proximity to large population centre in Cirecencester
Spatial Strategy Considerations	Site is located at Preston (proposed to be a Non-Principal Settlement in the Local Plan update) but within close proximity to Cirencester
Market Demand Factors	

Physical Constraints	No major physical constraints on site. Site contains priority habitat designation in centre of site – deciduous wood.
Current Policy / Planning Position	None
Local Demand Factors	Site is located within proximity of Cirencester urban are. Direct access to the A419 increases market attractiveness.
Surrounding Uses	Commercial uses are located within the site and to its south western boundary, with greenfield land surrounding the remaining edges.
Potential Employment Uses	E(g) / B2/ B8
Deliverability Factors	
Landownership And Control	Site has multiple landowners. Site is promoted by Bloor Homes Western for mixed use development 'Cotswold Gate' of 1,500 new homes, village centre containing primary school, sports pitches, healthcare facilities and retail.
Infrastructure Requirements	No abnormal infrastructure constraints are identified at this stage; however, standard on-site and off-site infrastructure will be required to support development including improved access off Cirencester Road
Deliverability And Deliverability Timescales	Given scale of site it is assumed employment development could be brought forward in the medium term. Site is assumed to be deliverable in the medium term – indicative masterplanning has been prepared.

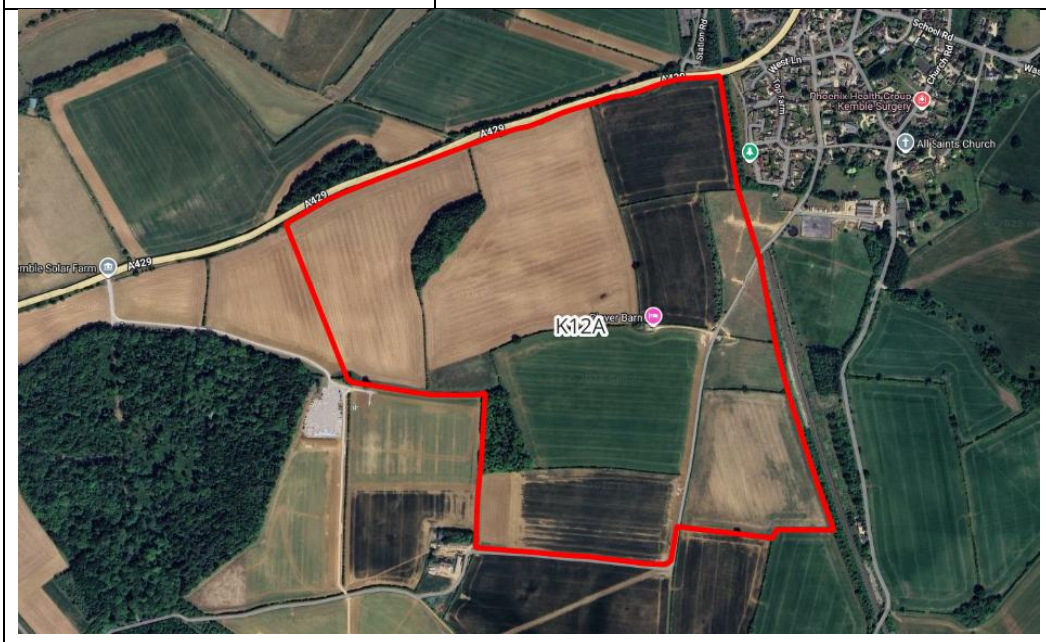
Overall Assessment		
Summary	As part of a mixed-use development, provision of employment could be provided, up to c.10ha, preferably located in the south of the site where connectivity to the A419 / A417 is strongest.	

Ref	R644
Site	Land at Fosse Farm, to the south of Driffield
Size (Ha)	129.6

Locational Factors	
SRN Access	Multiple access points off the A419, leading onto the A417. A419 leads into Cirencester Road junction, providing further linkages onto the SRN.
Local Access	Existing access available via Cirencester Road roundabout which services Cirencester Agricultural Centre.
Public Transport	The closest bus stop is located approximately 300m (as the crow flies) to the southern point of the site. The bus stop is not easily accessible by foot, which may reduce accessibility of the site.
Labour Access	Good - Close proximity to large population centre in Cirencester

Spatial Strategy Considerations	Would be part of a new settlement to the south of Driffield
Market Demand Factors	
Physical Constraints	No major physical constraints. Site contains a number of Priority Habitat designations – deciduous woodland.
Current Policy / Planning Position	None
Local Demand Factors	Site is located off the A419, leading into Cirencester – would see strong market demand.
Surrounding Uses	Commercial uses to the south east of the site, village of Driffield to north east.
Potential Employment Uses	E(g) / B2/ B8
Deliverability Factors	
Landownership And Control	Site has two landowners. Site is promoted by AJW Land & Development.
Infrastructure Requirements	No abnormal infrastructure constraints are identified at this stage; however, standard on-site and off-site infrastructure will be required to support development
Deliverability And Deliverability Timescales	Promoted for mixed-use - housing and employment. Site assumed to be deliverable in medium to long term - no master planning has been undertaken, employment component could come forward in the short to medium term given extension to existing employment area.
Overall Assessment	
Summary	As part of a wider mixed-use scheme, it would be suitable to provide c.10ha of employment as an extension to the existing Agricultural Centre in the south of the site,

	benefiting from strong accessibility to the SRN.	



Siddington

Ref	SD20
Site	Land north of Clark's Lane
Size (Ha)	21.66
	
Locational Factors	
SRN Access	No direct SRN access – site is located 4.7km from A417 via Swindon Road.
Local Access	Access point off Spratsgate Lane leads into Cirencester's urban core. Spratsgate Lane leads towards Love Lane Industrial Estate. Three access points to the Site: one point off Clarks Lane and two access points off the C-road accessible from Park Way. Clarks Lane is narrow.
Public Transport	Bus stop is located 240m east of the Site. The hourly service provides links towards Cirencester.
Labour Access	Good - Close proximity to large population centre in Cirencester

Spatial Strategy Considerations	Siddington is proposed to be a Non-Principal Settlement in the Local Plan update. This would be a strategic site on the edge of Cirencester.
Market Demand Factors	
Physical Constraints	No physical constraints.
Current Policy / Planning Position	None
Local Demand Factors	Site is within proximity of the Spratsgate Lane, leading onto the main road into Cirencester's urban core, making it an attractive employment area.
Surrounding Uses	Residential uses to the east and towards the northern boundary. Southern and western boundaries are greenfield sites.
Potential Employment Uses	E(g) / B2/ B8
Deliverability Factors	
Landownership And Control	Owned and promoted by Bathurst Estates.
Infrastructure Requirements	No abnormal infrastructure constraints are identified at this stage; however, standard on-site and off-site infrastructure will be required to support development including improvements required to Clarks Lane access.
Deliverability And Deliverability Timescales	No known deliverability issues. Deliverable in medium term – no planning status
Overall Assessment	
Summary	If brought forward for mixed use development, site would be of suitable to provide small scale employment component.

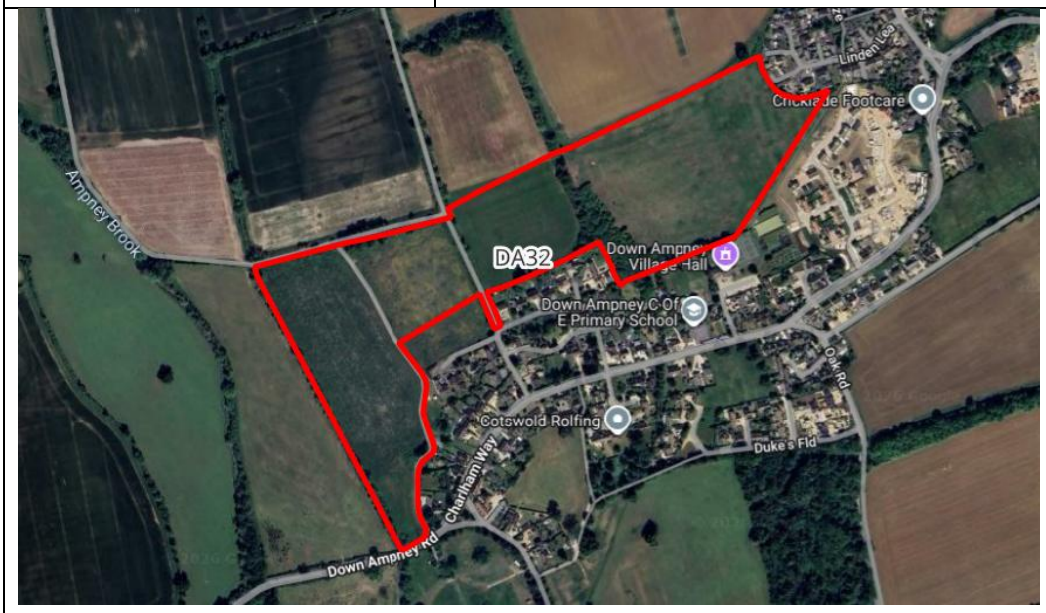
Kemble

Kemble

Ref	K12
Site	Clover Barn (Land south of A429)
Size (Ha)	65.38
	
Locational Factors	
SRN Access	Site is located c.10km from A417 (SRN) via Tetbury Road (A429).
Local Access	Two access points: Main access off the A429 towards the northern boundary of the Site. Another access point is located to the eastern boundary of the Site on a C-road (off Old Vicarage Lane).
Public Transport	Closest bus stop is located 630m north east of the Site, with services towards Cirencester and Tetbury. North eastern corner of site is located 500m away from Kemble train station served by direct trains to London, Swindon, Gloucester and Cheltenham.

Labour Access	Moderate - Kemble has relatively small labour poor. However, site is located 6km from larger population centre Cirencester.
Spatial Strategy Considerations	Kemble is a proposed principle settlement. The site would be a strategic extension south-west of Kemble.
Market Demand Factors	
Physical Constraints	No physical constraints on site. Site contains priority habitat designation in centre of site – deciduous wood.
Current Policy / Planning Position	None
Local Demand Factors	Site is located off the A429, leading towards Kemble and Cirencester. However, distance from the SRN makes it a less attractive employment location. Demand would be localised driven by Cotswold Airport occupiers.
Surrounding Uses	Mainly residential uses and agricultural buildings to the eastern boundary, greenfield sites to the northern and southern area of the site. Cotswold Airport is located north of the main access point to the site.
Potential Employment Uses	E(g) / B2/ B8
Deliverability Factors	
Landownership And Control	Owned and promoted by Bathurst Estates.
Infrastructure Requirements	An upgrade needed to water supply. No abnormal infrastructure constraints are identified at this stage; however, standard on-site and off-site infrastructure will be required to support development
Deliverability And Deliverability Timescales	This parcel is promoted for mixed use use. Promoters indicate site could come forward as early as 2028 subject to planning.

Overall Assessment		
Summary	Location sees less demand for employment uses given distance from Cirencester and SRN. A mixed use site could support an element of small scale employment development.	



Ref	K15
Site	Land south of A429
Size (Ha)	16.28
	
Locational Factors	
SRN Access	Access is located off the A429, leading towards Kemble and Cirencester's urban core.
Local Access	Access point off A429, towards the northern boundary of the Site.
Public Transport	Site is not within proximity of a bus stop, with the closest bus stop located approximately 1.6km from the access point. North eastern corner of site is located 1.7km away from Kemble train station served by direct trains to London, Swindon, Gloucester and Cheltenham.
Labour Access	Moderate - Kemble has relatively small labour pool however site is located 6km from larger population centre Cirencester.
Spatial Strategy Considerations	Kemble is a proposed principle settlement, although this site would be in open countryside.
Market Demand Factors	

Physical Constraints	No physical constraints on site. Ancient Woodland located to the south of the site.
Current Policy / Planning Position	None.
Local Demand Factors	Site is located off the A429, leading towards Kemble and Cirencester. However, distance from the SRN makes it a less attractive employment location. Demand would be localised driven by Cotswold Airport occupiers.
Surrounding Uses	Cotswold Airport is located to the north of the Site. There are industrial uses further south of the Site. West of the Site is agricultural land, East of the site is Ancient Woodland.
Potential Employment Uses	E(g) / B2/ B8
Deliverability Factors	
Landownership And Control	Owned and promoted by Bathurst Estates.
Infrastructure Requirements	An upgrade needed to water supply. No abnormal infrastructure constraints are identified at this stage; however, standard on-site and off-site infrastructure will be required to support development
Deliverability And Deliverability Timescales	This site is promoted for employment use. Promoters indicate site could come forward as early as 2028 subject to planning.
Overall Assessment	
Summary	Location sees less demand for employment uses given distance from SRN. Airport employment uses on adjacent site are lower value and unlikely to support viable new build industrial development in Kemble.

Down Ampney

Ref	DA16A
Site	Land south of Down Ampney Road
Size (Ha)	2.76
	
Locational Factors	
SRN Access	Site is located 2.7km from A419 via Down Ampney Road.
Local Access	Site has two access points, coming off Down Ampney Road. Access points are located on the northern and eastern boundaries of the Site.
Public Transport	Closest bus stop is located 1.6km west of the Site. The bus stop offers regular services towards Swindon and Cirencester.
Labour Access	Moderate - Down Ampney has relatively small labour poor however site is located 9km from larger population centre in Cirencester.

Spatial Strategy Considerations	Down Ampney is Principal Settlement in the adopted Local Plan and is proposed to be a non-principal settlement in the Local Plan update.	
Market Demand Factors		
Physical Constraints	Flood Zone 3 within the west of the site.	
Current Policy / Planning Position	None.	
Local Demand Factors	Site is within Down Ampney Village and would create a new employment location. Site accessible to A419 but via B-road which can be a constraint to LGV/HGV activity.	
Surrounding Uses	Surrounding uses are mainly residential and green field sites to the west of the Site.	
Potential Employment Uses	E(g)	
Deliverability Factors		
Landownership And Control	Single ownership – Home Paddock (Down Ampney)	
Infrastructure Requirements	No abnormal infrastructure constraints are identified at this stage; however, standard on-site and off-site infrastructure will be required to support development.	
Deliverability And Deliverability Timescales	Unlikely to be deliverable as an employment site given small scale and creation of new employment location.	
Overall Assessment		
Summary	Site is not suitable for employment use due to residential adjacency and rural location with B-road access to SRN reducing market attractiveness.	

Ref	DA32
Site	Land to the north of Chestnut Close, Down Ampney
Size (Ha)	13.43
	
Locational Factors	
SRN Access	Site access is on a B-road, located 1.2km from the A419 which leads onto Cirencester's urban core.
Local Access	Site's access point is off Chestnut Close on the southern boundary of the Site. The access point is located 1.2km from the A419.
Public Transport	The closest bus stop to the Site is approximately 900m east of the Site. The bus stop offers services to Southrop, Burford and Cirencester. Bus service may be infrequent.
Labour Access	Moderate - Down Ampney has relatively small labour pool however site is located 9km from larger population centre Cirencester.
Spatial Strategy Considerations	Down Ampney is Principal Settlement in the adopted Local Plan and is proposed to be a

	non-principal settlement in the Local Plan update.
Market Demand Factors	
Physical Constraints	Floodzone 2 and 3 across the western boundary of the Site.
Current Policy / Planning Position	None.
Local Demand Factors	Site is on the edge of Down Ampney Village, slightly further out from Cirencester but accessible via the A419. Access to the Site is down a B-road so may be a constraint. Proximity to Cirencester can make the Site attractive for employment use.
Surrounding Uses	Uses are mainly residential with a green field site towards the north of the Site.
Potential Employment Uses	E (g)
Deliverability Factors	
Landownership And Control	Site is under single ownership – Robert Hitchen Ltd
Infrastructure Requirements	No abnormal infrastructure constraints are identified at this stage; however, standard on-site and off-site infrastructure will be required to support development.
Deliverability And Deliverability Timescales	Unlikely to be deliverable as an employment site given small scale and creation of new employment location.
Overall Assessment	
Summary	Site is not suitable for employment use due to its proximity to residential development and rural location, with B-road access to SRN reducing market attractiveness.

Ref	DA13
Site	Land east of Down Ampney Road
Size (Ha)	3.18
	
Locational Factors	
SRN Access	Site access is off Down Ampney Road, 2.4km from Cirencester Road, leading onto the A419. The A419 is the main artery into Cirencester's urban core.
Local Access	Access point to the Site is off Ampney Road, on the southern boundary of the Site.
Public Transport	Bus stop is located on the western boundary of the Site. Bus has services towards Cirencester and Burford, although service seems infrequent.
Labour Access	Moderate - Down Ampney has relatively small labour poor however site is located 9km from larger population centre in Cirencester.
Spatial Strategy Considerations	Down Ampney is Principal Settlement in the adopted Local Plan and is proposed to be a non-principal settlement in the Local Plan update.

Market Demand Factors	
Physical Constraints	No physical constraints on site.
Current Policy / Planning Position	None.
Local Demand Factors	Site is within Down Ampney Village, slightly further out from Cirencester but accessible via the A419. Access to the Site is down a B-road so may be a constraint. Proximity to Cirencester can make the Site attractive for employment use.
Surrounding Uses	Towards the northern and eastern areas, the Site is surrounded by greenfield. Mainly residential uses towards the western areas.
Potential Employment Uses	E (g)
Deliverability Factors	
Landownership And Control	Single ownership alongside wider land holdings, owned and promoted by Urban&Civic. Part of wider strategic site promotion for c.2,000 homes.
Infrastructure Requirements	No abnormal infrastructure constraints are identified at this stage; however, standard on-site and off-site infrastructure will be required to support development.
Deliverability And Deliverability Timescales	Site forms part of Area B within masterplan – for c.694 residential units. Unlikely to deliver employment development.
Overall Assessment	
Summary	Site is not suitable for employment given its close relationship with nearby housing and its rural setting, n with B-road access to SRN reducing market attractiveness.

Ref	DA5
Site	Land south of Down Ampney Road
Size (Ha)	4.92
	
Locational Factors	
SRN Access	Site access is off Down Ampney Road, 2.4km from Cirencester Road, leading onto the A419. The A419 provides the main route into Cirencester.
Local Access	The access point to the Site is located off Down Ampney Road, to the northern boundary of the Site.
Public Transport	The closest bus stop is located 330m to the north of the Site. There are bus services running to Cirencester and Burford, although not very frequent.
Labour Access	Moderate - Down Ampney has relatively small labour pool however site is located 9km from larger population centre Cirencester.
Spatial Strategy Considerations	Down Ampney is Principal Settlement in the adopted Local Plan and is proposed to be a

	non-principal settlement in the Local Plan update.
Market Demand Factors	
Physical Constraints	No significant physical constraints on site.
Current Policy / Planning Position	None.
Local Demand Factors	Site is on the edge of Down Ampney Village, slightly further out from Cirencester but accessible via the A419. Access to the Site is down a B-road so may be a constraint. Proximity to Cirencester can make the Site attractive for employment uss.
Surrounding Uses	Directly on the northern boundary of the Site, there are agricultural buildings, towards the western boundary of the Site there are mainly residential uses.
Potential Employment Uses	E (g)
Deliverability Factors	
Landownership And Control	Site is under single ownership – Robert Hitchen Ltd
Infrastructure Requirements	No abnormal infrastructure constraints are identified at this stage; however, standard on-site and off-site infrastructure will be required to support development.
Deliverability And Deliverability Timescales	Unlikely to be deliverable as an employment site given small scale and creation of new employment location.
Overall Assessment	
Summary	Site is not suitable for employment use due to proximity to residential areas and the rural setting with B-road access to SRN reducing market attractiveness.

Tetbury

Ref	T71A
Site	Land north of Havenhill Road, Tetbury
Size (Ha)	2.15
	
Locational Factors	
SRN Access	Site is located c.19km from A417 (SRN).
Local Access	Site is located off Havenhill Road, leading onto London Rd/ A433. Access would be through the residential area to the southeastern boundary of the Site.
Public Transport	Closest bus stop to the Site is located 255m from the Site. The bus stop offers frequent services to Stroud, Wickwar and Tetbury.
Labour Access	Moderate – site is located in Tetbury, a smaller town, labour may also be drawn from nearby Malmesbury
Spatial Strategy Considerations	Tetbury is a principal settlement in the adopted Local Plan and is proposed to continue as a principle settlement in the Local Plan update.
Market Demand Factors	

Physical Constraints	The site is within the Cotswold National Landscape	
Current Policy / Planning Position	The site is within a Strategy Delivery sub-area.	
Local Demand Factors	The site is within proximity of the A433, linking to Cirencester. Located is in closely proximity to residential areas which reduces market attractiveness.	
Surrounding Uses	Mainly residential uses to the south of the Site, with greenfield sites to the north..	
Potential Employment Uses	E (g)	
Deliverability Factors		
Landownership And Control	Site is in single ownership	
Infrastructure Requirements	Suitable access to the site would need to be created.	
Deliverability And Deliverability Timescales	Given residential proximity and access arrangements, employment development is likely undeliverable.	
Overall Assessment		
Summary	Site is not considered to be suitable for employment development due to residential proximity and lack of suitable access. More suitable for residential.	

Ref	T31B
Site	Land west of Lowfield Road, Tetbury
Size (Ha)	2.01
	
Locational Factors	
SRN Access	Site located over 20km from A417 (SRN).
Local Access	Site is located off Lowfield Road, leading to the B4014. Access point is located off Lowfield Road, 330m from the B4014 leading to the London Road/ A433.
Public Transport	The closest bus stop to the Site is located 48m to the south of the site l. This bus stop offers services to Old Sodbury, although buses may be infrequent.
Labour Access	Moderate – site is located in Tetbury, a smaller town, labour may also be drawn from nearby Malmesbury
Spatial Strategy Considerations	Tetbury is a Principal Settlement in the adopted Local Plan and is proposed to continue as such in the Local Plan update.
Market Demand Factors	

Physical Constraints	The site is within the Cotswold National Landscape (AONB) designation.	
Current Policy / Planning Position	None	
Local Demand Factors	The site is within proximity of the A433, linking to Cirencester, but is in closely proximity to residential areas, which reduces market attractiveness.	
Surrounding Uses	The northern boundary of the site is countryside. Towards the east is a school and to the south residential.	
Potential Employment Uses	E (g)	
Deliverability Factors		
Landownership And Control	Site is in single ownership	
Infrastructure Requirements	No abnormal infrastructure constraints are identified at this stage; however, standard on-site and off-site infrastructure will be required to support development	
Deliverability And Deliverability Timescales	Employment development would be deliverable however residential proximity means site is more suitable for residential use.	
Overall Assessment		
Summary	Employment development of site would create a new employment site disconnected from the existing Tetbury industrial estate . More suitable for residential use.	

Fairford

Ref	F52
Site	Land south of London Road
Size (Ha)	1.49
	
Locational Factors	
SRN Access	Site is located 16.5km from A417 (SRN section)
Local Access	Access is off the A417 on the northern boundary of the Site, providing links to Cirencester. London Road / A417 is the main connection through Fairford.
Public Transport	Nearest bus stop is located 350m to the west of the Site. This bus stop offers services to Cirencester.
Labour Access	Moderate – site is located in Fairford, a smaller town, labour may also be drawn from Cirencester located within a 15 minute drive time catchment.

Spatial Strategy Considerations	Fairford is a principal settlement in the adopted Local Plan and is proposed to continue as such in the Local Plan update.
Market Demand Factors	
Physical Constraints	No physical constraints on site.
Current Policy / Planning Position	None.
Local Demand Factors	Site is located off the A417, providing the main connection through Fairford and towards Cirencester. Site is adjacent to existing employment clusters in Fairford.
Surrounding Uses	Towards the south of the Site there are commercial / manufacturing uses. Residential uses towards the western areas and greenfield sites towards the north.
Potential Employment Uses	E(g) / B2/ B8
Deliverability Factors	
Landownership And Control	Site is under single ownership
Infrastructure Requirements	No abnormal infrastructure constraints are identified at this stage; however, standard on-site and off-site infrastructure will be required to support development including new access off A417 required.
Deliverability And Deliverability Timescales	No planning progress – assumed deliverable in medium term.
Overall Assessment	
Summary	Site could suitably form an extension of the existing employment area to the south, however proximity to residential areas to the east and west would limited employment use to E(g).

Ref	F53A
Site	Land east of Totterdown Lane
Size (Ha)	12.81

Locational Factors	
SRN Access	Site located c.14km from A417 (SRN section).
Local Access	Site is located off Horcott Road, leading to A417 (links to Cirencester) and further leading into A361 (links to Swindon).
Public Transport	The nearest bus stop is located 300m north of the Site. The bus stop offers services to Cirencester, Lechlade and Highworth.
Labour Access	Moderate – site is located on the edge of Fairford, a smaller town, labour may also be drawn from Cirencester located within a 15 minute drive time catchment.
Spatial Strategy Considerations	Fairford is a principal settlement in the adopted Local Plan and is proposed to continue as such in the Local Plan update.

Market Demand Factors	
Physical Constraints	No physical constraints on site.
Current Policy / Planning Position	None.
Local Demand Factors	Site is located within proximity of the A417/ Cirencester Road, leading to the employment hubs in Cirencester. Fairford has a number of small industrial areas which see a good level of demand.
Surrounding Uses	Towards the east of the Site, there are industrial uses, the south of the Site is a camping site. To the north of the Site, there are residential uses and western area is Horcott Lakes.
Potential Employment Uses	E(g) / B2/ B8
Deliverability Factors	
Landownership And Control	Site is under single ownership
Infrastructure Requirements	No abnormal infrastructure constraints are identified at this stage; however, standard on-site and off-site infrastructure will be required to support development including new access off A417 required.
Deliverability And Deliverability Timescales	No planning progress – assumed deliverable in medium term.
Overall Assessment	
Summary	Given proximity of Horcott Industrial Estate it would not be logical to create a further new employment area in this location.

Bourton-on-the-Water

Ref	B56
Site	Land north of Moor Lane, Bourton-on-the-Water
Size (Ha)	1.83
	
Locational Factors	
SRN Access	Site is accessible via Moor Lane, 1.3km from the A429 which is the main link to Cirencester.
Local Access	Access point from Mallard Crescent, leading onto the A429. Access point is from the northern part of the Site.
Public Transport	The closest bus stop to the Site is located 1.6km from the parcel. There are frequent services towards Cheltenham, Cirencester, Chipping Norton and Bourton-on-Water.
Labour Access	Good – site is located in Bourton-on-the-Water, a smaller town, labour may also be drawn from Moreton-in-Marsh and Cirencester.

Spatial Strategy Considerations	Bourton-on-the-Water is a principal settlement in the adopted Local Plan and is proposed to continue as such in the Local Plan update..
Market Demand Factors	
Physical Constraints	Cotswold National Landscape
Current Policy / Planning Position	None
Local Demand Factors	Site is located within proximity of Bourton Industrial Park and close to the SRN (A429) however residential adjacency and access arrangements reduces market attractivness
Surrounding Uses	Towards the southern part of the site, there are greenfield sites. Other uses surrounding the site are mainly residential. Further north of the Site is Bourton Business Park/ Industrial Estate.
Potential Employment Uses	E(g) / B2/ B8
Deliverability Factors	
Landownership And Control	Site is under single ownership
Infrastructure Requirements	No abnormal infrastructure constraints are identified at this stage; however, standard on-site and off-site infrastructure will be required to support development
Deliverability And Deliverability Timescales	Given residential adjacency and access to site, employment development is likely undeliverable
Overall Assessment	
Summary	Site is not suitable for employment development due to residential adjacency and access. Would create employment site separated from existing Bourton Industrial Estate.

Ref	B57
Site	Land south of the A429, Bourton-on-the-Water
Size (Ha)	4.93
	
Locational Factors	
SRN Access	Site located off the A429, leading onto the A424, providing links to Cirencester.
Local Access	Access through industrial area to the south, layout of permitted scheme on allocation provides access to site through industrial estate.
Public Transport	Closest bus stop to the Site is 60m from the Site. There are frequent services towards Chipping Norton.
Labour Access	Good – site is located in Bourton-on-the-Water, a smaller town, labour may also be drawn from Moreton-in-Marsh and Cirencester.
Spatial Strategy Considerations	Bourton-on-the-Water is a principal settlement in the adopted Local Plan and is proposed to continue as such in the Local Plan update.
Market Demand Factors	

Physical Constraints	Site contains is entirely covered by priority habitat designation – coastal and floodplain grazing marsh. Cotswold National Landscape
Current Policy / Planning Position	None
Local Demand Factors	Site is located off the SRN (A429) providing links to large reemployment hubs. The site would form an extension to Bourton Industrial Park, increasing market attractivity.
Surrounding Uses	Northern and southern areas of the site are greenfield sites. Bourton Industrial Park is located to the south
Potential Employment Uses	E(g) / B2/ B8
Deliverability Factors	
Landownership And Control	Single ownership – owned by John Hackling Transport who own allocated land to the south.
Infrastructure Requirements	No abnormal infrastructure constraints are identified at this stage; however, standard on-site and off-site infrastructure will be required to support development.
Deliverability And Deliverability Timescales	Build out of Bourton Business Park extension to the south has been slow with just two units delivered since permitted. Further expansion on this site is seen as a long term option.
Overall Assessment	
Summary	Site would form a further long-term expansion option for Bourton Industrial Park, however land is entirely designated as a priority habitat,

Stow-on-the-Wold

Ref	S55B
Site	Land to the south of Oddington Road, Stow-on-the-Wold
Size (Ha)	0.57
	
Locational Factors	
SRN Access	Poor SRN access – located over 25km from A46 and A417.
Local Access	Site is located off the A436 leading onto Roman Road. The A436 provides connections to employment hubs in larger towns such as Cirencester. Access to the Site is off Oddington Road, on the northern boundary of the Site.
Public Transport	The nearest bus stop is adjacent to the site, providing services to Cheltenham.
Labour Access	Good – site is located in Stow-on-the-Wold, a smaller town, labour may also be drawn from Moreton-in-Marsh and Bourton-on-the-Water.

Spatial Strategy Considerations	Stow-on-the-Wold is a principal settlement in the adopted Local Plan and is proposed to continue as such in the Local Plan update.	
Market Demand Factors		
Physical Constraints	Southern boundaries of the Site have conservation areas running along the boundary. Site has a steep topography. Cotswold National Landscape.	
Current Policy / Planning Position	None.	
Local Demand Factors	Stow-on-the-Wold is not an established employment location. Site is of insufficient scale to create a new employment cluster.	
Surrounding Uses	Towards the eastern area of the Site, there are greenfield sites and commercial sites towards the western areas.	
Potential Employment Uses	E(g) / B2/ B8	
Deliverability Factors		
Landownership And Control	Site is under single ownership	
Infrastructure Requirements	No abnormal infrastructure constraints are identified at this stage; however, standard on-site and off-site infrastructure will be required to support development.	
Deliverability And Deliverability Timescales	Site is of insufficient scale to deliver sufficient employment development. Stow-on-the-Wold is not an established employment location.	
Overall Assessment		
Summary	Site is of insufficient scale to deliver sufficient employment development. Stow-on-the-Wold is not an established employment location and may see limited commercial demand.	

Moreton-in-Marsh

Ref	M31
Site	Land north of Todenham Road
Size (Ha)	50.4
	
Locational Factors	
SRN Access	Site located off Todenham Road, leading onto Roman Road/ Fosse Way (A429).
Local Access	Site's main access point is off Todenham Road, on the southern boundary of the Site.
Public Transport	The closest bus stop is located 980m from the Site. Site is located within walking distance of Moreton-in-Marsh train station, serving the Cotswold Line and providing direct services between London Paddington and Worcester.
Labour Access	Good – site is in Moreton-in-Marsh
Spatial Strategy Considerations	Moreton-in-Marsh is a principal settlement in the adopted Local Plan and is proposed to continue as such in the Local Plan update, with

	options for strategic extensions to the north, south, and east of the town.
Market Demand Factors	
Physical Constraints	Site is located in a Special Landscape Area and within the setting of the Cotswold's National Landscape. There is a scheduled monument adjacent to the north-west boundary.
Current Policy / Planning Position	None.
Local Demand Factors	Site has direct access to A429 providing north and south connections through the district. Employment development in the south of the site would add to the existing cluster at Fosseway Industrial Estate.
Surrounding Uses	Towards the southern area of the Site, uses are mainly residential, south east of the area is a Fire Service training facility. The northern, western and eastern areas of the Site are greenfield sites.
Potential Employment Uses	E(g) / B2 / B8
Deliverability Factors	
Landownership And Control	Single ownership and being promoted by an agent on behalf of landowner.
Infrastructure Requirements	No major off-site infrastructure needs have been identified at this stage, though all development would require standard on-site infrastructure and servicing provision.
Deliverability And Deliverability Timescales	Site has no planning history, but an element of employment development could potentially be brought forward in earlier phases in the south of the site.
Overall Assessment	

Summary	Within a mixed-use development of the site, an element of employment would be suitable, within the south of the site or in the west where there is direct access to the A429.	

Ref	M70
Site	Land east of Evenlode Road
Size (Ha)	7.57
	
Locational Factors	
SRN Access	Site is located off Evenlode Road, approximately 830m south of the A44. The A44 provides links to Oxford and Worcester.
Local Access	Access point to the Site is off Evenlode Road, on the western boundaries of the Site.
Public Transport	The closest bus stop to the site is located approximately 830m north of the Site. The bus stop provides frequent services towards Chipping Norton. Moreton-in-Marsh train station is approximately 1.3km from the site, providing services to London Paddington and Worcester.
Labour Access	Good– the site is located on the edge of Moreton-in-Marsh
Spatial Strategy Considerations	Moreton-in-Marsh is a principal settlement in the adopted Local Plan and is proposed to continue as such in the Local Plan update, with

	strategic extensions to the north, south and east of the town.
Market Demand Factors	
Physical Constraints	Special Landscape Area. Sewage Treatment Works adjacent to the north east.
Current Policy / Planning Position	An application for 110 homes was submitted in December 2025 and is pending consideration (ref: 25/04041/OUT).
Local Demand Factors	Cotswold Business Park to the north is a successful employment site, however this site does not benefit from direct access to the A44 or A429. Consideration is being given to a new link road through the Local Plan process, which if delivered would connect this site to the A44 and A429.
Surrounding Uses	Residential uses to the north of the Site. Cotswold Business Park is to the north east of the Site. It is bounded by open countryside to the south and east.
Potential Employment Uses	E(g) / B2/ B8
Deliverability Factors	
Landownership And Control	Site is in single ownership
Infrastructure Requirements	No abnormal infrastructure constraints are identified at this stage; however, standard on-site and off-site infrastructure will be required to support development.
Deliverability And Deliverability Timescales	No known deliverability issues – site could come forward in short to medium term.
Overall Assessment	
Summary	The site has an ongoing planning application for residential development and is therefore not available for employment development. Furthermore, the Site is

	currently located in a periphery location, with narrow access via Evenlode Road. Employment development on A44 would be more preferable, however delivery of new link road would improve commercial attractiveness.	

Ref	M12B
Site	Land to the east of Evenlode Road
Size (Ha)	3.07

Locational Factors	
SRN Access	Site is located off Evenlode Road, approximately 600m from the A44. The A44 provides links to Oxford and Worcester.
Local Access	Site access is through residential area off Evenlode Road.
Public Transport	The nearest bus stop to the site is located approximately 600m to the north of the Site. The bus stop is serviced by frequent bus services to Chipping Norton. Moreton-in-Marsh train station is approximately 1.3km from the site, providing services to London Paddington and Worcester.
Labour Access	Good– the site is located on the edge of Moreton-in-Marsh.

Spatial Strategy Considerations	Moreton-in-Marsh is a principal settlement in the adopted Local Plan and is proposed to continue as such in the Local Plan update, with strategic extensions to the north, south and east of the town.
Market Demand Factors	
Physical Constraints	Special Landscape Area. Sewage Treatment Works adjacent to the north east.
Current Policy / Planning Position	None.
Local Demand Factors	Cotswold Business Park to the north of the site sees good demand however site access through residential area reduces market attractiveness. Consideration is being given to a new link road through the Local Plan process, which if delivered would connect this site to the A44 and A429 and would improve the market attractiveness.
Surrounding Uses	Directly north of the Site is Cotswold Business Park. Greenfield sites towards the southern and eastern areas. Residential uses towards the western areas of the Site.
Potential Employment Uses	E(g) / B2/ B8
Deliverability Factors	
Landownership And Control	Site is owned by Gloucestershire County Council
Infrastructure Requirements	No abnormal infrastructure constraints are identified at this stage; however, standard on-site and off-site infrastructure will be required to support development.
Deliverability And Deliverability Timescales	Site is unlikely to come forward for commercial development. Access through residential area is not suitable.

Overall Assessment		
Summary	Despite adjacency to Cotswold Business Village, there is no access through the existing employment site. Access through residential area via Evenlode Road means site is not suitable for employment development.	

Ref	M76
Site	Land to east of Evenlode Rd
Size (Ha)	3.24
	
Locational Factors	
SRN Access	Access is off Evenlode Road, 630m south of the A44 (SRN). The A44 has links towards Worcester and Oxford.
Local Access	Access point is located off Evenlode Road, on the western boundary of the parcel. Consideration is being given to a new link road through the Local Plan process, which would link the site to the A429 and A44.
Public Transport	The closest bus stop to the Site is located on the A44/ London Road, 630m north of the Site. The bus stop is serviced by frequent services towards Chipping Norton. Moreton-in-Marsh train station is approximately 1.1km from the site, providing services to London Paddington and Worcester.
Labour Access	Good– site is located i on the edge of Moreton-in-Marsh

Spatial Strategy Considerations	Moreton-in-Marsh is a principal settlement in the adopted Local Plan and is proposed to continue as such in the Local Plan update, with strategic extensions to the north, south and east of the town.
Market Demand Factors	
Physical Constraints	Site is within the Special Landscape Area. Area of the Site (western part) is in Flood zone 3.
Current Policy / Planning Position	None.
Local Demand Factors	Cotswold Business Park to the north of the site sees good demand however current site access via Evenlode Road reduces market attractiveness. The delivery if the link would improve the market attractiveness.
Surrounding Uses	Several residential properties lie to the east of the site. Greenfield land surrounds the remainder of the site, with a small number of agricultural buildings present within this wider area.
Potential Employment Uses	E(g) / B2/ B8
Deliverability Factors	
Landownership And Control	Site is under single ownership
Infrastructure Requirements	No abnormal infrastructure constraints are identified at this stage; however, standard on-site and off-site infrastructure will be required to support development.
Deliverability And Deliverability Timescales	Site is within floodzone 3 which requires mitigation – site could come forward in short to medium term.
Overall Assessment	
Summary	Site is located in a periphery location, with narrow access via Evenlode Road,

	employment development on A44 would be more preferable, however delivery of new link road would improve commercial attractiveness..	

Ref	M77
Site	Land west of Evenlode Road
Size (Ha)	10.99

Locational Factors	
SRN Access	Site is located off Evenlode Road, approximately 900m south of the A44. The A44 provides links to Worcester and Oxford.
Local Access	Access point to the Site is off Evenlode Road, on the western boundary of the Site. Consideration is being given to a new link road through the Local Plan process, which would link the site to the A429 and A44.
Public Transport	The closest bus stop to the Site is located on the A44/ London Road, approximately 900m north of the Site. The bus stop is serviced by frequent services towards Chipping Norton. Moreton-in-Marsh train station is approximately 1.2km from the site, providing services to London Paddington and Worcester.

Labour Access	Good– site is located in Moreton-in-Marsh
Spatial Strategy Considerations	Moreton-in-Marsh is a principal settlement in the adopted Local Plan and is proposed to continue as such in the Local Plan update, with strategic extensions to the north, south and east of the town..
Market Demand Factors	
Physical Constraints	Site is within a Special Landscape Area Western section of site falls within Flood Zone 3.
Current Policy / Planning Position	None.
Local Demand Factors	Cotswold Business Park to the north of the site sees good demand however site access via Evenlode Road reduces market attractiveness. The delivery of the link road would improve the market attractiveness.
Surrounding Uses	Several residential units to the east of the Site. Greenfield land surrounds , it with a few scattered agricultural buildings.
Potential Employment Uses	E(g) / B2/ B8
Deliverability Factors	
Landownership And Control	Site is under single ownership
Infrastructure Requirements	No abnormal infrastructure constraints are identified at this stage; however, standard on-site and off-site infrastructure will be required to support development.
Deliverability And Deliverability Timescales	No known deliverability issues – site could come forward in short to medium term.
Overall Assessment	
Summary	Site is located in a periphery location, with narrow access via Evenlode Road, employment development on A44 would be

	more preferable, however delivery of new link road would improve commercial attractiveness.	

Ref	M9C, M9C, M9D
Site	Land west of Evenlode Road
Size (Ha)	1.31
	
Locational Factors	
SRN Access	Site access is off Evenlode Road, approx. 600m south of the A44. The A44 provides linkages to Worcester and Oxford.
Local Access	Site access point is off Evenlode Road, on the eastern boundary of the Site. Access is located off a C-road. Consideration is being given to a new link road through the Local Plan process, which would link the site to the A429 and A44.
Public Transport	The closest bus stop to the Site is located on the A44/ London Road, approximately 615m north of the Site. The bus stop is serviced by frequent services towards Chipping Norton. Moreton-in-Marsh train station is approximately 1km from the site, providing

	services to London Paddington and Worcester.
Labour Access	Good– site is located in Moreton-in-Marsh
Spatial Strategy Considerations	Moreton-in-Marsh is a principal settlement in the adopted Local Plan and is proposed to continue as such in the Local Plan update, with strategic extensions to the north, south and east of the town.
Market Demand Factors	
Physical Constraints	Site is located within a Special Landscape Area
Current Policy / Planning Position	None.
Local Demand Factors	Cotswold Business Park to the north of the site sees good demand however site access via Evenlode Road reduces market attractiveness. Delivery of the link road would improve the market attractiveness.
Surrounding Uses	Directly towards the west of the Site is the Highways Depot, greenfield sites to the north and south of the Site and Residential uses towards the west of the Site.
Potential Employment Uses	E(g) / B2/ B8
Deliverability Factors	
Landownership And Control	Site is formed of three separate titles – land ownership unknown.
Infrastructure Requirements	No abnormal infrastructure constraints are identified at this stage; however, standard on-site and off-site infrastructure will be required to support development.
Deliverability And Deliverability Timescales	No known deliverability issues – site could come forward in short to medium term.
Overall Assessment	

Summary	Site is located in a periphery location, with narrow access via Evenlode Road, employment development on A44 would be more preferable, however delivery of new link road would improve commercial attractiveness.	

Ref	M78
Site	Land west of Roman Road / Fosse Way (A429)
Size (Ha)	2.62

Locational Factors	
SRN Access	Site is located off Roman Road/ A429. The A429 provides links towards Cirencester and Royal Leamington Spa, alongside the main linkage to Moreton-in-Marsh.
Local Access	Site access is off Roman Road/ A429, on the eastern boundary of the parcel, sharing the existing access of the Fosseway Garden Centre.
Public Transport	The closest bus stop is 360m north of the Site. The bus stop is serviced by regular services towards Cheltenham and Chipping Norton. Moreton-in-Marsh train station is approximately 1.2km from the site, providing services to London Paddington and Worcester.
Labour Access	

	Good – the site is located on the edge of Moreton-in-Marsh, with access to the town's labour pool.
Spatial Strategy Considerations	Moreton-in-Marsh is a principal settlement in the adopted Local Plan and is proposed to continue as such in the Local Plan update, with strategic extensions to the north, south and east of the town.
Market Demand Factors	
Physical Constraints	Cotswold National Landscape.
Current Policy / Planning Position	None.
Local Demand Factors	Site is well-placed in terms of accessibility, with great links via train and regular bus services. Located within proximity of Cotswold Business Park, providing an employment cluster.
Surrounding Uses	The southern and eastern areas of the Site are greenfield sites. Towards the western areas of the Site, there are commercial uses with a car park accompanied.
Potential Employment Uses	E(g) / B2/ B8
Deliverability Factors	
Landownership And Control	Site is under single ownership – Wavendon Land. Site is promoted for Class E / B2 / B8/ hotel and/or Sui Generis.
Infrastructure Requirements	No abnormal infrastructure constraints are identified at this stage; however, standard on-site and off-site infrastructure will be required to support development.
Deliverability And Deliverability Timescales	No known deliverability issues – site could come forward in short to medium term.
Overall Assessment	

Summary	Site has good road accessibility with direct access to A429. Provision of small-scale employment units would be suitable at this location.	

Ref	M71A
Site	Land south of the A44
Size (Ha)	10.59

Locational Factors	
SRN Access	Site is located off the A44, providing linkages to Worcester and Oxford. The A44 links to Roman Road, which provides the link to Cirencester.
Local Access	Site access point is off the A44, on the northern boundary of the Site.
Public Transport	The closest bus stop is 260m east of the Site. The bus stop is serviced by provides frequent services towards Bourton-on-Water and Chipping Norton. The Site is approximately 1.3km from the train station, providing services to London Paddington and Worcester.
Labour Access	Good – the site is located on the edge of Moreton-in-Marsh, with access to the town's labour pool

Spatial Strategy Considerations	Moreton-in-Marsh is a principal settlement in the adopted Local Plan and is proposed to continue as such in the Local Plan update, with strategic extensions to the north, south and east of the town.
Market Demand Factors	
Physical Constraints	No physical constraints on Site.
Current Policy / Planning Position	Allowed at appeal (6002934) - residential application (25/01036/OUT) for 195 dwellings, vehicular access from London Road, landscaping etc.
Local Demand Factors	Site is well-placed in terms of accessibility, with great links via train and regular bus services. Located within proximity of Cotswold Business Park, providing an employment cluster.
Surrounding Uses	Greenfield land beyond the southern and eastern boundaries of the Site. Commercial and Manufacturing/ Industrial uses adjacent to the Site. Fire Service College is to the north of the Site.
Potential Employment Uses	E(g) / B2/ B8
Deliverability Factors	
Landownership And Control	Site is under single ownership and Bloor Homes have an option agreement / are the applicants.
Infrastructure Requirements	New access of A44 required.
Deliverability And Deliverability Timescales	Given that the site is being actively pursued for residential development, it is unlikely that employment development will be delivered on site.
Overall Assessment	

Summary	The site is unavailable for employment development given recent allowance of appeal for residential scheme.	

Ref	M71B
Site	Land south of the A44
Size (Ha)	12.27
	
Locational Factors	
SRN Access	Site access is off the A44, providing linkages to Worcester and Oxford. The A44 links to Roman Road, which provides the link to Cirencester.
Local Access	Site access is off the A44, on the northern boundary of the Site.
Public Transport	The closest bus stop is adjacent to the northern boundary of the Site. The bus stop is serviced by provides frequent services towards Bourton-on-Water and Chipping Norton. The Site is approximately 1.6km from the train station, providing services to London Paddington and Worcester.
Labour Access	Good– site is located in Moreton-in-Marsh
Spatial Strategy Considerations	Moreton-in-Marsh is a principal settlement in the adopted Local Plan and is proposed to continue as such in the Local Plan update, with

	strategic extensions to the north, south and east of the town. By itself the site is disconnected from Moreton-in-Marsh and would sprawl development eastwards. In the event that the residential site to the west is allowed at appeal and built out the site becomes less of disconnected.
Market Demand Factors	
Physical Constraints	No physical constraints on site, except for the strip along the western boundary which is Floodzone 3. Site is within the Special Landscape Area designation.
Current Policy / Planning Position	In 2014 a screening application (14/01782/SCR) was submitted for a proposed solar PV development. No further planning applications have been submitted.
Local Demand Factors	Site is well-placed in terms of accessibility, with great links via train and regular bus services. Located within proximity of Cotswold Business Park, providing an employment cluster.
Surrounding Uses	The site is enclosed by greenfield land, with the A44 forming its northern boundary.
Potential Employment Uses	E(g) / B2/ B8
Deliverability Factors	
Landownership And Control	Site is under single ownership and owned by Turnstone Farming Company Ltd. Bloor have an option agreement on the site.
Infrastructure Requirements	No abnormal infrastructure requirements are identified, although a new access onto the A44 would be required and may necessitate highway works
Deliverability And Deliverability Timescales	No known deliverability issues – site could come forward in short to medium term.

Overall Assessment		
Summary	The site is currently disconnected from Moreton-in-Marsh, however recent permitted residential development on the site to the west improves connectivity. The site would be suitable for employment development, building on the existing cluster at Cotswold Business Village.	

Ref	M89
Site	Land to south of Moreton in Marsh Sewage Treatment Works (STW)
Size (Ha)	3.97

Locational Factors	
SRN Access	Site access is via Cotswold Business Park, located off the A44, providing linkages to Worcester and Oxford. The A44 links to Roman Road, which provides the link to Cirencester.
Local Access	Site access is via Cotswold Business Park via a narrow private access which will require improvements.
Public Transport	The closest bus stop is located 500m from site on the A44. The bus stop is serviced by provides frequent services between Cheltenham and Chipping Norton. The Site is approximately 1.5km from the train station,

	providing services between London Paddington and Worcester.
Labour Access	Good– site is located in Moreton-in-Marsh
Spatial Strategy Considerations	Moreton-in-Marsh is a principal settlement in the adopted Local Plan and is proposed to continue as such in the Local Plan update, with strategic extensions to the north, south and east of the town. By itself the site is disconnected from Moreton-in-Marsh and would sprawl development southwards.
Market Demand Factors	
Physical Constraints	No physical constraints on site.
Current Policy / Planning Position	None
Local Demand Factors	Site is well-placed in terms of accessibility, with great links via train and regular bus services. Located within proximity of Cotswold Business Park, providing an employment cluster. Site access may reduce attractiveness
Surrounding Uses	Site is current use a STW. Cotswold Business Village to the north.
Potential Employment Uses	E(g) / B2/ B8
Deliverability Factors	
Landownership And Control	Owned by Thames Water Utilities
Infrastructure Requirements	No abnormal infrastructure requirements are identified, although improved access to site via Cotswold Business Village would be required
Deliverability And Deliverability Timescales	Site in use as STW – engagement with Thames Water indicates the site will be used as expansion for the water treatment works and is therefore unavailable.
Overall Assessment	

Summary	The site is unavailable and due to be used for expansion of the water treatment works. Access to site requires investigation given current narrow access via private land.	

Ref	M72
Site	Land north of the A44, Fire Service College
Size (Ha)	35.17
	
Locational Factors	
SRN Access	Site access is off the A44, providing linkages to Worcester and Oxford. The A44 links to Roman Road, which provides the link to Cirencester.
Local Access	Site access on Massey Shaw Avenue, leading onto the A44 on the southern boundary of the Site.
Public Transport	The nearest bus stop is adjacent to the southern boundary of the Site. The bus stop is serviced by provides frequent services towards Bourton-on-Water and Chipping Norton. The Site is approximately 1.6km from the train station, providing services to London Paddington and Worcester.
Labour Access	Good– site is located on western edge of Moreton-in-Marsh

Spatial Strategy Considerations	Moreton-in-Marsh is a principal settlement in the adopted Local Plan and is proposed to continue as such in the Local Plan update, with strategic extensions to the north, south and east of the town..
Market Demand Factors	
Physical Constraints	Priority habitat (deciduous woodland) lies to the east of the site. Tree Preservation Orders (TPOs) are present in several locations across the wider area, with larger concentrations along and beyond the eastern a boundary.
Current Policy / Planning Position	A 7ha parcel in the west of the site is allocated for office employment development in the adopted Local Plan.
Local Demand Factors	Site is well-placed in terms of accessibility, with great links via train and regular bus services. Located within close proximity of Cotswold Business Park, providing an employment cluster. Existing commercial units to the north of the Site.
Surrounding Uses	The site forms part of the Fire Services College in active use for emergency services training. The site includes an incident ground and a ‘motorway’ used for helicopter and emergency vehicle training which can generates noise Residential uses towards the western areas of the site.
Potential Employment Uses	E(g) / B2/ B8
Deliverability Factors	
Landownership And Control	The site is owned and promoted by Capita
Infrastructure Requirements	The main infrastructure requirement relates to the creation of a new access onto the A44,

	which would require appropriate highway design and approv	
Deliverability And Deliverability Timescales	See Fire Services College MORE6 site assessment. Medium term - Engagement with Capita reveals no progress has been made on the site since being allocated for office employment use in the currently adopted Local Plan. No planning application has been submitted or is under consideration.	
Overall Assessment		
Summary	The extant Local Plan allocation within the site has not come forward, due to its restriction to B1 use class and the evolution of the office market since the plan was adopted. A broader range of employment uses such as B2/B8 would be more deliverable, evidenced by the success of Cotswold Business Village. As part of a mixed-use development, an employment allocation of 7ha should be retained, and could be relocated within the wider mixed use site.	

Ref	ME6
Site	Land off Fourth Avenue, Fire Service College
Size (Ha)	8.47
	
Locational Factors	
SRN Access	The site is located off Fourth Avenue, leading onto A44. The A44 provides linkages to Worcester and Oxford. The A44 links to Roman Road, which provides the link to Cirencester.
Local Access	Site access is off Fourth Avenue, leading onto the A44 on the southern boundary of the Site.
Public Transport	The closest bus stop is adjacent to the southern boundary of the Site The bus stop is serviced by provides frequent services towards Bourton-on-Water and Chipping Norton. The Site is approximately 1.6km from the train station, providing services to London Paddington and Worcester.
Labour Access	Good– site is located in Moreton-in-Marsh
Spatial Strategy Considerations	Moreton-in-Marsh is a principal settlement in the adopted Local Plan and is proposed to continue as such in the Local Plan update, with

	strategic extensions to the north, south and east of the town.
Market Demand Factors	
Physical Constraints	South of site contains priority habitat designation – deciduous woodland
Current Policy / Planning Position	None
Local Demand Factors	Site is well-placed in terms of accessibility, with great links via train and regular bus services. Located within proximity of Cotswold Business Park, providing an employment cluster. Existing commercial units to the south of the Site.
Surrounding Uses	Fire Service College and commercial units to the south of the Site. Greenfield land to the east..
Potential Employment Uses	E(g) / B2/ B8
Deliverability Factors	
Landownership And Control	The site is owned and promoted by Capita
Infrastructure Requirements	No abnormal infrastructure constraints are identified at this stage; however, standard on-site and off-site infrastructure will be required to support development.
Deliverability And Deliverability Timescales	Site is currently in use as part of the Fire Services College which may limit short term delivery.
Overall Assessment	
Summary	Part of the site contains a priority habitat which reduces the site area. The existing employment allocation on the A44 is a more suitable location for employment

	development and should be retained over the allocation of this site.	

Ref	M88A, B, C
Site	Land north of Todenham Road
Size (Ha)	20.51 + 2.92 + 0.93

Locational Factors	
SRN Access	Access to the site is off Todenham Road, leading onto Fosse Way (A429). Fosse Way has linkages to Cirencester.
Local Access	Site access point is off Todenham Road, on the southern boundary of the site. Site is located over 1km from the centre of Moreton-in-Marsh.
Public Transport	The closest bus stop to the site is 1.6km east of the Site. This bus service provides frequent services to Stratford-upon-Avon. The Site is approximately 1.6km from the train station, providing services to London Paddington and Worcester.
Labour Access	The site is located in open countryside, outside the built-up area of Moreton-in-Marsh, on the northern edge of the settlement.

Spatial Strategy Considerations	Moreton-in-Marsh is a principal settlement in the adopted Local Plan and is proposed to continue as such in the Local Plan update, with strategic extensions to the north, south and east of the town.
Market Demand Factors	
Physical Constraints	Traditional Orchards towards the eastern boundary of the Site. Historical Landmark on Site (Lemington Grange). Site is within the Special Landscape Area.
Current Policy / Planning Position	None.
Local Demand Factors	Located within close proximity of Cotswold Business Park, providing an employment cluster. Site is well-placed in terms of accessibility, with links via train to larger employment hubs.
Surrounding Uses	Commercial unit to the east of the Site, greenfield land surrounding all other areas of the Site.
Potential Employment Uses	E(g) / B2/ B8
Deliverability Factors	
Landownership And Control	It is assumed that the parcels are under single ownership or being promoted by a single interest
Infrastructure Requirements	Infrastructure provision, including new access arrangements, internal road infrastructure, utilities reinforcement and community facilities.
Deliverability And Deliverability Timescales	Given the sites historical assets (Lemington Grange) and location outside of Moreton-in-Marsh, employment development would not be deliverable on the site.

Overall Assessment		
Summary	The site is not suitable for employment development given location outside of Moreton-in-Marsh and environmental and physical constraints on site.	

Blockley

Ref	BK11
Site	Land north of Station Road, Blockley
Size (Ha)	1.46
	
Locational Factors	
SRN Access	Site access is off Station Road (B4479), providing linkages to Northcott Business Park and Norwich Business Centre. The B4479 leads onto the A44, providing links to Cirencester.
Local Access	Site access is off Station Road, on the southern boundary of the Site.
Public Transport	The nearest bus stop is approximately 112 m from the site access. This service operates only on Fridays, providing connections to Mickleton and Moreton-in-Marsh.
Labour Access	Blockley has a limited supply of labour, but is within a 10 minute drive time catchment of Moreton-in-Marsh labour pool.

Spatial Strategy Considerations	Blockley is a principal settlement in the adopted Local Plan and is proposed to continue as such in the Local Plan update.
Market Demand Factors	
Physical Constraints	Cotswold National Landscape
Current Policy / Planning Position	None
Local Demand Factors	Site is located off the B4479, providing links to the A44. Links are within proximity of Draycott Works, Northwick Business Centre and Paxford Brickworks (Northcott Business Park). Further commercial development in this location would see limited commercial demand.
Surrounding Uses	Residential uses to the south of the Site. Sports and Social Club to the north of the Site. Open countryside to the west.
Potential Employment Uses	E(g) / B2/ B8
Deliverability Factors	
Landownership And Control	Site is owned by The Dickinson Trust Ltd.
Infrastructure Requirements	No abnormal infrastructure constraints are identified at this stage; however, standard on-site and off-site infrastructure will be required to support development
Deliverability And Deliverability Timescales	Site is unlikely to be delivered for commercial development given lack of demand for further commercial use in the area.
Overall Assessment	
Summary	Further commercial development is not recommended in this location and would see low levels of demand.

Bagendon

Ref	R614
Site	Land north of Welsh Way
Size (Ha)	3.36

Locational Factors	
SRN Access	Site access off Welsh Way, leading onto the A417 and A435. A-road provides links to Cirencester.
Local Access	Site access point is off Welsh Way, on the southern boundary of the Site.
Public Transport	The closest bus stop to the site is approx. 900m to the east . This service provides buses to Winson.
Labour Access	Moderate – site is located in rural location however is within a 10 minute drive time catchment of Cirencester.
Spatial Strategy Considerations	Site is not located within a settlement, rural location.

Market Demand Factors		
Physical Constraints	Site is within the National Landscapes designation.	
Current Policy / Planning Position	None	
Local Demand Factors	Site is within proximity of two A-roads, well connected to the SRN. The linkages to Cirencester provide access to a larger employment hub.	
Surrounding Uses	Site is surrounded by greenfield land	
Potential Employment Uses	E(g) / B2/ B8	
Deliverability Factors		
Landownership And Control	Built development is on land owned by Burbury Investment Ltd. Vacant land in south is owned by Tegan Properties Ltd.	
Infrastructure Requirements	No abnormal infrastructure constraints are identified at this stage; however, standard on-site and off-site infrastructure will be required to support development.	
Deliverability And Deliverability Timescales	The existing development at Tall Trees Estate has been successfully built and let. Further development of small scale light industrial units could be delivered and in demand at this location.	
Overall Assessment		
Summary	Site would be suitable for an extension to the existing Tall Trees Estate. Site has strong accessibility to A417, however is located in rural location, outside of a settlement boundary and does not align within the spatial strategy.	

Chipping Campden

Ref	CC66B
Site	Land east of Aston Road,
Size (Ha)	0.54
	
Locational Factors	
SRN Access	Site has poor SRN access – located 14km from A46.
Local Access	Site is located off Aston Road / B4035, providing links into Chipping Campden and to further towns offering employment hubs. Access point is off Aston Road, on the western boundary of the Site.
Public Transport	The closest bus stop is 40m south of the access point. There are frequent services from this stop towards Cheltenham and Stratford-upon-Avon.

Labour Access	Poor – Chipping Campden has a limited labour pool.
Spatial Strategy Considerations	Chipping Campden is a principal settlement in the adopted Local Plan and is proposed to continue as such in the Local Plan update.
Market Demand Factors	
Physical Constraints	Site is within the National Landscape designation.
Current Policy / Planning Position	None
Local Demand Factors	Within proximity of Campden Business Park, however residential adjacency and small nature of site results in low commercial market demand.
Surrounding Uses	Residential areas to the south of the s ite, alongside greenfields surrounding the site.
Potential Employment Uses	E(g) / B2/ B8
Deliverability Factors	
Landownership And Control	Site is under single ownership
Infrastructure Requirements	No abnormal infrastructure constraints are identified at this stage; however, standard on-site and off-site infrastructure will be required to support development.
Deliverability And Deliverability Timescales	Site would unlikely be delivered for employment development given lack of commercial market demand.
Overall Assessment	
Summary	Site is not suitable for employment development

Ref	CC68
Site	Land east of Aston Road
Size (Ha)	13.02
	
Locational Factors	
SRN Access	Site access off Aston Road/ B4035 (SRN), providing link to the A44 (leads to Cirencester).
Local Access	Site access point is off B4035, on the western boundary of the Site.
Public Transport	The closest bus stop is adjacent to the site, providing frequent services to Chipping Campden, Stratford-upon-Avon and Cheltenham.
Labour Access	Poor – Chipping Campden has a limited labour pool
Spatial Strategy Considerations	Chipping Campden is a principal settlement in the adopted Local Plan and is proposed to continue as such in the Local Plan update.
Market Demand Factors	
Physical Constraints	Site is within the National Landscape designation.

Current Policy / Planning Position	Site is within the Vale of Evesham heavy goods vehicle control zone, as set out in the Local Plan.
Local Demand Factors	Accessibility from the site to larger employment hubs such as Cirencester is good due to frequent bus services and links to the SRN. Within proximity of Campden Business Park.
Surrounding Uses	Residential and commercial uses towards the south and west of the Site. Greenfield sites towards the east of the Site.
Potential Employment Uses	E(g) / B2/ B8
Deliverability Factors	
Landownership And Control	Site is under single ownership – owned by Gloucestershire County Council
Infrastructure Requirements	Site would require major infrastructure provision to provide suitable access to the site.
Deliverability And Deliverability Timescales	Site would unlikely be delivered for employment development given lack of commercial market demand.
Overall Assessment	
Summary	Site is not considered suitable for employment development

Willersey

Ref	W4B
Site	Land north of Collin Lane
Size (Ha)	1.82
	
Locational Factors	
SRN Access	Site is located off Collin Lane / B4632 (SRN), providing links to the A44 (link to larger employment hubs such as Cirencester)
Local Access	Site access is off Collin Lane (through Nash Road) on the eastern boundary of the Site, through a residential area
Public Transport	The closest bus stop is located approx. 300m east of the site, providing frequent services to Chipping Campden and Stratford-upon-Avon.
Labour Access	Poor – Willersey has a limited labour pool
Spatial Strategy Considerations	Willersey is a principal settlement in the adopted Local Plan and is proposed to be a

	non-principal settlement in the Local Plan update.
Market Demand Factors	
Physical Constraints	No physical constraints on Site.
Current Policy / Planning Position	Site is within the Vale of Evesham heavy goods vehicle control zone, as set out in the Local Plan.
Local Demand Factors	Site is located within proximity of public transport to travel to larger employment hubs. Located close to Willerlsey Industrial Estate, however access through residential area reduces market demand.
Surrounding Uses	Residential uses to the west and south of the site. Greenfield land to the north.
Potential Employment Uses	E(g) / B2/ B8
Deliverability Factors	
Landownership And Control	Site and access are under separate titles but assumed to be under single ownership
Infrastructure Requirements	No abnormal infrastructure constraints are identified at this stage; however, standard on-site and off-site infrastructure will be required to support development.
Deliverability And Deliverability Timescales	Given access and residential adjacency, it is unlikely that this site will be deliverable for employment development.
Overall Assessment	
Summary	The site is not considered suitable for employment development due to the requirement for access through a residential area, which would give rise to amenity and compatibility concerns.

Mickleton

Ref	MK3, 16, 17, 21, 22, 23
Site	Strategic Northern Extension Mickleton
Size (Ha)	c.40ha

Locational Factors	
SRN Access	Poor - Site located around 14km from A46
Local Access	Site access is located off Stratford Road / B4632, providing links to Chipping Campden and Willersley.
Public Transport	The closest bus station is on Stratford Road access point. This stop provides services to Moreton in Marsh and Stratford-on-Avon bi-hourly
Labour Access	Poor – Mickleton has a limited labour supply.

Spatial Strategy Considerations	Mickleton is a principal settlement in the adopted Local Plan and is proposed to continue as such in the Local Plan update.
Market Demand Factors	
Physical Constraints	No physical constraints on Site.
Current Policy / Planning Position	Site is within the Vale of Evesham heavy goods vehicle control zone, as set out in the Local Plan.
Local Demand Factors	Moderate commercial demand, lack of existing clustering however strategic residential development could generate demand for E(g) uses
Surrounding Uses	Residential uses to the south of the site. Agricultural land to the north and west.
Potential Employment Uses	E(g)
Deliverability Factors	
Landownership And Control	Multiple private owners
Infrastructure Requirements	No abnormal infrastructure constraints are identified at this stage; however, standard on-site and off-site infrastructure will be required to support development
Deliverability And Deliverability Timescales	Medium to long term – would be supported by wider strategic mixed-use development only, employment could not come forward in isolation.
Overall Assessment	
Summary	Within a wider mixed-use allocation a small quantum (1-2ha) of E(g) use is considered appropriate – studio / co-working space.

Ref	MK2B&C
Site	Land east of Canada Lane
Size (Ha)	2.18 + 3
	
Locational Factors	
SRN Access	Poor - Site located around 14km from A46
Local Access	Site access is located off Stratford Road / B4632, providing links to Mickleton and other towns such as Chipping Campden and Willersley. Site is accessed via Furrow Way via residential area.
Public Transport	The closest bus station is 40m south of the access point. This stop provides services to Railway station and Noel Arms Hotel.
Labour Access	Poor – Mickleton has a limited labour supply.
Spatial Strategy Considerations	Mickleton is a principal settlement in the adopted Local Plan and is proposed to continue as such in the Local Plan update.
Market Demand Factors	
Physical Constraints	Cotswold National Landscape.

Current Policy / Planning Position	Site is within the Vale of Evesham heavy goods vehicle control zone, as set out in the Local Plan.	
Local Demand Factors	Mickleton is closely located to commercial development at Meon Vale, however this is seen as a secondary location given poor SRN access. New build commercial development would not be commercially viable at this location.	
Surrounding Uses	Residential units to the south, west and east of the Site. Greenfield land to the north..	
Potential Employment Uses	E(g) / B2/ B8	
Deliverability Factors		
Landownership And Control	Site is under single ownership	
Infrastructure Requirements	Major infrastructure requirements to unlock access to the site.	
Deliverability And Deliverability Timescales	Commercial development would not be deliverable given lack of commercial development	
Overall Assessment		
Summary	Employment development is not desirable at this location, inappropriate access through the residential area. New build commercial development would not be commercially viable.	

Ref	MK12A
Site	Land east of Broad Marston Road
Size (Ha)	1.56
	
Locational Factors	
SRN Access	Poor - Site located around 14km from A46
Local Access	Access is off Broad Marston Road, leading onto Broadway Road / B4632 and Campden Road / B4081. Site access point is off Broad Marston Road, on the western boundary of the Site.
Public Transport	The closest bus stop is approx. 460m east of the Site. This bus stop provides services to Stratford-upon-Avon.
Labour Access	Poor – Mickleton has a limited labour pool
Spatial Strategy Considerations	Mickleton is a principal settlement in the adopted Local Plan and is proposed to continue as such in the Local Plan update.
Market Demand Factors	
Physical Constraints	No physical constraints on site.

Current Policy / Planning Position	Site is within the Vale of Evesham heavy goods vehicle control zone, as set out in the Local Plan.
Local Demand Factors	Site is within proximity of Seyfried (Bird Industrial Estate) an reasonable distance to travel via public transport to larger employment hubs. Existing commercial sites within Mickleton.
Surrounding Uses	Residential uses to the east of the Site, with greenfield land to the west, north and south.
Potential Employment Uses	E(g) / B2/ B8
Deliverability Factors	
Landownership And Control	Site is under single ownership
Infrastructure Requirements	No abnormal infrastructure constraints are identified at this stage; however, standard on-site and off-site infrastructure will be required to support development
Deliverability And Deliverability Timescales	Commercial development is not considered deliverable in this location due to the absence of an established commercial market and limited demand.
Overall Assessment	
Summary	Employment development is not desirable in this location and new build commercial development would not be commercially viable.

Ref	MK19
Site	Land west of Broad Marston Road
Size (Ha)	7.82
	
Locational Factors	
SRN Access	Poor - Site located around 14km from A46
Local Access	Access to the site would be through the front parcel leading out onto Broad Marston Road. Broad Marston Road leads onto Broadway Road / B4632 and Campden Road / B4081.
Public Transport	The closest bus stop is approx. 460m east of the site. This bus stop provides services to Stratford-upon-Avon.
Labour Access	Poor – Mickleton has a limited labour pool
Spatial Strategy Considerations	Mickleton is a principal settlement in the adopted Local Plan and is proposed to continue as such in the Local Plan update.
Market Demand Factors	
Physical Constraints	Norton Hall Special Landscape Area.

Current Policy / Planning Position	Site is within the Vale of Evesham heavy goods vehicle control zone, as set out in the Local Plan.
Local Demand Factors	Site is within proximity of Seyfried (Bird Industrial Estate) an accessible distance to travel via public transport to larger employment hubs. Existing commercial sites within Mickleton.
Surrounding Uses	Residential uses to the east of the site, with greenfield to the west, north and south of the site.
Potential Employment Uses	E(g) / B2/ B8
Deliverability Factors	
Landownership And Control	Site is under single ownership
Infrastructure Requirements	No abnormal infrastructure constraints are identified at this stage; however, standard on-site and off-site infrastructure will be required to support development
Deliverability And Deliverability Timescales	Commercial development would not be deliverable given lack of commercial development
Overall Assessment	
Summary	Employment development is not desirable at this location and new build commercial development would not be commercially viable.

Ref	MK20B
Site	Land north of Broadway Road
Size (Ha)	10.52
	
Locational Factors	
SRN Access	Poor - Site located around 14km from A46
Local Access	Site is located off Broadway Rd / B4632, leading to Campden Road / B4081. B-roads provide links to other towns providing employment hubs.
Public Transport	The closest bus stop is 540m to the east of the Site, providing services to Railway station, Cheltenham, Four Pools and Noel Arms Hotel.
Labour Access	Poor – Mickleton has a limited labour pool
Spatial Strategy Considerations	Mickleton is a principal settlement in the adopted Local Plan and is proposed to continue as such in the Local Plan update.
Market Demand Factors	
Physical Constraints	Cotswold National Landscape and Norton Hall Special Landscape Area.

Current Policy / Planning Position	Site is within the Vale of Evesham heavy goods vehicle control zone, as set out in the Local Plan.
Local Demand Factors	Site is within proximity of Seyfried (Bird Industrial Estate) an accessible distance to travel via public transport to larger employment hubs. Existing commercial sites within Mickleton.
Surrounding Uses	Commercial/ Industrial to the east of the Site, B&B use to the west and residential to the south.
Potential Employment Uses	E(g) / B2/ B8
Deliverability Factors	
Landownership And Control	Site ownership is split across three titles
Infrastructure Requirements	No abnormal infrastructure constraints are identified at this stage; however, standard on-site and off-site infrastructure will be required to support development
Deliverability And Deliverability Timescales	Commercial development would not be deliverable given lack of commercial development
Overall Assessment	
Summary	Employment development is not desirable at this location and new build commercial development would not be commercially viable.

1. Introduction 4
How is the data set out? 4
Why monitor employment land statistics? 5
2. Summary of employment development in Cotswold District 2020/25 6
3. Completions in 2020/25 9
4. Commitments at 1 April 2025 31
5. Lapsed planning permissions in 2020/25 44

1. Introduction

1.1 Cotswold District Council maintains a record of planning permissions that result in the gain or loss of employment land and floorspace. Usually, a site-by-site survey is undertaken each year to determine which permissions are being implemented, which have been completed and any that have expired. However, due to time and capacity constraints, this work has been delayed in recent years.

1.2 The monitoring period covered in this report therefore runs from 1 April 2020 to 31 March 2025 (hereafter referred to as 2020/25). This document reports on net changes to different types of employment land and floorspace in 2020/25. Account is taken of any loss of employment land or floorspace occurring as a result of demolition or conversion. Some sites may show a loss where a building has been demolished or is in the process of having a change of use. These sites may also appear in the commitments section as the replacement building or use has either not started or is under construction.

1.3 While accurate at the time of publication, this report is subject to change due to continuing monitoring.

How is the data set out?

1.4 This report is divided into five sections. Following this Introduction (Section 1), Section 2 provides a summary of employment development in Cotswold District. Sections 3, 4 and 5 provide schedules of completions, commitments and lapsed planning permissions respectively.

1.5 The figures are summarised into different types of employment land use class that were present in April 2025. Further details of the use classes can be seen on the Planning Portal website, and a summary is provided below:

- E(g) – Commercial, Business and Service (formerly B1)[1]
  - E(g)(i) – Offices
  - E(g)(ii) – Research and Development of Products or Processes
  - E(g)(iii) – Industrial processes
- B2 – General Industrial
- B8 – Storage or Distribution

1.6 The site areas and floorspace measurements used in this report are taken from planning application forms and the Council's own measurements of site areas.

[1] Class E(g) includes activities previously covered under the revoked Class B1(a, b, c) and now forms part of the broader Class E – Commercial, Business and Service category established in the 2020 Use Classes amendments.

Where measurements are not provided, they are calculated using information submitted to support planning applications.

1.7 There are cases where there is more than one type of use proposed to be gained or lost and where the floorspace or site area is not defined by the respective planning land use classes. In such cases, the Council has used the supporting information provided with the planning application to calculate the proposed floorspace or site area. For instance, where a development creates or loses more than one type of use, the site area has been calculated proportionately using the proposed floorspace loss or gain as a guide. In cases where it is not possible to ascertain a breakdown of how much floorspace or land is being lost or created, the overall floorspace / site area has been reported or it has only been shown that a planning application exists, but the site area or floorspace measurements are not reported at all.

1.8 Consideration has also been given to whether developments are on existing economic development land or whether new economic development land is being created. In the circumstance where a scheme intensifies the use of existing site, only the part of that site that receives new development has been reported as new economic development land and not the entire site.

Why monitor employment land statistics?

1.9 The Cotswold District Local Plan (2011-31) (the adopted Local Plan) implements economic objectives through several policies, which include providing land allocated for economic development (policies S1-S19) and protecting Established Employment Sites (policy EC2). Through this, the adopted Local Plan provides the spatial framework to support the implementation of the Council's corporate priorities and the strategic economic ambitions for Gloucestershire.

1.10 Monitoring also helps to identify patterns of change and tests whether policies are working or whether they will need to be revised in the next Local Plan review. Furthermore, providing up to date information helps to make more informed decisions when determining planning applications, such as the current position on the need for a particular type of development.

2. Summary of employment development in Cotswold District 2020/25

2.1 Table 1 provides a summary of completed employment developments in the District in 2020/25.

2.2 Despite a gain of 6.53 hectares (ha) of E(g) employment land, this only results in 57 square meter gain (m^2) of E(g) floorspace. The reason for this is that the employment land lost was used more intensively with 6.66 ha of land lost holding almost the same amount of floorspace in square meters as the 13.20 ha of land gained.

Table 1 – Completions in 2020/25

Use Class	Gain (ha)	Gain (m^2)	Loss (ha)	Loss (m^2)	Net change (ha)	Net change (m^2)
E(g) – Offices / R&D / Industrial Processes	13.20	14,237	6.66	14,180	6.53	57
B2 – General industrial	6.59	8,667	5.39	7,880	1.20	787
B8 – Storage or distribution	18.07	30,342	9.21	7,433	8.86	22,909

2.3 Table 2 summarises employment developments in the District at 1 April 2025 that had planning permission and were either not started or were under construction.

Table 2 – Commitments at 1 April 2025

Use Class	Gain (ha)	Gain (m^2)	Loss (ha)	Loss (m^2)	Net change (ha)	Net change (m^2)
E(g) – Offices / R&D / Industrial Processes	19.54	59,945	0.92	1,583	18.62	58,362
B2 – General industrial	9.30	21,080	1.93	3,870	7.37	17,210
B8 – Storage or distribution	11.24	22,375	1.52	2,882	9.72	19,493

2.4 Table 3 analyses whether the District's 24.4ha B class employment land requirement[2] is on course to being delivered by 2031, which is the end of the adopted Local Plan period. The table shows that the combined total for completions for the period 2016/25, commitments at 1 April 2025 and adopted Local Plan employment land allocations are expected to deliver the full 24.4ha employment land requirement. With the changes to the Use Classes system the Council now includes the new E(g) class instead of B1.

[2] Provided in adopted Local Plan policy DS1 for the period 1 April 2016 to 31 March 2031

2.5 More than three times the amount of employment land is expected to be delivered by the end of the adopted Local Plan period (73.24 ha) compared to the identified need (24.4 ha).

2.6 A substantial part of this gain comes from B8 employment land with almost double the required amount already delivered and triple the amount forecast when including commitments. While B8 plays a valuable role in supporting logistics and supply chains, the scale of growth has implications for employment land availability for higher-value E(g) and B2 uses, and future economic balance. B8 typically generates lower employment and occupies larger sites, the strong growth in this sector may influence the District's ability to accommodate future office, R&D, and industrial demand.

Table 3 – Gain / loss of B and E(g) class employment land

Type	Net land gained / lost (ha) (2016-2025)	Net committed land (ha) at 1 April 2025	Net remaining allocated land (ha) at 1 April 2025	Total	Requirement (ha)	Shortfall?
E(g)	8.86	18.62	8.25	35.73	16.60	No
B2	3.05	7.37	0	10.42	-2.10	No
B8	17.37	9.72	0	27.09	9.90	No
Total	**29.28**	**35.71**	**8.25**	**73.24**	**24.40**	No

2.7 The adopted Local Plan also includes a forecasted gain of 64,626m2 B1 Office floorspace[3]. However, with the changes to the Use Classes system, developers are now able to gain permission for E(g) Use Class without needing the specify which of the 3 subdivision (such as E(g)(i) – Offices) they are planning to implement. The forecasted gain is therefore now compared to the overall figures for the new E(g) class.

Table 4 – Gain / loss of E(g) Floorspace

Type	Floorspace forecast (m^2) (2016-2031)	Annualised floorspace forecast (m^2)	Net floorspace gained / lost (m^2)	Net committed floorspace (m^2) at 1 April 2025	Cumulative E(g) floorspace built or committed (m^2) at 1 April 2025
E(g)	64,626	4,308	7,453	58,362	65,815

[3] Provided at paragraph 6.1.4 of the adopted Local Plan for the period 1 April 2016 to 31 March 2031

2.8 Table 5 monitors the adopted Local Plan employment land allocations. Four of the allocations have gained planning permission since the adoption of the Local Plan in August 2018.

Table 5 – Employment Land Allocations at 1 April 2025

Parish	Site Name	Size (ha)	Type	Permission
Allocations with Permissions				
Cirencester	Land to the south of Chesterton	9.10	B1/B2/B8	16/00054/OUT
Bourton-on-the-Water	Land north of Bourton Industrial Estate / Business Park	3.38	B1/B2/B8	15/03318/OUT
Chipping Campden	Battle Brook / Extension to Campden Business Park	0.67	B1/B2/B8	21/03116/OUT
Willersey	Land north of B4632 and east of employment estate	1.97	B1/B2/B8	22/03534/FUL
Allocations Without Permissions				
Lechlade	Land north of Butler's Court	1.25	B1	–
Moreton-in-Marsh	Fire Service College B	7.00	B1	–

3. Completions in 2020/25

3.1 Table 6 lists the economic developments completed in Cotswold District in 2020/25 by individual sites.

Table 6 – Net completions by individual sites in 2020/2025

Contents

1. Introduction 4
   How is the data set out? 4
   Why monitor employment land statistics? 6
2. Summary of employment development in Cotswold District 2025/26 6
3. Completions in 2025/26 9
4. Commitments at 1 April 2026 12
5. Lapsed planning permissions in 2025/26 29

1. Introduction

1.1 Cotswold District Council maintains a record of planning permissions that result in the gain or loss of employment land and floorspace. Usually, a site-by-site survey is undertaken each year to determine which permissions are being implemented, which have been completed and any that have expired.

1.2 The monitoring period covered in this report runs from 1 April 2025 to 31 March 2026 (hereafter referred to as 2025/26). This document reports on net changes to different types of employment land and floorspace in 2025/26. Account is taken of any loss of employment land or floorspace occurring resulting from demolition or conversion. Some sites may show a loss where a building has been demolished or is in the process of having a change of use. These sites may also appear in the commitments section as the replacement building or use has either not started or is under construction.

1.3 This report follows the previous monitoring update, which addressed a backlog in employment land monitoring for the 1 April 2020 to 31 March 2025 period. Site visits to assess employment development across this period were undertaken in December 2025. Monitoring visits for the 2025/26 year were subsequently completed in March 2026, resulting in a limited interval between monitoring periods.

1.4 As a result, there has been a reduced opportunity for additional development, particularly completions, to occur and be recorded. The figures for 2025/26 are influenced by this overlap and do not reflect a full monitoring year. The data in this report should therefore be read alongside the previous Employment Land Monitoring Report, rather than interpreted as a change in overall delivery trends. The previous report is available on the Council's website: https://www.cotswold.gov.uk/planning-and-building/planning-policy/policy-documentation-and-monitoring/.

1.5 While accurate at the time of publication, this report is subject to change due to continuing monitoring.

How is the data set out?

1.6 This report is divided into five sections. Following this Introduction (Section 1), Section 2 provides a summary of employment development in Cotswold District. Sections 3, 4 and 5 provide schedules of completions, commitments and lapsed planning permissions respectively.

1.7 The figures are summarised into different types of employment land use class that were present in April 2026. Further details of the use classes can be seen on the Planning Portal website[1], and a summary is provided below:

- E(g) – Commercial, Business and Service (formerly B1)
  - E(g)(i) – Offices
  - E(g)(ii) – Research and Development of Products or Processes
  - E(g)(iii) – Industrial processes
- B2 – General Industrial
- B8 – Storage or Distribution

Note: Class E(g) includes activities previously covered under the revoked Class B1(a, b, c) and now forms part of the broader Class E – Commercial, Business and Service category established in the 2020 Use Classes amendments.

1.8 The site areas and floorspace measurements used in this report are taken from planning application forms and the Council's own measurements of site areas. Where measurements are not provided, they are calculated using information submitted to support planning applications.

1.9 There are cases where there is more than one type of use proposed to be gained or lost and where the floorspace or site area is not defined by the respective planning land use classes. In such cases, the Council has used the supporting information provided with the planning application to calculate the proposed floorspace or site area. For instance, where a development creates or loses more than one type of use, the site area has been calculated proportionately using the proposed floorspace loss or gain as a guide. In cases where it is not possible to ascertain a breakdown of how much floorspace or land is being lost or created, the overall floorspace / site area has been reported or it has only been shown that a planning application exists, but the site area or floorspace measurements are not reported at all.

1.10 Consideration has also been given to whether developments are on existing employment development land or whether new employment development land is being created. In the circumstance where a scheme intensifies the use of existing site, only the part of that site that receives new development has been reported as new economic development land and not the entire site.

[1] https://www.planningportal.co.uk/permission/common-projects/change-of-use/use-classes

Why monitor employment land statistics?

1.11 The Cotswold District Local Plan (2011-31) (the adopted Local Plan) implements economic objectives through several policies, which include providing land allocated for employment development (policies S1-S19) and protecting Established Employment Sites (policy EC2). Through this, the adopted Local Plan provides the spatial framework to support the implementation of the Council's corporate priorities and the strategic economic ambitions for Gloucestershire.

1.12 Monitoring also helps to identify patterns of change and tests whether policies are working or whether they will need to be revised in the next Local Plan review. Furthermore, providing up to date information helps to make more informed decisions when determining planning applications, such as the current position on the need for a particular type of development.

2. Summary of employment development in Cotswold District 2025/26

2.1 Table 1 provides a summary of completed employment developments in the District in 2025/26. The completion figures should be interpreted in the context of a shortened monitoring period (see Section 1.3). As such, the low level of recorded completions reflects the timing of monitoring activity rather than a reduction in overall employment development.

Table 1 – Completions in 2025/26

Use Class	Gain		Loss		Net change	
	(ha)	(m^2)	(ha)	(m^2)	(ha)	(m^2)
E(g) – Offices / R&D / Industrial Processes	0.3	293	0	0	0.3	293
B2 – General industrial	0.17	179	1.15	2,095	-0.98	-1,916
B8 – Storage or distribution	1.36	735	0.84	1,774	0.52	-1,039

2.2 Table 2 summarises employment developments in the District at 1 April 2026 that had planning permission and were either not started or were under construction.

Table 2 – Commitments at 1 April 2026

Use Class	Gain		Loss		Net change	
	(ha)	(m^2)	(ha)	(m^2)	(ha)	(m^2)
E(g) – Offices / R&D / Industrial Processes	21.86	60,576	1.88	6,069	19.98	54,507
B2 – General industrial	9.74	22,717	0.85	1,907	8.89	22,708
B8 – Storage or distribution	13.19	26,761	1.37	2,161	11.82	24,600

2.3 Table 3 analyses whether the District's 24.4 ha employment land requirement[2] is on course to being delivered by 2031, which is the end of the adopted Local Plan period. The table shows that the combined total for completions for the period 2016/26, commitments at 1 April 2026 and adopted Local Plan employment land allocations are expected to fully deliver 24.4 ha employment land requirement. With the changes to the Use Classes system the Council now includes the new E(g) class instead of B1.

2.4 More than three times the amount of employment land is expected to be delivered by the end of the adopted Local Plan period (78.06 ha) compared to the identified requirement (24.4 ha).

2.5 A substantial part of this gain comes from B8 employment land, with almost double the identified requirement (9.9 ha[3]) already delivered and three times the amount forecast when including commitments. While B8 plays a valuable role in supporting logistics and supply chains, the scale of growth has implications for employment land availability for higher-value E(g) and B2 uses, and future economic balance. B8 typically generates lower number of jobs and occupies larger sites. The strong growth in this sector may influence the District's ability to accommodate future office, R&D, and industrial demand.

Table 3 – Gain / loss of B and E(g) class employment land

Type	Net land gained / lost (ha) (2016-2026)	Net committed land (ha) at 1 April 2026	Net remaining allocated land (ha) at 1 April 2026	Total	Requirement (ha)	Shortfall?
E(g)	9.16	19.98	8.25	37.39	16.60	No
B2	2.07	8.89	0	10.96	-2.10	No
B8	17.89	11.82	0	29.71	9.90	No
Total	**29.12**	**40.69**	**8.25**	**78.06**	**24.40**	No

[2] Provided in adopted Local Plan policy DS1 for the period 1 April 2016 to 31 March 2031
[3] Provided at paragraph 6.1.4 of the adopted Local Plan for the period 1 April 2016 to 31 March 2031

2.6 The adopted Local Plan also includes a forecasted gain of 64,626m^2 B1 Office floorspace[4]. However, with the changes to the Use Classes system, developers are now able to gain permission for E(g) Use Class without needing the specify which of the 3 sub-divisions (such as E(g)(i) – Offices) they are planning to implement. The forecasted gain is therefore now compared to the overall figures for the new E(g) class.

Table 4 – Gain / loss of E(g) Floorspace

Type	Floorspace forecast (m^2) (2016-2031)	Annualised floorspace forecast (m^2)	Net floorspace gained / lost (m^2)	Net committed floorspace (m^2) at 1 April 2026	Cumulative E(g) floorspace built or committed (m^2) at 1 April 2026
E(g)	64,626	4,308	7,746	54,507	62,253

2.7 Table 5 monitors the adopted Local Plan employment land allocations. Four of the allocations have gained planning permission since the adoption of the Local in August 2018.

Table 5 – Employment Land Allocations at 1 April 2026

Parish	Site Name	Size (ha)	Type	Permission
Allocations with Permissions				
Cirencester	Land to the south of Chesterton	9.10	B1/B2/B8	16/00054/OUT
Bourton-on-the-Water	Land north of Bourton Industrial Estate / Business Park	3.38	B1/B2/B8	15/03318/OUT
Chipping Campden	Battle Brook / Extension to Campden Business Park	0.67	B1/B2/B8	21/03116/OUT

6. Summary and Conclusions 72

Appendix A: Study Area 73

Appendix B: Market Share & Quantitative Assessment 74

1. Introduction

1.1 This Retail and Town Centres Study ('the Study') has been prepared by Nexus Planning ('Nexus') for Cotswold District Council ('CDC'). It is intended that the Study will provide up to date evidence base information for the emerging Cotswold Local Plan which is being prepared by CDC as the main development plan document for Cotswold District with a lifespan for 2026-2043.

1.2 The emerging Local Plan, when adopted, is intended to replace the Cotswold District Local Plan 2011-2031. It will, amongst other things, set out policies and proposals for land use development in Cotswold District, including a long-term vision for the area, outlining where growth should occur, along with a suite of planning policies to guide decisions on planning applications. This will include a strategy and policies for the delivery of new homes, jobs and infrastructure to meet the needs of the local community and local economy.

1.3 Part of the spatial strategy within the emerging Local Plan will be in relation to the main 'town centres', including the definition of network of centres that meet the needs of the local communities, which will also include planning for new centres to meet the needs of new and expanding communities.

1.4 Preparation of the emerging Local Plan has commenced, with a Vision, Objectives and Development Strategy Options Paper consulted upon between February and March 2024. Following changes in national planning policy in December 2024, including the minimum length for Local Plans[1] and the method for calculating the number of homes needed in each local planning authority area, CDC have recently been consulting upon a series of preferred options for development.

1.5 In order to inform the emerging Local Plan work has been continuing on its evidence base. In order to inform this work, this Study has been commissioned to provide the following evidence base information and assessment work on retail and town centre issues:

a. A review of main settlements in Cotswold District in order to define a hierarchy of centres and support the wider spatial strategy within the Local Plan Review.

b. An assessment of the health of the main town centres across the District, along with main town centre land use provision across the smaller settlements not currently in the retail hierarchy.

c. A review of retail, leisure and town centre trends in order to set the context for the town centres strategy and the need to plan for new retail and main town centre uses across the District.

d. A review of current spending patterns across Cotswold District on retail and food/beverage land uses, including the market share of key destinations/settlements and the amount of spending which local facilities gain from visitor/tourist spending.

e. Assessments of need for retail, food/beverage and other main town centre land use floorspace, including the spatial distribution of provision.

f. Recommendations for retail and town centre planning policies for the Local Plan Review, including the opportunities/requirements for new retail/main town centre land use provision to support strategic development sites.

[1] 15 years

1.6 It is intended that this document will be made available by CDC as part of the forthcoming Regulation 19 consultation for the draft Local Plan, due in August 2026.

1.7 The most recent comprehensive review of retail land use provision and town centre strategy issues was undertaken by GVA for CDC in 2017: the Cotswold Retail Study Update 2016 (June 2017) (hereafter known as 'the 2017 Study'). The 2017 Study covered similar ground as this current Study including a review of the health of the main town centres in the District, an assessment of the need for retail land use floorspace, a review of the key development sites which can accommodate identified needs, along with the recommendations for the content of development plan policy. The recommendations of the 2017 Study informed the retail and town centre elements of the Cotswold District Council Local Plan, adopted in August 2018.

1.8 The preparation of this current Study has been guided by the contents of the current version of the National Planning Policy Framework ('NPPF') published in December 2024[2] and, in particular, Section 7 which details with planning policy. Given the preparation programme for the new Local Plan, it will be examined under the 2024 version of the NPPF. However, it is to be noted that a new draft version of the NPPF was published in December 2025 for consultation. Whilst the content of the new Local Plan will not be Examined in the light of the 2026 NPPF, the content of the new national policy document will nevertheless be a material consideration for future retail and other main town centre land use proposals in the District.

1.9 As part of the assessment of the topics outlined in paragraph 1.5 above, a wide range of data has been collected during the course of preparing this Study. This has included obtaining data on spending patterns across retail and leisure facilities in the Cotswold District area using evidence provided by Experian. This data has helped the Study understand the extent of the shopping and leisure catchments for the main 'town centres' along with out of centre provision and the market share of each settlement. In addition, land use data for the main 'town centres' and main settlements has also been collected in order to provide an up-to-date picture on the diversity of land uses in each of the main locations in the centre hierarchy.

1.10 The remainder of this document is structured in the following manner:

a. Section 2 provides a review of the background and context to the main 'town centres' and retailing issues in Cotswold District, including a summary of the recent stage of consultation on the Local Plan Review. Section 2 also provides a review of current national planning policy for retail and main town centre uses, along with recent legislative changes.

b. In order to provide up-to-date evidence base data for the emerging Local Plan, Section 3 provides a review of retail, leisure and town centre trends, including how the environment for retail and 'town centre' land use issues has evolved in recent years since the preparation of the 2017 Study.

c. Section 4 provides a comprehensive review of the current baseline regarding retail and other main town centre issues across Cotswold District. In particular, a review of the land use profile of existing defined town centres in the development plan hierarchy is provided, along with a review of the provision of main town centre uses in smaller settlements which do not currently have a defined town centre. As part of this review of the main settlements in the District, data on retail and food/beverage spending is reviewed in order to build up a picture of the catchment area of the main settlements.

[2] And updated in February 2025

d. Section 5 provides various strands of work which lead towards a retail and town centres strategy for the emerging Local Plan. In particular, this section provides:

    1. An assessment of the need for retail floorspace across Cotswold District, with particular focus upon the main settlements in terms of quantitative and qualitative provision. An assessment for food and beverage floorspace is also provided.
    2. Following the baseline assessment of need for retail floorspace, Section 5 also provides a detailed analysis of the spatial aspects of provision. Within this assessment we examine the need to plan for retail and other main town centre land use provision as part of the larger potential strategic development areas to be included in the Local Plan Review.
    3. Advice and recommendations regarding the content of strategic and development management policies for inclusion in the Local Plan Review, having regard to the findings of the spatial and need assessments in this Study and the content national planning policy.

e. Finally, Section 6 provides a summary of the content and recommendations of this Study.

1.11 All plans and other documents referred to in the main text of this report are contained in appendices.

2. Background & Context Issues

Introduction

2.1 In order to provide context for this Study and the formulation of the retail and town centre elements of the emerging Local Plan, it is helpful to provide a brief review of main background and context issues for 'town centre' and retail planning issues across Cotswold District and the surrounding area. In particular, this context section provides:

a. A review of current local planning policy towards town centre and retail issues, including the existing Cotswold Local Plan and the content of the 2025 Preferred Options consultation.

b. A summary of the main findings of the 2017 Retail Study regarding retail and town centre issues across Cotswold District.

c. A brief summary of current national planning policy (and guidance) regarding main town centre uses, along with salient parts of the ongoing reform of the planning system.

2.2 Each aspect is discussed in turn below.

Planning Policy and Evidence Base Information for Retailing and 'Town Centre' Issues in Cotswold District

Policy

2.3 The current adopted development plan for Cotswold District is the Cotswold District Local Plan 2011-2031, which was adopted in August 2018. Sections 9.7 to 9.9 of the Local Plan provide the retail and town centre land use strategy for the District. Policy EC7 outlines the town centre hierarchy, across four tiers of centre. These are as follows:

a. Town centre: Cirencester

b. Key Centres:

1. Bourton-on-the-Water
2. Chipping Campden
3. Moreton-in-Marsh
4. Stow-on-the-Wold
5. Tetbury

c. District centres:

1. Fairford
2. Lechlade

d. Local centres:

1. Northleach
2. South Cerney

2.4 The differentiated classification of these settlements for retail and main town centre land use purposes differs from Policy DS1 of the Local Plan which classifies all of these settlements as Principal Settlements for the purposes of the development strategy in the Plan.

2.5 Part 3 of Policy EC7 indicates that provision will be made for 400sq m net of convenience goods and 2,100sq m net of comparison goods retail floorspace within Cirencester over the Local Plan period. None of the other nine settlements in the town centre hierarchy in EC7 are provided with a net additional retail floorspace forecast, with the policy instead noting that support will be given to proposals in defined centres which maintain and enhance provision and the wider health of the centre. In addition, each of the centres listed in the hierarchy in Policy EC7 have a defined town, district or local centre boundary on the Local Plan policies map. Cirencester town centre also possesses primary shopping area and primary/secondary frontage definitions.

2.6 Policy EC8 provides detailed and wide-ranging criteria for the management of retail and other main town centre land use proposals. The policy deals with proposals within town centre boundaries, including how they contribute to the health, role and function of town centres, along with the consideration of proposals outside of the defined town centre boundaries for the centres listed in Policy EC7. This includes the operation of the sequential test, plus a series of assessment criteria in Part 7 of the policy (relating to accessibility, the assessment of the likely impact of proposals on town centre health and investment, impact on choice and competition, plus the contribution of proposals to the attractiveness and character of settlements).

2.7 Following on from Part 8 of Policy EC8, Policy EC9 outlines the approach to the assessment of retail development proposals located outside of the town centres listed in Policy EC7. It notes that retail proposals with a net increase of 100sq m or more, or proposals that relate to floorspace of 100sq m or above, will be assessed against their impact on the health of, and investment within, defined town centres.

2.8 Beyond the overarching policy in EC8, Policy S3 of the Local Plan provides the Cirencester Central Area Strategy, including historic environment, transport/parking/access, and redevelopment opportunities. S3 identifies car parks within the town centre as redevelopment opportunities, particularly the Brewery and Forum car parks. The Policy indicates that redevelopment proposals should be guided by a masterplan for the town centre which will be adopted as a Supplementary Planning Document.

2.9 Policy S1 of the Local Plan identifies four mixed use redevelopment opportunities in Cirencester town centre (Memorial Hospital, Sheep Street, Forum car park and Brewery car park), with the two car park sites identified retail-led development opportunities. None of the other Principal Settlements have identified redevelopment opportunities in the adopted Plan.

2.10 Outside of Cirencester town centre, Policy S2 of the Local Plan allocates a large area of land to the south of Chesterton as a strategic development area (including 2,350 dwellings). This allocation also includes the provision of a new neighbourhood centre as part of a series of community facilities to support the day-to-day needs of this new residential community.

Evidence Base

2.11 As noted in Section 1 of this document, the most recent comprehensive assessment of town centre land use issues across Cotswold District was the 2017 Retail Study. That study examined the town centre hierarchy across the District and included health centre assessment of those settlements which can feature as part of the former 'town centre' hierarchy in Policy EC7 of the Local Plan. The 2017 Retail Study also provided an assessment of the quantitative and qualitative need for retail floorspace across the District up to 2031 and provided advice on the main locations which could meet the

identified needs. Advice was also provided on the content of strategic and development management policies in the Local Plan, along with town centre boundary areas.

2.12 Alongside the 2017 Retail Study, CDC has commissioned/undertaken a number of different evidence base studies which have covered land use and accessibility issues in Cirencester town centre. These are:

a. Cirencester Town Centre Feasibility Study: Forecast Change in Uses to 2051, Nexus (November 2021)

b. Cirencester Town Centre Health Check Report, August 2021

c. Cirencester Site Assessments, Strategic Housing and Economic Land Availability Assessment (2021)

2.13 A summary of the content of the 2021 Feasibility Study can be found in Section 4 of this report.

National Planning Policy, Guidance & Legislation

National Planning Policy

2.14 The latest version of the NPPF was published in December 2024. This latest version provides a clear statement of the new Labour government intended approach to the planning system, with a particular focus around its objective of delivering 1.5 million new homes by the end of the current Parliament (in 2029).

2.15 The main section of the NPPF which deals with retail and town centre planning policy matters is Section 7: ensuring the vitality of town centres. No changes were made to this section between the 2023 and 2024 versions and the general content of national policy towards retail and town centres has remain relatively unchanged over recent years. The main elements of the current version of the NPPF are as follows:

a. Paragraph 90 asks that planning policies in development plans should:

"a) define a network and hierarchy of town centres and promote their long-term vitality and viability – by allowing them to grow and diversify in a way that can respond to rapid changes in the retail and leisure industries, allows a suitable mix of uses (including housing) and reflects their distinctive characters;

b) define the extent of town centres and primary shopping areas, and make clear the range of uses permitted in such locations, as part of a positive strategy for the future of each centre;

c) retain and enhance existing markets and, where appropriate, re-introduce or create new ones;

d) allocate a range of suitable sites in town centres to meet the scale and type of development likely to be needed, looking at least ten years ahead. Meeting anticipated needs for retail, leisure, office and other main town centre uses over this period should not be compromised by limited site availability, so town centre boundaries should be kept under review where necessary;

e) where suitable and viable town centre sites are not available for main town centre uses, allocate appropriate edge of centre sites that are well connected to the town centre. If sufficient edge of centre sites cannot be identified, policies should explain how identified needs can be met in other accessible locations that are well connected to the town centre; and

f) recognise that residential development often plays an important role in ensuring the vitality of centres and encourage residential development on appropriate sites".

b. In relation to development management issues, the two policy tests are the sequential and impact tests.

1. Paragraphs 91 and 92 note, in relation to the sequential test, that:

"Local planning authorities should apply a sequential test to planning applications for main town centre uses which are neither in an existing centre nor in accordance with an up-to-date plan. Main town centre uses should be located in town centres, then in edge of centre locations; and only if suitable sites are not available (or expected to become available within a reasonable period) should out of centre sites be considered.

When considering edge of centre and out of centre proposals, preference should be given to accessible sites which are well connected to the town centre. Applicants and local planning authorities should demonstrate flexibility on issues such as format and scale, so that opportunities to utilise suitable town centre or edge of centre sites are fully explored".

2. Paragraph 94, in relation to impact assessments, notes that:

"When assessing applications for retail and leisure development outside town centres, which are not in accordance with an up-to-date plan, local planning authorities should require an impact assessment if the development is over a proportionate, locally set floorspace threshold (if there is no locally set threshold, the default threshold is 2,500sq m of gross floorspace). This should include assessment of:
a) the impact of the proposal on existing, committed and planned public and private investment in a centre or centres in the catchment area of the proposal; and
b) the impact of the proposal on town centre vitality and viability, including local consumer choice and trade in the town centre and the wider retail catchment (as applicable to the scale and nature of the scheme)".

2.16 Beyond Section 7 the only other change in the December 2024 version of the NPPF which directly relates to main town centre land uses is the inclusion of a new paragraph, No.97 (in Section 8), which relates to hot food take-away and fast-food outlets. It notes:

"Local planning authorities should refuse applications for hot food takeaways and fast food outlets:

a) within walking distance of schools and other places where children and young people congregate, unless the location is within a designated town centre; or

b) in locations where there is evidence that a concentration of such uses is having an adverse impact on local health, pollution or anti-social-behaviour".

The Draft National Planning Policy Framework, December 2025

2.17 In December 2025, the Ministry of Housing, Communities and Local Government published a draft version of the new NPPF for consultation[3]. Section 8 of the draft NPPF splits town centre planning policy into two parts: plan-making and decision-taking. Policy TC1 addresses plan-making issues, with the key aspects comprising:

a. From the outset, TC1(1)(a) refers to development plans having a strategy for town centres. Whilst there is long-standing national planning policy support for town centres, the reference to town centre strategies being an integral aspect of plan-making is now proposed to be front and centre of national plan-making policy.

[3] The consultation runs until March 2026.

b. There remains a requirement to define a hierarchy of 'town centres' (TC1(1)(b), although the emphasis now falls upon town centres alone (without the reference to primary shopping areas). There is also a greater emphasis on areas of change, diversity, infrastructure, intensification and public realm, plus specific reference to residential development.

c. It remains the case that national policy expects local authorities to allocate suitable sites in town centres to meet the scale and type of uses needed. In a change to the current NPPF, these allocations should relate to needs over the plan period, and not the current policy of 'looking at least ten years ahead'. There is a subtle change between paragraph 90(e) in the current NPPF and TC1(1)(c) in the proposed draft NPPF. Both contemplate changing town centre boundaries, where there is justification to do so, however it is arguable that TC1(1)(c) is suggesting that local authorities should work harder to accommodate needs on vacant town centre sites and areas suitable for intensification.

d. It will be noted that the proposed new NPPF, like the existing NPPF, does not go into any detail about how 'needs' are to be defined and assessed. Maybe we'll get some guidance on this in future updates to the PPG.

e. Whilst it appears in the development management area of the current NPPF (para 94), there is now proposed to be, in plan-making policy (TC1(1)(e), a clear requirement, where appropriate to do so, to set locally defined floorspace threshold for impact assessments.

f. There is also now proposed to be specific reference to the use of Article 4 Directions, where they are justified in supporting the health and character of town centres.

g. There is also encouragement for local authorities to use design guides, masterplans and design codes to support their vision for town centres. This encouragement, in TC1(2), will no doubt have a relationship with the requirement for town centre strategies in TC1(1)(a).

h. Finally, it is notable that references to 'markets' (para 90(c) in existing NPPF) are proposed to be removed.

2.18 There are three proposed development management policies within the draft NPPF, which are intended to deal with the general policy approach to developments in town centres and also the management of proposals for main town centres uses located outside of town centres. Whilst there has been long-standing support for maintain and enhancing the health of town centres, there is now proposed to be a specific stand-alone national policy: TC2. It is directed specifically at proposals located within town centres, with the singular aim of supporting the overall vitality and viability of the centre. Importantly, it requires the decision maker to give substantial weight to this aspect. There is also specific emphasis on a diversity of uses in the proposed policy, but no specific mention of 'traditional' town centre land uses (i.e. retail, leisure, service uses) although residential uses do get a mention.

2.19 Policy TC3 is intended to deal with the sequential test. It is proposed to retain all the hallmarks of the existing town centre first approach (in paragraphs 91 and 92 of the current NPPF), although the following points should be noted. First, a number of aspects of the current NPPF are not proposed to be changed in the new NPPF. These include:

a. The sequence of locations for the sequential test: town centre, then edge of centre, followed by out of centre.

b. When considering edge and out of centre locations preference should be given to accessible sites that are well connected to the town centre2.

c. When considering the 'availability' of alternative sequentially preferable sites an 'available site' is either available now or expected to become available within a reasonable period.

d. There continues to be an exemption to the sequential test for small scale offices or other small scale rural development.

2.20 With regard to the proposed changes, there are three aspects. First, there is one minor 'clarification' in TC3(1), which now makes it clear that the sequential test will apply to proposals not in an existing centre nor *"in accordance with an allocation for that purpose in an up-to-date development plan".* The proposed change is the use of the phrase: 'for that purpose'. This is a subtle change from the current NPPF, which makes reference to *"not in accordance with an up-to-date plan".* This will, no doubt, be helpful in those cases where there is debate over whether an edge or out of centre proposal on an allocated site is 'in accordance with an up-to-date plan'.

2.21 Second, an element of the current version of the PPG has made its way to the new NPPF. This existing guidance, which would now become policy, states: *"In doing so it is not necessary to demonstrate that a potential town centre or edge of centre site can accommodate precisely the scale and form of development proposed".*

2.22 Third, the biggest potential change in the application of the sequential test related to TC3(3). The proposed wording of this part of the sequential test policy states:

> *"In doing so it is not necessary to demonstrate that a potential town centre or edge of centre site can accommodate precisely the scale and form of development proposed, and it should be considered whether the type of development proposed could be accommodated across multiple sites".* [our emphasis]

2.23 The reference to 'multiple sites' suggests a requirement to consider, in certain circumstances, the concept of disaggregation in the sequential test. Specific reference to disaggregation was removed from national policy when the first edition of the NPPF was published in 2012. It previously appeared in PPS4 (and the accompanying Practice Guidance) and, in summary, allowed a decision maker to consider whether a proposal, which was constructed of different elements, should be split up and accommodated on suitable and available separate alternative sites. This added an additional level of assessment for proposals involving retail and leisure parks or separate elements.

2.24 Finally, Policy TC4 deals with the assessment of the likely impact of certain development proposals on town centres. TC4 has many similarities with paragraph 94 of the current NPPF, namely:

a. It applies to retail and leisure proposals and not all main town centre land use proposals outside of town centres.

b. In line with the clarification for the sequential test (TC3), proposals for retail and leisure uses outside of centres will only avoid the impact assessment if they on a site allocated for the proposed use.

c. The two limbs of the assessment framework remain: impact on town centre vitality and viability, plus impact on town centre investment.

d. The default threshold for impact assessments is 2,500sq m gross floorspace unless there is an alternative locally-set development plan threshold.

2.25 Looking beyond the main NPPF policies, there is a proposed change in the Glossary which will affect the application of the sequential test, plus how some people approach the impact assessment test: the definition of edge-of-centre. Based upon the current NPPF, a decision on whether a site is either in-centre or edge-of-centre is dictated by its relationship to a defined Primary Shopping Area ('PSA') and the defined town centre boundary depending upon the land use. If it's a retail use, a town centre site is within the PSA. In addition, a retail site will be edge of centre if it is well connected to, and up to 300 metres from, the PSA. For all other main town centre uses, an edge-of-centre location is up

to 300 metres from the town centre boundary. Therefore, in theory, the site of a proposed retail development could be edge-of-centre even though it is within a defined town centre boundary. In the draft NPPF, the definition of edge-of-centre becomes more straight-forward: edge of centre is a location that is well connected and within 300 metres of a town centre boundary for all main town centre uses.

2.26 Other proposed changes to the NPPF Glossary include:

a. Within the definition of 'main town centre uses', 'banks' and 'professional services' have been added into the definition (which otherwise lies unchanged).

b. To support the reference to masterplans in the town centre plan-making policies, 'masterplan' is now defined in the Glossary.

c. There are minor changes to the definitions of 'out of centre' and 'out of town', where the word settlement replaces the phrase 'urban area'.

2.27 There are no substantive changes to the definition of a 'town centre' in the draft NPPF.

Planning Practice Guidance

2.28 National policy contained within the NPPF is supported by the contents of the Planning Practice Guidance ('PPG') which is intended to assist with the preparation of development plans and the determination of planning applications. One of the main sections of the PPG covers a range of land use planning issues for town centres and retail uses, including: (a) planning for town centre vitality and viability; (b) permitted development and change of use in town centres; and (c) assessing proposals for edge and out of centre development. Those parts of the PPG which are relevant to the scope and objectives of this Study are summarised later in this document.

Legislation and Other Initiatives

2.29 As part of the **Levelling Up and Regeneration Act 2023**, the secondary legislation was brought into force in 2024 which enables local authorities to progress **High Street Rental Auctions ('HSRAs')**. HSRAs are a new power for local authorities to require landlords to rent out persistently vacant commercial properties to new tenants such as local businesses or community groups. HSRAs provide local authorities with a strong tool to use in places where vacancy rates are a problem and where there is little cooperation between landlords and local authorities, however, they will not be applicable in all cases of vacant high street premises. When considering whether a HSRA will be appropriate, a local authority should consider whether the specific premises in question meets the requirements of the legislation, as well as whether alternatives to High Street Rental Auctions might be more appropriate.

2.30 To qualify for a HSRA, premises need to be situated on a designated high street or in a designated town centre and the local authority needs to consider them to be suitable for a high-street use. The local authority is responsible for designating their streets or areas where a HSRA could be used. The local authority must maintain and make available to the public a list describing, and a map showing, any high streets or areas it has designated. This is similar to the process a local authority would take to designate and display a conservation area. In designating a street or area in which a HSRA could be used, the local authority must be satisfied that the street or area is important to the local economy because of a concentration of premises undertaking high-street uses on the street or area.

2.31 Once a high street designation has been made in the correct manner, monitoring should take place to identify long term vacancies. Properties which have been continuously unoccupied for 365 days, or at least 366 days in a 24 month period, have the potential to qualify for a HSRA (so long as occupation of the premises for a suitable high street use

would be beneficial to the local economy, society or environment. Subject to those conditions being met, the HSRA process commences, with the aim of securing a new tenant for the property in question. Further information on HSRAs can be found at: https://www.gov.uk/government/publications/high-street-rental-auctions-non-statutory-guidance/high-street-rental-auctions-non-statutory-guidance.

3. Retail & Town Centre Trends

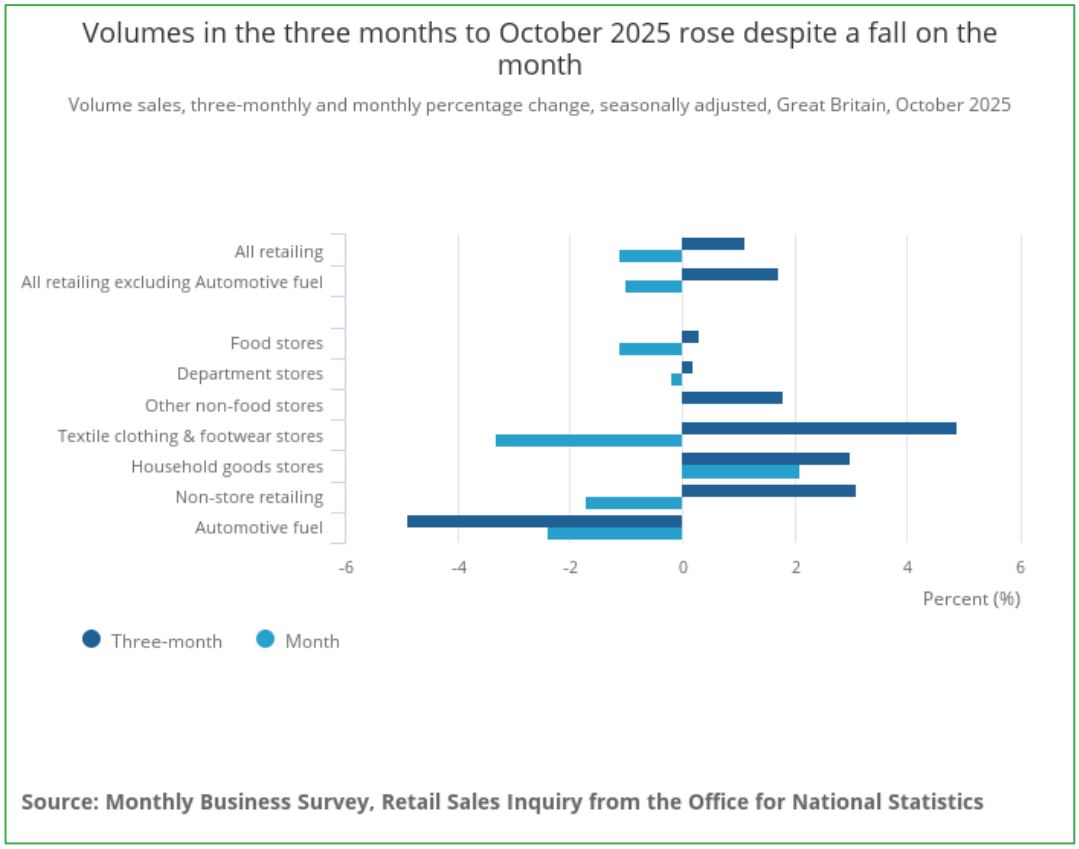
Introduction

3.1 A key part of building the background context for this Study is an examination of retail, leisure and town centre trends. Like any land use sector, economic and commercial market trends, along with external factors, will have an influence on how a local authority will plan for individual land uses and how it will develop strategic planning policies to guide development and other regeneration initiatives.

3.2 Based upon the scope of this Study, two areas should be examined: (a) national economic issues and trends; and (b) local issues in and around Cotswold District. Within these topic areas, it is important to consider events which have occurred since the preparation of the previous evidence base study on retail and town centre issues in 2017 and also the adoption of the Local Plan in 2018, including how actual events may have matched or diverged from previous forecasts and assessments. For the avoidance of doubt, this section of the Study provides 'a point in time' assessment of the UK economy and retail, leisure and town centre sectors. Therefore, its contents should be read and understood with this in mind.

National Trends

Consumer Spending



3.3 As consumer spending accounts for around 60% of GDP, the financial health of households and their ability to spend are crucial factors in determining an economy's performance. Traditionally, consumer spending is the driving force behind GDP growth in the UK. In recent years, however, this has not been the case. First, the Covid-19 pandemic and associated lookdowns resulted in temporary large drops in spending and big changes to spending patterns (such as a greater share of spending on goods and less on services). Then, just as spending had recovered to its pre-pandemic level, the period of high inflation in 2022 and 2023 squeezed household budgets, resulting in stagnant spending in real (inflation-adjusted) terms.

3.4 In November 2025, the ONS announced that retail sales had fallen 1.1% in October, which was much worse than commentators had been expecting. This marked a steepening in the decline in retail sales volumes since the summer, following growth of 0.5% in September 2025, 0.7% growth in August and 0.3% growth in June. The sharp fall in sales in October mirrored the 1% contraction in sales in May 2025.

3.5 Figure 3.4 below provides data, from the ONS, on the changes in retail sales per category for October 2025 and the three month period leading up to (and including) October. The ONS reports that sales volumes rose over the three months to October 2025 as a strong summer for clothing stores reached its peak in September 2025. Within other non-food stores, computer and telecommunication retailers performed well, which retailers attributed to new product releases. Non-store retailers continued to rise in the three-monthly series, with retailers commenting on strong demand for gold which boosted online jewellers in September 2025.

3.6 Total sales volumes fell over the month to October 2025, the first monthly fall since May 2025. Supermarket sales volumes fell for the second month in a row. Clothing store sales volumes also fell following a recent peak in September 2025, with retailers reporting that consumers held back in preparation for Black Friday discounts. Online retailers within non-store retailing also dipped on the month, in part because of online clothing retailers. Some online retailers also mentioned delayed spending in the lead up to Black Friday.

Figure 3.4: UK retail sales, three-month and October 2025 change in sales

A Closer Look at the Retail Sector

3.7 Taking the above factors into account, Table 3.1 below provides a summary of Experian's 'central case' forecast for retail sales growth and associated floorspace requirements at the UK level over the short to medium term 2023-2032 and the longer term (2023-2040). The figures also take into account the impact of special forms of trading ('SFT') (i.e. internet shopping) and floorspace efficiency gains.

3.8 The table shows that efficiency gains in floorspace are likely to match retail sales growth minus SFT up to 2032, thus leading to a situation where there is negligible growth in retail floorspace. Over the longer term to 2041, the outlook is expected to improve slightly at 0.2% per annum and 7.8% overall from 2025 until 2041.

Table 3.1: retail sales growth, efficiency gains and floorspace requirements

	% p.a. 2025 - 2032	Cumulative Growth, 2025-2032	% p.a. 2025-2041	Cumulative Growth, 2025-2041
Retail sales growth	1.5	12.5	1.7	32.4
Retail sales growth, less SFT adjusted for sales from stores	1.1	9.0	1.3	24.9
Efficiency gains	0.8	7.3	0.9	17.1
% increase in floorspace required after efficiency gains (sales growth less efficiency gains)	0.2	1.7	0.4	7.8

Source: Experian, 2026

3.9 In order to get a broader picture of floorspace requirements, the above figures should also be read alongside vacancy levels across the country. At the present time, the national average rate for vacant retail and service property in town centres in the UK is 14.1%. This rate of vacancy has remained virtually unchanged since the Covid-19 pandemic when national average vacancies stood at 13.8% in 2021-2022. However, these levels are noticeably higher than pre-pandemic levels of 11.3% in 2018 and 12.0% in 2019. This overall picture, where almost one in six units within the UK's retail centres is empty, is a clear cause for concern and is a key indicator of potentially too much retail floorspace within town centres. However, it is also important that this wider UK situation should, however, be compared with local circumstances in Cotswold District, which is covered in the next section of this report.

3.10 Alongside sales growth, it is also important to examine retail spending volumes, as this type of forecast is a key input into local authority retail floorspace capacity assessments, such as those contained in the 2017 Retail Study. In particular, the scale of change in retail spending will have an influence on the turnover of existing retail stores and also help to establish whether there is a case for net additional floorspace to be provided over the course of the development plan period.

3.11 Table 3.2 below compares the forecast annual changes in retail expenditure per head on all comparison goods from the time of the 2017 Study and the latest available (March 2026) forecasts from Experian. The table shows the year-on-year change forecasts over the period 2017-2031. This period matches the assessment timeframe in the 2017 Study and allows for a comparison on a consistent basis with the forecasts used in the 2017 Study and also the latest forecasts from Experian.

3.12 Table 3.2 shows that, at the time of the 2017 Study, the total forecast growth up to 2031 was circa +46%. However, the latest future retail spending (per head) forecasts, published in March 2026, show that the combination of actual and forecast change to amount to +16% between 2017-2031. Therefore, the total level of forecast growth in total comparison goods spending per head has reduced by around two-thirds since the previous evidence base study.

Table 3.2: forecast year-on-year change in per capita comparison goods spending from 2017 until 2031

	Retail Planner 13 (2015) % Growth p.a.	Retail Planner 23 (2026) % Growth p.a.
2017	2.9	4.2
2018	2.7	0.9
2019	2.8	3.0
2020	3.0	-8.1
2021	3.2	8.6

2030	3.3	2.4
2031	3.2	2.7
Total Change, %, 2017-2031	***+46.5***	***+15.9***

Source: Experian, 2015 and 2026

3.13 The same exercise as contained in Table 3.2 is replicated for convenience goods expenditure per head in Table 3.3 below. This also shows a material difference between the forecasts available at the time of the 2017 Retail Study and the latest comparable forecasts in 2026. Once again, the focus is on the core period of 2017 to 2031.

3.14 Table 3.3 shows that in contrast to the +1.8% growth anticipated at the time of the 2017 Study (for the period 2011-2031), the latest forecasts for convenience goods spending per head show a -6% fall in the level of spending per head over the same period.

Table 3.3: forecast year-on-year change in per capita convenience goods spending between 2015 and 2040

	Retail Planner 13 (2015) % Growth p.a.	Retail Planner 23 (2026) % Growth p.a.

3.15 It should be noted that the expenditure per head figures in Tables 3.2 and 3.3 above are total spending levels, inclusive of spending via special forms of trading (i.e. internet shopping). Therefore, Table 3.4 below compares the total annual change in spending per head for comparison goods against adjusted spending figures which strip out purely internet spend[4]. This comparison includes forecasts which were available at the time of the 2017 Study and the latest forecasts from Experian (2026).

[4] i.e. removing any spending which is not associated with physical stores, in order to distinguish between those sales which are fulfilled by stock held in Class E(a) stores.

Source: Experian

3.16 Table 3.4 shows that, at the time of the 2017 Study, growth between 2017 and 2031 for comparison goods spending per head was circa +44% when purely online sales were removed from the forecasts. In contrast, the latest forecasts show no growth between 2017 and 2031.

3.17 It should be noted that the comparison between the 2017 and 2026 data is heavily influenced by the events of 2020 when comparison goods spending per head fell by 24%. Therefore, if the period 2020-2021 is removed from the comparison between the 2017 and 2026 data, then the (adjusted) growth for 2017-2031 used within the 2017 Study was +38%, whilst the latest forecasts suggest a +9% growth over the same period.

3.18 Table 3.5 below shows the market share of pure online sales for both convenience and comparison goods. Again, a comparison is made between the forecasts used in the 2017 Study and the data which is available at the present time. It will be noted that there is very little difference between the convenience goods spending data, but a much larger difference for comparison goods online spending. At the time of the 2017 Study, it was forecast that purely online sales for comparison goods at 2017 would be 13.1% of total spending. The actual proportion was slightly higher, at 16.6%. However, the forecasts for 2026 are considerably different: 15% online sales (as forecast at the time of the 2017 Study) and 26% online sales (based upon the latest forecasts provided by Experian). This scale of difference in the forecasts is expected to continue to 2031.

Table 3.5: special forms of trading allowances for convenience and comparison goods expenditure, 2017-2031

	2017 Retail Study – Convenience SFT	2017 Retail Study – Comparison	2026 Experian Forecast – Convenience SFT (adjusted)	2026 Experian Forecast – Comparison SFT (adjusted)
2017	3.3	13.1	3.1*	16.6*
2026	5.1	15.0	5.4	26.1
2031	5.8	14.6	6.1	28.0

Notes: 2017 Study data taken from forecasts published by Experian in October 2015. 2025 data based on forecasts published by Experian in March 2025. In both instances, Experian SFT data has been adjusted for sales associated with physical stores. *actual data, rather than forecasts.

The Retail & Leisure Sectors

3.19 Alongside data on retail and leisure expenditure, it is also important to examine trends in retail sector in terms of the presence of retailers and leisure uses in high streets and out of centre locations as this can also help to understand the wider aspects of 'need' from a commercial viewpoint.

The retail sector

3.20 Table 3.6 below provides data, published by Green Street and PwC, on store openings and closures across the UK. It shows that there has been a consistent net loss in store numbers, with circa 5,000 premises lost in 2023 and 3,800 in 2024. The number of store openings has been consistency lower in recent years (2023-2024) than the period 2015-2019, following the Covid pandemic. It is also notable that, since 2018, the net reduction in store numbers has been larger than the pre-2018 period.

Table 3.6: retail store openings and closures, 2015-2024

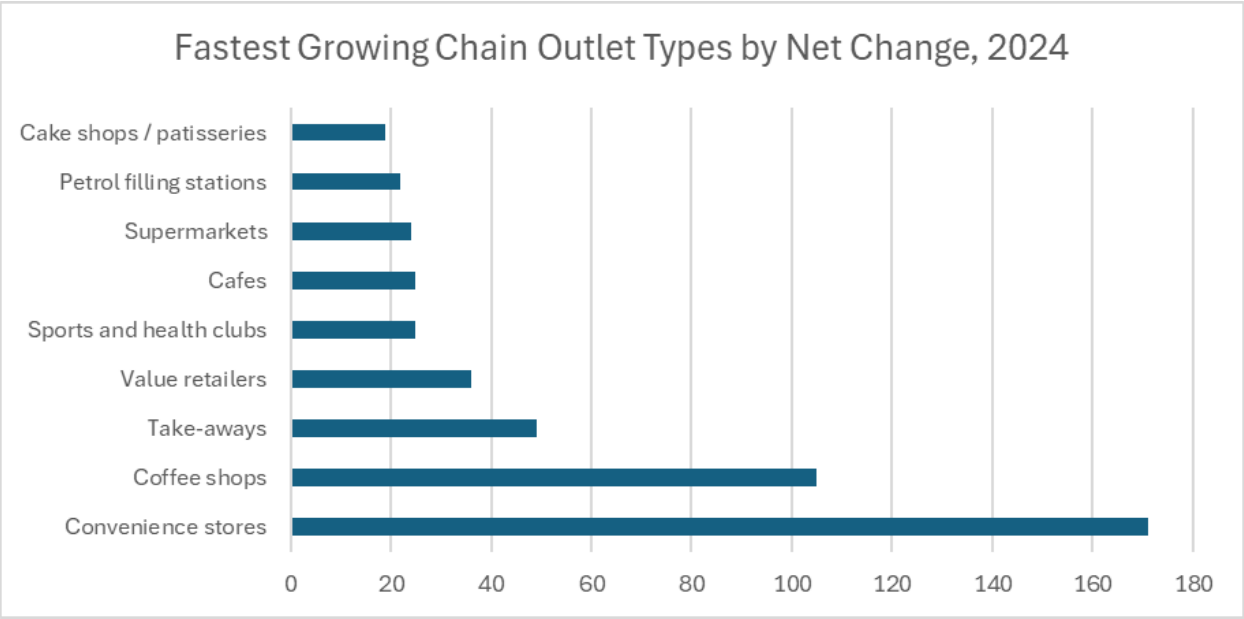
	Store Closures	Store Openings	Net Change
2015	13,268	12,121	-1,147
2016	14,439	11,806	-2,633
2017	16,274	12,264	-4,010
2018	15,304	8,767	-6,537
2019	17,338	9,690	-7,648
2020	17,532	7,655	-9,877
2021	17.219	7,160	-10,059
2022	11,530	7,903	-3,627
2023	14,081	9,138	-4,943
2024	12,804	9,002	-3,802

Source: Green Street and PwC

3.21 Table 3.7 concentrates upon net closures over the period 2014-2024 and breaks down the available data into separate locations. It shows the rate of change over the past decade and is based upon an indexation of 100 at 2014.

Table 3.7: outlet net closures by location, 2014-2024 (2014 = 100)

	UK Average	Retail Park	Stand Alone Stores	Shopping Centre	High Street
2014	100	100	100	100	100
2015	99	105	99	101	99
2016	99	103	98	100	98
2017	97	103	97	98	96
2018	94	102	95	95	92
2019	91	100	91	91	88
2020	86	97	88	85	83
2021	82	92	85	79	79
2022	81	92	84	78	77
2023	79	93	82	76	74
2024	78	93	81	75	73



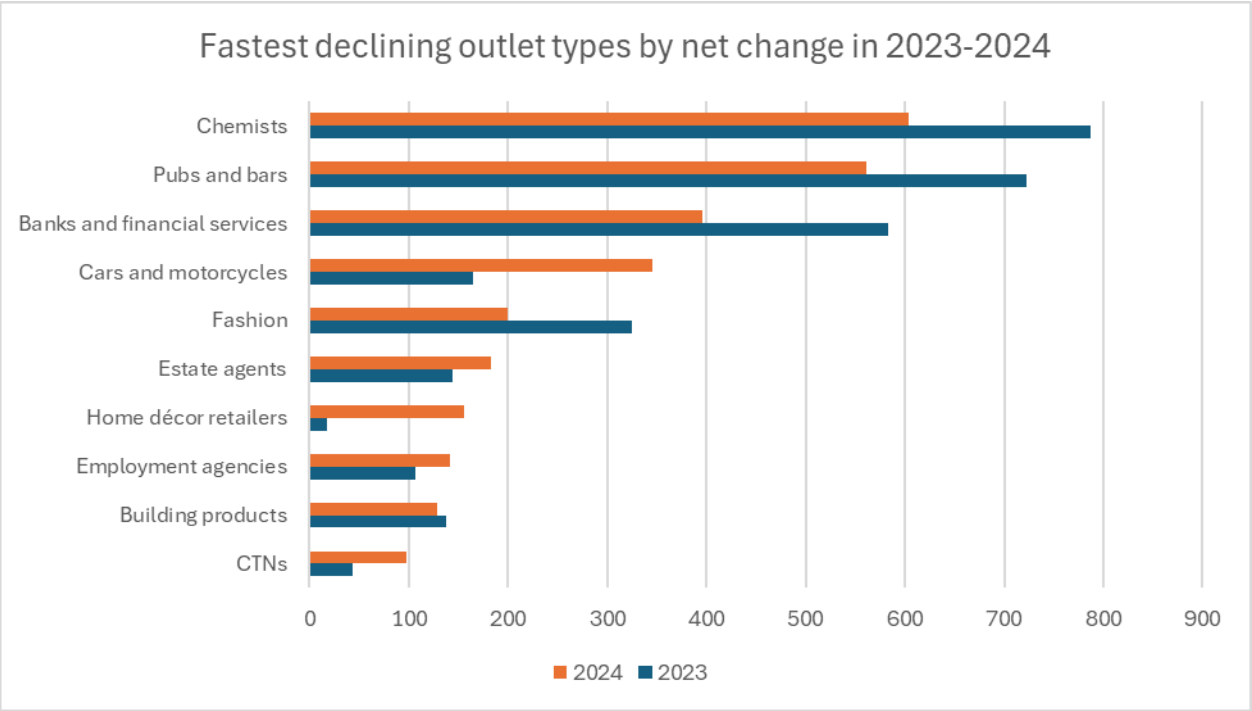
Source: Green Street and PwC

3.22 Against a backdrop of a net loss of stores between 2014 and 2024 across all locations, it is noticeable that a net loss in stores in retail park locations has only occurred since 2019. This is not matched by the other locations, with high street and shopping centre locations losing around one quarter of stores. Given the location of individual stores in shopping centre and high street locations, this has significantly affected the UK average, which has been a 22 point net loss up to 2024.

3.23 Figures 3.3 and 3.4 show the net change in different types of shops and service uses across the UK in 2024. Figure 3.3 shows the fastest growing chain outlets, by use type, in 2024 and indicates that the only two types of outlets which were able to add, on average, a net additional store per week (i.e. net change higher than 52) were convenience stores and coffee shops. However, despite lower levels of growth, the other types of businesses shown below are those which have also been able to make a positive contribution. Unsurprisingly, these include: cafes, sports and health club uses, supermarkets[5], value retailers and take-aways.

[5] Driven by the expansion programmes of ALDI and Lidl

Figure 3.3: fastest growing chain outlet types by net change, UK, 2024

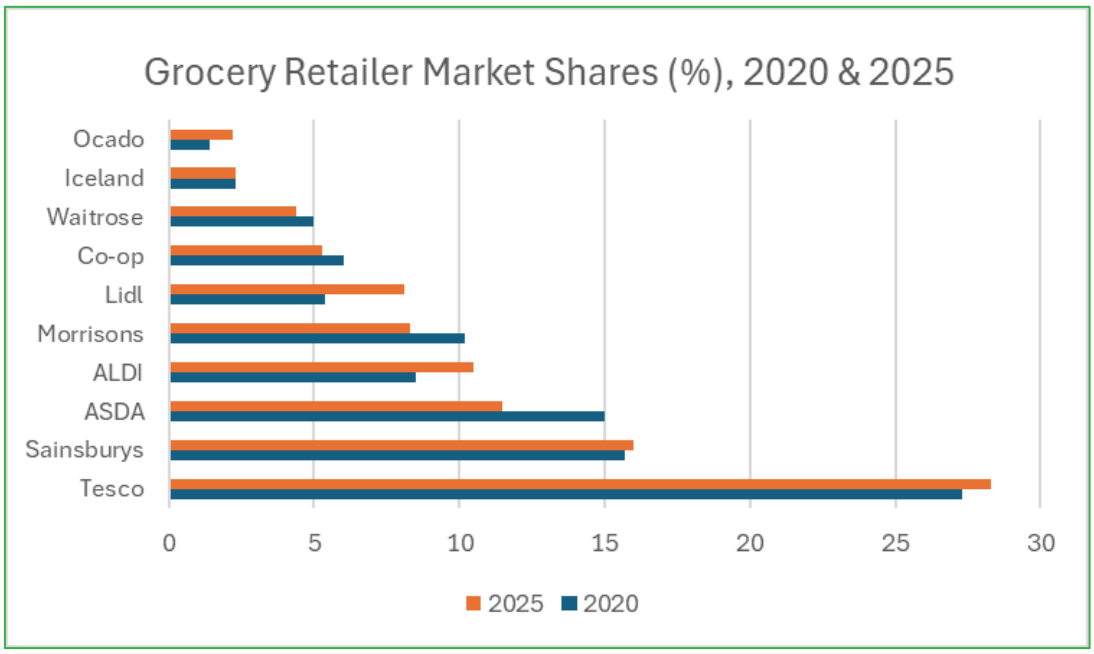


Source: Green Street

3.24 In contrast, the types of businesses shown in Figure 3.4 below are the ones showing the largest levels of decline from 2023-2024. The most notable, but probably not unsurprising ones, are chemists, pubs and bars and banks/financial services. There was a loss of around 600 chemists in 2024, following a larger loss of just under 800 chemists in 2023. In 2024, around 550 pubs/bars closed, which was less than the circa 700 units closing in 2023.

3.25 It is also notable that there has been a large number of closures in the clothing/fashion sector, with just over 300 stores closing in 2023 and 200 stores closing in 2024.

Figure 3.4: fastest declining outlet types by net change, UK, 2023-2024



Source: Green Street

The grocery sector

3.26 Within the grocery retail sector, the headline trend over the past five years has been the continued rise of discount stores such as ALDI and Lidl. These operators are now a well-established part of the UK grocery sector and, in combination now (in 2025) control around 19% of the UK grocery market. Indeed, ALDI overtook Morrisons in 2022 to become the UK's fourth-largest grocer by market share.

3.27 Figure 3.5 below outlines the market share of the main grocery retailers in the UK in 2020 and 2025. The growth in market share for Lidl and ALDI is clear, which has largely been at the expense of ASDA and Morrisons. Tesco remains, by far, the largest grocer by market share, with 28.3% of spending in June 2025. The second highest market share is Sainsburys at 16.0%.

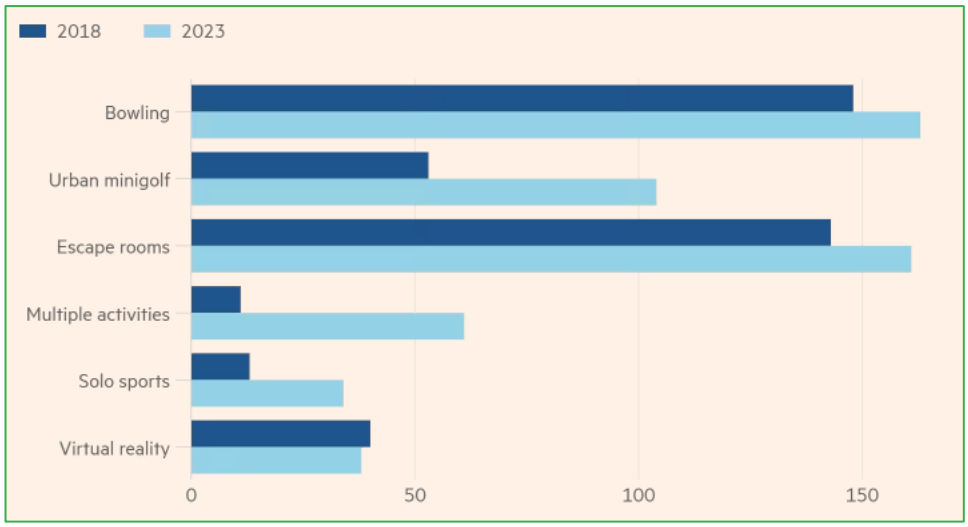
Figure 3.5: individual retailer market shares, 2020 & 2025

Source: Kantar

3.28 Looking forward, both ALDI and Lidl have significant continuing expansion plans and continue to be the most active in terms of proposed new store openings. Over the course of 2025, both retailers have opened their 1,000th store.

The leisure sector

3.29 Turning to the leisure sector, the available market data shows a complex picture. The COVID-19 pandemic had a huge effect on the performance of this sector, which led to significant business closures and loss of employment opportunities. The sector has bounced back and, according to research published by Deloitte, confidence reached a two year high in the first quarter of 2024. Since that time, however, recent research published by Deloitte has found that sentiment in 'eating out' and 'drinking in pubs and bars' declined by about 6 percentage points over the remainder of 2024. This has been driven by the cost of living and increasing prices in the leisure sector particularly in the food and beverage sector. In recent years, costs for leisure and hospitality businesses have increased significantly, driven by higher energy and food costs, along with rising wages.



3.30 Data shown earlier in this section[6] indicates the impact of cafes and coffee shops on the occupation of premises on the high street, which is part of a longer-term trend in most city, town and district centres towards more of a service-based offer. Cafes have also been a big part of the evolution of out-of-town retail and leisure parks, which have traditionally focused upon comparison goods retailing and 'big box' leisure facilities (such as multi-screen cinemas and ten-pin bowling premises). With car parking areas under-utilised, and landlords looking for additional sources of income, proposals for stand-alone cafes (sometimes with drive-through elements) are now a common feature at out-of-town facilities; a trend which is also occurring as part of the expansion of discount foodstore operator sites.

3.31 Within the leisure sector, the post-pandemic period has seen some changes within key categories and their demand for space in town centres and out of town locations. In particular, there has been a shift in the types of venue being visited. In October 2024, Hollywood Bowl, the UK's largest ten-pin bowling operator indicated that like-for-like sales were a product of intensifying competition from new emerging leisure sectors, from axe-throwing to mini golf. Whilst 'active

[6] See Figure 3.3

family' venues, such as ten-pin bowling, remain popular, there has been a growth in other activity-focused venues such as darts, cricket, escape rooms, axe-throwing and shuffleboard. According to the real estate adviser Savills the number of UK activity-focused venues has increased by around 40% since 2018 to 600 in 2024. Savills expect that the number of sites will increase further to 800 by 2029. The increase in the types of venue, by activity between 2018 and 2023, is shown in Figure 3.6 below.

Figure 3.6: UK socialising venues, number by segment, between 2018 and 2023 (Source: Savills)

4. The Main 'Town Centres' & Wider Retail and Main Town Centre Land Use Provision

Introduction

4.1 A key foundation for the retail and 'town centre' land use strategy within the emerging Local Plan is a robust set of evidence in relation to land use provision and the wider characteristics of the main 'town centres' in Cotswold District, along with a particular emphasis on retail floorspace provision within and outside of the defined 'town centre' area. Therefore, this section of the Study provides:

a. A review of the land use profile of the defined 'town centre' areas for those settlements included in the existing town centre hierarchy, as defined by Policy EC7 of the Local Plan, along with the main elements of retail floorspace provision outside of these defined boundaries.

b. For the other Principal Settlements (i.e. those without defined town centre boundaries), this section provides a review of the main town centre land uses present throughout these settlements. In addition, the same process has been undertaken for the Non-Principal Settlements.

c. An assessment of current spending patterns and associated market share levels for retail and food/beverage uses across the Principal Settlements, including an analysis of the catchment areas of these settlements and, where applicable, their defined 'town centres'.

Evidence Gathering

'Town Centre' Land Use Data

4.2 An analysis of data on retail, leisure, service and other main town centre uses provides a key contribution to the Study in a number of different ways. First, it provides a key indicator of the current performance, role and function of each defined 'town centre'. Second, it enables an analysis of the land use characteristics of each centre. Third, the land use assessment provides an important contribution to the assessments of retail and food/beverage floorspace need which will be undertaken later in this Study.

4.3 The scope for this Study focuses upon those Principal Settlements who feature as part of the 'town centre' hierarchy in Policy EC7 of the Local Plan, along with the other Principal Settlements (not included in EC7) and a series of Non-Principal Settlements. The scale and extent of information gathered for these settlements is proportionate to their size and place in the 'town centre' hierarchy.

4.4 During November 2025, Nexus undertook a series of land use surveys across main Principal and Non-Principal settlements. The surveys recorded all main town centre uses within the defined town centre boundaries for those settlements included in the Policy EC7 hierarchy, along with notable retail uses outside of these defined boundaries. For those principal and non-principal settlements without a defined town centre, all main town centre uses across the settlement were recorded. In order to assist with the gathering this land use data, town centre research data from Experian GOAD was used for Cirencester, Tetbury and Stow-on-the-Wold.

Spending Patterns Data for Retail & Food/Beverage Uses

4.5 A further key aspect of our evidence base analysis is a review of current shopping and retail spending patterns across the District, including market share data for the main centres and grocery stores. In order to inform this assessment, this

Study has obtained spending data from Experian's Spend Insight ('ESI') database. This is a database of around 4 million debit and credit cards from across the UK and provides data on spending levels at specific shopping destinations and the source of this spending[7].

4.6 The data which has been obtained from Experian is based upon the following parameters:

a. Spending data has been obtained for the key locations across Cotswold District area. This has concentrated on the larger of the Principal Settlements, along with specific foodstores/supermarkets and (for Cirencester) key retail park/warehouse facilities.

b. Spending data has been obtained for grocery stores, comparison goods shops and food/beverage facilities (such as cafes, restaurants, pubs/bars, and take-aways).

c. In order to build up a picture of the shopping catchment area of the main locations, the ESI spending data has been obtained on a zone-by-zone basis. This enables our analysis to show the scale of spending (and associated market share) from defined individual parts of the Cotswold District area. Figure 4.1 below provides a plan of the zones which have been used to organise the ESI data. These zones are based upon postcode sector areas and are consistent with the zones used in the 2017 Retail Study. Table 4.1 below provides a list of those postcode sectors that comprise each zone. A plan of the study area is also contained at Appendix A to this report.

d. In addition to the expenditure which is flowing to specific destinations in Cotswold District area from each of the eleven study area zones, the ESI data also provides an estimate of spending attracted by Cotswold retail and food/beverage facilities from outside of the study area[8].

e. The spending data provided by ESI is based upon the calendar year 2024.

[7] For the avoidance of doubt, the ESI data does not record cash sales and, therefore, for the purposes of this assessment, patterns of cash sales are assumed to follow the same distribution as credit/debit card sales.
[8] Non-study area UK spending only.

Figure 4.1: plan showing study area used for the collection of Experian Spend Insight data

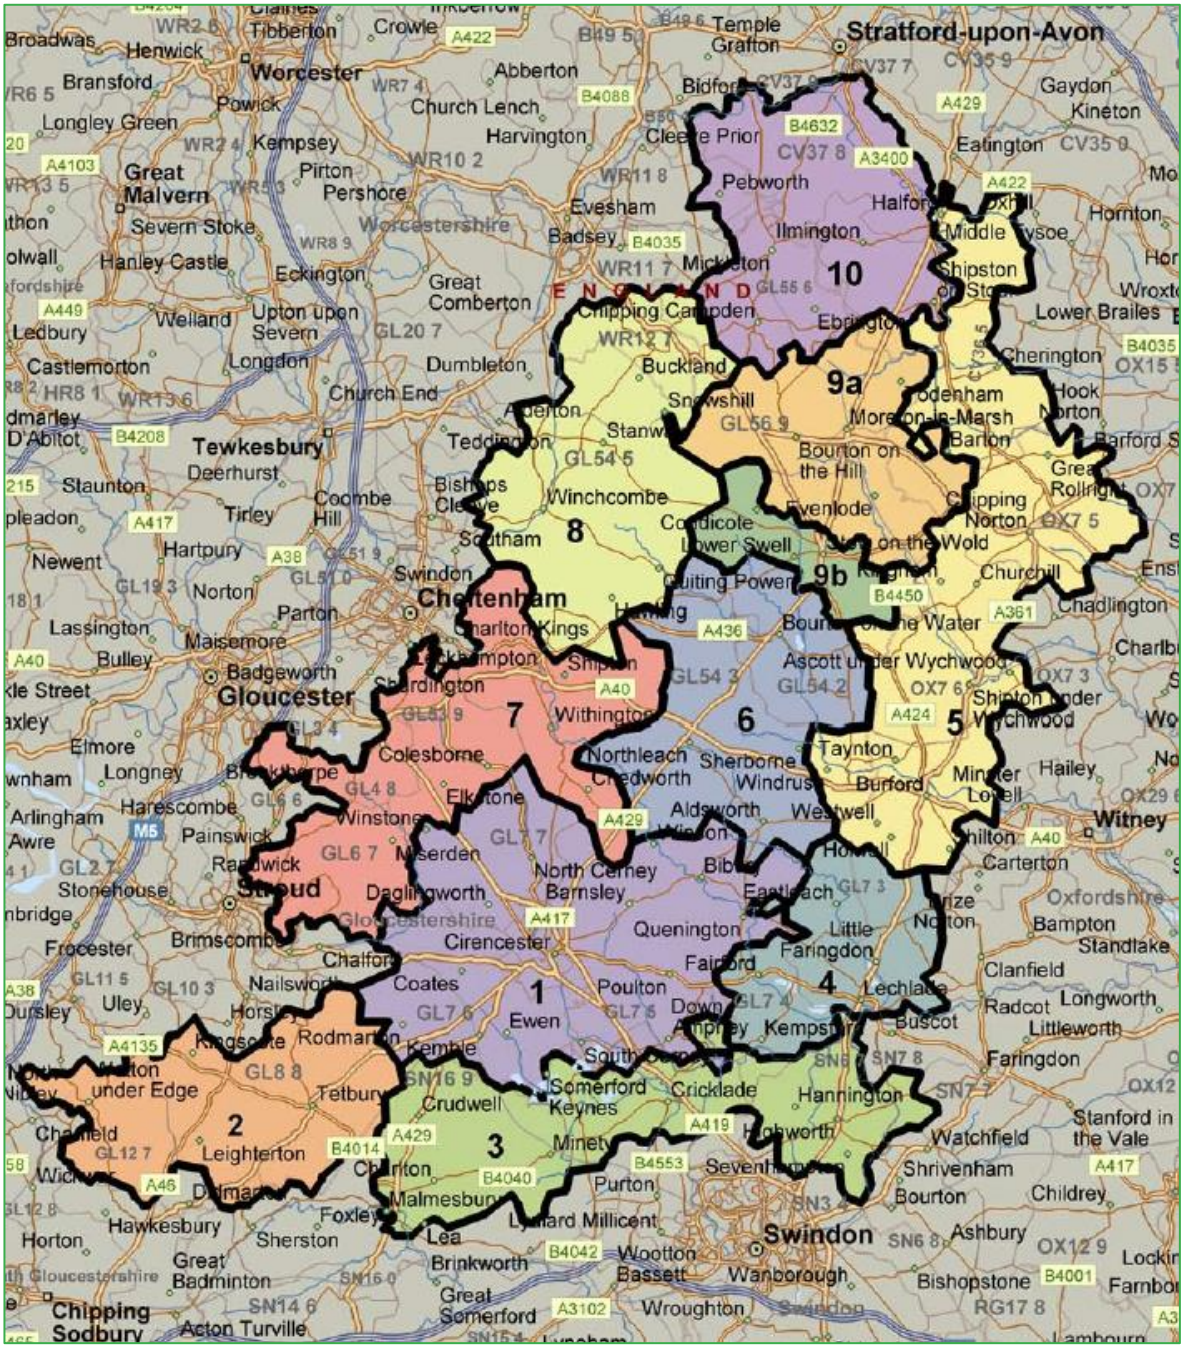


Table 4.1: study area zones and their constituent postcode sectors

Zone	Postcode Sectors
1	GL7 1, GL7 2, GL7 5, GL7 6, GL7 7
2	GL8 8, GL12 7
3	SN6 6, SN6 7, SN16 9
4	GL7 3, GL7 4
5	OX7 5, OX7 6, OX18 4
6	GL54 2, GL54 3
7	GL4 8, GL6 7, GL53 9, GL54 4
8	GL54 5, WR12 7
9a	GL56 0, GL56 9
9b	GL54 1
10	CV36 4, CV37 8, GL55 6

4.7 In order to turn the raw ESI spending data sample into market share levels for the various retail destinations in the Cotswold District area, the level of spending at each specific destination/area is expressed as a proportion of the overall spending (at all destinations) within each zone. The result of this process is shown in the market share data contained within Tables 4, 6 and 8 at Appendix B. These tables have been structured to provide the following information:

a. Across all of the tables, the market share of the main centres and other key destinations is shown on a zone-by-zone basis. For convenience goods retail provision (Table 4), data for all the main grocery stores in each settlement is provided, along with the main 'town centre' areas and an 'other' category for each main settlement.

b. A similar approach is taken for comparison goods shopping (Table 6), although the data concentrates upon a single market share figure for each settlement (apart from Cirencester[9]).

c. The market share assessment for both convenience and comparison goods spending also includes the following information:

   1. The proportion of retail spending, within each category, which is flowing to destinations outside of Cotswold District; and
   2. The proportion of spending on convenience and comparison goods which is being directed via online shopping[10].

d. The structure of the food/beverage market share data in Tables 8 (Class E(b) food/beverage) follows the structure of the comparison goods retail data.

[9] Where in-centre and edge/out-of-centre data is provided.
[10] The market share data for online shopping shown in Tables 4 and 6 at Appendix C comprises all online purchases for convenience and comparison goods. When reading this market share for each study zone it should be appreciated that the goods purchased via some of these online sales will be sources from physical bricks and mortar Class E(a) stores in the local area. This will be particularly true for grocery shopping online orders, where a large proportion of the order is sourced from the closest large foodstore/supermarket (rather than being sent from a Class B8 warehouse from elsewhere in the UK)

4.8 The market share data referred to for each of the main centres can be found in the following tables at Appendix B to this document:

a. Table 4 – convenience goods market share levels

b. Table 6 – comparison goods market share levels

c. Table 8 – market share levels for Class E(b)[11] and sui generis food/beverage uses[12]

4.9 Tables 5a, 7a and 9a translate the market share data for the various Cotswold District retail and food/beverage destinations into annual turnover forecasts for 2026 by applying the corresponding market share data to total available expenditure within each of the study area zone. This analysis is the first step in the wider quantitative need assessment which is described in Section 5 of this report.

4.10 These tables also provide an estimate of the amount of potential 'expenditure inflow' which is attracted by each of the main convenience, comparison and food/beverage destinations across the Cotswold District area. 'Expenditure inflow' comprises the amount of spending that destinations in the District are estimated to attract from customers residing outside of the study area. It has been calculated on the basis of the proportion of spending that the ESI data indicates is being spent by non-study area customers.

4.11 Further information regarding the data inputs into the quantitative assessment of spending patterns can be found in Section 5 of this report.

Review of Main Settlements within Cotswold District

4.12 Tables 4.1 and 4.2 on the following pages provide an overview of the main settlements in the District in relation to their place in the 'town centre' and settlement hierarchy, whether they currently benefit from a defined 'town centre' boundary and also a summary of the key land use data for each settlement.

4.13 The contents of Tables 4.1 and 4.2 below provide the following information:

a. The total number of retail and service uses still generally conform with the three existing elements of the Principal Settlement classification (in Policy EC7). The largest town centre in the District remains, by some considerable margin, Cirencester (with 313 retail and service units) followed by (in descending order): Stow-on-the-Wold, Tetbury, Moreton-in-Marsh and Bourton-on-the-Water (each of which are defined as 'key centres').

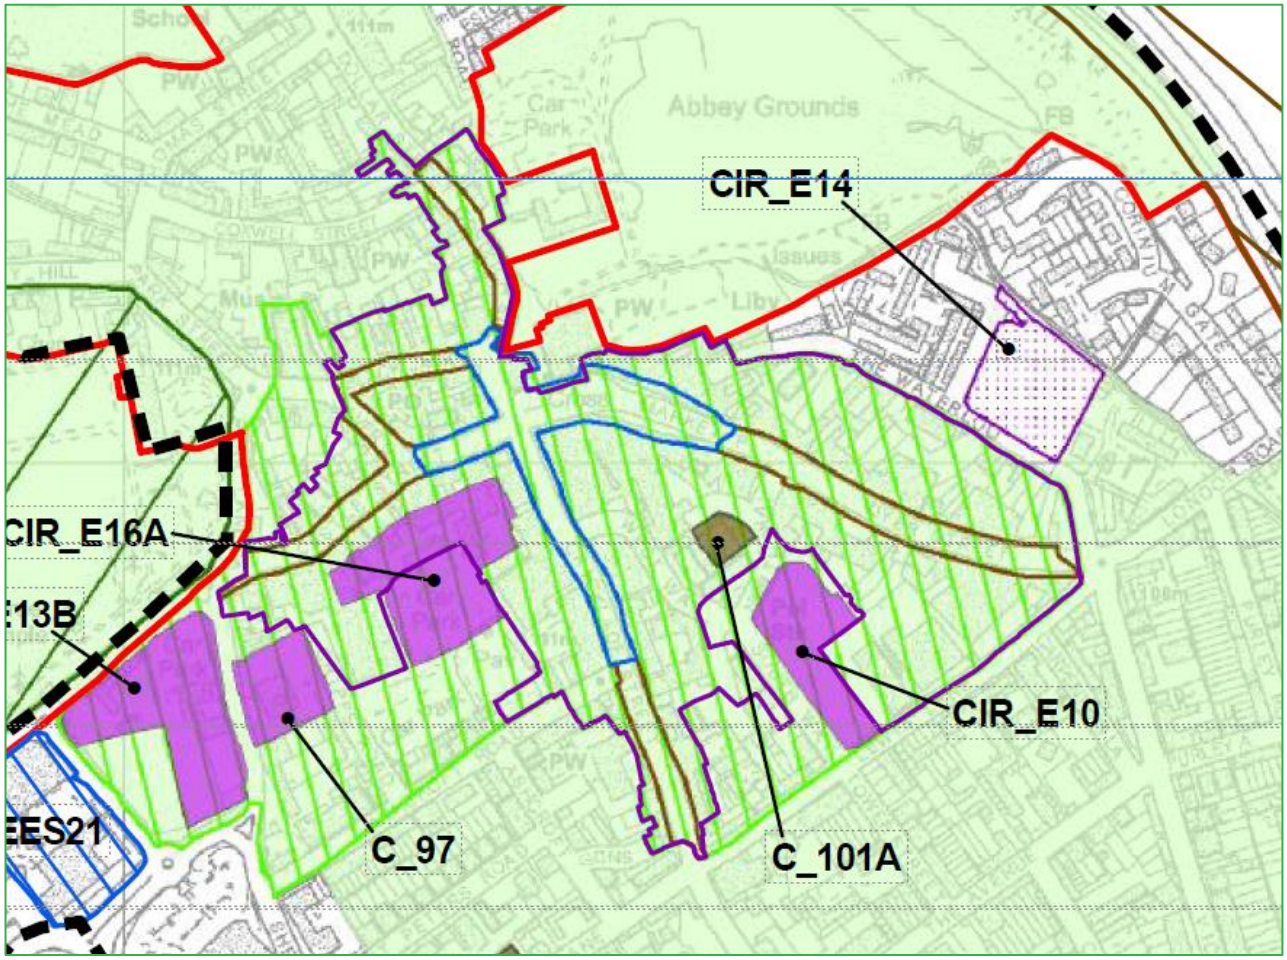
b. In most cases, there is a notable separation between the amount of retail/service uses present in those Principal Settlements which currently feature as part of the centre hierarchy in Policy EC7 and those settlements which are not within EC7. The only area where the boundaries between the two different classifications become blurred is for South Cerney and Mickleton, which contain a similar number of these uses.

c. It will also be noted that the number of retail and service uses with a number of the Non-Principal Settlements is of a similar scale to a number of the Principal Settlements. However, despite a similar scale of

[11] Cafe and restaurant uses
[12] Drinking establishments and take-aways

provision in many cases, it will be noted that all of the Principal Settlements not currently included in EC7 contain at least one convenience store whilst many of the Non-Principal Settlements do not.

d. It should be noted that the above characteristics are confined to the existing scale of retail and service land use provision across the main settlements within the District. There will be other factors which will influence the scale of provision in individual settlements, including the size of the settlement itself and the proximity of other settlements (which may have their own retail/service provision).



4.14 The information in Tables 4.1 and 4.2, along with the detailed information and analysis in the remainder of this section, will provide a baseline assessment of provision which will inform the future retail and main town centre land use strategy recommendations later in this Study.

4.15 A summary of the main characteristics of all of the main settlements can also be found in Section 6 of this document.

Cirencester

4.16 Cirencester is, by some margin, the largest defined town centre in Cotswold District. It is the only Principal Settlement to be classified as a Town Centre in the adopted Local Plan, a document which defines the following areas within the town centre: (a) town centre boundary[13]; (b) primary shopping area[14]; (c) primary frontage[15]; and (d) secondary frontage[16]. These areas are shown in the extract from the adopted policies map in Figure 4.2 below.

Figure 4.2: extract from adopted policies map for Cirencester town centre

4.17 Following the 2017 Retail Study, the Council commissioned Nexus to undertake a further study of Cirencester town centre in 2021: Cirencester Town Centre Feasibility Study: Forecast Change in Uses to 2051 ('the 2021 Cirencester Study'). The study was commissioned to consider anticipated future changes in the composition of Cirencester's 'high street' to 2051. The study reached the following conclusions:

a. At the time of 2021 assessment, it was forecast that there may be a need for an additional 1,300sq m (net) and 1,900sq m (gross) of additional convenience goods floorspace in the town centre at 2051. The estimated

[13] Green vertical lines on plan in Figure 4.2
[14] Area edged in purple in Figure 4.2
[15] Area edged in blue in Figure 4.2
[16] Area edged in brown in Figure 4.2

comparison goods requirement over the same timeframe is more modest, equating to 600sq m net and 800sq m gross.

b. In terms of the service sector, the 2021 assessment identified that 900sq m of retail service floorspace and 2,000sq m of leisure service floorspace could potentially be supported at 2051. It was also forecast that the quantum of floorspace occupied by the financial and business service sector may remain broadly similar going forward.

c. Extracts from the 2021 Cirencester Study, showing the forecast change in land use floorspace between 2021 and 2051 are shown in Figures 4.3 to 4.4 below.

Figure 4.3: forecast change in floorspace by retail and service land use, 2021-2051

Retail Service	10.0%	11.7%
Vacant	12.6%	1.6%
Total	**100.0%**	**100.0%**

d. The 2021 Study also indicated that, in commercial terms, the key opportunities for Cirencester town centre related to:

1. the potential to bring forward a cinema within Cirencester, which would likely be of a 'boutique format' in order to be accommodated on a town centre site;
2. the potential to supplement the hotel offer in the town centre;
3. the quantitative need which exists towards the end of the reporting period to support a further moderately-sized supermarket in the town, which could be brought forward in the centre (subject to format and site availability); and
4. the potential to improve the leisure and cultural economies, which are perhaps not as substantial as we would expect given the wider role and function of the town (and its ability to attract visitors to the area).

4.18 For the purposes of this Study, the land use profile of Cirencester town centre has been updated via land use surveys undertaken by Nexus in Autumn 2025. The results of the 2025 surveys are shown in shown in Table 4.2 below and have been arranged to show the change in the number (and proportion) of retail and service land uses in the centre between 2021 and 2025. Table 4.2 also shows the amount of floorspace occupied by each of these land use sectors in 2021 and 2025.

Table 4.2: land use profile of Cirencester town centre, 2021-2025 (units and floorspace)

Sector	2021				2025			
	Units		Floorspace (sq m gross)		Units		Floorspace (sq m gross)

Source: 2021 Cirencester Study, Table 3.1 and 2025 Experian GOAD updated by Nexus. Figures may not add due to rounding.

4.19 The contents of Table 4.2 indicate that the amount of convenience goods retail units has remained relatively static between 2021 and 2025, with a small rise from 20 to 22 units. Over this period convenience goods retailers have occupied around 6% of all surveyed units in the town centre, with a below the 2025 national average for convenience goods units in town centres of 9.4%. However, the amount of floorspace occupied by convenience goods retail provision has fallen by around one quarter between 2021-2025. This fall has been caused primarily by the closure of the Tesco store in the centre, with convenience goods floorspace now comprising 5.5% of all occupied retail and retail service floorspace. This proportion of occupied space is well below the 2025 national average for town centre convenience goods floorspace provision of 15.3%.

4.20 Between 2021 and 2025 the number of comparison goods units rose from 138 to 153. This represents 44.1% of all surveyed units and is well above the (2025) national average of 26.0%. Not only is this proportion of units well above the national average, but the increase in units between 2021-2025 (41% in 2021 to 44% in 2025) is in contrast to the national

trend which has seen a decline the proportion of comparison goods retailers in UK town centres (from 27.0% in 2021 to 26.0% in 2025). In line with the increase in the number of occupied comparison goods units, Table 4.2 also shows an increase in the amount of floorspace occupied by comparison goods retailers, from 19,500sq m in 2021 to 22,000sq m in 2025. This level of floorspace comprises 42.5% of all surveyed floorspace and is also well above the national average of 28.7%.

4.21 Table 4.2 also shows that the amount of retail and financial/business service uses in Cirencester town centre has declined over the period 2021-2025. The proportion of units occupied by these uses (14.1% and 8.1%) is however, similar to their respective national averages (15.8% and 7.9% respectively). The drop in the proportion of financial/business services in the town centre mirrors national trends, with this sector experiencing a significant level of decline in town centres over the past several years.

4.22 In contrast to the fall in retail and financial/business service uses, the amount of leisure service uses in the centre has increased between 2021-2025, from 15.2% to 17.6% of all surveyed units. Despite this rise, the proportion of leisure service uses in the centre remains well below the national average of 26.6%. A similar picture emerges for the amount of floorspace occupied by leisure service floorspace, although provision of occupied floorspace (23.6%) is also below the national average of 27.6%.

4.23 Vacant units in the town centre fell over the past few years, from 37 in 2021 to 34 in 2025. At 2025, the proportion of vacant units in the town centre comprised 9.8% of all surveyed units and which is well below the national average for town centre vacancies of 14.1%. Over the same period, the amount of vacant floorspace rose very slightly to circa 6,700sq m (gross) across the town centre. This comprises around 13% of all surveyed floorspace and is slightly below the national average equivalent of 14.3%. A large (new) contributor to this amount is the vacated former Tesco unit.

4.24 Following the closure of the Tesco store on Castle Street/Brewery Court, the largest town centre grocery store is a Marks & Spencer Simply Food on Dyer Street. As a consequence, the main elements of grocery retail provision in Cirencester can be found in edge or out of centre locations. There is a large Waitrose store a short walk to the southern edge of the centre (on Sheep Street), along with three foodstores (in out of centre locations) to the east of the centre: Lidl (Midland Road), ALDI and Tesco (both on Cricklade Road). Table 4.3 below draws upon information contained within the quantitative need assessment prepared for this Study and outlines the current trading performance of the larger grocery stores in Cirencester. Data is provided to show the amount of turnover which each store attracts from residents of the study area, along with expenditure which is associated with visitors/tourists. A comparison between the current forecasts turnover and the company benchmark turnover for each store is also provided.

Table 4.3: study area, total and benchmark turnover of grocery stores in Cirencester

	Study Area Turnover (£m)	Expenditure Inflow (£m)	Total Turnover (£m)	Benchmark Turnover (£m)	Forecast Actual Turnover as a % of Company Benchmark (%)
Marks & Spencer	4.73	1.49	6.22	4.03	+54
Waitrose	29.13	9.17	38.30	32.46	+17
Lidl	7.67	1.45	9.12	10.06	-9
ALDI	9.17	1.46	10.63	9.79	+26
Tesco	49.66	10.88	60.54	48.10	+20

Source: Tables 5a and 10a, Appendix B

4.25 The contents of Table 4.3 indicate that there is not a significant level of widespread trading above company average across the grocery retail sector in Cirencester. The M&S, Waitrose, ALDI and Tesco stores trade above average, whilst the Lidl store trades slightly below average. The above data also shows that the main grocery stores in Cirencester are able to attract a reasonably large proportion of their turnover from outside of the study area. For the Waitrose and M&S stores, this is in the region of one third of total turnover, whilst it is closer to one fifth of total turnover for the Tesco, ALDI and Lidl stores.

4.26 Table 4 at Appendix B shows the market share of the main foodstores in Cirencester. It shows that Zone 1 of the study area[17] forms the primary catchment area for convenience goods shopping provision in the town, with all convenience goods stores attracting 64% of in person till receipts from residents of this zone. Of the remaining spending associated with Zone 1 residents, 17.5% is directed to online shopping, part of which will also be associated with local stores (as online orders from Tesco and Waitrose are likely to be fulfilled from their stores in the town), with a further 15% spent outside of Cotswold District[18].

4.27 Table 4 at Appendix B also shows that grocery stores in Cirencester are also able to attract convenience goods spending from other parts of the study area. Those zones which the town is able to gain a reasonable market penetration rate are Zones 3, 4, 6 and 7 (14%, 21%, 11% and 10% respectively)[19].

4.28 Table 6 at Appendix B shows the market share levels for comparison goods stores across the District. For Cirencester, the data shows that 24% of person spending from residents of Zone 1 is directed towards stores in the town. The majority of the remainder of Zone 1 comparison goods spending is directed to online purchases (47%), followed by spending outside of the District (24%). Table 4.4 below outlines the combined market share of all comparison goods retailers in Cirencester across the eleven study area zones, along with the retail expenditure equivalent levels. The table also indicates the amount of comparison goods expenditure which stores in Cirencester gain from visitors from outside of the study area.

Table 4.4: market share and turnover levels, Cirencester, 2025

	1	2	3	4	5	6	7	8	9a	9b	10	Inflow	Total
Market Share (%)	23.7	5.2	7.1	8.8	0.3	4.9	3.7	0.8	0.4	0.9	0.1	43*	-
Turnover (£m)	46.2	4.4	9.4	5.1	0.3	3.0	3.3	0.8	0.2	0.2	0.1	42.7	115.5

Source: Excluding Dobbies garden centre, Siddington. Figures may not add due to rounding. *Experian data indicates that total turnover of comparison goods stores in Cirencester comprises expenditure inflow.

4.29 The above data indicates that the primary catchment area for comparison goods stores in Cirencester is focused upon Zone 1, with a secondary catchment which includes Zones 2, 3, 4, 6 and 7. In addition, it will also be noted from the contents of Table 6 at Appendix B that, whilst the market share of Cirencester in these five (secondary catchment) zones may appear low they are the highest market share for any Cotswold town centre. The data also shows that around 40% of the total turnover of comparison goods stores in Cirencester derives from spending associated with visitors travelling from outside of the study area.

[17] The zone in which Cirencester is located.
[18] This is likely to be associated with a combination of occasional grocery trips in surrounding areas (such as Stroud, Cheltenham and West Oxfordshire) along with grocery spending associated with day trips and vacations elsewhere.
[19] Zones 3, 4, 6 and 7 cover: Cricklade (3), Lechlade/Fairford (4), Northleach/Bourton-on-the-Water (6) and the rural area between Gloucester, Cheltenham and Cirencester (7).

4.30 Table 9a at Appendix B outlines the patterns of trade draw to the main settlements in Cotswold District for food/beverage facilities (i.e. cafes, restaurants, drinking establishments, and take-aways). It shows that the total turnover of food/beverage facilities in Cirencester town centre is circa £56.6m, with all over half of this total (£32.7m) deriving from expenditure inflow from outside of the study area. Of the £23.9m of expenditure which is attracted from study area residents, three-quarters (£18.3m) of this expenditure derives from residents of Zone 1[20].

4.31 The contents of Tables 5a, 7a and 9a indicate that the comparison goods retail sector makes the highest contribution to spending within the town centre, closely followed by the food/beverage sector, with the convenience goods sector a distant third.

Bourton-on-the-Water

4.32 Whilst many of the settlements in Cotswold District play a significant role in attracting visitors to the local area, Bourton-on-the-Water is arguably the most well-known of these centres, due to its unique built and natural environment. This role has been recognised in previous town centre-related development plan evidence base studies (such as the 2017 Retail Study), which can be characterised by a defined 'town centre' which caters for tourists and visitors more than it does for local residents. This was recognised by the shopping patterns survey information commissioned to inform the 2017 Retail Study and which is reinforced by more up to date household survey information which has been submitted in support of a current planning application for a new ALDI foodstore on the western side of the village area.

4.33 The main change in retail provision in Bourton-on-the-Water since the completion of the 2017 Retail Study has been the completion (and opening) of a new Co-op foodstore on Station Road outside of the defined 'town centre' boundary. For many years, Co-op operated a modest-sized foodstore on Station Road although the store was dated and was not able serve a wide range of local needs[21]. At the time of the 2017 Retail Study there was an aspiration that the replacement Co-op store would be able to retain a larger amount of locally-generated grocery shopping trips, although the Experian Spend Insight data commissioned for this Study suggests that the previous situation, as described in the 2017 Retail Study, has not materially changed. Table 4 indicates that grocery stores in Bourton (primarily the Co-op) retain just 18% of convenience goods expenditure from Zone 6 (the zone in which Bourton lies), with substantial leakage of expenditure to stores in Stow-on-the-Wold, Cirencester and Moreton-in-Marsh.

4.34 Table 5a at Appendix B forecasts that the Co-op store on Station Road has a (2026) study area derived convenience goods turnover of £8.7m which is boosted by a further £2.6m of expenditure drawn from beyond the study area. At £11.3m, this total turnover is slightly below the national company average for Co-op (£14.61m, for this size of store[22]). The data in Tables 5a and 10a also suggests that the small Budgens store, which gains over half of its turnover from visitors from beyond the study area, is also trading at reasonably modest levels (and slightly below company average (£2.3m)).

4.35 Comparison goods retailers comprise circa 40% of all main town centre land uses in the defined 'town centre' area in Bourton. Gift shops, and similar retailers catering for the tourist/visitor sector, predominate within this sector, with very few other businesses catering for the day-to-day needs of the local community. Table 7a (at Appendix B) indicates that three-quarters of the annual comparison goods turnover of comparison goods stores in Bourton derives from customers who reside outside of the study area. The comparison goods sector has a forecast total turnover of £11.2m, of which £8.4m is forecast to derived from spending from outside the study area.

4.36 The balance between study area generated spending and expenditure inflow is even more pronounced for food/beverage outlets in Bourton. Around 85% of all spending in cafes, restaurants and other hospitality premises in Bourton is forecast to come from visitors/tourists. The total turnover of food/beverage facilities is forecast by Table 9a to be £28.5m, of

[20] With lower levels of expenditure being drawn from Zones 2, 3, 4 and 7.
[21] As evidenced by shopping patterns evidence.
[22] Taken from Table 10a, Appendix D

which £24m is attributable to visitors/tourists. The total level of annual turnover suggests that food/beverage uses contribute three times as much expenditure to the local economy as comparison goods retail facilities.

4.37 Outside of the defined 'town centre' area in Bourton, the main town centre land uses which are present comprise mainly of hotel and other types of visitor accommodation. The is, as noted above, a current planning application for a new ALDI foodstore and food/beverage outlet on land at Bourton Industrial Estate (close to the A429). Whilst a detailed assessment of this proposal has not been undertaken for the purposes of this Study, it would appear likely that, in addition to trade diversion from the Co-op store in Bourton, there would be a sizable amount of trade diversion from existing medium to large foodstores in Stow-on-the-Wold, Moreton-in-Marsh and Cirencester.

Chipping Campden

4.38 Chipping Campden is one of the larger Principal Settlements in the District in terms of the size of its defined 'town centre' area. Our latest land use survey indicates that there are 48 main town centre land uses, including 4 convenience goods stores and 23 comparison goods retail outlets. In relation to convenience goods retail provision, Chipping Campden has relatively small-scale grocery stores including Co-op and One Stop stores on the High Street. Along with other small scale independent operators, Table 5a at Appendix B indicates that grocery stores in Chipping Campden attract £2.2m of convenience goods spending from residents of the study area, which is boosted by around £1.2m of expending inflow (from tourists/visitors) to provide a total forecasts turnover (at 2026) of £3.4m. Over three-quarters of study area derived turnover is drawn from residents of Zone 10, which is the home zone for Chipping Campden. Table 4 at Appendix B indicates that grocery stores in Chipping Campden attract only 2% of spending from residents of Zone 10, whilst around 70% of spending flows to grocery stores outside of the District (the majority of which is likely to flow to Evesham).

4.39 The comparison goods retail sector is the largest of the retail and service sectors in the defined 'town centre', with a range of provision which is orientated towards the furniture, homewares, art and antiques sectors. There are also a number of clothing stores, plus a bookshop which lies outside of the defined 'town centre' boundary. Table 7a at Appendix B forecasts that comparison goods stores in Chipping Campden will have a total turnover of £2.95m in 2026. Around one quarter of this total will be drawn from residents of the study area, with the other three-quarters comprising expenditure from visitors/tourists travelling from elsewhere.

4.40 In relation to service use provision, the data at Appendix B indicates that there are 3 retail service uses, 14 leisure service business and 4 financial/business service uses. Whilst leisure service uses are the second largest category of main town centre land use in the centre, this total is not as large (on a proportionate basis) as a number of the other large Cotswold towns.

4.41 The importance of the food and beverage sector, which is the main component part of the leisure services land use category, is demonstrated by the contents of Table 9a at Appendix B. Table 9a forecasts that food and beverage outlets have an annual (2026) turnover of £14.4m, which is broadly split between one third (£4.5m) from study area residents and two thirds (£9.9m) from expenditure inflow. The turnover of food and beverage uses in Chipping Campden is around four times as high as its grocery stores and five times as high as its comparison goods stores.

Moreton-in-Marsh

4.42 Moreton-in-Marsh is the 4th largest town centre in Cotswold District in terms of the number of main town centre land uses present in the defined 'town centre' boundary. During the land use surveys conducted for this Study in November 2025, 90 uses were recorded including 5 convenience goods retailers and 25 comparison goods retailers. The convenience goods retailers present in the town centre include a large Co-op foodstore at the northern end of the centre, which extends to circa 1,500sq m net sales and sells a reasonably wide range of convenience goods. The store is also

served by a large off-street surface level car parking area. The other four convenience goods retailers in the centre include a Tesco Express convenience store, two bakeries and a cheese shop.

4.43 A significant element of the convenience goods retail sector in Moreton is the ALDI store, which is located in an out of centre location (on the Fosse Way, close to North Cotswolds Hospital and Fosseway Garden Centre). The store was constructed several years ago. It is of a similar size to the town centre Co-op store, with a more focused range of grocery products which are associated with the value orientated ethos of the store.

4.44 Table 4 at Appendix B provides market share information for convenience goods retailers in Moreton. It shows that around 30% of convenience goods expenditure generated by residents of Zone 9a (the zone in which Moreton lies) is retained by stores in the town. This is split between the ALDI (14%), Co-op (10%), Tesco Express (3%) and other smaller town centre stores (4%). Table 4 shows that convenience goods stores in Moreton also draw spending from Zones 5, 6, 9b and 10, with the ALDI store possessing the highest market penetration in these zones (particularly Zones 6 and 9b). Table 4.5 below outlines the study area and total turnover levels of convenience goods stores in Moreton, along with their respective company average turnover levels. It shows that, whilst the out of centre ALDI store is forecast to trade close to its national company average sales density level, the Co-op and Tesco Express stores trade below their respective average levels (particularly the Co-op[23]).

Table 4.5: study area, total and benchmark turnover of grocery stores in Moreton-in-Marsh

	Study Area Turnover (£m)	Expenditure Inflow (£m)	Total Turnover (£m)	Benchmark Turnover (£m)	Forecast Actual Turnover as a % of Company Benchmark (%)
Tesco Express	1.3	0.7	2.0	2.20	-9
ALDI	11.4	2.0	13.4	12.19	+10
Co-op	5.2	1.7	6.8	15.39	-56
Other convenience goods stores	2.9	2.3	5.2	-	-

Source: Tables 5a and 10a, Appendix B

4.45 Comparison goods retailers comprise around one quarter of all main town centre uses in the defined centre, with the retail 'offer' of this sector heavily orientated towards furniture, art, homewares and antiques. This specialist nature of provision is reflected in the pattern of trade draw of comparison goods expenditure to stores in the town, with one half of total turnover (£14.4m out of £27.6m) deriving from shoppers outside of the study area[24]. Of the £13.2m of comparison goods expenditure drawn from residents of the study area, Table 7a forecasts that around one third is derived from residents of Zone 9a, with around 15% apiece from Zones 5 (Chipping Norton), 6 (Bourton-on-the-Water & Northleach) and 10 (Chipping Campden).

4.46 Service uses are the largest grouping of main town centre land uses, with just under half of all recorded uses[25]. The largest element are leisure uses, with a varied collection of food and beverage uses (restaurants, cafes and public houses). Table 8 at Appendix B indicates that food and beverage uses in Moreton-in-Marsh attract 11% of expenditure on food/beverage trips from residents of Zone 9a of the study area (the zone in which Moreton lies), along with circa 3% of expenditure from residents of Zone 9b. These market shares translate to a draw of £2.9m of expenditure from Zone 9a and £0.2m from Zone 9b, which contribute to an overall study area turnover of £4.5m (see Table 9a at Appendix B). The

[23] The 2017 Retail Study also forecast a comparatively poor performance for the Co-op store (formerly badged as a Budgens store), although other forecasts for this store (produced in associated with the planning applications for the ALDI store) have varied.
[24] See Table 7a at Appendix D.
[25] 42 occupied units (17 retail service uses and 25 leisure service uses).

data from Experian Spend Insight indicates that the food and beverage sector in Moreton-in-Marsh attracts two-thirds of its turnover from visitors travelling from outside of the study area. This is equivalent to circa £9.2m, out of a total annual forecast turnover of £13.7m (see Table 9a).

Stow-on-the-Wold

4.47 The latest land use survey of the defined town centre at Stow-on-the-Wold indicates that it contains 137 retail and leisure uses (see the land use profile in Section 4). Within this total there are 15 convenience goods retailers, including 6 bakers/confectioners and 4 grocery/delicatessen stores. This large number of convenience goods stores is influenced by the role and function of Stow-on-the-Wold as one of the key centres in the District for visitors and tourists, with convenience goods influenced by high-end/niche/visitor-orientated products. The main 'standard' grocery store in centre, which serves both the local population and visitors to the town centre is a Co-op on The Square. The modest product range of the Co-op indicates that it is orientated toward top-up and frequent modest-sized basket shopping trips.

4.48 The main grocery store in Stow-on-the-Wold is a large Tesco supermarket, located on the northern edge of the town. This store caters for both main and top-up food shopping trips and draws grocery trips from a wider catchment. Table 4 at Appendix B indicates that the Tesco store attracts 36% of convenience goods expenditure from residents of Zone 9b of the study area[26]. In addition to Zone 9b (the zone in which Stow sits), the Tesco store also attracts 11% of in-person grocery spending from residents of Zone 6 (Bourton-on-the-Water / Northleach) and 9a (Moreton-in-Marsh). In contrast, the catchment area for the town centre Co-op store is very much centred on Zone 9b, where the store has a 4.4% share of convenience goods spending. A similar picture emerges for other convenience goods retailers in Stow town centre, who have a 3.2% share of spending amongst Zone 9b residents, along with a 1.2% share spending in Zone 9a[27].

4.49 In addition to the study area derived market share levels, the contents of Table 5a at Appendix B also provide useful information regarding the source of spending in convenience goods stores in Stow. The table indicates that stores in the town centre draw a significant proportion of their turnover from non-study area shoppers, which emphasises the key role and function of the town centre as a visitor/tourism destination. Table 5a indicates that £0.6m of the Co-op store's total turnover (£1.4m) comprises 'expenditure inflow' which is equivalent to 77% of total turnover. The proportion of 'expenditure inflow' for other convenience goods stores in the centre is even higher at 94%. In contrast, 26% of the Tesco's convenience goods turnover is derived from non-study area residents. Whilst this is still a sizable part of the store's turnover, it is clear from this collection of data how the Tesco store has a primary role in serving the role of Cotswold District residents.

4.50 The largest retail/service sector in Stow town centre is the comparison goods retail sector, with 66 surveyed units (around half of the total number of units). Retailers are mainly local independents, with a particular focus upon antiques, art, homewares, clothing and gifts. Table 7a at Appendix B forecasts that comparison goods stores in Stow have a total annual turnover of £17.4m, with around two-thirds (£11m) deriving from visitor spending. The study area derived turnover of the centre is forecast to be £6.4m, which is drawn from a number of zones rather than the just the local area (Zone 9a)[28].

4.51 56 of the 137 surveyed retail and service uses in Stow town centre are service uses. The leisure service sector accounts for the majority of these units (36), which is a sector dominated by food and beverage outlets. The contribution of food/beverage outlets, particularly cafes and restaurants, to the financial performance of the town centre is clear from the contents of Table 9a at Appendix B. This shows that the total turnover of food/beverage outlets in Stow is £28.9m, which is around two-thirds higher than the turnover of comparison goods retail stores in the centre and around six times

[26] This level of market share is based upon in-store in-person spending, excluding any spending associated with the 17% online market share for Zone 9b residents which may be fulfilled via purchases from Tesco.
[27] Morton-in-Marsh
[28] Around one fifth of the study area derived turnover is drawn from Zone 9a, with £0.77m from Zone 9a (Moreton-in-Marsh), £0.76m from Zone 6 (Bourton-on-the-Water) and £0.86m from Zone 5 (Burford / Chipping Norton).

as much as the turnover of town centre grocery stores. Table 9a also shows that four-fifths of the turnover of food/beverage businesses in Stow is gained from spending from visitors, rather than the local population within the study area.

Tetbury

4.52 Tetbury lies in the southern part of Cotswold District and has the joint third largest collection of retail and leisure uses, alongside Moreton-in-Marsh and behind Cirencester and Stow-on-the-Wold. The land use profile data at Appendix B indicates that there are 94 retail and service uses in the defined 'town centre' boundary. At the time of the most recent survey, there were nine convenience goods retailers in the centre, including bakeries, a delicatessen and a Co-op foodstore. Table 5a at Appendix B indicates that, as a whole, convenience stores in the town centre attract £2.1m of expenditure from study area residents and have a total annual turnover of £3.9m. The majority of the study area derived turnover for convenience stores is drawn from Zone 2 of the study area, with very limited additional expenditure from Zones 1, 2 and 7. The Co-op store is forecast to have a modest trading performance (£1.4m), well below its national company average (£2.55m), whilst the remaining parts of the convenience goods sector have a collected turnover of £2.5m. This is also considered to be a modest trading performance.

4.53 The grocery retail sector in Tetbury is dominated by a large Tesco foodstore. Table 5a forecasts this store to have an annual total convenience goods turnover of £18.9m which is also below the Tesco company average performance for this size of store (£23.5m).

4.54 Like a number of other large Cotswold towns, Tetbury is also known for its antiques, furniture and homeware stores and this type of business make a significant contribution to the 53 comparison goods uses in the town centre. Comparison goods retailers comprise over half of the total number of surveyed retail/service units in the town centre, with Table 7a forecasting a total turnover for the comparison retail sector of £6.1m. Over half of this forecast turnover is drawn from spending by visitors to the town (from outside of the study area), although the forecast level of spending in the centre as a whole is surprisingly low. A contributary factor to this low forecast is the low market share for Tetbury within its primary catchment area (Zone 2), at just 2.5%. Table 6 at Appendix B indicates that 91% of comparison goods expenditure generated by residents of Zone 2 is either spent online or any destinations outside of the study area. In terms of the latter destinations in South Gloucestershire, Bristol and Bath are likely to be particularly attractors.

4.55 The contents of Table 9a (when compared with Tables 5a and 7a) indicates that the food/beverage sector in Tetbury is, by some margin, the largest contributor to the financial performance of its town centre. Table 9a indicates that £16.0m of expenditure is attracted by the town's food and beverage outlets, £10.4m of which is spending from visitors travelling from outside of the study area. Whilst Tetbury lies close to the southern edge of the study area (and therefore trips from South Gloucestershire, Stroud District and Wiltshire residents are likely to account for some of this expenditure, the level of 'expenditure inflow' is a sign of Tetbury's importance to the tourism/visitor industry in the District. Unlike some of the other main Cotswold settlements, the number of leisure service uses in Tetbury is not significant, which demonstrates the strong level of trading performance which is being achieved by those businesses present in the town.

Fairford

4.56 Fairford lies within Zone 4 of the study area and Tables 5a, 7a and 9a at Appendix B provide the following spending forecasts for retail and food/beverage uses in Fairford:

a. Convenience goods stores: total turnover of £5.1m, including £4.3m from residents of the study area.

b. Comparison goods stores: a total annual turnover of £2.3m, including £1.8m of spending derived from residents of the study area.

c. Food and beverage uses: £3.0m of expenditure derived from residents of the study area, as part of a total annual turnover of £6.8m.

4.57 In line with a number of other of the Principal Settlements in the District, the food and beverage sector in Fairford has a highest annual turnover although the scale of contribution of 'expenditure inflow' is not as great as some of the more tourism/visitor orientated towns and villages. Spending by visitors/tourists accounts for over half of the food and beverage turnover in Fairford, whilst the proportions for convenience and comparison goods retail are 16% and 27% respectively.

4.58 Within the convenience goods sector, Fairford has modest sized Budgens and Co-op convenience stores which are of a size more suited to top-up and small scale grocery shopping trips. Overall, grocery stores in Fairford attract a 8% market share of spending from Zone 4 residents. This is a similar market share to grocery stores in Lechlade, which is located nearby and also within Zone 4 of the study area. Table 4 at Appendix B indicates that there is a large 'leakage' of convenience goods expenditure from Zone 4, primarily to stores in Cirencester[29] (23%), along with stores outside of the District (likely to be stores within Swindon). Table 5a indicates that the Budgens store has a total forecast turnover of £2.6m, whilst the turnover of the Co-op store is £1.6m.

4.59 The data at Appendix B indicates that 16 of the 27 main town centre land uses are service uses. There are 8 leisure service uses (including two cafes, four take-aways and two restaurants). The five retail service uses in the defined 'town centre' boundary include four hair salons, whilst the financial/business service sector includes two officers and an estate agent.

Lechlade

4.60 Lechlade lies a short distance to the east of Fairford, on the south-eastern corner of the District. The data contained within Appendix B indicates that the defined 'town centre' boundary contained 35 main town centre land uses, split between 3 convenience goods retailers, 8 comparison goods retailers and 20 service uses. Like most other Cotswold towns, the largest service sector are leisure services (with 10 occupiers).

4.61 The main convenience goods retailer within Lechlade is a Budgens store, located on the corner of Burford Street and High Street. This store caters for small scale grocery shopping trips, particularly top-up food shopping. Table 4 at Appendix B indicates that grocery retailers in Lechlade attract circa 9% of spending on convenience goods from residents of Zone 4, with little market penetration within the other study area zones. Table 5a forecasts a study area derived turnover of all convenience stores of £4.4m per annum, which is boosted by a further £2.4m of spending from visitors/tourists travelling from outside of the study area.

4.62 Lechlade attracts around 5% of comparison goods spending from residents of Zone 5, which is notably higher than the other Principal Settlement in Zone 4: Fairford. Lechlade also attracts 1% of spending apiece from residents of Zones 1 and 3 of the study area. Overall, and as shown in Table 7a, Lechlade is forecast to attract £6.5m of comparison goods expenditure from the study area. The same table also shows that the town attracts a similar amount of comparison goods expenditure from visitors/tourists travelling from outside of the study area, giving a total comparison goods turnover for the town of £13.3m.

4.63 Table 8 indicates that food and beverage outlets in Lechlade attract a 4.6% share of spending amongst residents of Zone 4. This can be compared to 9.5% market share associated with nearby Fairford. Food and beverage businesses in the town also attract a small amount of spending from residents of Zones 1, 3 and 5 in the study area, with the overall study area derived (food/beverage) turnover for the town forecast to be £1.6m. Table 9a indicates that this study area derived

[29] Waitrose, Tesco and ALDI in particular

expenditure comprises around one third of total food/beverage turnover £4.6m in Lechlade, with £3.0m of expenditure associated with visitors/tourists.

Northleach

4.64 The land use surveys undertaken for this Study indicate that Northleach has 8 main town centre land uses within its defined 'town centre' boundary, along with a further 6 uses elsewhere in the town. Convenience goods stores comprise a Budgens, which sells a modest range of pre-packages and fresh grocery goods, with a sales area of 200sq m, along with a butcher (on Market Place). The leisure services sector is the largest sector, with three units, comprising pub/hotel, bar and café. There is also a beauty salon and a pharmacy. Outside of the defined 'town centre' boundary, there are a further three leisure service uses, including the Wheatsheaf Inn.

4.65 Tables 5a and 7a at Appendix B indicate that Northleach attracts very little comparison goods expenditure, which is unsurprising given the lack of comparison goods retail businesses[30]. Table 5a indicates that convenience goods store attract £1.7m of expenditure from residents of the study area, two-thirds (£1.1m) of which is spent at the Budgens store. Convenience goods stores are also forecast to attract a further £0.4m of expenditure from outside of the study area, which is equivalent to 19% expenditure inflow.

4.66 In relation to food/beverage expenditure, Northleach attracts £2.3m from residents of the study area, boosted by £2.6m from visitors travelling from beyond this area. Two thirds of the study area derived expenditure at facilities in Northleach is associated with residents of Zone 6.

South Cerney

4.67 South Cerney is the smallest of the proposed Principal Settlements in terms of main town centre land use provision. There are 8 main town centre uses within the defined 'town centre' boundary, comprising a bakery, pharmacy, hair salon, two public houses, a café, plus two take-aways. The defined boundary lies on either side of the northern part of Clarks Hay.

4.68 There are four further retail and service uses located outside of the defined centre boundary in South Cerney. These comprise a Co-op convenience store and Royal Oak public house on High Street, plus a One Stop convenience store on Broadway Lane and an outdoor sports store located close to Cotswold Water Park. The importance and popularity of the Co-op store to South Cerney is shown within our quantitative assessment (Table 5a) which forecasts a study area derived turnover of £2.1m for this store, which is boosted by a further £1.2m of expenditure from outside of the study area. The forecast turnover of the other convenience goods stores in South Cerney is £0.46m. The primary catchment area of the Co-op store is centred upon Zone 1, which contributes three-quarters of the store's study area derived turnover.

4.69 Table 7a indicates that the total forecast comparison goods turnover for stores in South Cerney is £6.9m. Given the lack of comparison goods stores, within the defined 'town centre' it is likely that a large part of this turnover will be associated with the outdoor clothing and sports store close to Cotswold Water Park. Overall, comparison goods floorspace within South Cerney gains around three-quarters of its turnover from outside of the study area.

4.70 A similar picture emerges for the forecast turnover of food and beverage floorspace in South Cerney. Table 9a at Appendix B forecasts an annual turnover of £14.1m, with £4.6m deriving from residents of the study area. Again, this pattern of trade draw is likely to be due to the presence of Cotswold Water Park. £3.3m of the £4.6m of food and beverage expenditure derived from the study area is attributable to residents of Zone 1.

[30] The only existing comparison goods retailer is a pharmacy, located within the defined 'town centre' boundary.

Other Principal Settlements

4.71 The other settlements proposed to be Principal Settlements in the emerging Local Plan are Mickleton, Upper Rissington, Blockley, Siddington, Kemble and Andoversford. None of these settlements have a defined 'town centre' boundary in the adopted Local Plan and our survey of main town centre uses reveals that each location has up to 10 main town centre uses. The key characteristics of these settlements are as follows:

a. All of these settlements have at least one convenience goods store, which comprise between one quarter and one half of all provision in these settlements. Mickleton has the largest amount of provision – 3 convenience retailers (one convenience store, one butcher and one deli – which account for one third of all the main town centre uses in the village. In the other settlements, provision is focused upon one convenience store / village shop.

b. Only two of the settlements (Mickleton and Upper Rissington) have comparison goods stores, which reflects the role of these locations within the retail hierarchy. A similar trend is found for retail services, which are only found in Kemble and Mickleton.

c. The largest single category within the other Principal Settlements is 'leisure services'. Apart from Upper Rissington (which does not have any leisure service uses) leisure service uses account for between one quarter and half of all uses in this grouping of settlements.

5. Towards a Retail and Town Centres Strategy for Cotswold District

Introduction

5.1 Having set out the baseline context for retail and main town centre land use provision within Cotswold District, this section of the Study turns to an assessment of the need for retail and food/beverage land use floorspace across the different parts of the District, followed by an assessment of the potential locations to meet the identified needs. The combined content of these assessments will provide an important contribution to the retail and town centres policy strategy in the new Local Plan.

5.2 In addition, as part of our assessment, this section of the Study also provides advice on the content of retail and town centre policies for the new Local Plan, taking into account the current version of the NPPF (which is the version of national planning policy under which the new Local Plan will be examined).

5.3 The remainder of this section is split into the following sections:

a. An assessment of the need for retail and food/beverage floorspace across Cotswold District, including assessments for convenience and comparison goods floorspace. Our assessment has considered quantitative and qualitative aspects of need.

b. As part of our qualitative assessment of need, this section also contains an assessment of the spatial aspects of need. This focuses upon specific needs which may arise as a result of strategic residential-led Local Plan allocations, including their relationship to the pattern of existing retail and defined 'town centre' provision across the District area.

5.4 Finally, this section provides advice around the content of retail and town centre land use policies for inclusion in the new Local Plan, taking into account the findings of our needs and spatial assessments and the requirements of national planning policy.

Quantitative Assessment

5.5 At the present time, national planning policy and guidance does not prescribe the specific nature of an assessment of 'need' for town centre land uses. However, it has been common practice for an element of these assessments to consider 'need' in quantitative terms via an analysis of expenditure capacity within a defined area. Such assessments consider the scale of available expenditure capacity and its ability to support existing retail and food/beverage floorspace and the potential for net additional floorspace over a prescribed period. This approach was adopted in the 2017 Retail Study and has been repeated for the purposes of this current evidence base study in relation to both Class E(a) retail floorspace and Class E(b) / sui generis food and beverage land use floorspace.

5.6 Our quantitative assessment which has adopted the following step by step methodology:

a. Setting a study area for the quantitative assessment which help guide the analysis local retail expenditure levels and shopping patterns.

b. Calculating the total level of available retail expenditure which is generated by residents of the different parts of the study area, using up to date local population estimates and local per capita retail expenditure forecasts.

c. Assessing local retail spending patterns in order to build up a detailed picture of the market share of the main convenience and comparison goods shopping destinations across the Cotswold District administrative area.

d. Applying these market share levels to available expenditure to forecast existing and future store / centre turnover levels.

e. Assessment of existing and future quantitative need levels by comparing the total turnover potential of existing floorspace against benchmark turnover levels (also taking into relevant retail floorspace commitments).

Structure of the quantitative assessment

5.7 Our quantitative assessment can be found at Appendix B to this Study and is structured in the following manner:

a. Table 1 – population levels within the study area, by zone

b. Tables 2a-2c - per capita expenditure, by study area zone, for retail and food/beverage purposes

c. Tables 3a-3c – total spending on retail and food/beverage purposes, by study area zone

d. Table 4 – convenience goods shopping market share levels within the study area

e. Tables 5a-5d – convenience goods study area derived turnover levels, plus expenditure inflow

f. Table 6 – comparison goods shopping market share levels, by study area zone

g. Tables 7a-7d – comparison goods study area derived turnover levels, plus expenditure inflow

h. Table 8 – food and beverage facility market share levels, by study area zone

i. Tables 9a-9cd – study area derived turnover (plus expenditure inflow) for food and beverage facilities

j. Table 10a – convenience goods floorspace benchmark turnover levels

k. Table 10b – retail floorspace commitments

l. Tables 11a-11l – quantitative need forecasts for convenience goods retail floorspace (main settlements(

m. Tables 12a & 12b – quantitative need forecasts for comparison goods retail floorspace (Cotswold District & Cirencester)

n. Tables 13a – food/beverage floorspace quantitative need forecasts (Cotswold District).

5.8 The various data inputs and methodological principles which have informed the above stages are explained in turn below.

Study Area

5.9 In order to enable a detailed assessment of shopping patterns and spending at retail and food/beverage outlets, the quantitative assessment is governed by a study area, a plan of which is attached at Appendix A to this report and also in shown in Figure 4.1 (at the start of the previous section of this document).

5.10 The study area covers the whole of Cotswold District and extends into surrounding administrative areas, including: West Oxfordshire, Stroud, Cheltenham, Tewkesbury and parts of south Warwickshire.

5.11 In order to allow the quantitative need assessment, along with other parts of this Study, to understand localised shopping patterns across Cotswold District area, the study area has been sub-divided into 11 individual zones. These zones match the zones used in the study area for the 2017 Retail Study.

Timeframe for the quantitative need assessment

5.12 The time period for the quantitative need assessment has been set with a base year of 2026 (the current year) and an end date of 2043, in order to match the time period for the Local Plan Review. In order to provide a picture of how levels of quantitative need change over time, our assessment provides interim forecasts for 2031 and 2036. This is also useful given that the reliability of economic forecasts will reduce over time, where more weight can be given the 2031 forecasts (whilst the 2036 and 2043 figures should be used as a guide).

Population

5.13 A key part of the assessment of quantitative need is the scale and distribution of population across the study area. The population levels for the eleven study area zones used within this assessment are contained in Table 1 at Appendix B.

5.14 In order to provide a basis for the quantitative need assessment which matches the development strategy in the emerging Local Plan, our assessment utilises a mixture of population forecasts (and associated data) from Experian, CDC and other parts of the evidence base for strategic planning across Gloucestershire. Examination of Experian's population forecasts for the study area reveals that they are likely to under-estimate population growth (based on planned house-building) in several of the study area zones[31]. As a consequence, for these specific zones we have used the population growth forecast for Cotswold District provided by the draft Gloucestershire Housing and Economic Needs Assessment and apportioned part of the forecast growth to Zones 1, 4, 6, 9a and 9b based upon the likely scale of house-building to be included in the new Local Plan[32].

5.15 Based upon this approach, Table 1 at Appendix B shows a 26% growth in the population levels across the study area. In light of the likely extent of house-building planned for the new Local Plan, the largest areas of proportionate growth between 2026-2043 in Cotswold District are forecast to be Zone 1 (Cirencester and the surrounding area) at 55%, 33% growth in Zone 4 (Fairford and Lechlade), Zone 9a (Moreton-in-Marsh) and Zone 10 (including Mickleton).

Per capita retail expenditure

5.16 Per capita spending on retail and food/beverage purposes for each of the study area zones has been obtained from Experian[33]. Use of separate forecasts for each zone enables the quantitative assessment to be informed by a socio-economic characteristics of the individual parts of the Cotswold administrative area, in order to provide a more accurate picture of local retail and town centre performance.

5.17 The spending data which has been obtained from Experian has a base date of 2024. This base data has been projected forward on the basis of forecasts contained within Experian's Retail Planner Briefing Note 23[34]. The forecasts which have been used are based upon Experian's annual adjusted convenience and comparison goods data. This version of the retail expenditure forecasts adjusts total growth/change to exclude purely online retail sales, given that the focus of

[31] These are Zones 1, 4, 6, 9a and 9b.
[32] The distribution of proposed house-building used in our assessment was set prior to the final draft Local Plan strategy and therefore may need to be updated in due course.
[33] Obtained in April 2026.
[34] Published in March 2026

this need assessment is on 'bricks and mortar' retail floorspace provision across Cotswold District[35]. The annual growth forecasts for convenience and comparison goods are shown in Table 5.1 below.

Table 5.1: % change per annum for per capita spending on convenience and comparison goods, plus food & beverage uses, 2026-2043

Year	Convenience Goods Spending per Head (% change p.a.)	Comparison Goods Spending per Head (% change p.a.)	Food & Beverage Spending (% change p.a.)
2026	-0.6	0.8	0.9
2027	-0.7	1.2	0.9
2028	-0.4	1.7	0.9
2029	-0.4	2.0	0.9
2030	-0.5	2.0	0.9
2031	-0.3	2.2	0.9
2032	-0.3	2.2	0.9
2033	-0.3	2.1	0.9
2034	-0.3	2.1	1.0
2035	-0.3	2.1	1.0
2036	-0.3	2.1	1.0
2037	-0.3	2.1	1.0
2038	-0.3	2.1	1.0
2039	-0.2	2.2	1.0
2040	-0.3	2.1	1.0
*2041**	-0.3	2.0	1.0
*2042**	-0.3	2.0	1.0
*2043**	-0.3	2.0	1.0

Source: Experian Retail Planner Briefing Note 23 (March 2026)

5.18 The above data shows that Experian are currently forecasting a year-on-year decline in spending per head on convenience goods up to 2041[36]. This decline will counteract part of any growth in population levels in the study area and therefore subdue the amount of additional convenience goods expenditure which will be made available to support both existing and net additional floorspace over the period 2026-2043. Comparison goods retail spending is expected to grow over the assessment period settling at an annual growth rate of circa +2% after 2029. Food and beverage spending is expected to experience annual growth of around +0.9% / +1.0% between 2026 and 2043.

5.19 The total levels of change for each of the ten study area zones can in found in Tables 2a-2c at Appendix B to this report.

[35] Experian note that "many stores sell online but source sales from regular stores rather than warehouses, implying an increase in required store floorspace to cater for rising internet sales". Therefore, it is not appropriate to use total retail spending to calculate future demand for retail space; nor is it satisfactory to use retail spending excluding all online sales. Therefore, Experian calculate growth rates for convenience and comparison goods that take into account the proportion of online trading using traditional floorspace.
[36] Experian's forecasts for retail and leisure spending extend to 2040 and therefore, for the purposes of this quantitative assessment we have assumed that the annual forecasts for 2039 & 2040 continue up to 2043.

Retail spending / shopping patterns data

5.20 A key part of the quantitative need assessment is the analysis of current shopping and food/beverage trip spending patterns. This data provides the basis for the assessment of current store turnover levels, the catchment area definition of these stores and also provides a starting point for the assessment of future levels of quantitative need.

5.21 For the purposes of assessment, we have utilised data from Experian's Spend Insight database. This is a database of around 4 million debit and credit cards from across the UK and provides data on spending levels at specific shopping destinations and the source of this spending. The ESI data has been provided separately for grocery stores, comparison goods stores and food/beverage destinations.

5.22 In order to create market share levels for the main retail destinations in Cotswold, all available spending data from the ESI database has been obtained for the key settlements for the 2024 calendar year. These settlements are Cirencester, Tetbury, Moreton-in-Marsh, Fairford, Bourton-on-the-Water, South Cerney, Lechlade, Chipping Campden, Mickleton, Upper Rissington, Northleach, Blockley, Stow-on-the-Wold and Siddington. Where available, data has also been sought for Kemble, Willersey, Andoversford, Down Ampney, Bibury, Coln St Aldwyn, Hatherop, Quenington, Driffield, Preston and Ampney Crucis.

5.23 The data which has been obtained from ESI provides a total sample spend at each of the chosen destinations / areas, which is then split into its constituent parts based on the eleven study area zones and the remaining amount attributable to expenditure inflow. This raw data is then translated into market share levels by expressing the sample spending/turnover for each destination as a proportion of all available spending in that particular zone. The resultant market shares for convenience and comparison goods, plus food/beverage destinations, are shown in Tables 4, 6, 8 at Appendix B.

5.24 The market shares in Tables 4, 6 and 8 are then applied to total available spending in each of the study area zones in order to provide a study area derived turnover estimate for each of the key Cotswolds settlements / areas. These can be found, for 2026 spending levels, at Tables 5a, 7a and 9a. Each of these tables also provide an estimate of the likely amount of spending which is drawn to each of the main destinations / areas in the District from outside of the study area. This estimate is based upon the proportion of spending which the raw ESI spending data indicates is drawn from outside of the study area. For the purposes of the quantitative assessment, it has been assumed that this proportion of turnover gained from 'expenditure inflow' remains constant over the assessment period.

5.25 The use of ESI provides an improvement over the 2017 Retail Study in relation to the forecasting of expenditure inflow in the study area, as the ESI data is able to record actual spending from those UK residents who are visiting the stores and centres in Cotswolds District. Whilst the ESI does not extend to international spending, providing better quality data on visitor/tourist spending is particularly important for this Study given the important of this customer group to the health of town centres across the District.

5.26 The market share levels in Tables 4, 6, 8 and 10 have been described in Section 4 of this document insofar as they relate to the picture that they build up in terms of the main catchment areas of each key settlements in the District.

5.27 The forecast turnover levels for the main convenience goods stores in Cotswold District are summarised in Table 5.2 below. Alongside these forecast turnover levels, Table 5.2 contains an indicative estimate of company average performance for each store, in order to provide a comparison of current indicative trading performance.

Table 5.2: forecast current total convenience goods turnover for the main foodstore/supermarkets in Cotswold District, 2026

Store / Centre	Forecast Turnover (£m)	Company Average Turnover (£m)
Marks & Spencer, Cirencester town centre	6.22	4.03
Waitrose, Cirencester	38.30	32.46
Tesco, Kings Meadow, Cirencester	60.54	48.10
ALDI, Cirencester	10.63	9.79
Lidl, Cirencester	9.12	10.06
Tesco Express, Chesterton	2.52	2.10
Co-op, Burford Road, Cirencester	5.52	1.87
Tesco, Tetbury	18.85	23.54
Co-op, Tetbury	1.39	2.55
Co-op, Moreton-in-Marsh	6.81	15.39
ALDI, Moreton-in-Marsh	13.37	12.19
Budgens, Fairford	2.63	1.80
Co-op, Fairford	1.60	1.52
Co-op, South Cerney	3.29	2.55
Co-op, Bourton-on-the-Water	11.33	14.61
Budgens, Bourton-on-the-Water	1.50	2.27
Co-op, Chipping Campden	1.86	1.98
Tesco, Stow-on-the-Wold	21.30	25.24
Co-op, Stow-on-the-Wold	1.43	1.41

Source: Tables 5a and 10a, Appendix B

5.28 The contents of Table 5.2 indicate a generally good level of trading performance for the larger foodstores in Cirencester, with many trading above company average. Trading performance in the stores in Moreton-in-Marsh, Bourton-on-the-Water, Stow-on-the-Wold and Tetbury is below average.

5.29 Table 5.3 below provides a summary of the comparison goods turnover of those settlements in Cotswold District which attract a large amount of expenditure from the study area and/or expenditure inflow. This data is broken down into study area derived turnover, the amount of comparison goods expenditure attracted from non-study area UK residents and total turnover levels. The total turnover of Cirencester is far in excess of any other of the main settlements in the District, with a total turnover of circa £115m[37]. The next highest turnovers can be found in Moreton-in-Marsh and Stow-on-the-Wold. However, one key theme which does emerge from the data contained in Table 5.3, which is taken from Table 7a at Appendix B, is the large proportion of turnover which comparison goods stores attract from outside of the study area (from UK visitors and tourists).

[37] Turnover of town centre and out of centre comparison goods stores.

Table 5.3: comparison goods turnover (£m) of the main centres in Cotswold District, by study area and inflow, 2026

Settlement	Turnover from Study Area (£m)	Turnover from Beyond Study Area (£m)	Total Turnover (£m)
Cirencester Town Centre	45.89	33.53	79.42
Cirencester	72.84	42.68	115.52
Tetbury	£2.60	£3.52	£6.12
Moreton-in-Marsh	£13.18	£14.39	£27.57
Fairford	£1.79	£0.48	£2.27
Bourton-on-the-Water	£2.81	£8.36	£11.17
South Cerney	£1.99	£4.88	£6.87
Lechlade-on-Thames	£6.48	£6.77	£13.25
Chipping Campden	£0.75	£2.20	£2.95
Upper Rissington	£1.52	£0.22	£1.74
Stow-on-the-Wold	£6.43	£11.01	£17.44
Siddington (Dobbies)	£6.84	£5.73	£12.57

Source: Table 7a, Appendix B

5.30 A similar exercise is undertaken for spending associated with food/beverage facilities across the main settlements. Whilst Cirencester attracts the highest volume of expenditure, the gap between its annual turnover and the turnover of other main settlements (such as Bourton-on-the-Water, Chipping Campden and Stow-on-the-Wold) is much smaller. One of the most distinctive elements of the food/beverage analysis is the proportion of spending attracted from outside of the study area: in all cases the proportion is above 100%. At South Cerney, Lechlade and Chipping Campden the proportion is close to 200%, whilst it is 375% at Stow-on-the-Wold and 589% for Bourton-on-the-Water.

Table 5.4: turnover of food and beverage facilities in Cotswold District derived from within and outside of study area

Settlement	Turnover from Study Area (£m)	Turnover from Beyond Study Area (£m)	Expenditure Inflow as a % of Study Area Turnover
Cirencester Town Centre	£23.87	£32.72	137%
Cirencester	£12.65	£14.91	118%
Tetbury	£5.60	£10.37	185%
Moreton-in-Marsh	£4.48	£9.20	205%
Fairford	£3.03	£3.75	123%
Bourton-on-the-Water	£4.13	£24.34	589%
South Cerney	£4.56	£9.55	209%
Lechlade-on-Thames	£1.58	£2.99	189%
Chipping Campden	£4.48	£9.87	220%
Mickleton (Cotswold)	£1.40	£1.87	134%
Northleach	£2.33	£2.64	113%
Blockley	£1.19	£2.01	168%
Stow-on-the-Wold	£6.09	£22.83	375%
Siddington	£0.82	£0.72	87%
Kemble	£0.27	£0.44	164%
Willersey	£0.10	£0.18	182%
Andoversford	£0.18	£0.43	245%
Bibury	£0.11	£1.56	1341%
Ampney Crucis	£0.92	£4.16	352%

Benchmark retail floorspace turnover levels

5.31 In order to compare the demand for, and supply of, retail floorspace with the Cotswold administrative area it is necessary to set benchmark turnover levels for convenience and comparison goods floorspace. The assessment takes two alternative approaches to benchmark turnover in order to reflect the characteristics of each retail sector.

5.32 For convenience goods retail floorspace, benchmark turnover is set by a mixture of: (a) calculating the specific benchmark turnover for individual larger stores based upon their existing net sales floorspace area and national company average trading performance; and, alternatively (b) for other small stores (particularly local independents) setting benchmark turnover at the same level as existing trading performance.

5.33 The calculation of individual store benchmark performance for the named larger foodstores/supermarkets is performed at Table 10a at Appendix B and summarised in Table 5.2 above. Data on floorspace levels has been obtained from various sources including planning application data, Valuation Office data, Experian GOAD and the previous 2017 Retail Study. Data on national average sales density levels for each of the named operators is provided by GlobalData, based

upon their latest (December 2025) research. Table 10a also shows the remainder of stores/locations which are subject to the alternative calculation of benchmark turnover – i.e. benchmark turnover at 2025 equals current trading performance[38].

5.34 For the avoidance of doubt, these benchmark turnover levels are intended to be an indicative guide to help understand the overall trading performance of retail stores in a particular area, including whether there are clear and obvious levels of good or poor trading performance.

5.35 For the comparison goods retail floorspace assessment, the 'current turnover performance equals current benchmark turnover' approach is applied to all floorspace. This is a common approach to quantitative need assessments across Wales and England and is reflective of the large number of comparison goods retailers present in any one given study area and the lack of available data on company average performance levels for many of these retailers. This was also the approach taken for the 2017 Retail Study.

Allowances for floorspace efficiency / productivity

5.36 A further key part of the quantitative need assessment, as it moves forward across the assessment period, between 2026 and 2043, is the need to make an allowance for retail floorspace efficiency / productivity. This is important for a number of reasons:

a. In addition to the allowance for benchmark turnover levels at the start of the assessment (2026) baseline floorspace performance levels have the ability to change over time as the retail space is used in different ways in order to display and sell products to customers. Where this occurs, an allowance should be made within the quantitative assessment over the period 2026-2043.

b. There is also the ability to use the quantitative assessment to pursue specific planning policy objectives around maintaining and enhancing the vitality and viability of defined 'town centres'. The use of allowances for productivity/efficiency is a way of supporting this objective through assigning part of the growth in available retail expenditure to existing floorspace, in order to allow it to improve its performance over time.

5.37 Based upon the above principles, the following allowances for productivity/efficiency have been adopted[39]:

Table 5.5: forecast (%) changes in floorspace efficiency / productivity between 2026 and 2043

	2026 & 2027 (% change per annum)	2028-2032 (% change per annum)	2032-2041 (% change per annum)
Convenience goods floorspace	0.0	0.0	-0.1
Comparison goods floorspace	+1.6 & +1.8	+2.3	+2.3
Food & beverage floorspace	-0.2	+0.2	+0.2

Source: Experian Retail Planner Briefing Note 23 (March 2026) & Briefing Note 23 (Leisure)

[38] Taken from Table 5a at Appendix C.
[39] Allowances for productivity/efficiency have been applied to existing floorspace, floorspace commitments and the indicative sales density for new retail and food/beverage floorspace.

Commitments & Current Proposals

5.38 When assessing future quantitative need it is important to have regard to any substantial pipeline development which may have the ability to soak up available expenditure / floorspace capacity[40]. At the present time, there are no substantial retail or food/beverage floorspace commitments such need to be taken into account.

5.39 However, it is worth noting that, at the time of preparing this Study there are two current planning applications for foodstore development in the District. The first is a proposal for a new ALDI foodstore on the western edge of Bourton-on-the-Water. The proposed store extends to 1,912sq m gross / 1,154sq m net and would, if permitted, provide for a second large main and top-up food shopping destination in Bourton-on-the-Water. This proposal also includes provision for a 167sq m (gross) food/beverage unit.

5.40 The second application is for a mixed use development, including retail and residential uses in Chipping Campden town centre. The proposed retail floorspace element of the proposal extends to 579sq m (gross) and would accommodate a new modest sized foodstore.

Quantitative need forecasts

5.41 Quantitative expenditure/floorspace forecasts have been prepared for convenience goods floorspace in all of the main settlements across the District, including: Cirencester, Tetbury, Moreton-in-Marsh, Fairford, Bourton-in-the-Water, South Cerney, Chipping Campden, Mickleton, Northleach, Upper Rissington and Stow-on-the-Wold. These locations reflect the centres which feature in the current retail hierarchy in the development plan and two settlements (Mickleton and Upper Rissington) which are defined as Principal Settlements in the development plan settlement hierarchy[41]. For comparison goods retail floorspace, our quantitative assessment at Appendix B concentrates upon a forecast for the whole of Cotswold District along with Cirencester. The decision to concentrate upon Cirencester as the only individual location which attracts a large amount of retail expenditure[42]. A similar approach is taken for food/beverage floorspace.

5.42 Tables 11a-11l at Appendix B are structured in a consistent manner. Each table shows the amount of convenience goods expenditure which each location attracts from residents of the study area, along with the separate amount of expenditure which the ESI data is predicting is being attraction from visitors from across the UK. For the purposes of the assessments at Tables 11a-11l the current market share of convenience goods stores in each settlement is held at a constant level over the assessment period (2026-2043). As a consequence, this should be seen as one starting point for the wider assessment of need, as other separate factors will need to be taken into account. These are discussed later in this Study, although can be summarised as follows:

a. There may be a need to consider changes in the future market share for retail provision in particular settlements. This may be based upon:

1. The impact of new retail floorspace provision. In some cases, the provision of a new retail store in a settlement may have a material (upwards) impact upon the market share of that settlement within the study area. In turn, this may also lead to a consequential reduction in the market share of those surrounding settlements which currently attract trade from the area where the new store is to be

40

[41] There are a number of other settlements which are defined as Principal Settlements which have not been included within the quantitative assessment due to their small size and lack of retail floorspace/turnover. These include: Blockley, Kemble, Willersey, Andoversford and Down Ampney.
[42] The other centres included in the development plan retail hierarchy also attract comparison goods expenditure. However, these are generally very modest amounts which are unlikely to inform a meaningful quantitative need assessment for comparison goods floorspace provision in these locations.

located. In such circumstances, this may lower the amount of expenditure capacity in these surrounding settlements.

2. A similar set of principles would apply where the retail and town centres strategy plans for specific new retail provision in an area of high growth / qualitative need. In such circumstances, qualitative and spatial need factors would influence quantitative need forecasts.

b. There may also be circumstances where greater weight is placed upon indicators of need such as town centre health, spatial assessments of need and qualitative needs. In such circumstances, non-quantitative indicators may well guide the overall assessment of need, rather than specific floorspace forecasts.

5.43 A summary of the (constant market share) quantitative need forecasts for convenience and comparison retail plus food/beverage floorspace can be found in found in Table 5.6 below.

Table 5.6: summary of quantitative capacity forecasts, 2026-2043, convenience and comparison retail floorspace, plus food/beverage floorspace (excluding pipeline development) – constant market share scenario for all main settlements

	2026 (sq m net)	2031 (sq m net)	2036 (sq m net)	2043 (sq m net)
Convenience goods floorspace				
Cirencester	1,851	3.136	4.535	6,464
Tetbury	-	-	-	-
Moreton-in-Marsh	-	-	-	95
Fairford	145	179	218	271
Bourton-on-the-Water	-	-	-	-
South Cerney	62	95	132	183
Chipping Campden	-	-	13	34
MIckleton	-	-	-	-
Northleach	55	56	59	63
Stow-on-the-Wold	-	-	-	-
Upper Rissington	-	-	-	-

Cotswold District	-	3,369	6,604	10,794
Cirencester	-	2,096	4,141	6,823
Food & beverage floorspace*				
Cotswold District	-	4,143	8,355	14,752

Source: Tables 11-13, Appendix B. *Floorspace capacity forecasts for food/beverage floorspace are gross floorspace figures. Other floorspace forecasts are net sales area.

5.44 The summary quantitative capacity forecasts outlined above most settlements across the District have either nil or limited surplus capacity for net additional convenience goods floorspace. This is primarily due to two factors: (a) the small size of settlements, which limits the amount of available expenditure capacity; and (b) reasonably high levels of existing grocery floorspace provision in some of the larger towns (Tetbury, Moreton-in-Marsh, Stow-on-the-Wold and Bourton-on-the-Water).

5.45 The one settlement will a high level of net additional convenience goods floorspace capacity, based upon the continuation of current market shares, is Cirencester. At the current year (2026), there is forecast capacity of circa 1,850sq m net sales floorspace, equivalent to a medium foodstore such as ALDI or Lidl. However, over the assessment period net additional quantitative capacity is set to grow significantly to 3,100sq m net by 2031, 4,500sq m net by 2036 and 6,400sq m net by 2043. When reading and understanding these forecasts, three factors should be noted:

a. the forecasts are based upon Cirencester maintaining its current market share over the assessment period;

b. Cirencester currently benefits from grocery shopping trips from surrounding settlements, such as Fairford and Northleach. As a consequence, improvements in the quantity and quality of grocery provision in those settlements will reduce the amount of convenience goods expenditure attracted to stores in Cirencester; and

c. the level of growth in net additional quantitative capacity is driven to a significant extent by planned strategic housing allocations in the new Local Plan. These include both urban extensions to Cirencester and new communities a short distance from the town. As a consequence, meeting the identified capacity, subject to points (a) and (b) above, plus qualitative considerations, may well be in separate locations around Cirencester and not just the town itself.

5.46 As noted above, there are some settlements whose catchment population travel to stores in other towns for their grocery shopping needs. This is, in part, likely to be a product of the relatively small size of the settlement in question. However, some of these settlements have the potential to see a large increase in the resident population of their local catchment of the new Local Plan period. The qualitative and spatial needs associated with this development plan strategy are explored in the next sub-section of this chapter and it is likely that any material increase in market share within these settlements would lead to a consequential reduction in future capacity in settlements such as Cirencester.

5.47 With regards to quantitative need factors associated with comparison goods floorspace provision, it will be noted from the contents of Table 5.6 that around two-thirds of the overall district-wide quantitative capacity is associated with Cirencester. Whilst medium to longer term capacity forecasts are less reliable, there is an estimate net additional capacity for circa 4,100sq m net by 2036 and 6,800sq m net by 2043. Shorter term capacity is estimated to be circa 2,100sq m net by 2031. Whilst there will be a particular focus on Cirencester town centre as a first choice location for additional provision, particularly in light of its current role as the main comparison goods shopping location in the District, it is likely that some comparison goods provision will be associated with new foodstores to serve new and expanding communities along with other small scale provision.

5.48 The scale of potential net additional food/beverage floorspace (Class E(b) / sui generis) is forecast to be reasonably high at circa 4,100sq m by 2031 and 8,300sq m 2036. This reflects a combination of forecast strong population growth in 4 key locations (Cirencester, Mickleton, Fairford and Moreton-in-Marsh) along with consistent growth in per capita spending at food/beverage outlets. The forecasts shown in Table 5.6 are District-wide and therefore will translate into relatively modest amounts on a settlement by settlement basis. In addition to the standard town centre first approach, a particular priority will be appropriate sized provision in new local centres (see next sub-section).

Qualitative and Spatial Assessment

General qualitative considerations

5.49 A common theme which runs through the qualitative assessment is the influence of commercial trends within the retail, leisure and town centre sectors, along with the characteristics of Cotswold District. In particular: the influence of surrounding centres (including Cheltenham, Swindon and Bristol/South Gloucestershire), size of many of the Principal Settlements (and their catchments), the role and function of these settlements (including the focus on day-to-day retail

and service provision and the strong influence of the tourism/visitor market). All of these factors lead to a limit on the amount of provision which can be provided in certain sectors in parts of the District. This is likely to be particularly true for comparison goods retailing where only Cirencester has a significant level of provision, with much of the remainder of the District relatively limited and split between local and visitor needs. As a consequence, this leads to a situation where qualitative needs are focused upon grocery provision and a requirement to meet local day-to-day retail and service needs.

5.50 With regards to grocery retail provision, Section 4 of this Study outlined current shopping patterns across the District, some of which suggest the potential for qualitative improvements. Apart from Cirencester, which has a good range of provision, a number of the other Principal Settlements possess a large foodstore capable of meeting main and top-up food shopping needs (Moreton-in-Marsh, Tetbury, Stow-on-the-Wold and Bourton-on-the-Water). In some circumstances this scale and type of provision does not always translate into high levels of grocery trip retention, which can be caused by the inter-relationship of a number of the settlements. As a consequence, there is not, in our view, any pressing need for the new Local Plan to address any qualitative improvements in Tetbury, Moreton-in-Marsh, Bourton-on-the-Water and Stow-on-the-Wold via any specific allocations. Instead, the new Plan should allow for qualitative improvements to be achieved via the development management process via suitable sites where new provision does not harm the health of existing 'town centres'. The same will apply for the smaller Principal Settlements which may not be of a size which can realistically accommodate a new larger foodstore unless they are subject to new strategic development areas (see next sub-section).

Location-specific needs

5.51 As part of the overall assessment of need, it will be important to consider whether there are any location-specific needs arising out of the emerging development plan strategy for Cotswold District. In particular, whilst the preceding quantitative assessments are able to identify potential current imbalances between demand and supply for convenience goods floorspace and future town-wide needs for retail and food/beverage and use floorspace, there may also be location-specific needs which should be addressed. A key theme for these location-specific needs will relate to the main areas of residential land use growth to be included in the new Local Plan.

5.52 In recent month, CDC has consulted upon a series of spatial options for the development strategy in the new Local Plan. Based upon the content of the consultation document, along with the representations received by the Council between November 2025 and January 2026, CDC are now finalising the Regulation 19 Local Plan for further public consultation. The spatial and location-specific needs assessment within this Study has been informed by the current preparation of the emerging Local Plan, with the following areas being identified as likely key areas of growth:

a. The Cirencester area, including urban extensions to the Cirencester urban area (southern extension at The Steadings) plus new residential development in Siddington[43] and Preston[44].

b. Land surrounding Down Ampney

c. Land south of Driffield

d. Land north-east of Fairford

e. Land south-west of Kemble

[43] Land south-west of Siddington
[44] Land east of Kingshill Lane Preston, plus land south-east of Cirencester and south of Preston

f. Land north and west of Mickleton

g. Land north, east and south of Moreton-in-Marsh

5.53 The potential needs associated with strategic residential development in each of these locations have been assessed with reference to the following factors:

a. The scale and location of potential residential development in each area

b. The scale, type and location of existing retail and main town centre land use provision in each area

c. Where potential existing / future gaps in provision exist, we provide an assessment of the potential scale and type of main town centre land use provision (including the need to identify planned new 'local centres'[45]).

5.54 When making an assessment of each of the above locations, we have undertaken a basic assessment of their 'ring fenced' expenditure / floorspace capacity. This is based upon the number of new homes in each area, which is multiplied by an average 'persons per dwelling' factor[46] and an average 'spend per head' for convenience goods retail floorspace[47]. These calculations provide a total spending capacity for convenience goods floorspace for each location, which is then translated into a floorspace capacity equivalent (using an average sales density for each type of use). The assessment concentrates upon convenience goods floorspace as this will comprise the main element of day-to-day needs for local communities.

5.55 It should be noted that this is a crude exercise given that, in reality, the expenditure / floorspace capacity in each location cannot be 'ring fenced' and will instead be subject to varying inflow and outflow influences. However, this basic assessment is nevertheless useful in providing some preliminary high-level guidance on the scale of grocery floorspace which residents of a particular strategic development area/allocation can support.

5.56 A summary of our recommends for the new Local Plan, in relation to the planned strategic development areas in Kemble, Cirencester, Preston, Fairford, Down Ampney, Driffield and Mickleton, are as follows.

[45] As part of this assessment, consideration is given the role and place of a new 'centre' in the District's 'town centre' hierarchy.
[46] Ratio of 2.1, based on CDC data.
[47] For each of the strategic development areas, we have based our assessment on the broad quantum of potential new homes to be allocated in the new Local Plan, multiplying this number by an average of 2.3 persons per dwelling and an average convenience goods spend per head of £3,234 (which is the average spend per head for the whole of the study area, used in our quantitative need assessment).

Table 5.1: summary of retail and main town centre land use elements for the potential strategic development areas

Settlement / Area	Recommended Provision	Notes
Land east of Kingshill Lane, Preston	Planned new Local Centre, to contain a small convenience store (circa 300sq m net sales) and several small Class E units.	Provision of new Local Centre to meet the needs of the planned new community and address shortfall in provision on the eastern side of Cirencester. New centre should be placed in heart of new development area and should not become a roadside facility.
Preston (land south-east of Cirencester and south of Preston)	Planned new Local Centre to contain convenience store / small foodstore (up to 1,000sq m), along with several small Class E units.	New local centre should be large enough to meet the day-to-day retail, service, food/beverage and community land use needs of a new community at Preston. New centre should be placed in heart of new development area and should not become a roadside facility.
Land north and west of Mickleton	Planned new Local Centre to contain small to medium foodstore (circa 1,000sq m) and several small Class E units (recommended to be between 75-250sq m gross) within an overall centre size of up to 3,500sq m gross.	Planned new centre likely to be placed with strategic residential development area. Recommended that the new Local Plan contains a strategy for the co-ordination of the new centre with existing local provision (including possible re-locations / consolidation).
Land south-west of Kemble	Planning new Local Centre to contain small to medium sized foodstore (circa 1,000sq m) and several small Class E units.	Planned new centre likely to be placed with strategic residential development area and to provide physical relationship with the mainline railway station.
Land surrounding Down Ampney	Planned new Local Centre to contain convenience store / small foodstore (up to 1,000sq m), along with several small Class E units.	New centre should be placed in heart of new development area and should not become a roadside facility.
Land north-east of Fairford	Provision of medium sized foodstore within strategic residential development area.	Medium sized foodstore to provide role/function which retains a larger proportion of grocery trips in Fairford. Size of store should be in the region of 1,500sq m net, with exact size to be determined via an impact assessment. No requirement for new local centre within the strategic development area, as spending/needs associated with planned residential growth should be used to support existing defined 'town centre'.
Land south of Driffield	Planned new Local Centre to contain convenience store / small foodstore (up to 1,000sq m), along with several small Class E units.	New centre should be placed in heart of new development area and should not become a roadside facility.

5.57 Following text explains the rationale for these recommendations.

Cirencester

5.58 The Cirencester area is likely to be a focus for additional residential development in the new Local Plan. This is likely to comprise several component parts. First, extensions to the existing main urban area of the town. Second, separate new communities or the enlargement of smaller settlements (such as Preston, Siddington, Driffield and Down Ampney).

5.59 With regards to **Cirencester** itself, we understand that the main areas of focus for additional residential land use development will be on the south-western edge, as an extension to The Steadings development, and to the east of the

town (between the existing urban area and the A417. The Steadings development (previously known as Chesterton) is a large-scale urban extension currently under (phased) construction and which will provide its own local centre. This scale of development sought to pursue a strategy which retained Cirencester town centre as the main focus for many retail, service and other main town centre land use needs whilst allowing for a modest scale of day-to-day retail, service and food/beverage land use provision within the heart of the Steadings urban extension area.

5.60 It is understood that a potential extension to The Steadings development would add around 585 additional dwellings within the new Local Plan period. On a 'ring fenced' basis, residents of those additional homes would collectively generate around £4m of convenience goods expenditure which would be equivalent to 280-400sq m (net) of convenience goods floorspace. Given that only part of this floorspace could be retained within the immediate area, along with permission of a new local centre in the original part of the Steadings development, there is no obvious requirement for the next phase of the Steadings development to provide additional neighbourhood-level retail/service uses.

5.61 The other potential urban extension for Cirencester lies on the eastern side of the town, on land to the east of Kingshill Lane (to the north of Preston). The potential for circa 610 new dwellings in this area are currently being assessed by CDC. At this level of development, a 'ring fenced' convenience goods spending capacity of £4.1m could be generated. At that level of spend, between 300-410sq m (net) convenience goods floorspace could be supported. Part of this spending would be attracted to the existing larger grocery stores in Cirencester, particularly the Tesco Extra, Lidl and ALDI stores which lie on the eastern side of the settlement.

5.62 Apart from a small convenience store on Upper Churnside, there is a general lack of day-to-day grocery shopping facilities in this part of Cirencester (to the east of Swindon Road and south of Burford Road). As a consequence, any planned new residential development in this area has the opportunities to provide new neighbourhood-scale retail provision. This would have the dual purpose of meeting the needs of new residents within the allocated area and also addressing a current deficiency in this part of the town.

5.63 Indeed, given the scale of these combined areas, we would recommend that CDC considers planning for a new local centre as part of the eastern extension to Cirencester. This should contain a new modest sized convenience goods store of circa 300sq m net sales, plus a range of other Class E units which are able to accommodate service, food/beverage and other main town centre land uses. It is also recommended that any new local centre is located in such a way that its primary purpose is to serve residents of the new development area and also be accessible to the existing residential areas to the south of Burford Road and east of Swindon Road. We strongly recommend that a location which is primarily focused upon pass-by / road-side trade is avoided.

5.64 **Siddington** is a small village with lies a short distance to the south of the main Cirencester urban area. The village has a post office and convenience store along with a public house, both of which serve local needs. Given the proximity of Cirencester, its retail and other main town centre land uses will have a significant influence over existing and future residents of Siddington. As a consequence, this relationship will place a natural limit on the ability to provide additional main town centre uses in the village.

5.65 At the present time, CDC are currently exploring the potential to allocate land at south-west Siddington for circa 380 new homes. On a 'ring fenced' basis, the population associated with these new homes could generate up to £2.7m of convenience goods expenditure. Given the factors described above, it is likely that a large majority of this expenditure would be lost to larger grocery stores in Cirencester. This would constrain the amount of available expenditure to support grocery floorspace in Siddington, which we consider would be better directed at support existing facilities.

Preston

5.66 The Preston lies to the south-east of Cirencester. It is a small village which lacks any existing retail or main town centre use provision. CDC are currently considering whether to plan for a new community to the south and south-east of the existing village, which would comprise circa 1,300 new homes in the new Local Plan period to 2043. The development area to sit between Cirencester Road and the A419. Existing retail provision comprises the large Tesco Extra store and ALDI store at Cricklade Road, along with the large Dobbies garden centre (to the south of the A419).

5.67 Given the scale of potential residential area in the Preston area, along with the reasonably poor accessibility characteristics associated with the Tesco and ALDI stores, we consider that there is a strong case for a new local centre to be provided as part of this strategic development area. The 'ring fenced' convenience goods expenditure capacity for circa 1,300 new homes is equivalent to £8.7m and 620-870sq m net convenience goods floorspace. Given the attractiveness of the nearby Tesco Extra and ALDI stores, all of these capacity would not be retained within this area. As a consequence, spending from residents of the new community may only be able to support a modest size grocery store of up to 500sq m net. However, qualitative factors, plus the need to ensure an element of self-sufficiency, could support a large level of grocery provision which is able to provide for a range of top-up food shopping needs and part of local residents' wider weekly grocery needs. We have also given consideration to whether retail provision in the Preston area could help to serve the needs of the surrounding area, although the separation of the Preston area from other parts of Cirencester (including the potential Cirencester East urban extension) suggests that this is not a reasonable possibility.

5.68 Given the scale of the strategic allocation at Preston we would recommend that the allocation in the new Local Plan includes provision for a new local centre. The allocation should set a series of clear parameters for the planned new centre including:

a. The provision of a centre which lies in the heart of the new residential community and not on its edge[48].

b. A centre which is anchored by a modest sized small foodstore / large convenience store (up to 1,000sq m gross), which has a function focused on serving the grocery shopping needs of the local population (and not a store with a wider catchment).

c. A centre which is able to provide several separate units for a range of Class E and other main town centre uses.

Driffield

5.69 We understand that CDC is giving consideration to the potential for a strategic land allocation to the south of Driffield, between the existing village and the A419. It is understood that the residential development capacity of this area is circa 1,090 units within the new Local Plan period. At the present time, Driffield does not accommodate any local retail or day to day service uses.

5.70 The closest large settlement to Driffield is South Cerney 3.5 miles[49] to the south (on the opposite side of the A419), which provides small scale grocery stores and a small range of service, food/beverage and other main town centre land uses. Cirencester is located circa 7 miles to the north-west, with potential strategic development allocation at Preston lying between Cirencester and Driffield.

[48] Adjacent to either the A419 or Cirencester Road
[49] Distance by road.

5.71 In the absence of any local facilities in Driffield, residents of a large new community in this area are likely to travel to South Cerney or Cirencester for their top-up food shopping needs and Cirencester for their main food requirements. As a consequence, there is a strong case for the provision of an appropriate scale of retail and other main town centre land use facilities within a strategic allocation. The scale of potential residential development (circa 1,090 units) would produce a 'ring fenced' convenience goods expenditure capacity of £7.4m, which would be equivalent to a convenience goods floorspace capacity of 530-740sq m (net). An element of this spending would naturally be lost to large grocery stores in Cirencester, although given the location of the potential allocation we consider that there is a reasonable quantitative and qualitative case for a convenience store of circa 500-1,000sq m gross.

5.72 In line with the recommendations for the new community at Preston, the grocery store should be of a size which allows the local community to fulfil their top-up / day-to-day grocery shopping needs along with the ability for a proportion of weekly shopping needs to also be met. The grocery store should form an anchor use of a planned new local centre, which also contains a modest amount of several small-scale separate Class E uses. It will also be important for a planned new local centre at Driffield to be placed in the geographical heart of the new community and not on the edge where it would become unnecessarily attractive to pass-by / road-side trading.

Down Ampney

5.73 Down Ampney is also a small village lying to the north of South Cerney and the A419. At the present time, the village has limited existing facilities for the local population and Cirencester, South Cerney and Fairford are likely to attract retail and other trips from the local population. As a consequence, much of the analysis provided for Driffield (above) is also likely to be applicable to Down Ampney.

5.74 We understand that CDC are currently consider the potential for a circa 1,660 residential unit allocation on land surrounding Down Ampney. This would provide for a significant expansion of the village and create significant levels of convenience goods spending capacity. On a 'ring fenced' basis, this capacity equate to circa £11.3m and is equivalent to between 800-1,100sq m net convenience goods net sales floorspace. Much of this spending power will be lost to large foodstores and supermarkets in Cirencester, although a combination of qualitative, sustainability and quantitative capacity factors suggest that the provision of a large convenience store, which is able to serve a range of top-up food shopping and wider grocery needs as part of a planned new local centre, should be accommodated. Our recommendations regarding the scale, role, location and function of a planned new local centre at Down Ampney are similar to those already outlined in relation to Preston and Driffield.

Fairford

5.75 Fairford is currently being assessed by CDC in terms of its potential to accommodate strategic residential-led strategic development. It is understood that the potential provision of circa 1,125 new residential units (to the north-east of Fairford) is being assessed. This level of new residential development is equivalent to a 'ring fenced' capacity of £7.6m of convenience goods expenditure. In floorspace terms, this is equivalent to between 550-760sq m net (convenience goods) sales area.

5.76 This level of potential quantitative capacity should be considered alongside several other characteristics of Fairford. First, Fairford is a reasonably large settlement which benefits from a reasonably range of retail, food/beverage, service and other Class E land use floorspace, much of which is located within a defined 'town centre' boundary along High Street and London Road. Grocery retail provision is focused upon Co-op and Budgens stores which concentrate upon top-up food shopping needs. These stores are popular, although are not of a size which make them attractive to main food shopping trips. As a consequence, 'leakage' of trips is likely to occur to Cirencester and Swindon for this type of shopping.

5.77 As a consequence, there is, in our opinion, already a qualitative case for improving the scale and type of grocery provision in Fairford. This would be achieved via the provision of a larger foodstore which is able to retain a greater proportion of main food trips from the local population. This qualitative case would also be supported by quantitative factors if a new store was able to raise the convenience goods shopping market share of Fairford.

5.78 In our opinion a particular constraint on this scenario being achieved will have been the overall size of the Fairford shopping catchment. Its size has been unable to attract commercial market interest in the provision of a larger medium-sized foodstore. However, these circumstances may well change with provision of circa 850 new homes in Fairford via a strategic development allocation. We consider that all of these factors/circumstances point to a situation where there is potential to provide a new medium-sized foodstore for Fairford.

5.79 The identification of a suitable location for a new foodstore will need to follow the sequential approach to site selection, starting with the defined 'town centre' and then edge of centre locations. Based upon our review of the structure of Fairford, we are not aware of any in-centre or edge-of-centre locations which are large enough to accommodate a medium-sized foodstore. Sites which have been promoted for development via the 'call for sites' for the new Local Plan are in out-of-centre locations and, as a consequence, the strategic development area(s) which have been identified to meet housing needs are likely to comprise an appropriate location for mixed use development including a foodstore.

5.80 The exact size of a new store will need to be tested via detailed assessment of its likely impact on Fairford 'town centre', although a store of circa 1,500sq m net sales area should be used as a general guide and starting point for future assessments.

5.81 Given the concentration of existing retail, service and other Class E / main town centre land uses within the defined 'town centre' in Fairford, we do not recommend that a new strategic development area should be required to provide a range of Class E uses in a new local centre. Instead, new provision should be limited to a medium size foodstore with the additional spending capacity generated by the growing local population used to reinforce existing uses in the defined centre[50].

Moreton-in-Marsh

5.82 Moreton-in-Marsh is currently being considered for the provision of circa 1,900 new homes over the lifetime of the new Local Plan. It is understood that these will be provided in development areas in different locations on the edge of the town's urban area, primarily to the north, east and south.

5.83 At the present time, Moreton has a reasonably large town centre which provides a wide range of retail, service, food/beverage and other Class E uses. The town has two medium-sized foodstores, one of which (Co-op) lies within the town centre boundary. The other foodstore (ALDI) lies to the south of the centre in an out of centre location. Our quantitative assessment of retail floorspace capacity indicates that there will be an over-provision of convenience goods floorspace over the new Local Plan period to 2043.

5.84 Therefore, whilst the provision of circa 1,900 new homes has the potential to add a significant amount of retail expenditure to the local area[51] the current under-performance of existing stores will soak up a large part of this new spending capacity. This is reinforced by qualitative factors which do not point towards a particular qualitative

[50] It should also be noted that one further consequence of providing a new foodstore within Fairford will be a reduced flow of grocery shopping trips to Cirencester which will, in turn, reduce its future convenience goods market share and potential net additional convenience goods floorspace requirements.
[51] Which, if ring fenced and made available in its entirety, could support 900-1,300sq m net convenience goods floorspace.

deficiency in convenience goods floorspace provision. There is also the potential for a new foodstore in Bourton-on-the-Water (if approved) to reduce the wider market share of Moreton-in-Marsh across the wider study area.

5.85 A further factor to consider is the disaggregated nature of the likely house-building areas across the town. There are a handful of large potential strategic allocations, although not one single location which is capable of becoming a large focused new community. As a consequence, we do not consider that there is a strong case for the provision of a planned new local centre in Moreton-in-Marsh during the new Local Plan period up to 2043. In our opinion, the retail, service and food/beverage land use strategy for the town should be based upon the following:

a. The majority of additional demand created by the town's growing population should be used to support retail, service and other main town centre uses in the existing town centre area;

b. The ability to provide a small convenience store within the larger of the proposed strategic development areas should not be ruled out, although this should be tightly controlled to a small top-up food shopping store which lies within the heart of the planned new residential communities and limited in size to under 300sq m net sales area.

Mickleton

5.86 Mickleton is a large village with modest amount (top-up food shopping orientated) grocery retail provision and a number of food/beverage uses. Larger surrounding settlements such as Evesham, Stratford and Moreton-in-Marsh are likely to attract a significant amount of grocery retail trips from local residents, with the size of the village likely to be a constraining factor on the amount of retail and other main town centre land use which can be supported.

5.87 As part of the preparation of the draft Local Plan, CDC are considering the potential to allocate land for the provision of circa 1,240 new dwellings to the north and west of Mickleton. It is also noted that there are a number of current planning applications for residential development on the western side of the village which (in combination) proposed over 300 new dwellings. Based upon the total amount of dwellings being considered by CDC for Mickleton, the 'ring fenced' spending power associated with residents of these new (circa 1,240) homes (£8.4m) equates to a convenience goods net floorspace capacity of between 600-840sq m net.

5.88 Whilst some of this expenditure capacity will not be available to support convenience goods floorspace in Mickleton, the combination of (a) the ability to retain a larger level of locally generated expenditure and (b) the spending capacity associated with the scale of new residential development, suggests that there is likely to be a quantitative and qualitative case for the provision of a medium sized foodstore.

5.89 It is understood that none of the current suite of (undetermined) planning application on the western side of the village contain retail or other Class E/main town centre uses. Therefore, opportunities for new retail and main town centre land use provision are likely to be concentrated in the new Local Plan land allocations. At the present time, Mickleton does not have a defined 'town centre' boundary, with existing facilities spread across the village. The scale of residential land use growth will lead to a requirement for further main town centre uses and it is therefore recommended that the development strategy for Mickleton puts into place a policy framework for how retail and main town centre land use provision in the village will develop over the lifetime of the new Local Plan[52]. This should include a planned new local centre within the northern land allocation, with the centre anchored by a medium sized foodstore along with several separate smaller units capable of accommodating a range of Class E and other main town centre uses. It is recommended that the new centre includes provision for a new medium sized foodstore of circa 1,000sq m

[52] For example, given that new retail, Class E and main town centre uses will be placed within the new strategic development areas, consideration should be given to whether it is appropriate to allow existing main town centre uses to relocate in order to form a co-ordinated single focus for Mickleton.

net sales area, plus several smaller Class E / main town centre land use units ranging between 75-250sq m gross. This would provide for a new centre of around 3,000-3,500sq m gross floorspace.

Kemble

5.90 CDC are currently assessing the potential to allocate land for circa 1,000 new residential units at south-west Kemble. This would provide for a significant expansion in the size of the village which currently accommodates only a modest amount of retail and service facilities for the local population. This situation is likely to be influenced by the limited catchment and existing spending capacity of the local population, with the majority of the local community likely to look towards Cirencester for their grocery and day-to-day retail and service needs.

5.91 The provision of circa 1,000 new homes in the village is likely to offer the opportunity to increase the amount of local retail and service facilities which can be supported by local residents. The presence of the mainline railway station, on the line between London and Cheltenham/Gloucester, also offers the potential to increase available spending to support local facilities.

5.92 The provision of circa 1,000 new homes in Kemble provides a 'ring fenced' convenience goods spending capacity of £6.8m which could support 490-680sq m. Some of this expenditure will not be genuinely available to support grocery floorspace in Kemble due to the attractiveness of large grocery stores in Cirencester, however two factors suggest that there is likely to be a location-specific need for the provision of modest-sized grocery provision: (a) the potential to retain a larger amount of existing expenditure; and (b) the available convenience goods expenditure associated with planned housing growth. In addition to opportunities for appropriately-sized grocery provision, we would also recommend that a strategic household allocation of circa 1,000 new homes is accompanied by a planned local centre which is anchored by a convenience goods store and several Class E land use units.

Policy Analysis and Recommendations

5.93 At the present time, within the adopted Local Plan, there are three 'town centre uses' policies: EC7, EC8 and EC9:

a. Policy EC7 outlines the various tiers in the formal 'town centre' hierarchy in the District, along with guidance for the provision of small shops and services in other settlements not listed in the hierarchy. EC7 also outlines the scale of net additional retail floorspace to be provided in Cirencester over the lifetime of the Local Plan.

b. EC8 sets out: (a) the framework for the application of the sequential test; and (b) provides (separate) development management policy criteria for proposals within and outside of the defined 'town centre' boundaries.

c. Policy EC9 outlines the circumstances where an impact assessment is required for retail land use proposals and the content of such assessments.

5.94 In addition, a further related policy is INF2 (social and community infrastructure) which deals with the provision and protection of community facilities including shops and services.

5.95 Consideration has been given to how the content of how policies EC7-9 should evolve for inclusion in the new Local Plan Review, taking into account the content of the current version of the NPPF and the findings of earlier parts of this Study.

5.96 Overall, we consider that there is merit in retaining the basic structure of current Local Plan town centre policies which separate out the town centre hierarchy (and related policy) from the detailed development management policies

associated with the sequential and impact policy tests. Separate policies for these topics should continue and we recommend that CDC consider re-organising and adding to these policies (including reference to the planned new 'local centres' within the strategic development allocations).

Policy EC7

5.97 At the present time Policy EC7 sets out a four-tier hierarchy of defined 'town centres' in the District. All these centres possess a defined 'town centre' boundary on the Local Plan policies map. The current tiers (town centre, key centres, district centres and local centres) provide different terminology to Policy DS1 of the Local Plan. DS1 outlines the development strategy for the District which defines all of the centres listed in EC7 as Principal Settlements.

5.98 It is understood that CDC is minded to retain (and update) the list of Principal Settlements in the new Local Plan Review. As a consequence, we consider that, in the interests of consistency, all defined 'town centres' attract the same classification in the town centres chapter. In particular, whilst earlier parts of this Study have identified the individual and unique characteristics of the main town centres, there are no fundamental differences between many of these locations in town centre land use terms. These settlements are: Cirencester, Bourton-on-the-Water, Chipping Campden, Moreton-in-Marsh, Stow-on-the-Wold, Tetbury, Fairford, Lechlade, Northleach and South Cerney.

5.99 The only exception to this will be for those Principal Settlements which do not possess the characteristics to attract (at the present time) a defined single existing 'town centre' boundary, due to the low level of dispersed main town centre uses in these settlements. These are Kemble, Mickleton, Blockley and Siddington. The approach to the provision of main town centre land uses in these settlements will, therefore, be the same as other settlements in the District, which would be a continuation of Part 2 of EC7.

5.100 Part 2 of EC7 is currently focused upon small local shops and services in those settlements which are not within the formal 'town centre' hierarchy. This provides conditional support for shops and services which enhance a settlement's viability, meet the needs of (and are accessible to) the local community.

5.101 It is recommended that Part 2 of EC7 should remain, although in order to address the differences between the different types of settlements caught by this element of policy it is recommended that this part of the policy is updated to provide a clear criteria-based approach which reflects the role, scale and function of each settlement. This criteria-based approach will also need to recognise that two of the four Principal Settlements (Mickleton and Kemble) are recommended to accommodate planned new local centres as part of a strategic development area allocation.

5.102 On the subject of planned new local centres, it is recommended that the updated version of EC7 includes a new section confirming the location of these new centres and the approach to designing their scale and content. As set out in the previous sub-section of this chapter, the six new planned new centres are located at: Kemble, Mickleton, Preston, Driffield, Down Ampney, Cirencester East. The criteria-based approach for designing these new centres should include: (a) a requirement to adhere to the scale, type and format described within the relevant strategic development site policy; (b) the need for new centres to be located where they would facilitate sustainable choice for new residents and the surrounding community; (c) the need to ensure that each new centre is of a scale and type which does not undermine the vitality, viability, role and function of existing centres in the town centre hierarchy.

Policy EC8

5.103 Policy EC8 in the current (adopted) Local Plan outlines the current application of the sequential test, along with: (a) the general approach to all main town centre land use proposals; (b) the assessment of proposals within the defined town centre boundaries; and (c) the approach to assessing main town centre land use proposals outside of defined 'town centre' boundaries.

5.104 In our opinion, all three of these elements should remain an important part of town centre planning policy for the new Local Plan Review. However, their format and location should, in our opinion, be revised. We recommend that the sequential test element of EC8 should be taken forward in its own policy, whilst the general main town centre elements of EC8 should be moved to an expanded town centre policy (i.e. the replacement policy for EC7 – see above).

5.105 A key area of update will be Part 5 of EC8, which focuses on proposals within the defined 'town centre' boundaries. The policy was prepared and adopted prior to the introduction of Use Class E and therefore amendments are required to remove reference to Class A1 retail uses. In addition, changes in the mix of land uses which contribute to the health and attractiveness of 'town centres' indicate that a change in emphasis in this policy is also required. These changes will also need to acknowledge the important role that residential uses play in town centre environments and how they may be introduced alongside (and not at the cost of losing) Class E and other main town centre land uses.

5.106 The approach to assessing proposals within defined 'town centre' boundaries will also need to take into account a requirement in the current NPPF to define a primary shopping area within town centres. The current approach in the adopted Local Plan is to define a primary shopping area boundary for Cirencester which is separate and smaller than the wider town centre boundary. In all of the other defined 'town centres' in the hierarchy in EC7 a separate primary shopping area boundary does not exist. Based upon the characteristics of the Principal Settlements recommended for the 'town centre' hierarchy in the successor policy to EC7 we remain of the view that Cirencester is the only one of the Cotswold towns to require a separate primary shopping area boundary. This is due to the size of the town centre, the number of commercial premises present in the centre and the importance of retail land uses[53].

5.107 The extent of the primary shopping area boundary for Cirencester is discussed later in this sub-section, with the policy approach for this area need only be subtly different from the wider town centre area due to the characteristics and parameters of Use Class E. Indeed, the draft version of the new NPPF proposes to remove the requirement to define a primary shopping area in town centres. Whilst the new Local Plan Review will not be examined under the new NPPF (due for publication later in 2026), any changes to national policy which will affect how primary shopping areas are used as part of the development management system will be of interest and relevance to how policies in the Local Plan Review are cast.

5.108 Therefore, when considering updates to Parts 5, 6 and 7 of EC8 and their relocation to the successor policy to EC7, we recommend the following:

a. Part 5 is amended to focus upon strong support for Class E and other main town centre uses in defined 'town centre' boundaries, particularly those which maintain and enhance the vitality and viability of centres.

b. There is a stronger focus of the promotion of Class E uses within Cirencester's primary shopping area, with a requirement for proposals to avoid harm to the shopping function of this defined area.

c. In addition to a district-wide set of criteria for main town centre land use proposals, it is recommended that a focused set of policy criteria is provided for main town centre land use proposals in settlements outside of the 'town centre' hierarchy (in order to ensure that an appropriate scale of land use provision is accommodated).

d. The existing approach of encouraging residential uses is retained, alongside an assessment of residential and other non-main town centre land use proposals within the defined town centre boundaries.

[53] We recommend that the Local Plan and the accompanying policies map make it clear that where there is not a separate Primary Shopping Area boundary within the 'town centre' (i.e. all centres apart from Cirencester) the PSA is the same as the town centre boundary.

e. The existing set of policy criteria for assessing all main town centre land use proposals, in any location, is retained.

5.109 Following the relocation of the town centre and general main town centre land use policies to the successor policy to EC7, the replacement for Policy EC8 should concentrate upon the sequential test. We consider that there are opportunities for a simplified version of this element of EC8 and recommend the following elements:

a. The focus of the policy will remain on all main town centre land use proposals outside of defined centres, unless one or more 'exclusions' apply:

1. The proposal relates to a site which is allocated in another part of the Local Plan Review for the same purpose.
2. The proposal is small scale (as defined by the updated version of EC7).

b. The policy retains a clear description of the sequence of preferred locations (in-centre, then edge-of-centre, then out-of-centre) and that sequentially preferable locations should be assessed on their ability to offer suitable and available alternatives.

c. The updated version of the sequential test policy should made it clear that the assessment of alternatives should require the demonstration of flexibility in scale and format.

d. Given the potential change in national policy in relation to the sequence of preferred locations around town centre and primary shopping area boundaries, it is recommended that Parts 1 and 2 of Policy EC8 are streamlined.

e. It is recommended that the new policy makes it clear that planned new centres across the District should also feature as part of the sequential test (both prior to and following implementation) in order to ensure that these new centres capture proposed investment opportunities in main town centre uses in those areas where they are proposed.

Policy EC9

5.110 At the present time, retail proposals of 100sq m net sales area or greater, and located outside of the 'town centres' listed in Policy EC7, are required to be accompanied by a retail impact assessment. In order to adhere to current national policy, it is recommended that the land uses relevant to this policy are widened to retail and leisure.

5.111 With regards to whether the existing (100sq m) floorspace threshold should continue for the updated policy we taken into account guidance within the PPG and considered factors such as: (a) the scale of proposals relative to town centres; (b) the existing viability and vitality of town centres; (c) cumulative effects of recent developments; (d) the likely effects of development on any town centre strategy; and (e) the impact on planned investment.

a. The scale of development. Our review of the main 'town centres' across the District indicates that the average unit size across all centres is reasonably small. Floorspace data is available for Stow-on-the-Wold, Tetbury and Cirencester and this shows that average (retail and service) unit sizes of 90sq m, 130sq m and 150sq m respectively. The other main centres across the District have a similar profile of units and are more likely to be similar to the average size of unit in Tetbury and Stow-on-the-Wold. Therefore, the existing threshold is at the lower end of this range and, therefore, any update to the threshold needs to strike a reasonable balance between the actual retail floorspace within the defined centres and concentrating upon larger edge and out of centre proposals which are proportionately larger than town centre provision. This

suggests that the threshold could be increased to 200sq m gross, which would allow development management decisions to concentrate upon edge and out of centre proposals which are most likely to compete with the larger component of units will provide the most support for the role, function and attractiveness of defined 'town centres'.

b. Cumulative impact factors. The need for this level of floorspace threshold is also reinforced by factors such as cumulative impact issues, the health of defined centres and the development plan strategy for the centre. In relation to cumulative impact, whilst it might be the case that the individual impacts associated with a circa 200sq m retail proposal do not cause any particular cause for concern, the combined effects of this proposal plus others (of a similar size) may well start to become significant. Therefore, the Council must consider how the cumulative build-up of a certain scale of development could affect the health of town centres. In other words, if it is considered that the individual impacts of say a 200sq m retail proposal are unlikely to ever be significant then this would allow all future 200sq m proposals to avoid the assessment of cumulative impact. Should several of these come forward then this would equate to circa 1,500-2,000sq m of new retail and leisure floorspace which would have avoided any consideration of impact despite it being over the national impact threshold.

c. The health of town centres. With regards to town centre health, it may well be the case that the health, role and function of a particular centre may not rely on just one retailer but, instead, a handful of retailers. Therefore, it may be the case that one specific edge/out-of-centre proposal would not lead to detrimental impacts, but when the cumulative build-up comprises a range of proposals selling different types of goods then the longer-term effects on the health of a centre could become an issue. This would be reinforced where there is potential for store relocations. As a consequence, this reinforces the need for an impact assessment policy whose floorspace threshold is proportionate enough to properly deal with the above circumstances.

d. Investment in existing and planned new centres. A further factor to consider is the impact of edge and out of centre retail and leisure proposals on town centre investment and related development plan strategy issues. In particular, some proposals may be of a type and scope which could attract retail and leisure operators which would otherwise have occupied new investment projects in existing and planned new centres. A key example of this will be occupiers who would be ideally suited to occupy the planned new centres in the strategic residential development allocations in the new Local Plan. Similarly, the potential for relocations away from existing centres should also be considered. Given the importance of new planned centres within these strategic development areas, we consider that this is a further clear reason why a proportionate impact assessment threshold should be set (with many of these planned new centres likely to accommodate small sized units).

5.112 Therefore, we consider that there is clear evidence and justification for the new Local Plan to continue with an impact assessment threshold which is below the national default threshold of 2,500sq m gross. There is evidence to demonstrate why the current threshold of 100sq m gross could remain, although raising it slightly to 200sq m gross would be reasonable based on the latest evidence provided by this Study. It would also show some flexibility and proportionality with the development management framework for retail and leisure uses in the new Local Plan.

5.113 When an impact assessment is required, the basic topic areas contained within Policy EC9 remain consistent with national planning policy: (a) impact on town centre vitality and viability; and (b) impact on town centre investment. As a consequence, these should remain within the updated version of EC9 and be expanded to make reference to:

a. The need to provide an assessment of cumulative impact in a scenario where there are committed and/or recently completed retail/leisure developments in the catchment area of the proposal.

b. The need to ensure that the 'impact on investment' strand of the policy includes reference to an assessment on the delivery of planned local centres within the catchment of the proposal.

6. Summary and Conclusions

6.1 This Retail and Town Centres Study report has been prepared by Nexus Planning for Cotswold District Council as an evidence base document for the new Cotswold Local Plan. This Study has provided new evidence, analysis and recommendations regarding the following issues associated with the retail and town centres land use strategy for Cotswold District:

a. A review of the current baseline position for retail and other main town centre uses in the main settlements in the District, including the land use profile of the main 'town centres' and main town centre land use provision across the Principle and Non-Principal Settlements.

b. A review of recent and current trends in the retail and leisure sectors, including the changes which have taken place since the preparation of the previous district-wide town centre evidence base study in 2017.

c. Assessment of current shopping patterns and retail spending levels across the main settlements in Cotswold District, including analysis of the shopping and food/beverage catchment areas for the main settlements.

d. Assessment of the need for retail and food/beverage floorspace across the main settlements, including spatial and location-specific assessments of need in relation to the Local Plan's strategic development areas.

e. Advice on the content of planning policy for town centres, including town centre boundaries and specific site allocations for retail and main town centre uses.

6.2 The following pages of this section provide a summary of our findings, analysis and recommendations regarding the main settlements across the District.

Sustainable construction policies

Operational energy and carbon

Evidence base complementary report

July 2026 | Rev P02

Etude

Contents and introduction

Introduction

This report provides an update to Cotswold District Council's energy and carbon evidence base for sustainable construction policies (December 2023). Etude, together with Levitt Bernstein, assisted the Council with creating the 2023 evidence base to justify net zero buildings policies based on operational energy metrics. Since the report was issued, a number of important developments have occurred relating to net zero operational energy policies. As such this update reflects this changing context.

The scope of this report covers:

- An update to the statutory context surrounding net zero policies.
- The recently released Future Homes and Future Buildings Standards and what these mean for the existing evidence base and Cotswold's proposed policies.
- A review of recent successful evidence bases from other local authorities adopting similar policies.
- Implementation of policies and the development management process.

Policy context update

Policy context update | The 2023 WMS: the legal response and inspectors' comments

The 2023 Written Ministerial Statement

A Written Ministerial Statement (WMS) was issued on 13th December 2023 by the Parliamentary Under Secretary of State for Levelling Up, Housing and Communities. A key extract of the statement is:

Any planning policies that propose local energy efficiency standards for buildings that go beyond current or planned buildings regulation should be rejected at examination if they do not have a well-reasoned and robustly costed rationale that ensures:

- *That development remains viable, and the impact on housing supply and affordability is considered in accordance with the National Planning Policy Framework.*
- *The additional requirement is expressed as a percentage uplift of a dwelling's Target Emissions Rate (TER) calculated using a specified version of the Standard Assessment Procedure (SAP).*

The legal response to the 2023 WMS

Open legal advice sought from Estelle Dehon KC concludes that the WMS should not prevent local authorities from exercising their statutory powers and duties.

> *So long as there is a robust evidence base – a reasoned and robustly costed rationale – it is open to examining inspectors, in the exercise of their planning judgment, to determine that policies based on [energy metrics] are consistent with national policy on climate change mitigation and the net zero obligation, and, to the extent that there would be deviation from the 2023 WMS, that can be justified on the evidence and does not prevent overall consistency of the proposed local plan with national policy (particularly as national policy can pull in different directions). "*

Estelle Dehon KC

The response from planning inspectors at examination

The response from planning inspectors appointed by the secretary of state at examination found policies that went beyond building regulations and used operational energy metrics justified.

> *...there is a justified rationale for the approach taken in Core Policy 22. Although the use of alternative metrics to TER means that it departs from the WMS, that departure is justified by the evidence presented to us and the objectives of the Plan in addressing climate change."*

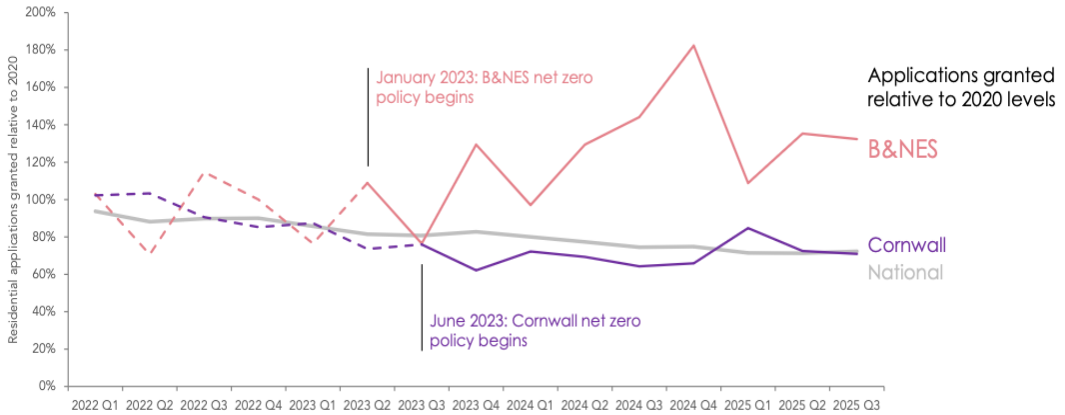
Inspector comment, Uttlesford Local Plan (January 2026)

> *...The (2023) WMS is a material consideration but needs to be read in the context of national policy and legislation. Evidence is presented to indicate that achieving net zero using the (EUI) metric proposed is both technically and financially feasible."*

Inspector comment, Winchester (March 2026)

The draft 2025 NPPF consultation

In December 2025, the government announced a consultation on the new draft National Planning Policy Framework (NPPF). Of particular relevance to this study is *PM13 Setting Standards* and *DM7 Relationships with Other Regulatory Regimes* which propose to:



- Limit local standards for energy efficiency in dwellings.
- Prevent local policies for any matters that are already covered by building regulations (with the exception of accessibility and water efficiency but including energy and carbon emissions).

Local energy policies do not stifle planning and development

One of the key arguments that the Government has made for this policy is that allowing local authorities to set their own policies inhibits development. Data from the Ministry of Housing, Communities and Local Government (MHCLG) demonstrate that local net zero energy policies introduced by Bath & North East Somerset Council and Cornwall Council in 2023 did not hold back planning and development in these areas. There is no evidence that net zero policies make the planning process too complex or that they constrain housing delivery (see graph on the right).

What PM13 and DM7 might mean for local plans if they are adopted in the NPPF

At this stage PM13 and DM7 are under consultation and it may be that the proposal is not taken forward. If it is, it is likely to extend to energy efficiency only, which may include limiting the ability of local authorities to set space heating demand and energy use-intensity targets (see box on the right for mitigating options). Renewable energy does not appear to be included and therefore it may be possible for local authorities to continue setting their own standards for renewable energy provision. Embodied carbon policies may face constraints but draft wording is vague and therefore the NPPF policy may be difficult to implement in practice.

% of residential applications granted relative to 2020. The pink line shows that applications granted for BANES were consistently higher for BANES after the introduction of the policy and higher than the national average. The purple line shows that were marginally lower but were already on a downward trajectory after 2020 anyway.

Chart based on MHCLG reference table 2 (PS2) data for district planning applications, showing applications granted for major and minor dwellings. This shows applications granted relative to 2020 levels in each area. Applications can refer to multiple dwellings. Data is not available for individual dwellings.

Justification for operational energy and embodied carbon policies

- Robust justification for local planning policies for operational energy and embodied carbon is important. There are other national policies which must be highlighted as a justification for the proposed local policies.
- Operational energy policies such as space heating demand and energy use intensity and embodied carbon policies could be considered to be sufficiently different from building regulations metrics to not be covered by PM13 and DM7. Building regulations covers regulated energy uses only, while operational energy use policies would cover total energy use. Operational energy policies can be measured in-use, whereas building regulations metric cannot.

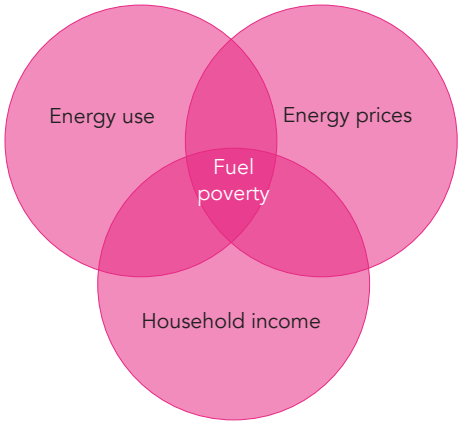
Complying with national policy

There are strategic national targets for the energy performance and carbon emissions of buildings contained in several legislative documents, but the specific requirements for new buildings are set by the Building Regulations. Building regulations are generally limited in ambition by what is achievable on the most viability constrained sites in England. Cotswold District Council can determine the viability of setting better standards based on the local, not national, conditions.

The role of new buildings in carbon budgets

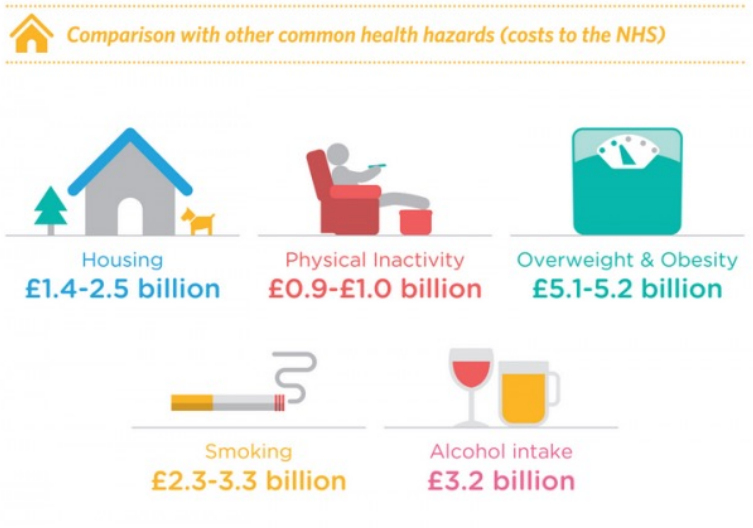
The concept of carbon budgets is absolutely critical to understand. Net Zero is not only about a destination; a very significant and fast decarbonisation pathway is needed and, in contrast to most other sectors, the technology to completely decarbonise new buildings already exists at scale.

Reducing energy bills



Energy costs are now a major issue for many UK residents. An energy efficient dwelling will help to reduce energy demand which in turn will reduce energy bills. It will also make the temperature more stable, enabling a 'smart' heating system to make the most of flexible dynamic electricity prices. Incorporating PV generation can generate significant cost savings when electricity is used by residents on-site.

Wider co-benefits



Better insulated buildings generally and housing specifically brings wider benefits to residents, communities and the region. Improving housing quality plays an important part in tackling health inequalities.

Embodied carbon

The Climate Change Committee (CCC) recommended that a whole life carbon assessment for new homes should be included within the Future Homes Standard, but it was excluded, leaving a policy gap that needs to be filled for the UK to meet its net zero obligation.

The dwelling's energy use is one of the three key factors contributing to fuel poverty. The proposed policy has a specific requirement for domestic buildings on energy efficiency.

The Government predicts housing quality impacts will increase as the population ages. NHS costs source: BRE, (image source: gov.uk)

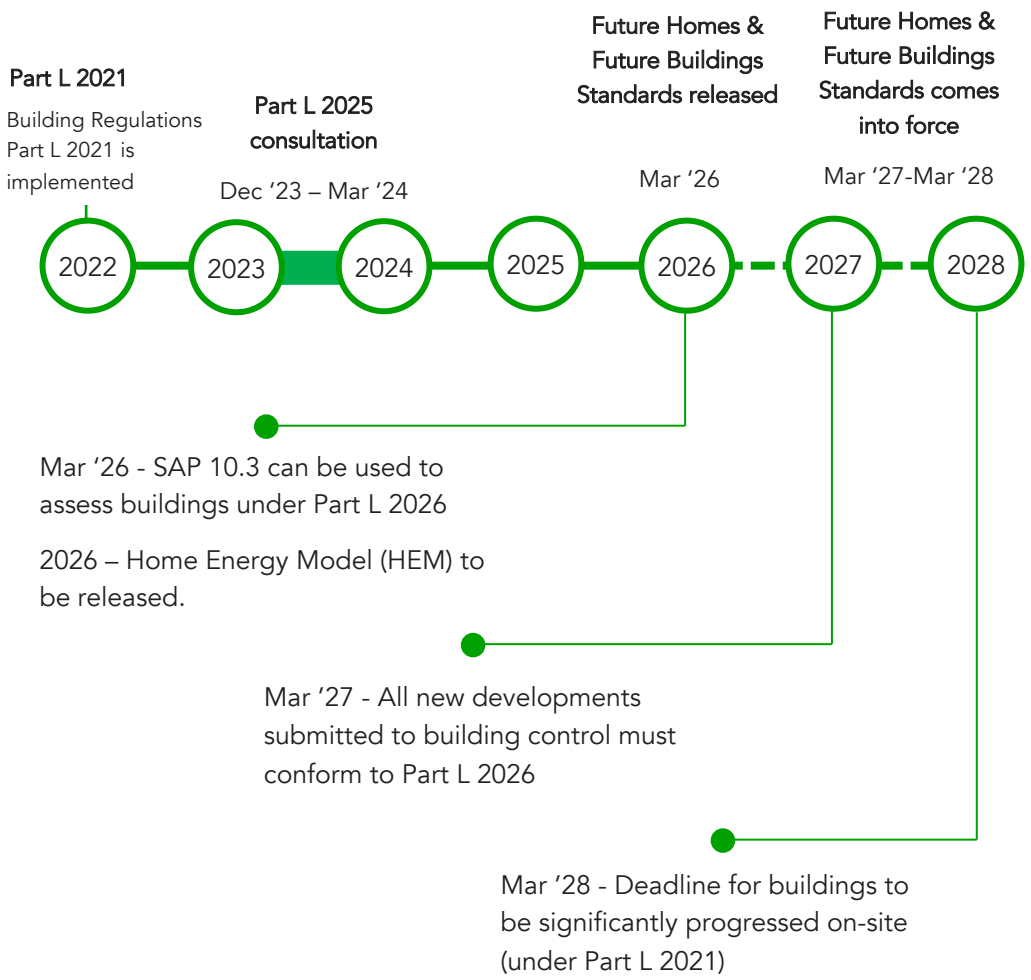
The Future Homes and Building Standards (FHS and FBS)

FHS and FBS | Timeline for introduction

The current Building Regulations, Part L 2021

The current section of the building regulations that governs energy and carbon emissions is Part L 2021. It will be replaced by the Future Homes Standard (residential) and the Future Buildings Standard (non-residential) in March 2027.

New homes being designed now will need to meet the timescales indicated opposite, otherwise they will need to comply with the new Part L 2026 standards when they come into force (March 2027).



Part L1 2026 (Dwellings) - The Future Homes Standard

Details of the UK Government's Future Homes Standard (FHS), or Part L1 2026, were published in March 2026. It will come into force on 24th March 2027* (except for higher risk building for which the date will be 27th September 2027).

The key changes between Part L 2021 and Part L1 2026 are discussed on the following page.

Part L2 2026 (Non-dwellings) - Future Buildings Standard (FBS)

The Future Buildings Standard (FBS) brings changes to Part L (conservation of fuel and power) and Part F (ventilation) of the Building Regulations for new and existing non-domestic buildings. It will deliver stronger fabric and services, low-carbon heating (no gas boilers), and greater use of on-site renewable generation.

The Future Homes Standard (FHS) and The Future Building Standard (FBS) have recently been released. The key updates and milestones are illustrated in the graphic above.

FHS and FBS | Summary of key changes for dwellings (Part L1 2026)

Part L1 2026 (or FHS) marks the UK's shift towards building 'zero-carbon ready' new homes. It assesses buildings against the same metrics as Part L1 2021, (carbon emissions, fabric energy efficiency and primary energy), but key changes to the calculation methodology, requirements and notional building encourage higher performance design.

An updated grid electricity carbon factor

The grid electricity carbon factor has been updated from 0.136 to 0.086 $kgCO_2/kWh$ for Part L1 2026 calculations, which aligns with various grid decarbonisation forecasts. This is much lower than the carbon factor for any fossil fuels.

A new requirement for low carbon heating systems

Part L1 2026 requires on-site space heating and DHW systems to be efficient and use low carbon fuels, favouring electricity-based options for new buildings. Space heating and DHW can also be provided by a district heat network.

A new functional requirement for renewable generation

On-site renewable energy generation is a new functional requirement under Part L1 2026. Every new residential building is required to provide a minimum amount of renewable generation, based on the size, in particular the floor area, of the building. This is most likely to be achieved through rooftop PV systems. There are exemptions under specific circumstances, such as where roof orientation or shading makes generation impractical, but these must be justified and accepted by Building Control.

A new notional dwelling

Part L1 2026 introduces a revised notional dwelling, which is used to calculate the performance which will have to be met by the actual dwelling in terms of carbon emissions, fabric energy efficiency and primary energy.

The main updates to the notional specification compared with Part L 2021 include:

- ***Air permeability and ventilation:*** an improved airtightness target and upgrade to decentralised Mechanical Extract Ventilation (dMEV), to maintain air quality where natural infiltration is insufficient.
- ***Space heating and DHW:*** upgrade to Air Source Heat Pumps (ASHP). Combined with the reduction in grid electricity carbon factor and requirement for low carbon heating, this makes compliance with fossil fuel based systems very difficult.
- ***Photovoltaics:*** the notional building now includes a PV system sized to match that of the actual building, up to a maximum threshold.

	Part L1 2021	Part L1 2026
Air permeability	5 $m^3/m^2/hr$ @ 50Pa	4 $m^3/m^2/hr$ @ 50Pa
Ventilation	Natural (i.e. intermittent mechanical extract ventilation)	dMEV (i.e. decentralised continuous mechanical extract ventilation)
Space heating and DHW	Individual gas boiler	Individual or communal ASPH
Photovoltaics	System facing south-east or south-west *For **houses**:* kWp = 40% of ground floor area, including unheated spaces / 6.5 *For **flats**:* kWp = 40% of dwelling floor area / (6.5 * number of storeys in block)	System facing south-east at 45° pitch kWp same as actual building up to: *For **houses**:* 40% ground floor area including unheated spaces / 4.5 *For **flats**:* 40% dwelling floor area / number of storeys / 4.5

Summary of key notional dwelling specification changes between Part L1 2021 and Part L1 2026

Solar PV as a mandatory requirement

Part L1 2026 introduces a new functional requirement for solar photovoltaic (PV) panels on **all new dwellings**. This is a significant change from Part L 2021, under which PV was not mandatory. Critically, the amount of PV required cannot be offset by higher levels of energy efficiency, it must be provided.

The generation requirement

The amount of solar PV that must be provided on the actual building must meet or exceed a minimum annual **generation requirement**. It is not simply an area requirement as sometimes thought.

The generation requirement is determined from a hypothetical array of a size determined by the method outlined on the right.

The generation of the actual array must account for actual orientation, tilt and overshading. Compliance is assessed using the SAP methodology.

Rules for maximising solar PV generation

Solar panels must be installed on each "reasonably practicable roof area", with all roof faces used where necessary to meet the generation target, regardless of orientation or overshading. Minimum offsets from roof edges, ridges and windows must be adhered to.

Exemptions

Exemptions are very limited. North-facing pitches and heavily shaded roofs are not exempt from the maximisation requirement. The only full exemption applies where, despite maximising PV across all roof faces, annual generation remains below **720 kWh/year**. Applications for exemption must include diagrams demonstrating maximised PV provision.

How building control officers will make judgements on exemptions is unknown.

5.73 Roof-mounted photovoltaic arrays on dwellinghouses should be designed to achieve a reasonable output using one of the following.

a. An annual output (in kWh) for the dwellinghouse as calculated using the approved methodology of at least equal to that of a photovoltaic array with all of the following characteristics.

   i. Installed peak power (kWp) equal to photovoltaic panels with an efficiency of 0.22kWp per m^2 installed over an area equivalent to 40% of the dwellinghouse's ground floor area (see equation 5.1).

   ii. Orientated south-east to south-west.

   iii. Pitch of 45 degrees.

   iv. Not overshaded.

b. An annual output (in kWh) for the dwelling as calculated using the approved methodology at least equal to that of a photovoltaic array covering the reasonably practicable roof area with a panel efficiency of 0.22 kWp/m^2.

Equation 5.1

An appropriate level of installed peak power (PPDWELLING) in kWp for an individual dwellinghouse can be calculated using the following equation.

PPDWELLING = APVD × EFFPV equation 5.1

Where:

EFFPV = PV panel efficiency (kWp/m^2) of 0.22kWp/m^2 or higher

APVD = area available for photovoltaic panels (m^2) equivalent to at least 40% of the ground floor area.

Extract from Part L1 2026 relating to Photovoltaic Panels

How the generation requirement is calculated

This generation requirement must be calculated using the approved methodology.

In simplistic terms the generation requirement is:

- The generation of a hypothetical PV array of a capacity (kWp) that is calculated by using the ground floor area of the dwelling: 40% of ground floor area × 0.22 kWp/m^2.
- The generation of this hypothetical PV array is determined using fixed assumptions on orientation (south-east), tilt (45 degrees), and overshading (no overshading).

Importantly, it is a **generation requirement**, **not** an area requirement.

The requirement for all buildings to provide renewable energy generation is one of the most significant changes to Part L1 2026. This is most likely to be delivered through a PV system and can be installed anywhere within the curtilage of the building. Generated electricity should be made available for residents' use.

Cotswolds' on-site renewable energy requirement

The minimum 80 kWh/m²/yr on-site renewable energy requirement in the Cotswolds policies is broadly equivalent to the Part L 2026 PV requirement for a typical semi-detached house. The energy balance requirement is likely to exceed the FHS requirement for flats, providing an important additional backstop.

Optimised roof design

Part L1 2026 does not require optimised roof design. Local policy can go further by requiring this, reducing the amount of PV needed and supporting better design outcomes. Where local policy requires optimised roof design, it will act as an effective backstop on renewable energy generation.

Local policy and the draft 2025 NPPF

Renewable energy provision does not appear to fall within the energy efficiency restrictions proposed under PM13 of the draft 2025 NPPF. It may therefore be possible for local authorities to continue setting standards for on-site renewable energy that go beyond the mandatory FHS requirement.

Blocks of flats

For blocks of flats, Part L 2026 provides no strong mechanism to incentivise efficient placement of plant equipment to maximise PV coverage. The energy balance requirement in the Cotswolds policies is likely to exceed the Part L 2026 requirement for flats, providing an important additional lever.

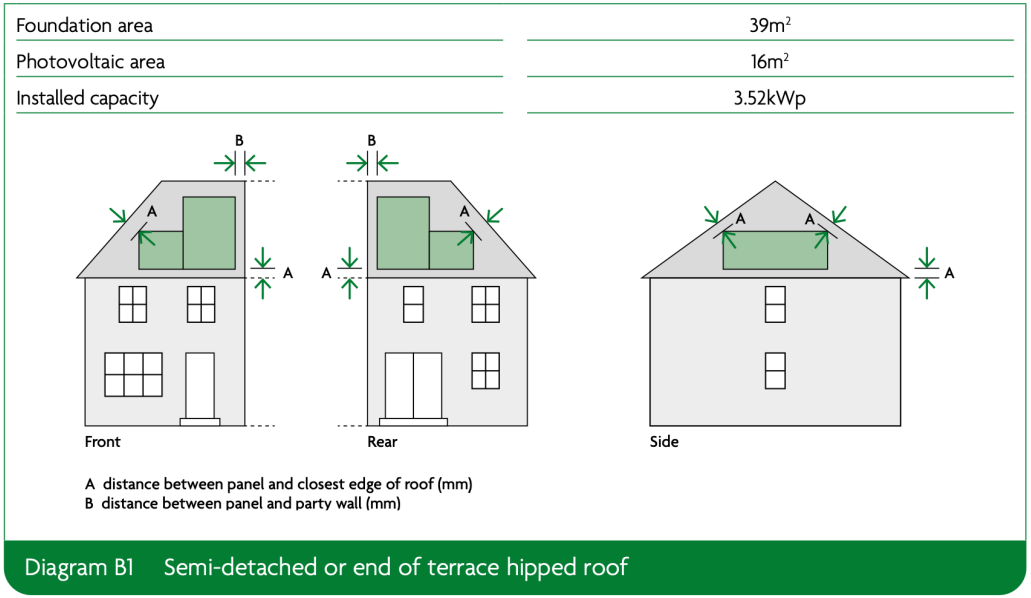


Diagram B1 Semi-detached or end of terrace hipped roof

These diagrams from the Approved Document L2026 illustrate how PV must be maximised.

B9 Evidence should be provided to the building control body in the following circumstances.

a. To support the need for lower output on-site renewable electricity generation than the standards in paragraphs 5.73(a), 5.74(a) and 5.74(b).

b. In the exceptional circumstances where it is not possible to install any on-site electricity that would meet the standards given in paragraph 5.77.

This should include the following as appropriate.

a. Roof diagrams with and without proposed photovoltaic panels clearly demonstrating any design restriction on panels. Examples of roof diagrams are provided in paragraph B11.

b. A statement outlining why lower provision is being installed and why any modification to designs cannot be made.

c. Any calculations made in support of paragraphs 5.73(a), 5.74(a) and 5.74(b), signed by a suitably qualified person. A suitably qualified person includes a qualified On Construction Domestic Energy Assessor.

Extract from Part L1 2026 relating to Photovoltaic Panels

FHS and FBS | Summary of key changes for non-domestic developments

Part L2 2026 (FBS) marks the UK's shift towards building 'zero-carbon ready' new buildings.

It assesses buildings against the same metrics as Part L2 2021, (carbon emissions and primary energy), but there are some key changes that are likely to make it more challenging to comply with.

A new requirement for low carbon heating systems

Part L2 2026 requires on-site space heating and hot water systems to be efficient and use low carbon fuels, favouring electricity-based options for new buildings. Space heating and hot water can also be provided by a district heat network.

A new notional building

While Part L2 2026 has been recently published, the update to the National Calculation Methodology (NCM) modelling guide, which defines the notional building specification, has not yet been publicly released, nor have any approved calculation software.

This means we can determine the policy intent from Part L2 2026, but we do not know the details of how building performance will be benchmarked by the notional building under Part L2 2026.

However, there is a draft NCM modelling guide that was released for consultation that gives an indication of the likely changes to the notional specification under Part L2 2026. This document contains two proposed options for the notional specification.

Commissioning

All fixed building services that requires commissioning evidence for compliance with Part L in new buildings (other than dwellings) now includes lifts, escalators and moving footways.

The notional specification

The main updates to the notional specifications include:

- ***Fabric improvements:*** improved U-values and air permeability.
- ***Ventilation:*** upgrade to Mechanical Ventilation with Heat Recovery (MVHR).
- ***Space heating and hot water:*** upgrade to Air Source Heat Pumps with low flow temperatures. Combined with a likely reduction in grid electricity carbon factor and requirement for low carbon heating, this makes compliance with fossil fuel based systems very difficult.
- ***Lighting:*** more efficient lighting with smarter controls.
- ***Photovoltaics:*** the notional building always includes a PV system sized to a % of the assumed roof area.

The Future Homes Standard has been confirmed since the original evidence base was issued

Cotswold District Council's energy and carbon evidence base for sustainable construction policies (December 2023) contains technical and cost feasibility evidence relating to the proposed net zero policies.

At the time, two baseline scenarios were used:

- Part L 2021 - this remains to be an accurate baseline of this standard.
- The anticipated Future Homes Standard - this baseline is now out of date as it has been superseded by the confirmed FHS. The table opposite summarises these differences which are significant enough for us to recommend that this baseline is not used for cost and viability purposes.

The Future Homes Standard baseline from the 2023 report is now out of date

In December 2023 the anticipated Future Homes Standard spec was based on the government's response to the the Future Homes Standard Consultation (published in November 2023). Since then, the actual FHS (or Part L1 2026) specification has been confirmed.

There are quite large differences in the fabric specification and solar PV requirement. For this reason, the energy and cost modelling results for Scenario 2 from the 2023 study are not suitable for use as a baseline for technical or viability purposes.

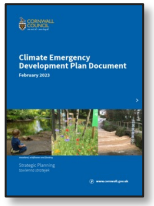
- Part L 2021 - this remains to be an accurate baseline of this standard.
- The anticipated Future Homes Standard (Scenario 2) - this baseline is now out of date as it should be superseded by new modelling using the confirmed FHS as a baseline. It should not be used for cost or viability purposes.

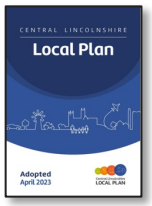
	Anticipated Part L 2025 (December 2023)	***Confirmed*** Part L 2026
Building fabric strategy	Anticipated Future Homes Standard notional building specification (in Dec 2023)	Confirmed Future Homes Standard notional building specification (confirmed Mar 2026)
Floor (W/m^2K, SAP adjusted)	0.11	0.13
Walls (W/m^2K)	0.15	0.18
Roof (W/m^2K)	0.11	0.11
Windows (W/m^2K)	0.8 (triple-glazed)	1.2 (double-glazed)
Doors (W/m^2K)	1.0	1.0
Thermal bridging* (W/K)	10.25 (SAP) 6.3 (PHPP)	tbc
Air Permeability ($m^3/m^2/hr$)	5	4
Ventilation	iMEV, 0.18 W/l/s	dMEV, 0.15 W/l/s
Space Heating	5kW ASHP Radiators at <45˚C	5kW ASHP Radiators at <45˚C
Domestic Hot Water	200l heat pump tank	200l heat pump tank
Waste water heat recovery (WWHR)	None	Yes (50% recovery)
Solar PV	0 kW	(approx. 40% GFA / 4.5)

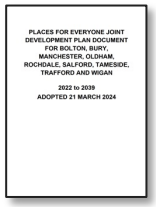
The table above compares the anticipated FHS spec (from the December 2023 study) and the actual confirmed FHS spec (confirmed in March 2026). The differences in specification are significant and the FHS baseline from the 2023 study is no longer suitable. An update to the modelling is recommended.

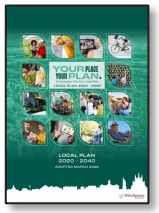
Requirement 1: Space heating demand	Justification for policy	Recommendation
30 kWh/m²/yr *Until 31st December 2030* 15-20 kWh/m²/yr *From 1st January 2031*	The confirmed fabric specification of the notional building for Part L 2026 does not deliver much of an improvement over Part L 2021. We have undertaken some indicative modelling on a semi-detached house in the East of England. This showed us that the space heating demand of the Part L 2026 compliant dwelling was approximately 60 kWh/m²/yr. Therefore, this policy delivers a space heating demand that is approximately 50% lower at 30kWh/m²/yr and will be 75% lower at 15-20 kWh/m²/yr than the Part L 2026 compliant equivalent building. Co-benefits of the space heating demand policy include: • Better insulated walls, roofs and floors – this will reduce the risk of condensation and mould. • Triple glazed windows (rather than double glazed windows) – this will reduce cold drafts and reduce the risk of condensation and mould. • Excellent levels of air-tightness – this will further reduce drafts and improve comfort. • Mechanical ventilation with heat recovery (MVHR), a ventilation system that efficiently recovers heat from outgoing air. Incoming air is filtered and pre-heated – this will deliver improved indoor air quality and comfort. • Resilience to energy price fluctuations and extreme cold weather.	This policy delivers a significant improvement in fabric efficiency.
Requirement 2: All new developments must be fossil fuel free	**Policy justification**	**Recommendation**
Fossil fuel free	The new Part L 2026 effectively removes the ability to install gas boilers in new homes (due to the notional building now including an ASHP, and the grid electricity carbon factors having been updated and reduced). As a result, the significant carbon emissions associated with gas heating systems makes it difficult to comply with the Target Emissions Rate (TER). It appears that it is not possible to pass Part L 2026 using a gas boiler in individual dwellings (more work is needed to understand the implications of gas boilers in heat networks).	This policy is a backstop to any instances where homes with gas boilers are able to meet Part L 2026.
Requirement 3: Energy use intensity	**Policy justification**	**Recommendation**
35 kWh/m²/yr	Cotswold's policy will deliver homes with overall lower total energy use than a Part L 2026 equivalent home. This, together with the presence of solar PV, may result in running cost savings for residents of approximately 40-60% (based on our modelling of a typical semi-detached house in the east of England). Benefits of the EUI policy include: • It is a target that can be measured at the meter and is therefore related to energy costs. • It helps protect occupants from high energy bills by limiting where direct electric heating can be used. • It may make inefficient heat networks unable to comply. • It potentially addresses the ability to use biomass heating in Part L 2026.	This policy delivers a significant improvement in overall energy use. It also protects occupants from inefficient heating systems.

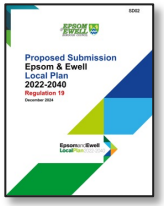
Continued on following page

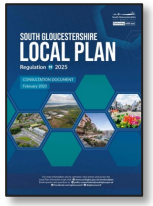












Requirement 4: On-site renewable energy generation	Policy justification	Recommendation
	**How the Cotswold's proposed policy performs compared with Part L 2026 requirements** Part L 2026 now includes a minimum solar PV requirement for all dwellings. The Part L 2026 requirement is based on ground floor area, in contrast to Cotswold's policy is based on total energy use. Therefore, how the two approaches compare will depend on the number of storeys the building has: • For 2-storey houses - Part L 2026 is likely* to exceed the energy balance requirement. However, if roof design is not optimized for solar PV this may not be the case. • For 3-storey houses and flats - the energy balance requirement is likely* to exceed the Part L 2026 requirement. *Further testing of different houses and flats with different number of storeys is needed. **Benefits of Cotswold's policy for on-site renewable energy generation** • The policy is likely to provide a greater ambition for dwellings of more than 2-storeys. • The policy can act as a back-stop requirement for all dwellings if there is a requirement to optimise roof design to achieve the policy requirement (this does not appear to be a strong requirement of Part L 2026).	Retain Requirement 4 in policy GE1. The energy balance requirement provides a useful backstop for renewable energy generation. Particularly if accompanied by guidance on how roof design should be optimized for maximum solar PV generation, and if development management have the ability to challenge inefficient roof design.
	The energy offset policy Cotswold's policy requires any renewable energy not met on-site to be offset through payment into an energy offset fund. This is a stronger requirement than Part L 2026, particularly for flats where the energy balance requirement will be difficult to achieve.	This policy should be retained as a requirement where an energy balance cannot be achieved on-site.

Recently adopted local plans | The viability of similar energy policies has been demonstrated successfully

Policies with energy metrics are found sound at examination

Below is a selection of Inspectors' comments from the examination of four other local plans with similar energy policies to those proposed by Cornwall Council.

These comments show that energy metric based policies have continued to be found sound at examination (including after the 2023 WMS).

	Policy status	Inspector comments
Winchester local plan	Adopted Mar '26	"Having regard to the Council's viability evidence, including the requirements of the emerging Future Homes Standard and other Plan policy requirements that influence viability, in the round, I find the application of policies CN1 and CN3 would be unlikely to impose a significant financial burden on the Plan's planned development or have a significant effect on its affordability" … no matter how energy efficiency is proposed to be measured, the environmental outcome, to mitigate climate change and contribute to the net zero obligation, will remain the same and it will meet the overarching aim of national policy. Therefore, based on the evidence before me, I find the Council's approach in policy CN1 and CN3, subject to the MMs proposed consistent with national policy, justified and effective. It is therefore sound."
Uttlesford	Passed examination Jan '26 (awaiting adoption)	"We have considered the effect of achieving net zero carbon in operation on the viability of new development and are satisfied that realistic build-cost uplifts have been factored into Viability Assessment Stages 1 and 2 (INF7 and INF8). In the light of this, we accept the viability assessment reports findings that there is reasonable prospect of the Plan's strategic allocations coming forward viably"
Tendring Colchester Borders Garden Suburb	Adopted June '25	"There is no evidence to suggest that, in this case, the longstanding aspiration for the garden community to meet the highest standards of sustainable design and construction measures would therefore make the development unviable or undevelopable over the plan period."
Cotswold Garden Village (Salt Cross)	Adopted Feb '24	"…the application of Policy 2 in isolation, is unlikely to impose a high financial burden on the Garden Village scheme or have a significant effect on housing supply and affordability as other factors also impact on overall viability. The application of Policy 2 is not a factor likely to make a development unviable and there should therefore be no adverse impact on housing delivery and affordability."

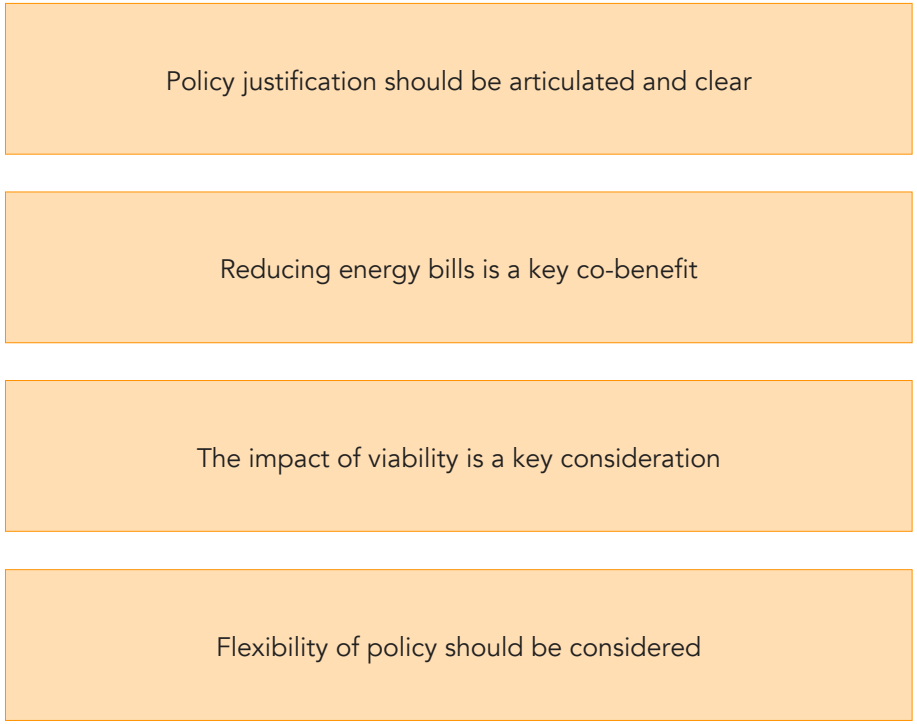
Recently adopted local plans | Learning from recent Examinations in Public (EiP)

Although each Examination in Public (EiP) is specific to the local planning authority as each Local Plan is unique and as it needs to respond to a unique set of opportunities and constraints, there are consistent themes. This page summarises our analysis of the key 'ingredients' required for a successful examination process.

Policy justification should be articulated and clear

Being clear on the policy requirements and demonstrating that they are technically feasible and economically viable tends to be the natural focus of evidence bases. It is however also very important to articulate clearly the justification for the policy, and in particular what is the added value of it compared to Building Regulations requirements.

Reducing energy bills is a key co-benefit



Most of operational energy/carbon policies are related to the Councils' climate change commitment and ambition. However, these policies can have a very positive impact on residents' future energy bills. It would be very useful for the EiP to be able to articulate this benefit of the operational energy/carbon policy, along with any other potential co-benefits as they would not be delivered otherwise.

The impact of viability is a key consideration

The risk of impacting housing supply is naturally at the forefront of Planning Inspectors' concerns. It is therefore crucial to have a very thorough understanding of viability. The 'lower' the viability, the more important it will be to demonstrate it clearly with robust assumptions.

Flexibility of policy should be considered

Finally, it is reasonable of Planning Inspectors to seek to avoid policies which are too 'rigid' as they may create issues down the line. Introducing flexibility in the policy wording without 'watering it down' is very beneficial.

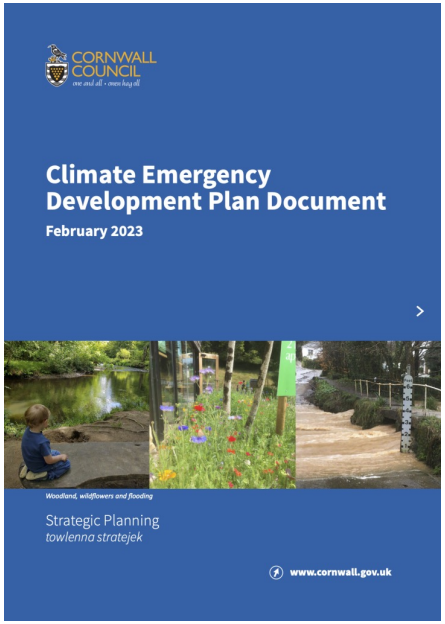
Key considerations to be addressed for a successful examination process

4.0

Implementation and development management

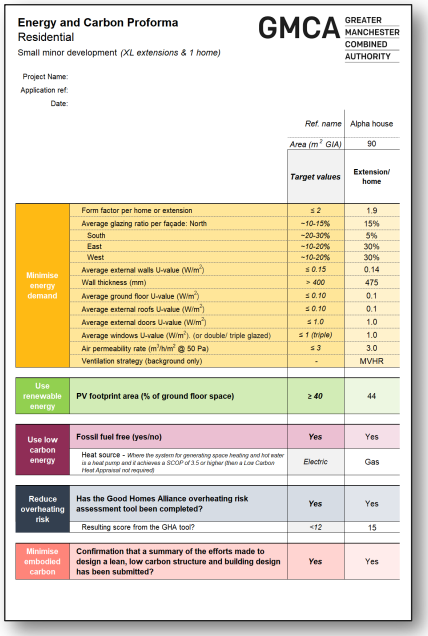
Implementation of policies and development management

Etude supported Cornwall Council in developing its Climate Emergency Development Plan Document (DPD) in 2021. The DPD was examined in 2022, adopted in February 2023, and implemented from June 2023. Following implementation, Cornwall Council determined around 1,300 applications in the first year.



The following points summarise Cornwall Council's reflections on factors that supported effective implementation in practice.

Advice from Cornwall Council on implementing policy



- Clear and targeted messaging and training is key at all stages, particularly in the run-up to implementation.
- Support front-line Validation Teams with close working and their own bespoke training.
- As you develop your protocols and guidance, scenario testing is key. Development Management team leaders will be able to consider the range of applications you're likely to receive and help consider how best to approach matters like retrospective applications, the implications of designations and local development types.
- **Guidance documents should be "live"** so you are able to update these with the benefit of feedback and experience.
- **Specialist advice** is essential to supporting planning applications as well as building knowledge amongst case officers.
- Consider **a pre-application advice service** dedicated to net zero. This will help applicants design in energy from the early stages and can also help fund the specialist post.

The experience from the Greater Manchester Combined Authority

Etude also supported the Greater Manchester Combined Authority (GMCA) to develop pro forma application forms to rationalise and simplify the presentation of the critical information needed by Development Management teams to determine compliance with technical policies.

Appendix C - Delivering Potential GI in the 17 Principal Settlements

Appendix D - Examples of GI related policies in made Neighbourhood Development Plans

Introduction

0.1 Why has the Green Infrastructure Strategy been prepared?

0.2 To direct the design and delivery of Green Infrastructure in Cotswold District to maximise its environmental, community and economic benefits. It is a guide for delivering high-quality Green Infrastructure through new developments, community partnership and land management. It identifies a number of Green Infrastructure issues at a District and at a more local scale.

0.3 A range of evidence has been used to inform the Strategy, including legislation and guidance. The Strategy forms part of the evidence base for the emerging Local Plan 2026 - 2043 and other new plans and strategies. Please note that the Cotswold District Pools and Halls Facility Planning Model Assessments May 2026, the Playing Pitch Strategy Action Plan and Strategic Assessment Report 2023 cover the strategic approach to sport in the District.

0.4 The GI Strategy was adopted by full Council in January 2024. This document is an update to the original for the purposes of the new draft Local Plan 2026 to 2043.

Who is the Strategy for?

0.5 The Strategy will be of use to a range of organisations and individuals including;

Who - Voluntary sector and community groups

0.6 How – Using the evidence to help put environmental projects and grant bids together.

- Delivering Green Infrastructure through Community and Partnership working
- Community Planning
- Appendix A and D
- The GI Strategy Maps (online)

Who – Developers and their Agents

0.7 How – Using the local evidence and Council guidelines as well as Building with Nature, and Natural England guidelines for designing new developments in the district.

- Strategic issues for GI
- Green Infrastructure Issues and Potential for the Cotswold District
- Possible GI solutions to address issues in the district
- Delivering Green Infrastructure through New Developments
- Green Infrastructure Checklist for Developers
- The GI Strategy Maps (online)

Who – The Council

0.8 How – Helping to guide and determine planning applications and new strategic initiatives.

- Strategic issues for GI – Possible
- Green Infrastructure Issues and Potential for the Cotswold District
- Possible GI solutions to address issues in the district
- Delivering Green Infrastructure through New Developments
- Green Infrastructure Checklist for Developers
- The GI Strategy Maps (online)

Who – Parish and Town Council's

0.9 How – Preparing Neighbourhood Development Plans as well as potential funding bids. See pages

- Delivering Green Infrastructure through Community and Partnership working
- Community Planning
- The GI Strategy Maps (online)
- Appendix A and D

Who – Residents and visitors

0.10 How – A supporting document that is helping to create a better place to live and visit.

- Strategic issues for GI
- Green Infrastructure Issues and Potential for the Cotswold District
- Possible GI solutions to address issues in the district
- Delivering Green Infrastructure through New Developments
- The GI Strategy Maps (online)

Who - Farmers, landowners and land managers.

0.11 When - drawing up and delivering Sustainable Farming Incentive (SFI)

- Strategic issues for GI
- Green Infrastructure Issues and Potential for the Cotswold District
- Possible GI solutions to address issues in the district
- Delivering Green Infrastructure through New Developments
- The GI Strategy Maps (online)

1. Overview and Introduction to Green Infrastructure

What is Green Infrastructure?

The National Planning Policy Framework *(NPPF) 2024*[1] defines Green Infrastructure as:

> *"A network of multi-functional green and blue spaces and other natural features, urban and rural, which is capable of delivering a wide range of environmental, economic, health and wellbeing benefits for nature, climate, local and wider communities and prosperity."*

1.1 This Strategy assumes all references to Green Infrastructure include both green and blue, i.e. water-related features and infrastructure.

1.2 Examples of green (and blue) infrastructure in Gloucestershire include rivers; cemeteries; canals; sports pitches; orchards; green roofs; parks; open fields and woodland.

1.3 Green infrastructure can be considered at a range of scales, from international such as the Severn Estuary and the Cotswold Beechwoods Special Area of Conservation to the local, such as a pond or a hedgerow around a garden or a field. Appendix A provides a list of examples of Cotswold District Green Infrastructure Fact, Figures and Issues.

1.4 Since the publication of this document in 2024 the guidance on GI has grown significantly, Appendix B lists some of the key developments relating to GI in the past few years; but what hasn't changed is the fundamental principles of Green Infrastructure and as such the findings of this strategy as well as its overall aim and objectives.

Methodology/Summary

1.5 The strategy has drawn upon, in the first instance, as a baseline, Building with Nature, which was used to establish the key Wellbeing and Access, Water and Wildlife elements of the District, and then the seventeen principal settlements as outlined in the adopted Local Plan 2018-2031[2]. These elements were then mapped to provide an overview of what is available and what isn't in these areas. In doing so, the mapping and desk top research was used to understand the key opportunities for Wellbeing, Water and Wildlife in those settlements. (See Appendix C). However, the various guidelines, issues and standards referred to in this strategy also apply to the other, non-principal settlements within the Cotswold District.

[1] https://assets.publishing.service.gov.uk/media/67aafe8f3b41f783cca46251/NPPF_December_2024.pdf
[2] https://www.cotswold.gov.uk/planning-and-building/planning-policy/cotswold-district-council-local-plan/

1.6 Section 2 makes reference to best practice standards, these include play spaces, allotments and the amount of accessible green space recommended by Natural England. These standards help to define what the Council means by good Green Infrastructure and should be used in conjunction with Building with Nature and the more recently published Natural England's GI Principles. In addition to providing practical advice the guidelines have helped to establish that the Cotswold District has a deficit of accessible green space.

1.7 Natural England have developed their own (non-statutory) set of GI principles 'The Green Infrastructure Framework',[3] this was published in 2023, it provides further guidance on the principles and importance of GI. The Natural England Framework, correlates very closely with the principles set out in the up-dated 2022 Gloucestershire County GI framework as well as the spirit of Building with Nature. Both the Natural England GI principles as well as Building with Nature should be referred to, to assist with the implementation of GI for the District.

1.8 In establishing that the District has a deficit of Accessible Green Space the Strategy provides guidance and possible solutions to address this issue. It also provides clarity regarding what the council expects when delivering new GI or addressing existing GI issues in the district or working with partners to create new opportunities for GI.

1.9 To deliver on the aim and objectives and priorities of the Strategy many other partners, stakeholders and individuals will also have to play their part. The Council will support action by others both practically and by providing a leadership role.

The Benefits of GI at a Local Level

1.10 The strategic framework for Green Infrastructure in Gloucestershire includes a map to show the location of the strategic GI in the county and how it links to GI across the county boundaries. The key GI features of relevance to the District are the wider Cotswold lakes area (Upper Thames Vales), the Cotswold Scarp and the main rivers that run NW/SE across the District.

1.11 The benefits of GI below have been taken from the Green Infrastructure | Gloucestershire LNP[4]

The key environmental and social benefits include:

- Ensuring a more attractive place for people to live, work and visit.
- Improving health and wellbeing including through access to and an appreciation of nature.
- Helping mitigate and adapt to climate change, for example by carbon sequestration, urban cooling and flood alleviation. Improving air and water quality.

[3] https://designatedsites.naturalengland.org.uk/GreenInfrastructure/Home.aspx
[4] https://www.gloucestershirenature.org.uk/green-infrastructure-pledge

- Creating, enhancing and connecting habitats to deliver biodiversity net gains and nature recovery. Providing sustainable and active travel routes.
- Enabling local food production – in allotments, gardens, community orchards and through agriculture.

The key economic benefits include:

- Attracting inward investment by enhancing places for investors and potential residents
- Generating employment by attracting new businesses and residents to an area.
- Increased visitor spend – a more attractive county for tourists and visitors
- Saving environmental costs – for instance by diffusing and reducing pollution, helping to manage flood risk plus storing water during droughts.
- Providing health benefits – for example through providing access to high-quality green space, better air quality, improved mental health and wellbeing, and also encouraging community cohesion.
- Promoting sustainable and increased local food production.

1.12 Green infrastructure provides a wide range of benefits simultaneously and from the same piece of land, often at a lower cost than non-natural solutions to the same problems.

The Aim of the Cotswold Green Infrastructure Strategy

The Aim of the Strategy is:

1.13 The overall aim of the strategy is to protect and enhance the GI framework of the District for the benefit of everyone, wildlife and the wider environment.

The Objectives

- Ensure that new and enhanced GI relates to the local character of the area and meets local needs.
- Provide a baseline to evaluate the key GI elements in the District.
- Set out and drive the GI priorities for the District and in particular for Cotswold District Council and its key partners.
- Illustrate Cotswold District Council's commitment to the Gloucestershire Local Nature Partnership Green Infrastructure | Gloucestershire LNP[5]
- Ensure that climate change adaptation and mitigation is central to all GI policies, projects and initiatives.
- Reinforce the measures in the Cotswold District Ecological Emergency Action Plan.
- Ensure that new development delivers high quality, timely, well-managed and beneficial GI

[5] https://www.gloucestershirenature.org.uk/green-infrastructure-pledge

- e.g. through the use of Natural England's Green Infrastructure Principles[6] or Building with Nature[7]
- Extend and improve access to Green Infrastructure to better include groups that don't currently benefit from it directly.
- Provide detailed data, mapping and analysis of GI across the District and beyond including key shared GI with neighbouring local authorities but, particularly within the 17 principal settlements.
- To augment the information, policies and guidance provided within the Cotswold District Local Plan, including the updated Cotswold Design Code.

Key GI Assets in the Cotswold District - Nationally and Locally designated sites in and adjacent to the district.

1.14 Cotswold District has a diverse range of habitats, species, important sites and features for biodiversity. The District has a small proportion of the internationally significant Cotswold Beechwoods Special Area for Conservation (SAC) within its boundary and Rodborough Common SAC, North Meadow and Clattinger Farm SAC are within 3 KM of its boundary.

1.15 To enable development to come forward that might otherwise cause likely significant recreational effects on the North Meadow and Clattinger Farm SAC or the Cotswold Beechwoods SAC, the Council has worked with Natural England and neighbouring Local Authorities to prepare recreation mitigation strategies for these SACs. These set out the types of recreational impact and the mitigation (and its cost) required to address those recreational impacts. They also provide data on the areas from which visitors come to the sites, enabling a Zone of Influence to be defined.

The District supports several nationally and locally designated sites.

Designation	Number of Sites	Total area of sites	Percentage of the District
Sites of Special Scientific Interest (SSSI) - includes a percentage Cotswold Beechwood & Cotswold Lakes	37	468Ha	0.4%
Local Wildlife Sites	Over 260	5,027.2Ha	4.31%
Gloucestershire Wildlife Trust Nature Reserves	7	139.41Ha	0.12%

[6] https://designatedsites.naturalengland.org.uk/GreenInfrastructure/Principles/GIPrinciples.aspx
[7] https://sintali.com/building-with-nature

Local Nature Reserves	2	13.41Ha	0.0115%
Ancient Woodlands.	146	3,566 Ha	3 %

Percentage of land within the district covered by priority habitats and wildlife sites.

Designation/ Land type	Percentage of land cover in the district
Priority Habitat	11 %

Gloucestershire Local Nature Improvement Areas

DEFRA define Nature Improvement Areas as:
"large (in the region of 10,000-50,000 hectares), discrete areas that, by taking a landscape–scale
approach, will deliver a step change in nature conservation, where a local partnership has a shared
vision for their natural environment. "

1.16 The Local Nature Partnership[8] have designated three "locally designated" Nature Improvement Areas (NIA) within and/or adjacent to Cotswold District.

- The Cotswold Scarp.
- The Cotswold Valleys.
- Cotswold Lakes.

Gloucestershire Nature Recovery Network and Strategy 2026

1.17 The aim of Local Nature Recovery Strategies (LNRS), which was a key component of the Environment Act 2021 is to drive more coordinated, practical and focussed action to reverse nature's decline. In Gloucestershire the County Council published the LNRS in 2026.[9]

1.18 The strategy consists of three main components:

Part 1 - Gloucestershire's Biodiversity and Opportunities for Nature Recovery. This document sets the scene for Gloucestershire's existing nature and important wildlife and explains the Key Messages of the strategy.

Part 2 - Gloucestershire's Biodiversity Priorities and Potential Measures. This is the practical guide to how we can carry out specific actions for nature. Each Potential Measure details specific actions that can be taken to improve or create wildlife rich habitats or protect and support threatened and notable species.

[8] https://www.gloucestershirenature.org.uk/nature-improvement-areas
[9] https://www.gloucestershire.gov.uk/planning-and-environment/ecology-and-landscape/gloucestershire-local-nature-recovery-strategy/

1.19 Local Habitat Map. This is a spatial online tool that maps our priority Potential Measures across areas of the county where they would have the best impact for nature - joining up existing wildlife sites and expanding from existing habitat.

The Key Standards used to shape the Cotswold Green Infrastructure Strategy

1.20 A number of standards have been used in analysing the data and mapping for this Strategy. The information in this section provides the relevant detail to help developers deliver GI that meets all the required standards.

High-quality GI in new development should use these standards and guidance:

- Building with Nature
- Natural England's Green Infrastructure Framework

Building with Nature (BwN)

1.21 Building with Nature is a national GI benchmark, developed in 2018 that supports the delivery of high-quality GI at all stages in the development process including policy, design, planning, implementation, construction and long-term management. It was originally developed by the Gloucestershire Wildlife Trust and the University of West of England with support from a wide partnership including Cotswold District Council. The benchmark is and has been used across the country and is a useful guide.

1.22 The 2024 Cotswold District GI Strategy has been developed using the Core Standards and benefit-driven themes set out in BwN, to ensure that the Strategy is comprehensive and reflects best practice. Although developers can pay for formal accreditation of their proposals the benchmark is also available on a free to use basis, with formal accreditation requiring the services of a trained Assessor.

Natural England's Green Infrastructure Framework

1.23 The Green Infrastructure Strategy Standard enables comprehensive green infrastructure policy based on the Green Infrastructure Framework's principles and standards[10].

The known benefits of Green Space at a National Level

- £2.1 billion per year could be saved in health costs if everyone in England had good access to greenspace, due to increased physical activity in those spaces.
- In Birmingham, the annual net benefit to society of their parks and greenspace is nearly £600 million, which includes £192 million in health benefits.

[10] https://designatedsites.naturalengland.org.uk/GreenInfrastructure/Principles/GIPrinciples.aspx

- In Sheffield, for every £1 spent on maintaining parks, there is a benefit of £34 in health costs saved, with local residents being the primary beneficiaries.

(Taken from Improving Access to Greenspace: 2020 Review. Public England)

Accessible Green Spaces

1.24 Natural England Accessible Natural Greenspace Standards (ANGSt) (used until December 2022) and the 2023 update. which is included in Natural England's Green Infrastructure Framework.

Accessible Natural Greenspace Standards (ANGSt)

1.25 The amount of Accessible Natural Green Space available in the District, was established using the the original Access to Natural Green Space Standard (ANGSt). ANGSt recommends that everyone, wherever they live, should be within easy reach of accessible natural greenspace:

ANGSt standards	
Size of Site	**Distance from Home**
of at least 2 hectares in size	no more than 300 metres (5-minute walk) from home;
at least one accessible 20-hectare site	within two kilometres of home;
one accessible 100-hectare site	within five kilometres of home; and
one accessible 500-hectare site	within ten kilometres of home
A minimum of one hectare of statutory Local Nature Reserves per thousand population.	

Natural England Green Infrastructure Framework 2023

1.26 In January 2023 Natural England launched a new Green Infrastructure Framework, listed below are the revised standards for access to green space. Natural England's revised Accessible Natural Greenspace Standards (ANGSt) have had their scope broadened and are now referred to as Accessible Greenspace Standards. The wellbeing maps and information collected from the Town and Parish Councils for Section 6 of the GI Strategy highlights this and provides evidence as to where new accessible green spaces should be allocated.

The Accessible Greenspace Standards (2023) define good provision based on different size proximity, capacity and quality criteria, as set out below:

Natural England - Access to Greenspace Close to Home - 2023	
Size of Site	**Distance from Home**
A doorstep greenspace of at least 0.5ha	within 200 metres
A local natural greenspace of at least 2ha	within 300 metres walk from home.
And a medium sized neighbourhood natural greenspace (10ha)	within 1km AND beyond 15 minutes' walk
A medium/large wider neighbourhood natural greenspace (20ha)	within 2km
A very large district natural green space (100ha)	within 5 km
A very large subregional greenspace (500ha)	10 km

1.27 The Accessible Natural Greenspace Standards (ANGSt) standard, as referred to until 2023 was applied to open space provision in the District. The introduction of Natural England's GI Framework and Accessible Green Space Standards in 2023 does not detract from the fact that the Cotswold District is deficient in Accessible Natural Greenspace.

1.28 Natural England (2023) estimates that parks and greenspaces in England deliver an estimated £6.6 billion of health, climate change and environmental benefits every year. The government's Environmental Improvement Plan includes a commitment that the public should be able to access green space or water, such as woodlands, wetlands, parks and rivers, within a 15-minute walk from their home.

1.29 Natural England's Green Infrastructure Framework (GIF)[11] provides a structure to analyse where greenspace in urban environments is needed most. It aims to support equitable access to greenspace across the country, with an overarching target for everyone being able to reach good quality greenspace in their local area. The wellbeing maps and information collected from the Town and Parish Councils for Section 6 of the strategy highlights this and provides evidence as to where new accessible green spaces are needed and should be allocated.

The Play Standards

Play England Design for Play Guidance

[11] https://designatedsites.naturalengland.org.uk/GreenInfrastructure/Principles/GIPrinciples.aspx

1.30 Play England Design for Play - A guide to creating successful play spaces[12] Design for Play includes 10 design principles which are at the core of a fresh, design-led approach to commissioning, and which are encapsulated in one 'golden rule':

- 'A successful play space is a place in its own right, specially designed for its location.
- Designers should take a holistic perspective on designing for play.
- Play opportunities should be embedded in the site as a 'A Guide for Creating a Successful Play Spaces'.

Building on these standards this Strategy supports the concept of natural play endorsed by Play England Design for Play — Play England

Learning as week as Playing

1.31 In recent years there has been a move to open up the idea of play to more than the traditional idea of outside play for children. From pieces of specific equipment and locations to viewing play and associated learning as an activity for all areas, not just the playground.

The Fields in Trust

1.32 The Fields in Trust[13] has offered guidance for practitioners on open space provision and design known as the Six Acre Standard (6AS) most recently updated to Planning and Design for Outdoor Sport and Play[14] (PDOSP) in 2008. While there is a need for review, given the changes in political, planning and social landscapes since 2008, the benchmark standards within PDOSP still remain a useful guidance tool.

1.33 The PDOSP seeks the protection, provision and improvements of outdoor spaces for sport and play and good planning and design is central to the philosophy and objectives. Using this current guidance will help to ensure that the provision of play is a sufficient size to enable effective use; is located in an accessible location and in close proximity to dwellings; and of a quality to maintain longevity and encourage its continued use.

Table identifying the Play Standards LAPs, LEAP, and NEAPS

Planning and Design for Outdoor Sport and Play (PDOSP) 2008	Play Standards	New and existing Play areas
		LAPs – Local Areas for Play (very young children)
		LEAP – Locally Equipped Areas for Play (LEAPs) (for children who can go out and play independently)

[12] https://www.playengland.org.uk/designforplay#:~:text=A%20guide%20to%20creating%20successful,experience%20risk%2C%20challenge%20and%20excitement

[13] https://fieldsintrust.org/

[14] https://angmering-pc.gov.uk/neighbourhood-plan-docs/098%20Fields%20in%20Trust.pdf

		NEAPS - Neighbourhood Equipped Areas for Play (aimed at older children)

Parks and Open Spaces

- The Green Flag Award
- Making Space for Girls

The Green Flag award

1.34 The Green Flag Award - Green Flag Award[15] recognises and rewards well managed parks and green spaces, setting the benchmark standard for the management of recreational outdoor spaces across the United Kingdom and around the world. Its purpose and aims are to:

- To ensure that everybody has access to quality green and other open spaces, irrespective of where they live.
- To ensure that these spaces are appropriately managed and meet the needs of the communities that they serve.
- To establish standards of good management.
- To promote and share good practice amongst the green space sectors.
- To recognise and reward the hard work of managers, staff and volunteers.

Make Space for Girls Play Guidance

1.35 Make Space for Girls[16] was registered as a charity in March 2021. Their mission is to use research, consultation, engagement and education to campaign and drive an approach to the planning, commissioning and development of parks and similar public spaces that recognises the different needs of girls and young women and finds ways to meet those needs.

Sport England – Playing pitches

1.36 Playing Pitches – includes football, rugby, hockey and cricket.

- Sport England Playing Pitch Strategy - Cotswold Version – Play and Pitch Strategy and Action Plan 2023.[17]

Sport England Guidance

1.37 Sport England[18] have developed the playing pitch calculator, which is based on information from the Playing Pitch Strategy in order to create the right amount of playing pitches and the correct typology. The Playing Pitch Strategy methodology for playing fields is not a standard but based on empirical evidence.

[15] https://www.greenflagaward.org/

[17] https://www.cotswold.gov.uk/media/v0ulu014/a5-4-5-playing-pitch-strategy-and-action-plan-jun-2023.pdf
[18] https://www.uksport.gov.uk/about-us/who-we-work-with/sport-england

Allotments

- The National Allotment Society

1.38 Allotments Standards - The National Society of Allotment and Leisure Gardeners[19]

1.39 The National Allotment Society states that 'An allotment is an area of land, leased either from a private or local authority landlord, for the use of growing fruit and vegetables. In some casescases, this land will also be used for the growing of ornamental plants, and the keeping of hens, rabbits and bees. An allotment is traditionally measured in rods (perches or poles), an old measurement dating back to Anglo-Saxon times. 10 poles isare the accepted size of an allotment, the equivalent of 250 square metres or about the size of a doubles tennis court. There should be 15 allotment plots per 1000 households'.

1.40 The National Society of Allotment and Leisure Gardeners has produced new guidance for Planners, developers, civil engineers, architects, local authority and/or project managers working on various stages of a new development. Guide To 21st Century Allotments in New Developments25: 21st Century Allotments in New Developments.

The Woodland Trust - The Woodland Access Standard[20]

1.41 According to The Woodland Access Standard, no person should live more than 500m from at least one area of accessible woodland of no less than 2ha in size. There should also be at least one area of accessible woodland of no less than 20 ha within 4km of people's homes. This is intended to be an aspirational benchmark and some flexibility and local assessment is needed in its interpretation. Currently only 18.2% of the population of Britain lives within 500m of accessible woodland, in the Cotswolds this is 6.3 %. This standard has not been used in assessing GI provision within the District as it is, to some degree, covered by the ANGSt standard.

The Cotswold District

1.42 There are a number of documents, which contribute towards the mitigation and adaptation of climate change. These include but are not limited to the Cotswold Renewable Energy Study[21] and the Cotswold Climate Emergency and Ecological Emergencies.[22]

1.43 The Town and Country Planning Association (TCPA)[23] holds the UK's biggest GI knowledge base, this knowledge base is constantly being updated, this is a useful resource base and should also be referred to.

[23] https://www.tcpa.org.uk/

2. Green Infrastructure Issues and Potential for the Cotswold District

2.1 These issues come from evidence prepared as part of this Strategy and from other data and evidence sources.

The Strategic GI Issues for Cotswold District

Strategic Access and Wellbeing led Issues

- To ensure that high-quality GI is created and maintained, for the benefit of all, as part of new developments.
- To encourage the development of Suitable Alternative Natural Green Spaces (SANG)
- To address the lack of accessible natural green space at both the strategic level (such as county parks) and at the more local or neighbourhood scale (such as allotments, local parks).
- To create new strategic GI cycle and pedestrian links, linking up existing settlements and other important destinations.
- To improve access to and create new public footpaths in and around the principal settlements.
- To increase play provision, including informal play opportunities, within new developments and elsewhere.

Strategic Water Led Issues

- To improve the water quality of water courses.
- To deliver Hydro-energy projects (particularly those that may also provide fluvial flood resilience).
- To ensure that SUDS are incorporated within new developments.
- To improve the management of watercourses, including their banks.
- To deliver upstream new SUDS.
- To consider water and its value as a natural and valuable resource at a catchment-based level.
- To ensure that the District has a sufficient water supply for current and future needs.
- To ensure that the District has sufficient sewage treatment provision for current and future needs.

Strategic Wildlife Led Issues

- To reverse habitat and species loss and fragmentation and build resilience to climate change and disease.
- To address recreational pressures on the Special Areas of Conservation (SACs).
- To develop a strategic approach to biodiversity conservation in the Cotswold Water Park.
- To implement biodiversity net gain in a way that maximises the outcomes for biodiversity and GI more widely.
- To ensure that habitats created and enhanced reflect locally important habitat networks through utilising the Gloucestershire Local Nature Recovery Strategy.

Strategic Planning Led Issues

- To encourage the development of Suitable Alternative Natural Green Spaces (SANG)
- To ensure that the natural environment, natural capital and GI is fully considered in all investment decisions relevant strategies and policies, including community planning, the update of the local plan and strategic level projects and their implementation.
- To maximise the contribution that GI can make to the climate change agenda – both mitigation and adaptation.
- To protect, enhance and create green wedges and corridors, for their connectivity value, within existing and new developments.
- To continue to develop the evidence base to support effective GI provision.
- Ensure there is a consistent, early and coordinated approach taken to the management of GI.
- To ensure new developments to provide gardens and open spaces, for wellbeing, to enable and encourage biodiversity and connectivity.

Possible GI solutions to address issues in the District

2.2 To realise the full potential of GI and to deliver maximum benefits across the District will require the input and efforts of a broad range of partners and stakeholders at the national, county, district and local level. The research findings in this strategy form the basis of critical information about the District. These findings provide real GI possibilities and solutions, in doing so they have the ability to deliver on more than one element of GI for the District. Below are potential GI solutions for the District.

Potential GI solutions - Wellbeing and Access

2.3 The creation of new (and particularly medium to large scale) country or natural parks within the district, including the opportunity to deliver Suitable Alternative Natural Green Spaces. (SANG).

2.4 GI led strategic cycle and pedestrian routes in the District, with an emphasis on linking up existing settlements (within and outside the District) and other important destinations, prioritising –

- Cirencester to Kemble (included in Local Plan)
- Cirencester - the re-use of the Andoversford to Cirencester dis-used railway where possible or quiet lane network for a new Active Travel Route
- Kemble to Tetbury (included in Local Plan) Kemble – re-use the dismantled railway
- Cirencester and Kemble, and Kemble to Tetbury for active travel
- Andoversford – re-use the disused railway where possible and/or A40 corridor between Cheltenham and Andoversford for active travel. Reuse the disused railway (where possible) and quiet lane network between Andoversford and Cirencester/Andoversford and Bourton on the Water
- Bourton- on- the- Water – re-use the disused railway between Bourton on the Water and Kingham for active travel and connectivity to mainline rail services
- Cirencester to South Cerney, the Cotswold Water Park and out to Swindon Fairford to Lechlade (included in Local Plan)

- The settlements along the Fosseway
- Ensuring that as many of these routes as possible are off-road or traffic free
- Re-using disused railway lines and canals. For example, the canal for access from Cirencester to the Cotswold Lakes .
- Providing routes that are accessible for all users, including families and disabled people and horse riders.
- Designs that also increase wildlife habitat connectivity to be delivered through new and existing developments
- Encourage the creation and promotion of circular, signed and accessible for all, circular walks around each of the principal and new settlements in the Local Plan for the benefit of local residents, workers and visitors.
- Encourage the provision of new allotments in all settlements, new and existing.
- To encourage landowners to provide opportunities for GI and natural capital as part of the Green Recovery.
- Provide better guidance on and encourage the provision of play opportunities in new developments and elsewhere, with a particular emphasis on natural play and play provision that is integrated across the whole development.
- Where appropriate, review the management of the Council's own land holding to maximise its contribution to the GI network and to climate change adaptation and mitigation.

Potential GI solutions - Water

- Work in partnership with landowners and other key stakeholders to improve the water quality of water courses and to deliver Hydro- energy projects (particularly those that may also provide fluvial flood resilience)
- Ensure that SUDS are considered from the first point of developer engagement with the Council; emphasising not only their water management role but also their potential to deliver biodiversity and amenity benefits.
- Foster a better understanding of the root causes of sewage into the district waterways.
- Work with partners to improve access to the Thames and Severn Canal. This ongoing project continues to restore the canal.
- Work with riparian owners and other partners to improve watercourse management.
- Work with partners for leaving space for flood water by safeguarding land through the Local Plan and utilising greenspace for flood storage and slowing the flow.

Potential GI solutions - Wildlife

- Support and work with key partners to minimise recreational pressures on the Cotswold Beechwoods SACs and North Meadow/Clattinger Farm SAC.
- Support the implementation of the Gloucestershire Tree Strategy (2020), in particular the actions for the Cotswold District.
- Work with partners to ensure that the nature recovery network mapping and a Local Nature
- Recovery Strategy for Gloucestershire is kept up to date, and it is reflected in District level policy and strategy.

- Ensure that habitat gain achieved through any District-licensing projects also delivers on wider GI objectives.
- Investigate how Biodiversity Net Gain can best deliver wider GI objectives and whether there is a case for delivering Net Gain at a higher level than mandated nationally.

Potential GI solutions - Planning

- Ensure there are mechanisms in place for the management of new or enhanced GI from the first stages of design to ensure high-quality management, community involvement and that the mechanism for stewardship will deliver on aspirations.
- Review the success of the current local plan policies and GI principles; amending them where necessary as part of the local plan update.
- Ensure that the update of the local plan, including new allocations and revised policies (including the revised Cotswold Design Code) fully considers better alignment with GI Standards such as the Natural England GI Framework published in January 2023; the Gloucestershire Local Nature Recovery Strategy and other new legislation, policy and guidance if appropriate.
- Consider how GI issues can be highlighted within the site allocation process, for example by including the GI on and offsite requirements for each proposed development site and within the relevant policies.
- Encourage the provision of new accessible open spaces through the local plan update.
- Consider how any new cycle or pedestrian routes could be included in the update of the local plan and how funding from development, for example via CIL, might be achieved.
- Highlight the importance of the consideration of the natural environment, natural capital and GI within Neighbourhood Development Plans; for example by providing – GI mapping.
- Analysis of GI mapping – looking for opportunities to enhance and connect GI. an evidence paper and policy template for NDPs on GI and the natural environment
- Review the current evidence base for the designation of Special Landscape Areas and update where necessary.
- Work with Highways England and other partners to maximise the opportunities for the A417 (Missing Link) project and any related projects to deliver GI benefits.
- Work with the Local Nature Partnership, Duty to Cooperate and other partners to update the Strategic Framework for GI in Gloucestershire, when needed.
- Ensure that the Steadings Development delivers on its aspirations to provide high-quality GI (that meets the BwN benchmark).
- Encourage the appropriate planting of more trees and woodland and rewilding projects to address climate change and ensure that this occurs in the design and creation of areas where multi-benefits are maximised.

Potential GI solutions - Review and Monitoring Actions

- Monitor the success of the GI strategy; update new GI-related initiatives and update the GI strategy, as necessary.
- The strategy is part of the Local Plan evidence base and will be subject to periodic updates, which will be delivered as part of extant Forward Planning and Development Management existing resources.

3. Delivering Green Infrastructure through New Developments

3.1 The creation and enhancement of GI are key components of delivering high-quality new developments and creating excellent places for people to live, work and play. This Strategy should help to ensure that this happens.

Policy Background

3.2 The potential of GI to help create great places is recognised in local, national and international policy and guidance that relates to specific GI benefits or issues.

3.3 At a national level the NPPF[24] and iterations of it over the last four years covers GI. In the latest version 2023, GI is made reference to in a number of different sections, including design and the natural environment, highlighting the multi-functional nature of GI.

Green Infrastructure in the Emerging Local Plan

3.4 The emerging Cotswold Local Plan 2026-2043 places Green Infrastructure at the heart of delivering sustainable growth and healthy, resilient communities. A range of strategic policies support the protection, enhancement and creation of Green Infrastructure and recognise its contribution to climate resilience, biodiversity recovery, health and wellbeing, active travel, landscape character and placemaking. In particular, the following policies are relevant to the delivery of Green Infrastructure:

- Core Policy 1 Addressing Climate Change
- Core Policy 16 Thames and Severn Canal
- Core Policy 33 Sustainable Transport and Connectivity
- Core Policy 35 Active Travel: Walking, Cycling and Wheeling
- Core Policy 43 Specialist Accommodation

3.5 These policies should be read alongside other relevant Local Plan policies and the Cotswold Design Code. Together they provide a framework for ensuring that Green Infrastructure is considered from the earliest stages of site identification, allocation and design. The implementation of these policies and associated design principles will help ensure that new development delivers high-quality, multifunctional Green Infrastructure that responds to local context, supports nature recovery, improves access to green space and contributes positively to place-making. The evidence base prepared to support the emerging Local Plan also provides important information on landscape, biodiversity, active travel, open space provision, recreation mitigation and health and wellbeing, all of which are relevant to Green Infrastructure planning and delivery.

[24] https://www.gov.uk/government/publications/national-planning-policy-framework--2

3.6 The emerging Local Plan also recognises the important role that Suitable Alternative Natural Greenspaces (SANGs), Alternative Natural Recreational Greenspaces (ANRGs) and Biodiversity Net Gain (BNG) can play in delivering wider Green Infrastructure objectives. Whilst these mechanisms have specific statutory and policy purposes, they also provide opportunities to increase access to natural greenspace, strengthen ecological connectivity, support habitat creation and improve the overall quality of the District's Green Infrastructure network. Where appropriately designed and managed, these measures can deliver multiple environmental and community benefits, helping to address recreational pressures on sensitive habitats whilst contributing to nature recovery and improved health and wellbeing outcomes.

Cotswold Local Plan - Cotswold Design Code

3.7 The emerging Local Plan promotes a masterplanning-led approach for strategic-scale development. Green Infrastructure should be identified and planned at the outset of the masterplanning process and used as a primary structuring element for new development. Existing landscape features, watercourses, habitats, public rights of way, heritage assets, trees, hedgerows and open spaces should be incorporated into a connected Green Infrastructure network that shapes the layout of development, movement corridors and community facilities. This approach helps ensure that Green Infrastructure delivers multiple benefits for people, place and nature whilst creating distinctive and successful new neighbourhoods.

3.8 The Cotswold Design Code provides further guidance on the delivery of high-quality places and includes a range of design principles relevant to Green Infrastructure. Sections D1-D65 address matters such as local character, landscape setting, connectivity, inclusive design, movement, public realm and boundary treatments, all of which contribute to successful Green Infrastructure design. The Design Code is being updated and is intended to be published as a separate Supplementary Planning Document (SPD). The most up-to-date version of the Design Code and any associated guidance should therefore be referred to alongside this Strategy and the emerging Local Plan.

Effective Green Infrastructure and High-Quality Landscape

3.9 High-quality, well-integrated and carefully designed Green Infrastructure and landscape provision are essential to the long-term success of development. The spaces between buildings, the surrounding landscape and the connections between people, places and nature are all critical components of successful placemaking. Green Infrastructure should not be viewed as residual land or solely as mitigation for development impacts. Instead, it should form a connected multifunctional network that supports biodiversity, climate resilience, sustainable drainage, active travel, recreation, health and wellbeing whilst reinforcing local landscape character and sense of place. Well-designed Green Infrastructure contributes significantly to the attractiveness, functionality and long-term sustainability of new and existing communities.

4. Designing Excellent Green Infrastructure in New Developments

4.1. Planning policies require new developments to fully consider GI issues but there are also benefits for developers in creating excellent GI which go beyond those policy requirements, including to:

- Ensure that all the land within the development site is used optimally delivering a range of benefits from flood management and cycle routes to biodiversity mitigation and landscape enhancements.
- Resolve local community concerns about new development, for example by providing new public open spaces.
- Demonstrate a commitment to high-quality GI.

How can High-Quality GI Contribute to the 3 Benefit-Based Themes?

Wellbeing	Water	Wildlife
Can be designed to promote health, wellbeing, community cohesion and active living Can be designed to be inclusive of the needs of vulnerable and excluded groups Can be designed to be used and enjoyed all year round Can assist in supporting local priorities for reducing/and or preventing health inequalities Can inspire innovative solutions to overcoming social and cultural boundaries to use and enjoy GI Can add positively to distinctiveness of place	Can be used to minimise surface water runoff and manage flood risk as part of SuDS Can be used to improve water quality Can be designed to create better places for people and wildlife to live Can provide opportunities to improve water management at a catchment level Can provide a range of features to minimise pollution downstream	Can be used to avoid, mitigate and compensate for negative impacts on existing biodiversity; and offer the opportunity to restore, create and enhance biodiversity in line with targets Offer the opportunity to ensure linkages between habitats Can contribute to the target conservation status of key species Can includes ecological features around and within the built environment Can play a role in restoring and sustaining wider ecological networks

	Water management features can add value to the overall design of a place	

Table: How can High-Quality GI Contribute to the 3 Benefit Based Themes? (Taken from Building with Nature)

Designing GI

4.2. The Cotswold Design Code provides a framework of principles for designing high-quality GI within new developments. Additional information on the Cotswold Design Code advice on Green Infrastructure,[25] particularly at the pre-application stage, has been prepared for (funded by the MHCLG Innovation Fund). A simple, additional way for developers to demonstrate that they are delivering high-quality GI at both the design, implementation and long-term management stages is to make use of the BwN benchmark process.

Natural England has also produced a GI Design Guide 2023[26]

4.3. The purpose of the Planning and Design Guide is to provide evidence based practical guidance on how to plan and design good Green Infrastructure. It complements the National Model Design Code and National Design Guide.

Green Infrastructure Checklist for Developers

- Remember Green Infrastructure means blue infrastructure as well.

[25] https://www.cotswold.gov.uk/media/4sojaskr/green-infrastructure-planning-advice.pdf
[26] https://designatedsites.naturalengland.org.uk/GreenInfrastructure/DesignGuide.aspx

- Consider what the GI requirements for the site may be before purchase of a site to ensure that the land value fully reflects those requirements.
- Engage with CDC at an early stage to make sure GI is central to the design of the development, including using the Green Infrastructure Pre Application Advice Note.
- Consider how the GI will be managed from the first stages of design to ensure high-quality management community involvement and that the mechanism for stewardship will deliver on aspirations.
- Use the full range of Local Plan policies to consider the broader elements of GI.
- Use the Design Code in the Local Plan, Natural England's GI Framework and principles and Building with Nature Benchmark to inform what GI is appropriate, in terms of location, type, quantum and quality (including reference to the standards set out in section of this GI Strategy).
- Engage, at an early stage, with local Town and Parish Councils to better understand community GI aspirations.
- Ensure that the GI related policies and projects in adopted and draft Neighbourhood Plans are fully considered.
- Use the mapping data and other evidence in this GI Strategy to better understand the local GI context. This will maximise the opportunities for the GI enhanced or created as part of new development to contribute to the overall GI network of the area and to deliver multiple benefits for Wellbeing, Water and Wildlife at a local as well as at a district level.
- Have a full understanding of the context of the site and its role in the GI network of the area, for example by referring to the Nature Recovery Network mapping, and the Landscape Character Assessments 31. A full set of the Landscape Character Assessment maps you can refer to Ecology and landscape - Gloucestershire County Council In addition to the mapping and other information in this Strategy.
- Ensure that all the relevant assessments and studies have been undertaken, for example ecological appraisals; onsite Biodiversity Net Gain, landscape visual impact assessments etc and that these have informed the design of the new development.
- Look for opportunities to deliver the District and local actions in the GI Strategy in section 2 Green Infrastructure Issues and Potential for the Cotswold District
- Consider in full the range of soft and hard landscape interventions to ensure the maximum usability, quality and attractiveness of GI.
- Look at the Natural Capital mapping website and Nature Recovery Network for GI opportunities https://naturalcapital.gcerdata.com/
- Put long-term mechanisms in place to retain and manage new or enhanced GI.

5. Delivering Green Infrastructure through Community and Partnership working

Community and Partnership Activities and Projects

5.1. There are a wide range of GI-related activities, projects and initiatives happening in the District, from those at a landscape scale, such as the Glorious Grasslands Project to individual actions, for example; installing a single bat box in a garden. Information on many of these projects can be found on Gloucestershire Nature Project Map.[27] This mapping illustrates the diverse nature of the organisations involved in GI, and the importance of partnership working to ensure that the right people are involved and that the most effective use is made of the resources available.

5.2. Although many of these projects, listed below, focus on one of the benefit-based outcomes of Wellbeing, Water or Wildlife, as the table above shows, they usually have beneficial outcomes for all. Most of the GI-related activities, projects and initiatives in the District are already delivering on many GI elements within this strategy and new ones will come forward that are also able to do that. The setting out of a clear list of issues and possibilities for the District may help projects to focus their activities and to justify what they are doing where this is necessary, for example within funding bids. The mapping and other evidence in the strategy should also assist in identifying where projects and partnerships can target their work to enhance the GI network of the District – and also, improve delivery at a more local community level.

Examples of Working in Partnership to Achieve Green Infrastructure Outcomes

Working In Partnership to Achieve Green Infrastructure Outcomes				
Organisation	**Project**	**Well-being**	**Water**	**Wildlife**
Cotswold District Council	The Community Wellbeing Team at CDC hosts The Cotswold Community Network (CCN) group made up of Voluntary Organisations, Community Groups, NHS, Foodbanks, Town and Parish Councils, Youth Providers to name just a few. There are currently over 115 members.	X	X	X

[27] https://www.gloucestershirenature.org.uk/gloucestershire-nature-project-map

Cotswold District Council, Gloucestershire County Council, Environment Agency	**Flood Defences** 29 Parishes in the Cotswold District have either had work completed or have work planned or both on flood defences since 2007; including 11 of the 17 key settlements. Progress and implementation is published annually.	X	X	X
Cotswolds National Landscape	Glorious Grasslands[28]	X	X	X
Gloucestershire County Council Highways – Rights of Way	PRoWs - Rights of Way Map Online[29]	x	x	x
Farming and Wildlife Advisory Group	The Cotswold Water Park WILD Project[30] Water with Integrated Local Delivery) is a three year project set within the Cotswold Water Park, it aims to improve water quality and biodiversity in order to meet the demands of EU legislation	X	X	X
Gloucestershire Highways	Biodiversity Guidance[31] contains advice to help the County Council implement its	X	X	X
Cotswold Canals Trust (CCT)	Restoration[32] is well advanced on the western section of the canal. Plans to similarly restore the eastern section to Connect	X	X	X

[28] https://www.cotswolds-nl.org.uk/our-work/nature-recovery/glorious-cotswold-grasslands/

[31] https://www.thinktravel.info/media/xmuhdhvl/ghbg-v32-may2022.pdf
[32] https://cotswoldcanals.org/

	the Water Park to the Thames are being made. The Eastern Visitor Centre located in the Cotswold Water Park , a joint venture between the CCT and the Cotswold Lake Trust opened in May 2023 and has since welcomed over 5500 visitors.			

Community Planning

5.3. Local communities, including Parish and Town Councils are keen to shape their towns and villages and this can be achieved through project work where local communities are key to successful outcomes, or by community planning initiatives, such as Parish Plans, Community Design Statements or Neighbourhood Plans. There is robust evidence to show that community involvement in GI has many benefits, including addressing social exclusion and improved mental health outcomes. Using GI as a focus for community effort can also encourage a wider range of people to become involved and to harness the energies of those who might otherwise be considered to be "hard to reach", for example young families are unlikely to engage in traditional community planning exercises but may be interested in wildlife projects.

Local Green Spaces

5.4. An important example of GI within community planning for Green Infrastructure is Local Green Spaces (LGS). The NPPF makes provision for local communities to identify green areas of particular importance to those communities, where development will not be permitted except in very special circumstances. Local Green Spaces can be designated through a Local Plan or Neighbourhood Development Plans.

5.5. In the 2011-31 Local Plan 12 Local Green Spaces were adopted. In the draft Local Plan 2026-2043, 37 Local Green Spaces have been proposed by Town and Parish Councils. The Council developed a toolkit to ensure that any proposed designation is robust and provide consistency.

This Strategy should help to provide that local context:

- The maps and additional information the GI Strategy should also help local communities to : Develop local community GI projects, (based on evidence of need).
- Support bids for external funding.

- Inform the Neighbourhood Planning process for example helping to identify breaks in connectivity for footpaths or wildlife that could be addressed through the NDP.
- Ensure that new developments can contribute to local GI by working directly with developers – showing them where the GI priorities lie or by providing detailed comments that refer to GI in responses to planning applications and other consultations .
- Inform NDP site allocations by providing clarity on sites that may not be suitable for development in GI terms or by highlighting opportunities to create new or improve existing GI within new site allocations (including providing detail on the type, location and quantum of GI that should be incorporated).

6. The Evidence – what does the evidence tell us?

GI Mapping

6.1. The mapping for the Strategy took place during 2018 and 2019, with additional amends made in 2020 and 2022. The maps, listed below, helped to establish a picture of existing work in the GI field at a County level. These maps include: The Strategic Framework for GI in the County, The Gloucestershire Nature Map, this map was the basis for the nature recovery network and Gloucestershire Nature Improvement Areas.

6.2. The Gloucestershire Nature Map was a strategic approach to showing the best places to maintain and extend terrestrial habitats at a county scale. The Nature Map identifies the Lowland Calcareous (Limestone) Grassland, Lowland Meadows, Floodplain Grazing Marsh, Woodland Mosaic and river areas as strategic areas for the Cotswolds.

6.3. Focusing on the Cotswold District, the following maps established key elements of GI within it, or on the District's boundary. These maps include:

- All the elements of Green Infrastructure in the District as well as a 15KM from the boundary line to recognise that GI does not respect boundary lines and our neighbours GI,
- Linear Green Infrastructure, which includes existing SUSTRANS Routes, National Trail (Cotswold Way & Thames Path) Promoted Routes (Diamond Way, Macmillian Way & Monarch's Way) and rivers,
- Agricultural Land Classification in the District,
- Landscape Classifications Cotswold District,
- Nature Conservation Plans and Key Access Routes and areas of opportunity.

6.4. Finally, maps were set up for each of 17 principal settlements to mirror the Local Plan. For each of the 17 settlements a Wellbeing, Water, and Wildlife map was created to pull through the Building with Nature themes.

The following table shows the GI asset mapped for each of the Building with Nature themes.

Main GI assets mapped	
Wellbeing	Access Land, Allotments, Amenity Green Spaces, AONB, Cemeteries and Churchyards, Common Land (registered), Historic Parks and Gardens (registered), Local Green Space, National Trail, Permissive Footpaths, Playgrounds (including school playgrounds), Playing Fields (including school playing Fields), Promoted Routes, Public Rights of Way, Railway line Active, Scheduled Ancient Monuments, Special Landscape Area, Sports Grounds, Sustran Route

Water	Bogs, Flood Zone 3b, Lakes, Main Rivers, Marshland, Thames and Severn Canal, Watercourses (this includes river tributaries) Cotswold Water Park
Wildlife	Ancient Woodland, Dismantled Railway, Local Wildlife Sites, National Forestry Inventory, Priority Habitat, Scientific Sites of Special Interest, Regionally Important Geological Sites

6.5. The mapping work for the 17 principal settlements was undertaken in partnership with the parish and town councils in 2017 and 2021 and builds on earlier work conducted for the Open Spaces Strategy in 2015/16. The Parish and Town Councils added their suggestions and refinements to the maps (and suggested further GI ideas. See Appendix C.

6.6. The detailed outcomes of this mapping and data work with the 17 principal settlements along with a brief analysis of the information collated as part of the 2017 work, 2021 consultation and other data are set out in Appendix C.

Open Space provision

6.7. Further analysis of the mapping was conducted, with a particular emphasis on access to open spaces and provision of open spaces in the District. In addition, research into linear routes, for example, public rights of way (PROW) and cycle routes also took place. By using the Accessible Natural Greenspace Standards (ANGSt).

The following information became apparent: –

ANGSt standards		
Size of Site	**Distance from Home**	**Does provision in the Cotswold District meet this standard?**
of at least 2 hectares in size	no more than 300 metres (5 minute walk) from home;	Desktop mapping has taken place, but input by a community, by community basis would be helpful.
at least one accessible 20 hectare site	within two kilometre of home;	No
one accessible 100 hectare site	within five kilometres of home; and	No
one accessible 500 hectare site	within ten kilometres of home	No

A minimum of one hectare of statutory Local Nature Reserves per thousand population.	No

Off-road Cycle and pedestrian routes

6.8. Within the District, access to services is a key issue, with a lack of regular public transport. In addition, there is a strong tourism sector, with an increasing emphasis on the walking and cycling offer. The county Health and Wellbeing Strategy also emphasises the need to increase activity levels and walking and cycling could make a cost-effective contribution to this, as well as helping to deliver against the climate change agenda with a modal shift from private cars to walking and cycling. The data, derived from the mapping evidence, shows that there are currently very few off-road cycle routes and that many of the public rights of way do not readily link up settlements and other key destinations (including those outside the District). There are a number of linear features, which have potential to deliver (in some cases long distance) linear off-road routes; this includes disused railway lines and canals. There are also opportunities to create and better promote circular pedestrian routes from the 17 principal settlements as well as a circular route around the Cotswold Water Park. These measures would benefit not only tourism, but also local residents and those that work in the settlements.

6.9. Policies and information within the current District Local Plan and its existing evidence base. Information on the relevant policies in the draft local plan can be found in section. The evidence on which the current local plan was based is extensive and includes –

- Cotswold Water Park Topic Paper 2015.
- Cotswold Water Park Nature Recovery Plan July 2021
- Special Landscape Areas Review 2017.
- Local Green Spaces Evidence Paper 2026.
- JBA Consulting Report Template[33] Cotswold District Council Local Plan Partial Update: Water Cycle Study Final July 2025.

Emerging evidence collated as part of the Local Plan Update 2026-2043

6.10. The local plan update is currently taking place, including the GI policies and the Cotswold Design Guide.

Engagement with principal settlements

6.11. The GI Strategy has, as it was expected to go In 2018, local communities were not only asked to comment on and improve the local GI mapping they were also asked to highlight some GI ideas within their parishes. Please see Appendix C. Further engagement and

[33] https://www.cotswold.gov.uk/media/ymxhji0e/jll-jbau-xx-xx-rp-en-0005-d1-c01-cotswold_par_joanne-corbett.pdf

updates took place in 2021 and 2022. The consultations gave individuals, public and private organisations as well as key strategic partners and community representatives an opportunity to provide further feedback.

Feedback from relevant stakeholders

6.12. The Council is part of a number of partnerships and stakeholder groups, for example the Local Nature Partnership. Recently, feedback from those partnerships have informed the development of this strategy. For example:

- The need to consider how the agricultural community can contribute to and benefit from the GI agenda.
- The increasing importance of natural capital data and the multiple benefits of creating circular walks from the market towns in the district to benefit tourism and leisure but that will also benefit those that live and work in the towns.

6.13. It is important to take a landscape approach. Large (in the region of 10,000 – 50,000 hectares), discrete areas that by taking a landscape-scale approach, will help deliver a step change in nature conservation, where a local partnership has a shared vision for their natural environment. The Gloucestershire Nature Recovery Network and the opportunity areas will help to define the boundaries of these Gloucestershire Local Nature Areas.

7. Access to Open Spaces

7.1. In this section, access to open spaces in the District is broken down to explain the conclusions drawn. Again using the ANGST standard, for the following:

- Potential sites 20 - 100 ha in area (indicating principal settlements within 5KM)
- Potential sites over 100 ha (indicating principal settlements within 5 KM)
- Potential Accessible Natural Greenspaces over 500 ha. (indicating principal settlements within 10 KM)

7.2. The Access Tables show the distance from where people live. The distance to the nearest principal settlement was used as a proxy to measure this; as the majority of people in the district live within these settlements. Access issues are also examined in the settlement specific sections see Appendix C.

7.3. It is clear from the data in the tables that although some of these open spaces are of a relevant size, they are not fully accessible to the public for reasons listed below.

- Access may be limited to public footpaths so people are unable to roam freely,
- The site might be outside the Cotswold District Boundary,
- There may be a charge for access, including a cost for parking,
- Access might be restricted because of irregular public transport,
- Access may be limited to certain days or times etc.
- Access is at the discretion of the landowner.

7.4. A description of why particular sites are discounted, can be found in Appendix C, Delivering GI in the Principal Settlements in the District.

7.5. Sites below 20ha have not been included on the District level mapping and the data tables, but are identified, on the wellbeing maps for the 17 principal settlements. Natural green spaces 2ha for each of the Principal Settlements are also mapped on the wellbeing maps and are listed in the tables that indicate how delivering GI in the Principal Settlements might be achieved. See Appendix C

Potential sites 20 - 100 ha in area (indicating principal settlements within 5KM)							
Site	**Principal Settlements within 5KM**	**Size**	**Location – within District or within 15km buffer**	**Access Limitations e.g. entrance fee; footpath access only**	**Ownership**	**Cost of access**	**Does this site constitute accessible natural greenspace?**

Dovers Hill	Blockley Chipping Campden Mickleton	75 ha	Within District	Footpaths	National Trust	Yes	No
Greystones Nature Reserve	Bourton on the Water	66 ha	Within District	Footpaths	Glos Wildlife Trust	None	No
Clattinger Farm SAC	Kemble South Cerney	60 ha	Within 15km buffer	Footpaths	Natural England	None	No
North Meadow	Down Ampney South Cerney	44 ha	Within 15km buffer	Footpaths	Natural England	None	No
Lineover Wood	Andoversford	50 ha	Within District	Footpaths	Woodland Trust	None	No
Barber Wood	None	39 ha	Within District	Footpaths	Woodland Trust	None	No
Crickley Hill	None	27 ha	Within 15km buffer	Footpaths	National Trust & Glos Wildlife Trust	None	No

Potential sites over 100 ha (indicating principal settlements within 5 KM)

Site	Principal Settlements within 5KM	Size	Location – within District or within 15km buffer	Access Limitations e.g. entrance fee; footpath access only	Ownership	Cost of Access	Does this site constitute accessible natural greenspace?
Westonbirt Arboretum	Tetbury	242 ha	Within District	Footpaths	Forestry England	Yes	No
Newark Park	None	222 ha	Partially in District	Footpaths	National Trust	Yes	No
Hidcote	Chipping Camden Mickleton	125 ha	Within District	Footpaths	National Trust	Yes	No

Batsford Estate	Blockley Morton in Marsh	114 ha	Within District	Footpaths	Private	Yes	No

Potential Accessible Natural Greenspaces Over 500 ha. (indicating principal settlements within 10 KM)

Site	Principal Settlements within 10 KM	Size	Location – within District or within 15km buffer	Access Limitations e.g. entrance fee; footpath access only	Ownership	Cost of Access	Does this site constitute accessible natural greenspace?
Sherborne Park	Northleach Bourton on the Water, Upper Rissington	1160 ha	Within District	Footpaths	National Trust	Yes	No
Cirencester Park	Cirencester, Kemble, South Cerney. Down Ampney	1055 ha	Within District	Access based on goodwill of owner. Some PROW limitations	Private	None	No
Beechwood SAC	None	590 ha	Partly within District	Open access. High level of recreational disturbance, further unlimited access should not be encouraged	Natural England	None	No

Official Local Nature Reserves in the Cotswold District

Standard – A minimum of one hectare of statutory Local Nature Reserves per thousand population. CDC population 2011 Census – 82,881 – number of LNR = 2

Where	Size	Ownership	Cost access	Does this site constitute accessible natural greenspace?
Coke's Pit (Lake 34)	10 ha	Cotswold Water Park is on a lease from Gloucestershire County Council.	Free	Yes
Cirencester City Bank Local Nature Reserve	3 ha	Cirencester Town Council	Free	Yes

7.6. It should be noted that where there isn't a cost for accessing the site there might be a parking charge expected.

7.7. Special Areas of Conservation – Cotswold Beechwoods SAC and North Meadow and Clattinger Farm SAC. These two sites lie close or partially within the district. These accessible natural greenspaces, although available, are very vulnerable to recreational disturbance and without additional measures put in place, increased access to these sites should not be encouraged. This is recognised, in the Local Plan, policy INF7 Green Infrastructure. For this reason, the two SACs have not been included in the analysis of publicly accessible open space.

Recreation Mitigation and Suitable Alternative Natural Greenspaces (SANGs)

7.8. The emerging Cotswold District Local Plan 2026-2043 recognises that increased housing growth has the potential to increase recreational pressure on internationally important nature conservation sites, particularly the Cotswold Beechwoods SAC and North Meadow and Clattinger Farm SAC. To address this issue, the Council has prepared a Recreation Mitigation Study and Habitats Regulations Assessment evidence base, which identify the scale of mitigation required to support planned growth whilst protecting these sensitive sites.

7.9. A key recommendation of the Recreation Mitigation Study is the delivery of Suitable Alternative Natural Greenspaces (SANGs) and Alternative Natural Recreational Greenspaces (ANRGs). These spaces are designed to provide attractive, accessible locations for recreation, walking and informal enjoyment of nature, helping to divert visitor pressure away from protected habitats. In addition to their mitigation role, SANGs and ANRGs can make an important contribution to the wider Green Infrastructure network by increasing

access to natural greenspace, supporting health and wellbeing, providing opportunities for active travel, and contributing towards nature recovery objectives.

7.10. The emerging Local Plan proposes that major strategic housing allocations deliver significant areas of new green infrastructure, including SANG and ANRG provision where required. The Recreation Mitigation Study identifies that the strategic allocations are capable of accommodating substantial areas of mitigation land as part of their masterplans, alongside the potential delivery of a strategic district-scale SANG to serve developments that are unable to provide bespoke mitigation on-site. Together, these measures have the potential to address recreation impacts on protected sites whilst also helping to tackle the District's identified deficit of accessible natural greenspace.

7.11. The delivery of SANGs and associated green infrastructure represents an opportunity to achieve multiple benefits through a single intervention. Well-designed and appropriately managed sites can provide recreational opportunities for new and existing communities, strengthen green infrastructure connectivity, support biodiversity enhancements and habitat creation, and contribute to the long-term resilience of the District's natural environment.

2023 Update - The challenge of creating new country and natural parks

7.12. The data analysis in the strategy, particularly the application of the ANGSt standards, has indicated that the district's provision of country and natural parks at all scales is poor. At a county scale, the Gloucestershire strategic framework also emphasises the lack of strategic scale green spaces.

7.13. Providing new country and natural parks will be challenging, particularly as very little land in the District is in public ownership. These parks are likely to come forward either as part of development proposals or where a landowner can see sufficient benefit for them in opening up access. There are a few landowners, particularly in the charitable sector, where increasing access to the countryside is at the core of their work, but other landowners, such as farmers, will also need to see significant economic benefits. These may arise from agri-environment schemes, such as, the delivery of Sustainable Farming Incentive (SFI) or Suitable Alternative Natural Green Spaces (SANGs), payment of ecosystems services and other grants; delivery of biodiversity net gain; off-site provision of GI or open space that is required to meet development needs; increased diversification potential. There are pockets of land in the Cotswold District that are not suitable for either high productivity agriculture or development, and these may provide useful opportunities for creating new accessible open spaces.

2026 update

7.14. The emerging Local Plan (2026-2043) proposes a number of strategic growth locations across the District. The scale of this development creates an opportunity to deliver significant new Green Infrastructure as an integral part of the development of new communities, rather than as a residual or mitigating element. This includes the delivery of Suitable Alternative Natural Greenspaces (SANG), strategic green corridors, accessible natural greenspace, habitat creation, sustainable drainage systems and active travel connections.

7.15. These new green infrastructure assets should be planned as multifunctional networks that support nature recovery, strengthen ecological connectivity, improve climate resilience, provide opportunities for recreation and active travel, and protect the distinctive landscape character of the District. They can also help reduce recreational pressure on internationally and nationally important wildlife sites whilst improving public access to high-quality natural green spaces close to where people live.

7.16. The introduction of Biodiversity Net Gain requirements, the Gloucestershire Local Nature Recovery Strategy and Nature Recovery Network mapping provides a stronger framework for targeting investment and securing measurable environmental improvements. Together, these mechanisms offer an opportunity to create a more connected, accessible and resilient green infrastructure network across the District that benefits both people and nature.

Masterplanning and Green Infrastructure

7.17. For strategic-scale development, Green Infrastructure should provide the primary framework for the preparation of comprehensive masterplans. Existing and proposed Green Infrastructure assets, including habitats, watercourses, hedgerows, trees, public rights of way, landscape features, heritage assets and open spaces, should be identified at the outset and used to shape the disposition of development rather than being treated as residual land.

7.18. Comprehensive masterplans should demonstrate how a connected, multifunctional Green Infrastructure network will:

- provide strategic landscape structure and maintain settlement identity
- secure biodiversity enhancement and contribute to the Nature Recovery Network
- integrate SuDS, climate resilience and natural flood management
- support walking, cycling and access to green space
- respond positively to landscape character, heritage assets and key views, and
- establish a long-term framework for stewardship, management and maintenance.

7.19. The Green Infrastructure network should be planned across the whole allocation and, where relevant, beyond site boundaries, ensuring connectivity with surrounding green and blue infrastructure assets. Development parcels, movement corridors, community facilities and

open spaces should be designed within this framework to create coherent, healthy and resilient places.

8. Glossary

A

Accessible Natural Greenspace Standards (ANGst) – are a set of national benchmarks for ensuring access to a variety of greenspaces near to where people live.

Active travel – a concept of travel that includes only those forms of transport that require active use of the human body as a transport machine. Examples include walking and cycling, as these burn off energy in contrast to sedentary forms of travel, such as driving or getting the bus. People who already walk or use a bicycle as a primary mode of transport may do so for environmental, health or practical reasons.

Affordable Housing – social rented and intermediate housing, provided to specified eligible households whose needs are not met by the market.

Air pollution - Degradation of air quality with negative effects on human health or the natural or built environment due to the introduction, by natural processes or human activity, into the atmosphere of substances (gases, aerosols) which have a direct (primary pollutants) or indirect

(secondary pollutants) harmful effect

Air Quality Management Areas (AQMAs) Since December 1997 each local authority in the UK has been carrying out a review and assessment of air quality in their area. This involves measuring air pollution and trying to predict how it will change in the next few years.

Allocated – land which has been identified in the development plan for a specific form of development.

Amenity – those qualities of life enjoyed by people that can be influenced by the surrounding environment, in which they visit, live or work. 'Residential amenity' includes for example, a reasonable degree of privacy, freedom from noise nuisance, air pollution etc. normally expected at home.

Ancient and Semi Natural Woodland (ASNW) – ancient woodland is land that has had a continuous woodland cover since at least 1600 AD, and may be ancient semi-natural woodland (ASNW), which retains a native tree and shrub cover that has not been planted, although it may have been managed by coppicing or felling and allowed to regenerate naturally; or plantation on ancient woodland sites where the original tree cover has been felled and replaced by planting, often with conifers, and usually over the last century. The location of ancient woodlands over 2 ha in area is recorded in the National Inventory of Ancient Woodlands, which is maintained by Natural England**.**

Ancillary – use or development of a different subsidiary use, but which is related to and often found in association with primary use or development.

Area of Outstanding Natural Beauty (AONB) – a designated area of nationally important landscape value within which the conservation and enhancement of its natural beauty is the priority. The Cotswolds AONB is the largest in the country and covers 80 % of the District. It was designated by the Countryside Commission in 1966.

Aquifer – underground layers of water-bearing permeable rock or drift deposits from which groundwater can be extracted for human use may be extracted by means of wells or boreholes. Aquifer designations reflect the importance of aquifers in terms of groundwater as a resource (drinking water supply) but also their role in supporting surface water flows and wetland ecosystems.

Authority Monitoring Report (AMR) – a report on how the Council is performing in terms of the Local Plan. Includes monitoring implementation and performance of policies following changes brought in by the Local Planning Regulations 2012. It replaces the Annual Monitoring Report. Local planning authorities are no longer required to send an Annual Monitoring Report to the Secretary of State and instead monitoring should be a continuous process.

B

Biodiversity - Biological diversity means the variability among living organisms from all sources, including, inter alia, terrestrial, marine and other aquatic ecosystems and the ecological complexes of which they are part; this includes diversity within species, between species and of ecosystems (UN, 1992)

Biofuel - A fuel, generally in liquid form, produced from biomass. Biofuels currently include bioethanol from sugarcane or maize, biodiesel from canola or soybeans, and black liquor from the paper-manufacturing process. See also Biomass and Bioenergy.

Biomass - Living or recently dead organic material. See also Bioenergy and Biofuel.

Bluespace/ Blue infrastructure Outdoor environments, either natural or built, that prominently feature water such as streams, ponds, canals and other water bodies.

Building with Nature - (BWN) Puts nature at the heart of development in a way that's good for people and for wildlife. Through the Building with Nature Standards, which provide planners and developers with evidence-based, how-to, guidance on delivering high-quality Green Infrastructure. Through supporting and championing best-practice, BWN aim to help great schemes get built, raise the bar for industry, and mainstream Green Infrastructure in placemaking.

Building with Nature Standards

C

Carbon sequestration - The process of storing carbon in a carbon pool. See also Blue carbon, Carbon dioxide capture and storage (CCS), Uptake and Sink.

CIL - The Community Infrastructure Levy is a levy that local authorities can choose to charge on new developments in their area. The money should be used to support development by funding

infrastructure that the council, local community and neighbourhoods want

Climate - Climate in a narrow sense is usually defined as the average weather, or more rigorously, as the statistical description in terms of the mean and variability of relevant quantities over a period of time ranging from months to thousands or millions of years. The classical period for averaging these variables is 30 years, as defined by the World Meteorological Organization. The relevant quantities are most often surface variables such as temperature, precipitation and wind. Climate in a wider sense is the state, including a statistical description, of the climate system.

Climate change - Climate change refers to a change in the state of the climate that can be identified (e.g., by using statistical tests) by changes in the mean and/or the variability of its properties and that persists for an extended period, typically decades or longer. Climate change may be due to natural internal processes or external forcings such as modulations of the solar cycles, volcanic eruptions and persistent anthropogenic changes in the composition of the atmosphere or in land use. Note that the Framework Convention on Climate Change (UNFCCC), in its Article 1, defines climate change as: 'a change of climate which is attributed directly or indirectly to human activity that alters the composition of the global atmosphere and which is in addition to natural climate variability observed over comparable time periods.' The UNFCCC thus makes a distinction between climate change attributable to human activities altering the atmospheric composition and climate variability attributable to natural causes.

Cotswold District Council - (**CDC**) The Local District Authority, which covers the Cotswold District

D

E

Ecosystem Services - The components of nature that are directly and indirectly enjoyed, consumed, or used in order to maintain or enhance human well-being.

Environmental Impact Assessment (EIA) – A procedure to be followed for certain types of project to ensure that decisions are made in full knowledge of any likely significant effects on the environment.

Environmental Land Management Schemes (ELMS)

There are 3 new schemes that will reward environmental land management:

- Sustainable Farming Incentive
- Local Nature Recovery
- Landscape Recovery

These schemes are intended to support the rural economy while achieving the goals of the 25 Year Environment Plan and a commitment to net zero emissions by 2050.

Through these schemes, farmers and other land managers may enter into agreements to be paid for delivering the following:

- clean and plentiful water
- clean air
- thriving plants and wildlife
- protection from environmental hazards
- reduction of and adaptation to climate change
- beauty, heritage and engagement with the environment

Environmental Net Gain - Environmental Net Gain means improving all aspects of environmental quality through a scheme or project.

Evidence Base – is the information and data gathered by local authorities to justify the "soundness" of the policy approach, including physical, economic, and social characteristics of an area.

F

Flood Risk Assessment (FRA) – is an assessment of the likelihood of flooding in a particular area so that development needs and mitigation measures can be carefully considered. **Flood** - The overflowing of the normal confines of a stream or other body of water, or the accumulation of water over areas that are not normally submerged. Floods include river (fluvial) floods, flash floods, urban floods, pluvial floods, sewer floods, coastal floods, and glacial lake outburst floods.

G

Geographical Information Systems (GIS) – A computer software system to record, store, process, and analyse overlays of information linked to geographic areas.

Global warming - The estimated increase in global mean surface temperature (GMST) averaged over a 30-year period, or the 30-year period centered on a particular year or decade, expressed relative to pre-industrial levels unless otherwise specified. For 30-year periods that span past and future years, the current multi-decadal warming trend is assumed to continue. See also Climate change and

Climate variability.

Gloucestershire First or GFirst – is the service that promotes Gloucestershire as a location for business, for visitors and for investors and are the driving force for the recently formed Gloucestershire Local Enterprise Partnership (LEP) that promotes business in the Forest of Dean, Cotswold hills and major settlements of Gloucester, Cheltenham, Tewkesbury and Stroud. **Gloucestershire Nature Map** The Gloucestershire Nature Map represents the core of an ecological network for the future as produced by the Gloucestershire Biodiversity Partnership in 2011.The selected landscape-scale blocks of land called Strategic Nature Areas (SNAs), show where the characteristic habitats that typify the county can be expanded and linked to help wildlife survive in an uncertain future. The SNAs can be grouped together

within priority landscapes. Main rivers marked in blue on the schematic map as well as looking after existing and new strategic Green Infrastructure.

The Gloucestershire Nature Map, and its SNAs will eventually be replaced by the emerging Nature Recovery Network and the Local Nature Recovery Strategy.

Greenhouse Gas (GHG) – is a gas in an atmosphere that absorbs and emits radiation within the thermal infrared range. This process is the fundamental cause of the greenhouse effect.

Greenspace - Any area of vegetated land, urban or rural. This includes both public and private spaces such as parks, gardens, playing fields, children's play areas, woods and other natural areas, grassed areas, cemeteries and allotments, green corridors, disused railway lines, rivers and canals, derelict, vacant and contaminated land which has the potential to be transformed.

Green Infrastructure (GI) – is a network of high quality green spaces and other environmental features. It needs to be planned and delivered at all spatial scales from national to neighbourhood levels. The greatest benefits will be gained when it is designed and managed as a multifunctional resource capable of delivering a wide range of environmental and quality of life benefits (ecosystem services) for local communities. Green Infrastructure includes parks, open spaces, playing fields, woodlands, wetlands, grasslands, river and canal corridors allotments and private gardens. **Greenfield Land** – is land (or a defined site) usually farmland, that has not previously been developed.

Green stormwater Infrastructure (GSI) An approach to moving stormwater away from the built environment aiming to reduce surface water flooding, improve water quality and enhance the amenity and biodiversity value of the environment. GSI attempts to mimic nature and uses simple landscaping features such as green roofs, rain gardens and bioswales to slow, collect, infiltrate, and filter stormwater. Similar to Sustainable Urban DrainageSystems (SuDS).

Ground Water Source Protection Zones – is an integral part of land surface zoning within the Environment Agency's Policy and Practice for the Protection of Groundwater. Groundwater provides a third of our drinking water in England and Wales, and it also maintains the flow in many of our rivers

H

Habitat Regulations Assessment (HRA) - a document to determine impacts of nearby Natura 2000 sites.

I

J

K

L

Landscape Character Assessment – identifies areas with similar features or qualities, mapping and classifying them and describing their character. It is based on an understanding of landscape character and of the natural, historic and aesthetic factors that combine to create local distinctiveness.

Local Enterprise Partnership (LEP) – A body, designated by the Secretary of State for Communities and Local Government, established for the purpose of creating or improving the conditions for economic growth in an area.

Local Nature Partnership (LNP) – A body, designated by the Secretary of State for Environment, Food and Rural Affairs, established for the purpose of protecting and improving the natural environment in an area and the benefits derived from it

Local Nature Reserve – is an area of botanical or wildlife interest where access and use by local people is encouraged through designation by the local authority.

Local knowledge refers to the understandings and skills developed by individuals and populations, specific to the places where they live. Local knowledge informs decision-making about fundamental aspects of life, from day-to-day activities to longer-term actions. This knowledge is a key element of the social and cultural systems which influence observations of, and responses to climate change; it also informs governance decisions. This definition builds on UNESCO (2018).

Local Plan – The plan for the future development of the local area, drawn up by the local planning authority in consultation with the community. In law this is described as the development plan documents adopted under the Planning and Compulsory Purchase Act 2004. Current core strategies or other planning policies, which under the regulations would be considered to be development plan documents, form part of the Local Plan. The term includes old policies which have been saved under the 2004 Act.

Local Planning Authority (LPA) – is the local authority or council that is empowered by law to exercise statutory town planning functions for a particular area of the United Kingdom.

Local Transport Plan (LTP) – is a five-year integrated transport strategy, prepared by local authorities in partnership with the community, seeking funding to help provide local transport projects. The plan sets out the resources predicted for delivery of the targets identified in the strategy.

Local Wildlife Sites - are areas of land that are especially important for their wildlife. They are some of our most valuable wildlife areas. Local Wildlife Sites are identified and selected locally using scientifically-determined criteria and surveys. They are corridors for wildlife, forming key components of ecological networks. The Wildlife Trusts have worked with local authorities, statutory agencies, landowners and other local partners to establish effective systems for identifying, managing and monitoring Local Wildlife Sites.

M

Mitigation Measures – any works or actions required to be carried out by developers to reduce the impact of the development on the surrounding environment or to address particular environmental effects which would otherwise make that development unacceptable.

Mitigation measures In climate policy - mitigation measures are technologies, processes or practices that contribute to mitigation, for example, renewable energy (RE) technologies,

waste minimization processes and public transport commuting practices. See also Mitigation option, and Policies (for climate change mitigation and adaptation).

Modal Shift – a change in the means of transport, for example from use of cars to public transport, particularly applied to all travellers within an area or those travelling to a specific type of facility or destination.

Monitoring – a regular collection and analysis of relevant information in order to assess the outcome and effectiveness of policies and proposals and to identify whether they need to be reviewed or altered.

Natural Capital - The elements of nature that directly or indirectly produce value to people, including ecosystems, species, freshwater, land, minerals, the air and oceans, as well as natural processes and functions.

Natural Capital Accounting (NCA) - Provides a variety of mechanisms to calculate the total stocks and flows of natural assets, resources and services within a designated area or ecosystem, allowing environmental considerations to be taken into account in making policy and investment decisions. NCA produces formal accounts using methods and reports that are recognisable to those working within finance and management.

Nature Recovery Network - This initiative provides us with the opportunity to draw together all past works in a revised spatial format, looking to identify not merely where our special wildlife and natural habitats currently are, but also the opportunities that exist for enhancing and creating additional habitat networks and connectivity - whilst also helping to strategically inform development and growth opportunities locally, rather than simply hinder them. The Nature Recovery Network is slowly replacing the use of the Gloucestershire Nature Map in informing decisions.

National Planning Policy Framework (NPPF) – this sets out the Government's planning policies for England and how these are expected to be applied. It provides a framework within which local people and councils can produce their own distinctive local and neighbourhood plans, which reflect the needs and priorities of their communities.

Neighbourhood Plans (NP) – A plan prepared by a Parish Council or Neighbourhood Forum for a particular neighbourhood area (made under the Planning and Compulsory Purchase Act 2004). **NERC** - The Natural Environment Research Council commissions new research, infrastructure and training to advance environmental science.

Nitrate Vulnerable Zone (NVZ) - are areas designated as being at risk from agricultural nitrate pollution. They include about 55% of land in England. The Department for Environment, Food and Rural Affairs (Defra) reviews NVZs every 4 years to account for changes in nitrate concentrations.

O

P

Priority Habitat - are a range of semi-natural habitat types that were identified as being the most threatened and requiring conservation action.

Place Making – capitalises on a local community's assets, inspiration, and potential, ultimately creating good public spaces that promote people's health, happiness, and well being. Place making is both a process and a philosophy.

Planning Practice Guidance (PPG) – national guidance on planning practice, which compliments the NPPF.

Pocket Parks - are small green areas of public space, mostly seen in urban settings.

Protected Species – any species (of wildlife etc.) which, because of its rarity or threatened status is protected by statutory legislation.

Public Realm – any publicly owned streets, pathways, right of ways, parks, publicly accessible open spaces and any public and civic building and facilities.

Public Rights of Way (PROW) - Public rights of way are open to everyone at any time and give you the right to walk, ride a horse or cycle along certain routes. Some rights of way are open to vehicles.

R

Ramsar Sites – a term adopted following an international conference, held in 1971 in Ramsar in Iran, to identify wetland sites of international importance, especially as waterfowl habitat.

Regionally Important Geological & Geomorphological Sites (RIGS) – commonly referred to by their acronym RIGS are locally designated sites of local, national and regional importance for geodiversity (geology and geomorphology) in the United Kingdom. RIGS may be designated for their value to science, and to geological heritage in general, and may include cultural, educational, historical and aesthetic resources.

Register of Historic Parks & Gardens – a non-statutory list of parks and gardens of special historic interest maintained by English Heritage

Renewable Energy and Low Carbon Energy – Includes energy for heating and cooling as well as generating electricity. Renewable energy covers those energy flows that occur naturally and repeatedly in the environment – from the wind, the fall of water, the movement of the oceans, from the sun and also from biomass and deep geothermal heat. Low carbon technologies are those that can help reduce emissions (compared to conventional use of fossil fuels)

Runoff - The flow of water over the surface or through the subsurface, which typically originates from the part of liquid precipitation and/or snow/ice melt that does not evaporate or refreeze, and is not transpired.

S

Special Areas of Conservation (SACs) are those which have been given greater protection. They have been designated because of a possible threat to the special habitats or species

which they contain and to provide increased protection to a variety of animals, plants and habitats of importance to biodiversity both on a national and international scale.

Suitable alternative natural green spaces (SANGs) is a designated green area created to protect sensitive ecological sites by providing an alternative recreational space for people.

SANGs are designed to mitigate the impact of new residential developments on protected ecological areas, such as Special Protection Areas (SPAs) and Special Areas of Conservation (SACs), which are vulnerable to recreational pressures from increased footfall. By offering an attractive alternative for walking, cycling, and other outdoor activities, SANGs help divert visitors away from sensitive habitats, reducing disturbance to rare or threatened species and fragile ecosystems.

Scheduled Ancient Monument (SAM) – ancient structure, usually unoccupied, above or below the ground, which is preserved by order of the Secretary of State.

Section 106 Agreements (s106) – allow a Local Planning Authority to enter into a legally-binding agreement or planning obligation, with a land developer over a related issue (often to fund necessary improvements elsewhere).

Semi-natural & Natural Green Space – this type of open space includes woodlands, urban forestry, scrubland, grasslands (e.g. commons and meadows),wetlands, nature reserves and wastelands with a primary purpose of wildlife conservation and biodiversity within settlements. The approach is to provide easily accessible, natural and semi-natural green space for communities which, as well as its intrinsic value for biodiversity, also provides a range of other ecosystem functions and benefits. **Sequential Test (Flooding)** – a test carried out in accordance with the NPPF to demonstrate that certain land is appropriate to develop as has less flood risk,after alternative sites have been ruled out.

Settlement Hierarchy – a settlement hierarchy ranks settlements according to their size, function and their range of services and facilities. When coupled with an understanding of the possible capacity for growth, this enables decisions to be taken about the most appropriate planning strategy for each settlement.

Sink - A reservoir (natural or human, in soil, ocean, and plants) where a greenhouse gas, an aerosol or a precursor of a greenhouse gas is stored. UNFCCC Article 1.8 refers to a sink as any process, activity or mechanism which removes a greenhouse gas, an aerosol or a precursor of a greenhouse gas from the atmosphere.

Site of Special Scientific Interest (SSSI) – a site or area designated as being of national importance because of its wildlife plants or flower species and/or unusual or typical geological features. SSSIs are identified by Natural England and have protected status.

Social and Community Infrastructure – local facilities and services for the community including buildings and open spaces.

Special Area of Conservation (SAC) – are sites of European nature conservation importance designated under the Habitats Regulations.

Special Protection Area (SPA) – are sites designated under the European Commission Directive on the Conservation of Wild Birds.

Strategic Environmental Assessment (SEA) – a generic term used to describe environmental assessment as applied to policies, plans and programmes. The European 'SEA Directive' (2001/42/EC) requires a formal 'environmental assessment of certain plans and programmes, including those in the field of planning and land use which have a significant effect on the environment'.

Strategic Flood Risk Assessment (SFRA) – provides information about flood risk throughout the area of the local planning authority (LPA), either individually or combined with neighbouring LPAs. The SFRA will consider the effects of climate change on river and coastal flooding, identify the risk from other sources of flooding, and consider appropriate policies for development in or adjacent to flood risk areas. Stroud District has published level 1 and level 2 SFRA's.

Sustainability Appraisal (SA) – an appraisal of the economic, environmental and social effects of a plan from the outset of the preparation process to allow decisions to be made that accord with sustainable development.

Sustainable Development – is development which meets the needs of the present without compromising the ability of future generations to meet their own needs. The NPPF states sustainable development is about positive growth-making economic, environmental and social progress for this and future generations.

Sustainable Drainage System (SuDS) – efficient drainage system which seeks to minimise wastage of water including the use of appropriate ground cover to enable maximum penetration of clean water run- off into the ground and, where appropriate, recycling grey water within the development. Designed to minimise the impact of development on the natural water environment.

Sustainable Transport – are all forms of transport which minimise emissions of carbon dioxide and pollutants. It can refer to public transport, car sharing, walking and cycling as well as technology such as electric and hybrid cars and biodiesel.

Sustainable Transport Modes – Any efficient, safe and accessible means of transport with overall low impact on the environment, including walking and cycling, low and ultra low emission vehicles, car sharing and public transport.

Sustrans - Custodians of the National Cycle Network, a UK-wide network of traffic-free paths for everyone, connecting cities, towns and countryside, loved by the communities they serve.

T

Tree Preservation Order (TPO) – statutory protection for individual trees, groups, areas or woodlands. Any works to preserved trees require the consent of the local planning authority.

U

Urban Design – understanding the relationship between different buildings; between buildings and the streets, squares, parks, waterways and other spaces which make up the

public domain; the nature and quality of the public domain itself; the relationship of one part of a village, town or city with another part; and the pattern of movement and activity which is thereby established. **Urban Fringe** – the boundary between built up areas and the open countryside.

V

Viability – an objective financial viability test of the ability of a development project to meet its costs including the cost of planning obligations, whilst ensuring an appropriate site value for the landowner and a market risk adjusted return to the developer in delivering that project. Essentially it is the ability to attract investment and business.

W

Water Framework Directive – is a European Directive that aims to establish a framework for the protection of inland surface waters (rivers and lakes), transitional waters (estuaries), coastal waters and groundwater.

Water Standards aim to provide Green Infrastructure to effectively manage water quantity and quality, increase flood resilience, and maximise opportunities for amenity.

Wellbeing- A state of existence that fulfils various human needs, including material living conditions and quality of life, as well as the ability to pursue one's goals, to thrive, and feel satisfied with one's life. Ecosystem well-being refers to the ability of ecosystems to maintain their diversity and quality.

Wellbeing Standards aim to secure the delivery of health and wellbeing outcomes through the delivery of Green Infrastructure features. (Wellbeing includes access).

Wildlife Corridor – Areas of habitat connecting wildlife populations.

Wildlife Standards aim to ensure that Green Infrastructure allows nature to flourish, both within the boundary of development, and at a landscape scale.

The Cotswold District Green Infrastructure Strategy Update 2026 Appendices

Appendix A - Useful Cotswold District Green Infrastructure Facts, Figures and Issue

Appendix B - A list some of the key developments relating to GI in the past five years

Appendix C - Delivering Potential GI in the 17 Principal Settlements

Appendix D - Examples of GI related policies in made Neighbourhood Development Plans

Appendix A - Useful Cotswold District Green Infrastructure Facts, Figures and Issues

Wellbeing and Access Facts, Figures and Issues

- There are approximately 90,000 people living in the Cotswold District, of which, 13% of households do not have a car compared with 26% across England. (Extract taken from the OCSI, generated 19/10/20)
- Decarbonising transport is expected to be especially difficult for rural areas. This is due to the dependency on motor vehicles and the lack of secondary options.
- It has been estimated by Gloucestershire County Council that 65% of all travel to work journeys are completed by car or van. In order to make this sustainable transition, not only should motor transport be decarbonised, but there must also be viable alternatives.
- According to the OS 2017 data the total amount of green space provided by Parks and Gardens is 0.4 % compared with the England average of 0.8 %. (Extract taken from the OCSI, generated 19/10/20)
- There was one Green Flag holder, Cirencester Town Council did hold it for St Michaels Park in Cirencester. In 2023 the park was awarded it for the sixth year in a row. It is an international quality mark for parks and green spaces.
- 80% of the Cotswold District is within the Cotswold National Landscape). This is a greater coverage by a national landscape designation than any other District in England.
- Dark Skies are a key characteristic of the District and an important GI factor. Mapping produced by the CPRE in 2016 shows the Cotswolds still has good areas of dark skies, but previous mapping shows that more than 40% has been lost since 1993.
- The District falls within 3 National Character Areas (a landscape classification system led by Natural England) -106: Severn and Avon Vales; 107: Cotswolds; 108: Upper Thames Clay Vales.
- There are 969.35 miles of Public Rights of Way, which includes the Cotswold Way National Trail, Monarch Way, Diamond Way, the Millennium Way and the Thames Path National Trail.
- There are three Sustrans routes (Cycle Routes) – 45, 48, and 57 covering 67.76 miles Total length on road 63.11 miles Total length off road 4.65 miles
- The Cotswold National Landscape Voluntary wardens have created 85 self-guided walks. They cover a range of options for people from short easy routes suitable for wheelchairs such as the 'walks on wheels' series, easy access routes of up to 6 miles without stiles and a new longer route for all terrain mobility scooters. Many start from the Principal Settlements
- Imported plant pathogens will have a huge effect on the physical look of the District's landscape, for example, Ash Dieback.

- The total number of farmed land in the Cotswold District is 94,923 hectares and is worked by 782 agricultural holdings (DEFRA 2021)
- The District generally has good air quality. There are only two Air Quality Management Areas
- (AQMAs) at Thames Street in Lechlade and the Air Balloon Junction at Birdlip. The Cotswold Climate Change Emergency Strategy identifies road traffic as the biggest contributor to pollution in the District at just over 45%. Work began on the missing link (air balloon bypass) in Spring 2023 and is set to finish in Spring 2027.
- The North and South Cotswold GP localities have the oldest populations in Gloucestershire. A high proportion of patients suffer from long-term health problems, particularly conditions linked to age. It is estimated that Cotswold has around 1,500 people aged 65 and over with dementia. This forecast is to rise to 2,500 by 2030. Comparatively high rates of diabetes are also experienced in the District. (Understanding Cotswold JSNA 2015)
- Approximately 9% of households live in 'Fuel Poverty', compared to the national average of 11.1%. (Department for Energy and Climate Change 2016)
- The averages for the highest prevalent diseases in the Cotswold District compared to the England average are Asthma - CDC 6.7 v England 5.9. High Blood Pressure - CDC 15.3 v England 14. Not above the England average, but still high is Depression - CDC 8.3 v England 9.9. Obesity - CDC 8.2 v England 9.8. (Extract taken from the OCSI, generated 19/10/20)

Water Facts, Figures and Issues

- The majority of the district is a surface water and Nitrate Vulnerable Zone (NVZ) as well as a Drinking Water Safeguard Zone
- There are 51 river bodies and one reservoir
- The River Thames, the Thames and Severn Canal and the Cotswold Lakes are in or pass through the district.
- Surface water quality is generally good in the District; however the Water Cycle Study states there are failures of Water Framework Directive standards. There are some very high concentrations of phosphate, affecting the potential for watercourses to achieve good ecological status.
- Cotswold is in the 'SWOX' the Swindon-Oxford Water Resource Zone (WRZ) which is the second largest WRZ in Thames area after London.
- The Thames area and SE is classed as 'seriously water stressed' and one of the driest regions.
- There are over 180 lakes, set over 42 square miles formed as a result of mineral extraction in the Cotswold Lakes.
- The watercourses in the District are part of two main catchments – the Thames and the Severn
- There was a flooding incident in December 20/ January 21.

- By providing GI as a means of improving health and wellbeing naturally it has the benefit of potentially reducing levels of pharmaceuticals received through the sewage system.

Wildlife Facts, Figures and Issues

- There are 37 Sites of Special Scientific Interest;
- There are over 260 locally designated Local Wildlife Sites;
- The Cotswold grasslands are home to a large number of rare and declining plants including many species of orchid and other flowers including Pasque Flower and Cotswold Pennycress.
- Cotswold grassland also supports nationally rare butterflies such as the Chalkhill Blue and the Duke of Burgundy. Wildflower grassland was created by human activity and has developed since early farmers cleared forested areas to make grazing land for their livestock. In the 1930s 40% of the Cotswolds was covered in Jurassic limestone grassland, today that has fallen to less than 1.5%
- Natural England has reviewed the boundaries of the Sites of Scientific Interest in the Cotswold Lakes to better reflect important bird populations.
- There are 20,000 birds over winter in the Cotswold Lakes including the Goldeneye and the Smew.
- There are seven Gloucestershire Wildlife Trust reserves in the District.
- The key habitat types for the District are – ancient woodland, unimproved limestone grassland, unimproved and good semi-improved neutral grassland, traditional orchards, wetlands, rivers, streams and standing open water.
- There are a range of European protected species found within the District including - bat species, great crested newts, dormouse, otter and white clawed or freshwater crayfish.
- The Cotswold District has 13646 Ha, of tree cover, 11% of the total area of the District. To reach the countywide target set in the Gloucestershire Tree Strategy (2020) of 20 % tree cover would require an increase of 6,600 ha of tree cover in the district, that is a 50 % increase over the existing tree cover.

Play Space

The 2017 GI, Open Space and Play Space Strategy identified that there were 40 play areas in the 17 principal settlements. Each of the play areas were assessed as a result of site visits in 2016. The quality standards used included assessing the mix of play experiences, litter bin provision, benches and seats, safety of site, parking, dog free area, the location, lighting and disabled access.

Allotments

Applications for council-run allotments in England soared during the coronavirus pandemic. In August, 2021 the National Allotment Society (NAS) reported that 40% of English councils responded to a survey to say that they had experienced a "significant uplift" in applications

to join waiting lists in the April of that year. This trend has continued, in 2023 it is reported that the steady increase is down to the cost of living crisis, the increased interest in "growing your own" during covid and a better awareness of sustainable growing and eating. An increase in interest in allotments was reported by many of Parish and Town Councils.

Appendix B - Timeline for the Green Infrastructure Strategy and relevant Legislation and Guidance

- 2015/16 - Desk top research and community engagement work carried out in for the CDC GI, Open Space and Play Space Strategy 2017
- 2017 - The Conservation of Habitats and Species Regulations 2017 and the Water Framework Directive.
- 2018 - Building with Nature - National benchmark developed.
- 2018 - The 25 Year Environment Plan
- 2019 - The publication of the National Design Guide.
- 2019/20 - work on the update to the 2017 document commenced.
- 2021 - July NPPF update.
- 2021 - The update to the National Design Guide.
- 2021 - Publication of the Draft Green Infrastructure Strategy.
- 2021 - Monday 14 June to Monday 16 August (8 weeks) - Consultation on the Green Infrastructure Strategy.
- 2021 - Building with Nature refresh.
- 2021 - The Environment Act.
- Autumn/Winter 2021 - Updates and amendments to the Draft GI Strategy.
- 2021-2024 - The England Tree Strategy and Action Plan.
- 2021-2024 - The Pollinator Strategy.
- 2022 - The Gloucestershire Green Infrastructure Framework updated.
- 2021/22 - GI Draft Strategy Consultation Response Report.
- Friday 4th February 2022 to Sunday 20th March 2022 - Local Plan Partial update 'issues and options' consultation.
- 2022 - Responses to Local Plan Partial Update 'Issues and Options' Consultation, including GI Draft Strategy Consultation Response Report.
- 2023 - Publication of Natural England's Green Infrastructure Framework and revised access standards.
- 2023 - September NPPF update.
- 2023 - October/November final updates to the final Green Infrastructure Strategy.
- 2023/24 - Local Plan policies redrafting to reflect legislative and national guidance updates.

Please note that this is not an exhaustive list.

Appendix C - Delivering Potential GI in the 17 Principal Settlements

In addition to actions at a District level, consideration has been given to GI actions that could be delivered at a settlement level, focusing on those larger principal settlements where development is most likely to come forward. These were derived from the existing Local Plan or came forward as part of the 2018/19 community consultation. Further amendments have been made as a result of findings from the consultation of the Draft Green Infrastructure Strategy in 2021. Other settlements in the District are likely to have similar actions and/or priorities.

South of the District

Cirencester

Maps Identifying Key Wellbeing, Water & Wildlife Assets	
Main GI Wellbeing key Assets:	Numerous parks and public open spaces, including the registered Cirencester Park
Main GI Water Assets:	The Abbey Grounds lake and, The River Churn is the first tributary river of the River Thames
Main GI Wildlife Assets:	The City Bank Local Nature Reserve. The ancient woodlands within Cirencester Park and the River Churn

Overview of information collated in 2018/19 The ANGSt Standards		
ANGSt Standard	**Meets ANGSt Standard?**	**Description and Name of Site**
2 ha + within 300m	No – deficit north, north east, & west	Four sites – Abbey Grounds, Kingshill South, City Bank & Amphitheatre
20 ha – 100 ha site within 5KM	No	No Sites
100 ha site within 5KM	No	No Sites
500 + hectares site within 10km of home	No	Cirencester Park is 1055 hectares and is the largest publicly accessible open space in Cirencester. It should be noted that this site could be closed to the public at any point as it is only open due to the owner's goodwill, the Bathurst Estate. Charges for entry will apply in 2024 for some visitors.

Additional Information from Cirencester Town Council	
Other parks	Cirencester Abbey Grounds, Four Acres, Two Acres, The Amphitheatre, St Michael's Field (Green Flag holder since 2017)
Local Nature Reserve	City Bank Nursery awarded 2018
Public Rights of Way	11,780 metres within 2km buffer of the town
Wild Town Project	Cirencester is taking part in the Wild Towns Project

Opportunities for GI enhancements on the three themes of water, well-being and wildlife

Cirencester Town Council did not request any major changes as a result of the Draft GI Strategy consultation, which took place in 2021. Cirencester Town Council took part in a consultation workshop. An overview of the comments made can be found here.

Wellbeing	Improve and enhance new routes to amenity green space to encourage use and enjoyment for existing and new communities. Consider activities to enhance use and enjoyment of the amenity green spaces, e.g. forest school.
Water	Improve school and hospital grounds for biodiversity value, especially urban species.
Wildlife	Continue to work on improvements to the City Bank Local Nature Reserve and encourage wildlife enhancement along the neighbouring Daglingworth stream.

Down Ampney

Maps Identifying Key Wellbeing, Water & Wildlife Assets	
Main GI Wellbeing key Assets:	Numerous PROW and permissive paths, including a circular walk of the village. Amenity green space, Community Garden and Millennium Recreation Area
Main GI Water Assets:	The Ampney Brook. Further mineral extraction may lead to the creation of new open water bodies in the future
Main GI Wildlife Assets:	Stubs Copse and Estate Yard Copse; Down Ampney Pits KWS and other areas of priority habitat – mainly woodland. (The whole of Down Ampney falls within the Cotswold Water Park NIA

Overview of information collated in 2018/19 The ANGSt Standards		
ANGSt Standard	**Meets ANGSt Standard?**	**Description and Name of Site**
2 ha + within 300m	No – deficit north, north east	1 site – land off Oak Road
20 + ha – 100 ha site within 5KM	No	North Meadow - outside of Cotswold District Boundary
100 ha site within 5KM	No	No Sites
500 + hectares site within 10km of home	No	Cirencester Park - Private Park with access granted by the Bathurst Estate.

Additional Information	
Public Rights of Way	7388 metres within a 2KM buffer of Down Ampney

Opportunities for GI enhancements on the three themes of water, well-being and wildlife

Down Ampney Parish Council did not request for updates, as a result, of the GI consultation that took place in 2021.

Wellbeing	Improve and enhance new routes to amenity green space to encourage use and enjoyment for existing and new communities. Consider activities to enhance use and of the amenity green spaces, e.g. forest school
Water	Continue work on Ampney Brook as part of wider intervention quality of Upper Thames.

Wildlife	Survey of House Martin, Swifts and Swallow nests to identify where to concentrate on enhancements. Encourage monitoring to adopt a management plan to secure flourishing populations.

Fairford

Maps Identifying Key Wellbeing, Water & Wildlife Assets	
Main GI Wellbeing key Assets:	The Thames and Severn Way, Walnut Tree Playing Field, Coln House Playing Field.
Main GI Water Assets:	The River Coln, The Cotswold Water Park, Horcott Lakes
Main GI Wildlife Assets:	Fairford falls within the CWP NIA. There are a number of standing open water Key Wildlife Sites, as well as other areas of priority habitat, including woodland and floodplain grazing marsh.

Overview of information collated in 2018/19 The ANGSt Standards		
ANGSt Standard	**Meets ANGSt Standard?**	**Description and Name of Site**
2 ha + within 300m	No – deficit all of settlement	None
20 + ha – 100 ha site within 5KM	No	None
100 ha site within 5KM	No	None
500 + hectares site within 10km of home	No	None

Additional Information	
Public Rights of Way	17728 metres within 2km buffer of the town

Opportunities for GI enhancements on the three themes of water, well-being and wildlife Fairford Town Council requested a few factual changes, as a result, of the Draft Green Infrastructure Strategy consultation, which took place in 2021.	
Wellbeing	Managing arc of land around the south of town to improve Green infrastructure access to special features e.g. non-designated heritage assets. Incorporate Fairford park and green gap between Fairford and Horcott. As well as the Coln House Playing Field.
Water	Explore the enhancements of the river bank with the aim of creating and enhancing areas for target species. Including the river bank opposite the Coln House School playing field

Wildlife	Encourage habitat for hedgehogs which have been recorded in the area. Interventions in new and existing built environment e.g. gaps in fencing and hedgehog boxes.

Kemble

Maps Identifying Key Wellbeing, Water & Wildlife Assets	
Main GI Wellbeing key Assets:	Kemble Community Garden, Special Landscape, Clayfurlong Playing Field.
Main GI Water Assets:	The Upper Thames
Main GI Wildlife Assets:	Deciduous woodland, ancient and semi natural woodland, SSSI along the Kemble active railway line. Old Mill Farm lowland meadow.

Overview of information collated in 2018/19 The ANGSt Standards		
ANGSt Standard	**Meets ANGSt Standard?**	**Description and Name of Site**
2 ha + within 300m	No – deficit all of settlement	None
20 + ha – 100 ha site within 5KM	No	Clattinger Farm SAC, North Meadow SAC, Cleveland Lakes. All outside Cotswold District Boundary.
100 ha site within 5KM	No	None
500 + hectares site within 10km of home	No	Cirencester Park - Private Park with access granted by the Bathurst Estate.

Additional Information	
Public Rights of Way	10,484 metres within 2km buffer of the village

Opportunities for GI enhancements on the three themes of water, well-being and wildlife Kemble Parish Council did not request any changes as a result of the Draft Green Infrastructure Strategy consultation that took place in 2021.

Wellbeing	Using GI to increase attractiveness of routes for walking and cycling between Kemble and Cirencester (and the Water Park) Also incorporate Thames Path along the river.
Water	Encourage creation of small ponds in gardens/community gardens to increase surface area which can contribute to water management and habitat for wildlife.
Wildlife	Encourage creation of small ponds in gardens/community gardens to increase surface area which can contribute to water management and habitat for wildlife

Lechlade-on-Thames

Maps Identifying Key Wellbeing, Water & Wildlife Assets	
Main GI Wellbeing key Assets:	The National Trail, Coln Country Park and Sports Grounds
Main GI Water Assets:	The River Thames, River Coln, River Leach and the lakes around Lechlade.
Main GI Wildlife Assets:	Previous mineral sites have over time become valuable for wildlife. A good example includes the lakes that form part of the Edward Richardson & Phyllis Amey Reserve at Lechlade.

Overview of information collated in 2018/19 The ANGSt Standards		
ANGSt Standard	**Meets ANGSt Standard?**	**Description and Name of Site**
2 ha + within 300m	No – deficit in central area	2 sites Riverside Park & Edward Richardson & Phyllis Amey Nature Reserve
20 + ha – 100 ha site within 5KM	No	None
100 ha site within 5KM	No	None
500 + hectares site within 10km of home	No	None

Additional Information	
Public Rights of Way	14,386m metres within 2km buffer of the town
Nature Reserve	Eric Richardson & Phyllis Amey Nature Reserve & designated Local Green Space.

Opportunities for GI enhancements on the three themes of water, well-being and wildlife

Lechlade Town Council updated the opportunities for GI enhancements as a result of the Draft GI Strategy consultation, which took place in 2021. Local walking maps are in the process of being produced for the area. Some maps are available from Lechlade Library at a minimal cost. Lechlade Town Council took part in a consultation workshop. An overview of the comments made can be found here.

Wellbeing	Himalayan Balsam is a problem for the wellbeing, water and wildlife of Lechlade. The infestation is affecting the accessibility of riverside walks, destroying the viability of native flora and fauna on riverbanks. Local walking maps are being created. Some maps have been created and are available from Lechlade Library at a minimal cost.
Water	Create new habitats for water voles, otters and newts
Wildlife	Improve local green space for key species

South Cerney

Maps Identifying Key Wellbeing, Water & Wildlife Assets	
Main GI Wellbeing key Assets:	Bow Wow Lane, Sailing Club, Upper Up Playing Fields, Sustrans Route 45, The Allotments at Upper Up, The Thames and Severn Way.
Main GI Water Assets:	Cotswold Water Park, The River Churn and Cerneywick Brook.
Main GI Wildlife Assets:	The Dismantled Railway, four SSSI's, The disused airfield, A Strategic Nature Reserve, The River Churn Corridor, a floodplain grazing marsh.

Overview of information collated in 2018/19 The ANGSt Standards		
ANGSt Standard	**Meets ANGSt Standard?**	**Description and Name of Site**
2 ha + within 300m	No – deficit to south and south east	1 - Upper Up Playing Field.
20 + ha – 100 ha site within 5KM	No	Clattinger Farm SAC , North Meadow SAC. All outside Cotswold District Boundary.
100 ha site within 5KM	No	None - Clevedon Lake is outside Cotswold District Boundary
500 + hectares site within 10km of home	No	Cirencester Park - Private Park with access granted by the Bathurst Estate.

Additional Information	
Public Rights of Way	17,667 metres within 2km buffer of the town

Opportunities for GI enhancements on the three themes of water, well-being and wildlife. South Cerney Parish Council did not request any changes or updates, as a result, of the 2021 GI consultation.

Wellbeing	Improve links to playing fields and consider how playing fields are managed to consider any enhancements which would make the park more enjoyable to use.
Water	Investigate with the assistance of the appropriate bodies the reinstating of review tributaries in South Cerney.
Wildlife	Improving biodiversity measures at the golf club.

Tetbury

Maps Identifying Key Wellbeing, Water & Wildlife Assets	
Main GI Wellbeing key Assets:	Thirteen open spaces including two school playing fields, Allotments, Amenity Green Spaces and Sports Grounds, 3 play areas located at Dolphins Recreation Ground, Webb Road and Suffolk Close.
Main GI Water Assets:	The River Avon, Tetbury branch
Main GI Wildlife Assets:	Priority habitat along the dismantled railway. Deciduous woodland. 11 public open spaces including St Saviours Churchyard and the Cutwell Valley.

Overview of information collated in 2018/19 The ANGSt Standards		
ANGSt Standard	**Meets ANGSt Standard?**	**Description and Name of Site**
2 ha + within 300m	No- deficit, north, east & south	1 – Recreation Ground
20 + ha – 100 ha site within 5KM	No	None
100 ha site within 5KM	No	Westonbirt Arboretum - Cost for entry
500 + hectares site within 10km of home	No	Minchinhampton Common - Outside Cotswold District Boundary

Additional Information	
Public Rights of Way	22,522m within 2km buffer of the town

Opportunities for GI enhancements on the three themes of water, well-being and wildlife Tetbury Town Council and the Climate Strategy Working Group updated the opportunities for GI enhancements as a result of the 2021 GI consultation.

Wellbeing	Extend the railway path towards Cirencester and Kemble and greater focus on the public use of green spaces, including Preston Park and the development of forest schools.
Water	Improve riparian habitats along the railway path and improve the opportunity for biodiversity along the River Avon.
Wildlife	supports a significant increase in wildflower verges around Tetbury.

Middle of the District

Andoversford

Maps Identifying Key Wellbeing, Water & Wildlife Assets	
Main GI Wellbeing key Assets:	The Playing Fields and Playground
Main GI Water Assets:	The River Coln, lakes in Sandywell Park
Main GI Wildlife Assets:	The line of the dismantled railway line, three Key Wildlife Sites and four National Forest Inventory areas.

Overview of information collated in 2018/19 The ANGSt Standards		
ANGSt Standard	**Meets ANGSt Standard?**	**Description and Name of Site**
2 ha + within 300m	No – deficit all of settlement	None
20 + ha – 100 ha site within 5KM	No	Lineover Wood - footpaths, but not open access
100 ha site within 5KM	No	None
500 + hectares site within 10km of home	No	None

Additional Information	
Public Rights of Way	28,646m within 2km buffer of the village
	Limited amount of open space; the largest site is the Playing Field with a small amount of space available on the Temple Fields Estate. Both sites, collectively measure under 2ha.

Opportunities for GI enhancements on the three themes of water, well-being and wildlife

Andoversford Parish Council did not request any changes or updates as a result of the 2021 GI consultation.

Wellbeing	Linking access from school to new housing in the centre of the village – safe routes to school. Creation of new allotments in any new development.
Water	Reduce surface runoff by creating opportunities to collect water; for example installing water butts on Parish buildings with the view to installing Rain Water Harvesting if/when funds allow.

Wildlife	Work with landowners to improve bankside quality. Consider indicator species e.g. otters and bats.

Bourton-on-the-Water

Maps Identifying Key Wellbeing, Water & Wildlife Assets	
Main GI Wellbeing key Assets:	Greystones Farm Nature Reserve, Monarch's Way, three allotments, three play areas, an orchard.
Main GI Water Assets:	The Rivers Dickler, River Eye and River Windrush and numerous lakes.
Main GI Wildlife Assets:	Priority habitat, coastal and floodplain grazing marsh, Salmonsbury meadow SSSI.

Overview of information collated in 2018/19 The ANGSt Standards		
ANGSt Standard	**Meets ANGSt Standard?**	**Description and Name of Site**
2 ha + within 300m	No – deficit all of settlement	None
20 + ha – 100 ha site within 5KM	Yes	Greystones Farm Nature Reserve - Free access if within walking distance. No parking on site, nearby public car parks serve the site.
100 ha site within 5KM	No	None
500 + hectares site within 10km of home	No	Sherborne Park - Cost for entry

Additional Information	
Public Rights of Way	34,559m within 2km buffer of the village

Opportunities for GI enhancements on the three themes of water, well-being and wildlife

Bourton on the Water Parish Council did not request any changes as a result of the 2021 GI consultation. However, they did take part in a consultation workshop. An overview of the comments made can be found here

Wellbeing	Improve access – green active travel routes to Greystones, Gloucestershire Wildlife Trust Nature Reserve.
Water	Improve the river corridor for biodiversity, for example not cutting bankside vegetation too short. Leaving the grass to grow longer provides cover for wildlife including water voles.
Wildlife	Increase resilience of species. Alleviating recreational pressure on Greystones by creation/enhancement of new areas (e.g. Country Park) and optimising other sites in settlement for species protected at Greystones

Northleach

Maps Identifying Key Wellbeing, Water & Wildlife Assets	
Main GI Wellbeing key Assets:	Allotments, Amenity Green Space, The Monarch Way and The Diamond Way, Sustrans Route 48
Main GI Water Assets:	The River Leach,
Main GI Wildlife Assets:	Local Wildlife Site, Priority habitat - good quality semi improved grassland

Overview of information collated in 2018/19 The ANGSt Standards		
ANGSt Standard	**Meets ANGSt Standard?**	**Description and Name of Site**
2 ha + within 300m	No	2 – King George Field, Water meadow, but deficit all of settlement - see wellbeing map.
20 + ha – 100 ha site within 5KM	No	None
100 ha site within 5KM	No	None
500 + hectares site within 10km of home	No	Sherborne Park - Cost for entry

Additional Information	
Public Rights of Way	32,495 m within 2km buffer of the village

Opportunities for GI enhancements on the three themes of water, well-being and wildlife

The GI enhancements, as listed below, were updated by Northleach with Eastington Town Council as a result of the 2021 GI consultation. Northleach Town Council took part in a consultation workshop. An overview of the comments made can be found here

Wellbeing	Enhance green ring around the town for non-car access
Water	Improve riparian habitat along the edge of the river.
Wildlife	Improve wildlife value of Forte woodland.

Stow-on-the-Wold

Maps Identifying Key Wellbeing, Water & Wildlife Assets		
Main GI Wellbeing key Assets:	The allotments, cricket field and recreation ground, Gloucestershire and Monarch's Way, Spring Gardens Allotments, QEII and King George's Playing Fields,	
Main GI Water Assets:	Given its hilltop location, there are no significant water assets in Stow on the Wold although the River Dickler is near to the Parish boundary.	
Main GI Wildlife Assets:	Priority habitat including areas of deciduous woodland	
Overview of information collated in 2018/19 The ANGSt Standards		
ANGSt Standard	**Meets ANGSt Standard?**	**Description and Name of Site**
2 ha + within 300m	No	2, QE2 Field & King Georges Field - there is a deficit in the central area. See wellbeing map
20 + ha – 100 ha site within 5KM	No	None
100 ha site within 5KM	No	None
500 + hectares site within 10km of home	No	None
Additional Information		
Public Rights of Way	9,056m within 2km buffer of the village	
Opportunities for GI enhancements on the three themes of water, well-being and wildlife. Stow on the Wold Town Council updated the opportunities for enhancements, as a result,of the 2021 GI consultation. Updates to the maps were also made.		
Wellbeing	Increase access to GI in all new development by considering non-physical access (i.e. auditory and visual access), which is particularly important for older people	
Water	Make the riverside walk from Stow on the Wold along the Dickler more accessible	
Wildlife	Enhance King George's & QEII Playing Fields for wildlife	

Upper Rissington

Maps Identifying Key Wellbeing, Water & Wildlife Assets		
Main GI Wellbeing key Assets:	Cate Park – formal park, Firefly Walk and Folland Park	
Main GI Water Assets:	Cate Britton Pond and Hazelford Brooks.	
Main GI Wildlife Assets:	Ansell's Pasture, limestone grassland between Ansell's copse and Smith Barry Circus / Crescent	
Overview of information collated in 2018/19 The ANGSt Standards		
ANGSt Standard	**Meets ANGSt Standard?**	**Description and Name of Site**
2 ha + within 300m	Partially – deficit, south east area	5 – Folland Park, The Rec, Godfrey's Ground & combined – Cate Britain Pond, Ansell's Hill Copse, Peaks Coppice & Victoria Country Park
20 + ha – 100 ha site within 5KM	No	None
100 ha site within 5KM	No	None
500 + hectares site within 10km of home	No	Sherborne Park - cost for entry
Additional Information		
Public Rights of Way	13, 189m within 2km buffer of the village	
Opportunities for GI enhancements on the three themes of water, well-being and wildlife Upper Rissington Parish Council did not request any changes, as a result, of the 2021 GI consultation.		
Wellbeing	Create green routes across the settlement to community facilities such as school and shops. Link the village to the network of rights of way in the area through targeted creation of new paths. These are needed because the original military planning of Upper Rissington as a secure site. Build a Multi-Use Games Area for young people. With such a young population (30 per cent under 18) new facilities for young people are a high priority.	

Water	Manage and operate Cate Britain Pond to maximise its benefit to wildlife in the heart of the village whilst attenuating storm flows and providing a source of recycled water. Protect head waters of Hazelford Brooks to improve the quality of the streams. Advocate for the most stringent standards for the effluent from Upper Rissington STW as it discharges into the headwaters of Hazelford Brook with very low levels of dilution.
Wildlife	Protect and enhance the species rich limestone grassland in Godfrey's Grounds and Ansell's pasture. These areas already have a high diversity of plants including orchids but need proper management. Selectively plant new trees to replace existing protected trees reaching the end of their life. Protect areas of ancient woodland within the village to encourage wildlife. Advocate with the RAF to manage large areas of grassland on the Little Rissington Airfield to encourage a greater diversity of flora and fauna.

North of the District

Blockley

Maps Identifying Key Wellbeing, Water & Wildlife Assets	
Main GI Wellbeing key Assets:	A central Amenity Green Space, Station Road Allotment and Sports Grounds, Diamond Way and Heart of England Way
Main GI Water Assets:	The Blockley Brook runs down through the centre of the town
Main GI Wildlife Assets:	LGS 1, Local Green Space Blockley Mill (also known as the Water Board site). |Norcombe Wood, The Warren Wood.

Overview of information collated in 2018/19 The ANGSt Standards		
ANGSt Standard	**Meets ANGSt Standard?**	**Description and Name of Site**
2 ha + within 300m	No – all of settlement	None
20 + ha – 100 ha site within 5KM	No	Dovers Hill - Cost for parking
100 ha site within 5KM	No	Batsford Estate - Cost for entry
500 + hectares site within 10km of home	No	None

Additional Information	
Public Rights of Way	28,881 within 2km buffer of the village

Opportunities for GI enhancements on the three themes of water, well-being and wildlife

The GI enhancements, as listed below have been updated by Blockley Parish Council, as a result of the 2021 GI consultation. Reference should also be made to Blockley Parish Council Draft Climate and Ecological Action Plan, October 2021

Wellbeing	Target additional benches and seating in spaces for nature (creating wellbeing opportunities by linking seating to spaces for nature) Supporting the opening-up of allotments to the wider community; the site has been secured for 999 years and presents fantastic opportunities for groups other than plot holders to access this asset. Maintain and update the play infrastructure and seating in parish parks. Enhance opportunities for wildlife within parks and play areas, while protecting the overall character of the area.

	Creating safe cycle routes between Blockley and surrounding settlements
Water	Enhance existing mill ponds to increase opportunities for wildlife. ensure water courses are protected by retaining vegetation buffers even for small scale development.
Wildlife	Improving quality of habitat along the Brook to connect to habitat to the south of the settlement. Provide for key species in new developments Hedgerow restoration/extensions. Improve the cemetery for biodiversity. Improve roadside verges and other pockets/strips of land for wildlife, particularly pollinators. Survey for and improve nesting opportunities for birds eg
	swifts, swallows, house martins, barn owls etc Improve habitat connectivity for hedgehogs

Chipping Campden

Maps Identifying Key Wellbeing, Water & Wildlife Assets		
Main GI Wellbeing key Assets:	Amenity Green Spaces, Playing Fields, Allotment, Ernest Wilson Gardens, Heart of England Way, Monarch's Way and Cotswold Way.	
Main GI Water Assets:	The Cam runs through and adjacent to the Town.	
Main GI Wildlife Assets:	The Campden Wood, ancient woodland, traditional orchards,	
Overview of information collated in 2018/19 The ANGSt Standards		
ANGSt Standard	**Meets ANGSt Standard?**	**Description and Name of Site**
2 ha + within 300m	No – deficit east and north east of settlement	None
20 + ha – 100 ha site within 5KM	No	Dovers Hill - Cost for parking
100 ha site within 5KM	No	Hidcote - Cost for entry
500 + hectares site within 10km of home	No	None
Additional Information		
Public Rights of Way	26,730 within 2km buffer of the village	
Opportunities for GI enhancements on the three themes of water, well-being and wildlife Chipping Campden Town Council did not request any changes ,as a result, of the 2021 GI consultation.		
Wellbeing	Creation of circular walking/cycling (active travel) route around the settlement i.e. Station Road/Aston Road towards Hoo Lane. Linking up to the Cotswold Way and parks and open spaces.	
Water	Look into the possibilities for further improvements along the River Cam that will encourage new habitats for key species such as water voles.	
Wildlife	Provision of key species in any new development e.g. swift boxes.	

Mickleton

Maps Identifying Key Wellbeing, Water & Wildlife Assets	
Main GI Wellbeing key Assets:	The Allotment, Play Ground and Sports Grounds, Heart of England Way, Sustrans route 442,
Main GI Water Assets:	Norton Brook, Gran Brook
Main GI Wildlife Assets:	Mickelton Woods and the line of the dismantled railway line, SSSI Campden Tunnel Gravel Pitt

Overview of information collated in 2018/19 The ANGSt Standards		
ANGSt Standard	**Meets ANGSt Standard?**	**Description and Name of Site**
2 ha + within 300m	No – deficit all of settlement	None
20 + ha – 100 ha site within 5KM	No	Dovers Hill - Cost for parking
100 ha site within 5KM	No	Hidcote - Cost for entry
500 + hectares site within 10km of home	No	None

Additional Information	
Public Rights of Way	23,547 within 2km buffer of the village

Opportunities for GI enhancements on the three themes of water, well-being and wildlife Mickleton Parish Council has updated their opportunities for GI enhancements, as a result, of the 2021 GI consultation.	
Wellbeing	Promote safe walking and cycling routes
Water	Encouraging rainwater collection and its domestic use
Wildlife	Re-wilding of verges and small open spaces as well as tree and hedgerow planting on public land with the help of Woodland Trust grants.

Moreton-in-Marsh

Maps Identifying Key Wellbeing, Water & Wildlife Assets	
Main GI Wellbeing key Assets:	Two Parks, Allotments, Amenity Green Space and Sports Grounds and Playing Fields. Monarch's Way, Diamond Way, Sustrans Route 48
Main GI Water Assets:	River Evenlode, balancing ponds
Main GI Wildlife Assets:	Blenheim Park and Queen Victoria Gardens, Good quality semi improved grassland

2 ha + within 300m	No	2, Queen Victoria Gardens & Blenheim Open Space – deficit south & east of settlement
20 + ha – 100 ha site within 5KM	No	None
100 ha site within 5KM	No	Batsford Estate - Cost for entry
500 + hectares site within 10km of home	No	None

Additional Information	
Public Rights of Way	15,274 within 2km buffer of the village

Opportunities for GI enhancements on the three themes of water, well-being and wildlife

The GI enhancements, as listed below, were suggestions given by the GI team. Moreton in Marsh Town Council updated factual information and prepared a detailed response to the 2021 GI consultation. Moreton in Marsh Town Council also took part in a consultation workshop. An overview of the comments made can be found here

Wellbeing	Consider creation of a new Country Park to serve the North Cotswolds, e.g. how can any new development coming forward contribute to it.
Water	Enhancing water courses in public open spaces for the benefit of Green Connectivity Network and enhance role of existing water features for water and surface water management
Wildlife	Consider any improvements to churchyards & cemeteries to improve wildlife.

Willersey

Maps Identifying Key Wellbeing, Water & Wildlife Assets		
Main GI Wellbeing key Assets:	Amenity Green Spaces, Playgrounds, Registered Common land and Allotments Willersey has extensive allotments on land known as Terrify and have been the village allotments for centuries.	
Main GI Water Assets:	The Duck Pond.	
Main GI Wildlife Assets:	The Cotswold Scarp Nature Improvement area limestone grassland lowland beech and yew woodland as well as deciduous woodland areas.	
Overview of information collated in 2018/19 The ANGSt Standards		
ANGSt Standard	**Meets ANGSt Standard?**	**Description and Name of Site**
2 ha + within 300m	No – deficit all of settlement	None
20 + ha – 100 ha site within 5KM	No	None
100 ha site within 5KM	No	None
500 + hectares site within 10km of home	No	None
Additional Information		
Public Rights of Way	15,274 within 2km buffer of the village	
Opportunities for GI enhancements on the three themes of water, well-being and wildlife The GI enhancements, as listed below, were suggestions given by the GI team. The Council were happy to accept these suggestions. In response to the 2021 GI consultation the Parish Council highlighted the importance of the local allotments. Willersey PC took part in a consultation workshop. An overview of the comments made can be found here		
Wellbeing	Improve landscape of park for amenity and biodiversity value, e.g. use of hard and soft features.	
Water	Manage surface water runoff along the high street with the creation of swales, rain gardens and tree planting.	

Wildlife	Improve high street (roadside verges) for biodiversity – bees, butterflies and other pollinators by considering change of management and planting pollinator friendly plants. For example, pockets/swathes of wildflowers and trees, (planting of trees links to Water measures)

Appendix D - Examples of GI related policies in made Neighbourhood Development Plans

As of June 2026, there are nine made Neighbourhood Development Plans (NDPs) in the District with eleven further NDPS in development. Some of these include policies with GI themes. More detail on Neighbourhood planning can be found on the CDC website.

Examples of GI related policies in made Neighbourhood Development Plans

1. Overview and Introduction to Local Green Spaces

1.1 Local Green Space (LGS) allocations are a planning designation designed to protect green areas of particular importance to local communities. It offers sites that are important to a local community, special protection against development. Once designated the development restrictions that apply to the Green Belt, also apply to Local Green Space. Development cannot take place except in very special circumstances.

1.2 The purpose of this report is to evaluate the Local Green Spaces that have been put forward for designation in the Local Plan 2025 – 2043 by Town and Parish Councils in the district. A variety of community spaces, allotments, play areas, recreation grounds, walks, a quarry, woodland, green spaces within housing estates to formal green spaces have been nominated.

1.3 Some of the green spaces can be accessed by their community, and some cannot be accessed, but all are important to the community in which they serve. Once a space has been allocated and adopted in a Local Plan, the allocation does not allow access to the site if it is privately own. What it does is preserve the importance of the site as it exists for the community who nominated it.

1.4 Listed below are the nominated sites that will go forward in the Local Plan 2026-2043 for Local Green Space designation.

- Ampney Crusis - The Cricket Field and Woodland next to the Cricket Field.
- Bibury – The Upper and Lower Kitchen Garden.
- Bledington – The land next to the village Hall.
- Bourton on the Water - Springvale Allotments, Conigers footpath – Ridge and Farrow Field, Burghfield House Field, Bourton Chase – Phase 3 – Public Open Space.
- Coates – Coates Meadow.
- Didmarton – Didmarton Playing Field.
- Donnington – Stonehill Quarry.
- Ebrington - Saxon Fields.
- Fairford – The Park Close/ Park Close Pocket Park, Faulkers Close, Honeybone Green Space & Play Area, Keble Fields, Milking Path.
- Kempsford - Hazel View Recreation Ground, Wakefield Green.
- Kingscote - The Matara.
- Leighterton - Play Space.
- Little Rissington – Sweeting Corner.
- Naunton – Naunton Playing Field.
- Poulton – Ranbury Site B & C
- Tetbury – Preston Park, Berkeley Wood, The Knapp
- Willersey – Orchard Ley

1.5 Listed below are the nominated sites that will not go forward in the Local Plan 2026-2043 for Local Green Space designation.

- Dunfield – Green Space.
- Bourton on the Water – Greystones Fields nearest Moors Lane.
- Lower Oddington – Land to the Rear of the Village Hall.
- Lechlade - Butlers Field.
- Poulton – Ranbury Sites A, Butts Field.

1.6 The Natural Environment White Paper (The Natural Choice): securing the value of nature (2011) highlighted "the importance of green spaces to the health and happiness of local communities".

1.7 Green spaces, particularly natural green spaces, located close to local people provide a range of social, environmental, and economic benefits, including –

- improved mental and physical health
- increased social activity
- increased physical activity
- reduced crime
- improvements to children's learning
- increased voluntary action
- improved community cohesion and sense of belonging
- potential for local food growing
- more attractive places to live, work, play, visit and invest
- enhanced opportunities for wildlife habitats and wildlife corridors
- climate change adaptation for example by flood alleviation

1.8 The White Paper recommended that a new Green Areas designation be introduced that would give local people an opportunity to protect green spaces that have significant importance to their local communities.

"We propose that green spaces should be identified in neighbourhood plans and local plans which complement and do not undermine investment in homes, jobs and other essential services. Given the importance of green spaces to the health and happiness of local communities the Government considers the new designation should offer suitably strong protection to localised areas that are demonstrably special …."

1.9 That recommendation was incorporated into the National Planning Policy Framework (NPPF) as the new designation of Local Green Spaces.

2. The Policy Context

National Planning Policy Framework

The NPPF 2024 provides the following information on Local Green Space designations -

106. The designation of land as Local Green Space through local and neighbourhood plans allows communities to identify and protect green areas of particular importance to them. Designating land as Local Green Space should be consistent with the local planning of sustainable development and complement investment in sufficient homes, jobs and other essential services. Local Green Spaces should only be designated when a plan is prepared or updated and be capable of enduring beyond the end of the plan period.

107. The Local Green Space designation should only be used where the green space is:

(a) in reasonably close proximity to the community it serves;

(b) demonstrably special to a local community and holds a particular local significance, for example because of its beauty, historic significance, recreational value (including as a playing field), tranquillity or richness of its wildlife; and

(c) local in character and is not an extensive tract of land.

108. Policies and decisions for managing development within a Local Green Space should be consistent with national policy for Green Belts set out in chapter 13 of this Framework [45]. Additional guidance is provided in the National Planning Practice Guidance.

3. Spaces Methodology – Stage 1 Site Selection

3.1 That Stage 1: Site Selection - Local Community Input
In August 2025 114 Parish and Town Councils, including Parish Meetings, within Cotswold District, were invited to submit potential Local Green Spaces. Each council was sent a copy of the Local Green Space toolkit, which gives more information about the designation and the selection process. The 31st of October 2025 deadline was given for the submission of potential sites.

3.2 A Cotswold District Council Officer provided on-going support for the communities, providing clarity and explaining that the evidence submitted had to show why sites were "demonstrably special to the local community;" for example, by suggesting that communities consider how the field they would like to be designated met the NPPF's Local Green Space designation criteria. It was important to clarify that sites could not just be submitted because communities were aware that development might come forward on that site. Advice was also given that where a site was already in beneficial public ownership, for instance by a parish council, that there was probably little benefit in submitting it for designation.

3.3 The Officer then reviewed the submissions against the assessment criteria and provided feedback, for example, identifying where additional information would be needed. This initial assessment was important to help communities put together sound and robust evidence to support their submissions for Local Green Space designations. Using the assessment criteria, Officers were able to consider whether sites met the Local Green Space designation NPPF's tests, while ensuring that designation was 'consistent with the local planning of sustainable development'.

3.4 The toolkit provided further clarity, outlining that not every potential site will meet every criteria. However, all sites must meet the following criteria in the checklist as stated in the NPPF:

1) The site is not with an extant planning permission within which the Local Green Space could not be accommodated
2) The site is not allocated for development in the relevant Neighbourhood Plan or the Local Plan, unless it can be shown that the Local Plan housing allocation is not strategic and can be re-located somewhere else in the neighbourhood plan area; or alternatively that the Local Green Space could be incorporated within the site as part of the allocated development
3) The site is not an 'extensive tract of land'
4) The site is 'local in character'
5) The site is in 'proximity to the community it serves'
6) The site is 'demonstrably special to the local community'

3.5 All sites must meet at least one of the following criteria in the Checklist:

1) The site is of 'particular local significance … because of its beauty'
2) The site is of 'particular local significance … because of its historic significance'
3) The site is of 'particular local significance … because of its recreational value'
4) The site is of 'particular local significance … because of its tranquility'
5) The site is of 'particular local significance … because of its wildlife'

The site is of 'particular local significance … for any other reason'

4. Accessible Greenspace Standard (AGS) 2023

4.1 To provide certainty, Natural England's Green Infrastructure Standards (AGS) 2023 is used to define the likely size of a suitable Local Green Space and its distance from the local community.

4.2 Accessible Greenspace Standard (AGS) The new Accessible Greenspace Standard (AGS), which is one of the 5 Headline GI Standards included in the GI Framework- Principles and Standards for England. The Accessible Greenspace Standard covers a broader range of greenspace than the original ANGSt, while retaining a focus on accessible natural greenspace. It measures six categories of publicly accessible greenspace of increasing size and distance from home.

4.3 A Local Green Space should ideally be located within a 1km, 15-minute walk of the community it serves. Please see the table on the next page. Given the rural nature of the District, it may be necessary to relax these requirements in certain circumstances.

4.4 A site of over 20ha (50 acres) and a 35-minute walk would be considered to be "an extensive tract of land" and therefore, not suitable for designation as a Local Green Space.

Table 1. Type of Space

Type of Space	Minimum size	Maximum distance	Maximum Journey
Local Greenspace or	2 ha	300m	5 min walk
Doorstep Greenspace	0.5 ha	200m	Under 5 min
Neighbourhood Greenspace	10 ha	1 km	15 min walk
Wider Neighbourhood Greenspace	20 ha	2 km	35 min walk
District Green Space	100 ha	5 km	15 –20 min cycle
Sub Regional Green Space	500 ha	10 km	30-40 min cycle

Notes: The Accessible Greenspace Standards do not cover formal sports provision, for which Sport England is responsible; nor play provision, which is covered by Play England. - The above diagram uses a walking speed.

5. Stage 2: Sites Assessments

5.1 In total, 21 Town or Parish Council's out of the 24 that originally contacted the District Council about nominating Local Green Space's put forward 37 sites for consideration.

5.2 Over three days a Planning Policy Officer and an Officer from the Council's Communities Team visited all 37 sites. The site visits were used to assess each nominated space against the criteria listed in paragraphs 3.4 and 3.5. The officers discussed each site's merits and made notes to take into account at the next stage of the assessment, the board meeting.

6. Stage 3 - Criteria and Scoring

6.1 This section provides further detail on the criteria and scoring that was used to access the sites. A total of 37 sites were submitted by communities for Local Green Space designation. The sites that were taken through the detailed site assessment process are listed in the table below:

Table 2: Submitted Local Green Space sites

Parish	Site
1) Ampney Crucis	1. Cricket Field
	2. Woodland next to the Cricket Field
2) Bibury	3. Upper Kitchen Garden
	4. Upper Kitchen Garden
3) Bledington	5. Land next to the Village Hall
4) Bourton on the Water	6. Springvale Allotments
	7. Greystones – Fields nearest Moors Lane
	8. Conigers footpath – Ridge and Farrow field
	9. Burghfield House Field
	10. Bourton Chase – Phase 3 – Public Open Space
5) Coates	11. Coates Meadow
6) Didmarton	12. Didmarton Playing Field
7) Donnington	13. Stonehill Quarry
8) Dunfield	14. Green Space
9) Ebrington	15. Saxon Fields
10) Fairford	16. The Park Close/ aka Park Close Pocket Park
	17. Faulkers Close
	18. Honeybone Green Space & Play Area
	19. Keble Fields
	20. Milking Path
11) Kempsford	21. Hazel View Recreation Ground
	22. Wakefield Green
12) Kingscote	23. The Matara
13) Lechlade	24. Butlers Field
14) Leighterton	25. Play Space
15) Little Rissington	26. Sweeting Corner
16) Naunton	27. Naunton Playing Field
17) Lower Oddington	28. Land to the Rear of the Village Hall
18) Poulton East	29. The Butts
19) Poulton	30-33. Ranbury Site A, B & C

20) Tetbury	34. Preston Park
	35. Berkeley Wood
	36. The Knapp
21) Willersey	37. Orchard Ley

6.2 A Critical Friends Panel/Board was formed to review the information and evidence that had been gathered to date including the site assessments, which had been undertaken by the Council Officers. The discussion was held on Friday 1st May 2026 and supported by a Planning Policy Officer from the Planning Policy and Infrastructure Team.

6.3 The Board was made up of the Head of Planning Services, the Head of Natural, Built and Historic Environment, a Community Support Officer, a representative from Gloucestershire Rural Community Council GRCC a Senior Local and Neighbourhood Planning Officer and Planning Policy Technician. Each site was assessed by the Board members to ascertain which ones would be put forward as part of the Local Plan Reg 19 stage. If all members agreed, the site was automatically put forward. However, if any of the sites proposed did not quite meet the criteria, members were invited to vote on the site's inclusion or not.

6.4 Using the evidence from the submitted toolkit for each site and the officer site visits, and the recommendation of the Board, each site was evaluated the criteria and colour coded using the RAG evaluation explained below:

6.5 Each site was scored accordingly:

- Red - does not meet the criteria and scores a 0
- Amber - not sure or does in part meet the criteria and scores 0.5
- Green - meets the criteria and scores 1

6.6 The points in the criteria listed below are factual. Each site, either met or did not meet these elements.

Point. 1 - relevant planning history (the site does not have an extant planning permission within which the Local Green Space could not be accommodated)

Point 2. - not allocated for development (in the relevant Neighbourhood Plan or the Local Plan, unless it can be shown that the Local Plan housing allocation is not strategic and can be re-located somewhere else in the neighbourhood plan area; or alternatively that the Local Green Space could be incorporated within the site as part of the allocated development)

Point 3. - and extensive tract of land (based on the ANG Standard (see section 4)

Please note that points 1, 2, and 3 must all be green for a site to be considered.

Table 3: Points 1, 2 and 3 must be a yes (Green) for the site to be considered.

All three must be Green (G) for the site to be considered		
1) Relevant Planning History	Not suitable - Site has extant planning permission within which the Local Green Space could not be accommodated	Suitable - Site does not have an extant planning permission within which the Local Green Space could not be accommodated
2) Not allocated in the Local Plan	Not suitable - Site is allocated for development in the relevant Neighbourhood Plan or the Local Plan	It can be shown that the Local Plan housing allocation is not strategic and can be re-located somewhere else
3) Extensive tract of land	Not suitable - Site is over 20ha (50 acres) and is considered to be 'an extensive tract of land'	Suitable - Site is under 20ha (50 acres) and is not considered to be 'an extensive tract of land'

6.7 The points in the criteria listed in the two tables below are open to interpretation and are based on opinion as well as evidence. Therefore, an amber rating is added to the scoring where there is ambiguity in the scoring.

Please note points 4. 5 and 6 must all be green for a site to be considered.

Point 4 - the site is local in character (based on opinion of the Critical Friends Panel in consideration of the available evidence)

Point 5 - the site is in proximity to the local community (considered against the Accessible Green Standard (ANG guidance). See section 4, in a reasonable walking distance to a Local Green Space.

Point 6 - the site is demonstrably special to the local community (based on the opinion of the Critical Friends Panel in consideration of the available evidence)

All three must be Green (G) for the site to be considered	**Red (R)**	**Amber (A)**	**Green (G)**
Point 4: Local in Character			
Evidence taken from Community Toolkit Submission	**Not Suitable -** Evidence from Community Toolkit submission is not evident or very weak	Site partially meets the criteria	Meets the Criteria

Officer Site Visit	**Not Suitable** - No evidence from site visit that the space is local in character	Site partially meets the criteria	Meets the Criteria
Core Officer Team recommendation in light of toolkit submission and site visit	**Not Suitable** - No evidence to show that space is local in character from toolkit submission or site visit	Site partially meets the criteria	Meets the Criteria
Point 5: In proximity to the Local Community			
Evidence taken from Community Toolkit Submission	**Not Suitable** - Space is not within reasonable distance to the community it serves	Site partially meets the criteria	Meets the Criteria
Officer Site Visit	**Not Suitable** - Space is not within reasonable distance to the community it serves	Site partially meets the criteria	Meets the Criteria
Core Officer Team recommendation in light of toolkit submission and site visit	**Not Suitable** - No evidence from toolkit submission or site visit that space is within reasonable walking distance from the community it serves	Site partially meets the criteria	Meets the Criteria

Point 6: Demonstrably Special to the Local Community			
All three must be Green (G) for the site to be considered	**Red (R)**	**Amber (A)**	**Green (G)**
Evidence taken from Community Toolkit Submission	Not Suitable - Evidence from Community Toolkit submission	Evidence is not conclusive	Meets the Criteria
Officer Site Visit	Not Suitable - No evidence from site visit that the space is local in character	Evidence is not conclusive	Meets the Criteria
Core Officer Team recommendation in light of toolkit submission and site visit	Not Suitable - No evidence to show that space is local in character from	Evidence is not conclusive	Meets the Criteria

	toolkit submission or site visit		

6.8 Please note that one of the six points below (points 1,2,3,4,5,6) must be green for a site to be considered. These points were all determined by the Board and the available evidence. The Board reviewed all the criteria for each site, which was based on returned Toolkits and the Officer Site visit. Each point was agreed, disagreed, or questioned. The majority score was then used to score a green or a red result. If the result was not conclusive or partially considered to be the case, an amber score was given. For example, if a site was pretty, but not beautiful, it would score an Amber.

- Point 1 - beauty
- Point 2 - historical significance
- Point 3 - recreational value
- Point 4 - tranquility
- Point 5 - wildlife
- Point 6 - any other reason

Sites must meet one of the following six criteria in the toolkit check list	Red (R)	Amber (A)	Green (G)
Point 1 – Beauty			
Evidence taken from the Community Toolkit Submission	Does not meet the criteria	Partially meets the criteria	Meets the criteria
Officer Site Visit	Does not meet the criteria	Partially meets the criteria	Meets the criteria
Core Officer Team/Board Considering the toolkit submission and site visit	Does not meet the criteria	Partially meets the criteria	Meets the criteria
Point 2 – Historic Significance			
Evidence taken from Community Toolkit Submission	Does not meet the criteria	Partially meets the criteria	Meets the criteria
Officer Site Visit	Does not meet the criteria	Partially meets the criteria	Meets the criteria
Core officer Team/Board considering the	Does not meet the criteria	Partially meets the criteria	Meets the criteria

toolkit submission and site visit			
Point 3 – Recreational Value			
Evidence taken from Community Toolkit Submission	Does not meet the criteria	Partially meets the criteria	Meets the criteria
Officer Site Visit	Does not meet the criteria	Partially meets the criteria	Meets the criteria
Core officer Team/Board considering the toolkit submission and site visit	Does not meet the criteria	Partially meets the criteria	Meets the criteria

Sites must meet one of the following six criteria in the toolkit check list	Red (R)	Amber (A)	Green (G)
Point 4 – Tranquility			
Evidence taken from the Community Toolkit Submission	Does not meet the criteria	Partially meets the criteria	Meets the criteria
Officer Site Visit	Does not meet the criteria	Partially meets the criteria	Meets the criteria
Core Officer Team/Board Recommendation considering the toolkit submission and site visit	Does not meet the criteria	Partially meets the criteria	Meets the criteria
Point 5 – Wildlife			
Evidence taken from the Community Toolkit Submission	Does not meet the criteria	Partially meets the criteria	Meets the criteria
Officer Site Visit	Does not meet the criteria	Partially meets the criteria	Meets the criteria
Core Officer Team/Board recommendation considering toolkit submission and site visit	Does not meet the criteria	Partially meets the criteria	Meets the criteria

For any other reason

Local Green Space Decision Board	No (R)
No. (R) The site will not go forward with Local Plan – Does not meet the Toolkit test. Total 7 out of 11	

Additional information: The Board did not consider this site to be any more special than the fields surrounding it. It was acknowledged that it is used for walking and dog walking, but it was noted that there are lots of areas to walk in and around Lechlade. However, the Board was satisfied that as the site is located on a Scheduled Ancient Monument this provides a level of protection.

Sites must meet at least one of the five following criteria in the toolkit checklist:

	Beauty	Historic Significance	Recreational Value	Tranquility	Wildlife	Any other reason
Evidence from Community Submission (Toolkit)	Yes (G)	Yes (G) Setting of the village and listed buildings	Yes (G) Used for walking - There is a footpath, which is regularly used, by walkers	Yes (G) Footpath leads to open countryside, it retains access to quieter area	No – (R) except for normally found or seen in rural areas.	

Officer Site Visit	Pretty (A) not beautiful	Yes (G) The Setting	Yes (G) Use for walking	No – (R) but leads to area that is	No – (R) Nothing exceptional	
Board Meeting	(A) Pretty not Beautiful	Yes (G) The Setting	Yes (G) Use for walking	No – (R) but leads to area that is	No – (R) Nothing exceptional	

Poulton – Site B

All sites must meet the following **six** criteria		All sites must meet at least one of the **five**	
1. Relevant Planning History	1 point (G)	1. Beauty	0.5 point (A)
2. Not allocated in the Local Plan	1 point (G)	2. History	1 point (G)
3. Not an extensive tract of Land	1 point (G)	3. Recreational Value	1 point (G)
4. Local in Character	1 point (G)	4. Tranquility	0 point (0)
5. In proximity to the local community	1 point (G)	5. Wildlife	0 point (0)
6. Demonstrably Special to the Local community	1 point (G)	Any other reason	
Total 6 out of 6	Total 2.5 out of 5		

Poulton – Site B - Additional Evidence:

Evidence from Community Submission (Toolkit)		
	Parish/Town Council	Put forward by Parish Council
	Community Support – petitions	The Council feels that this application has the support of the local community and those who walk through Ranbury and across the footpath (which is used regularly).
	Letters of support from other organisations	

Poulton – Site B - Decision:

Toolkit Evidence	Yes (G)
Officer Site Visit	Yes (G)
Local Green Space Decision Board	Yes (G)
Yes. (G) Site will go forward with Local Plan – Does meet the Toolkit test. Total 8.5 out of 11	

031: Poulton – Site C

Sites must meet all the following six criteria in the toolkit checklist:

1. Relevant Planning History	2. Not allocated in the Local Plan	3. Not an extensive plot of land
NA. (G) Areas A, B and C have been previously designated for non-development in the District Plan of 1993 which stated that it was important that these open spaces were protected. We presume that the landowners would be aware of this. Sites B and C are in the flood plain.	NA. (G)	No (G) not an extensive plot of land. 1.11 Hectares

	4. Local in Character	5. In proximity to the Local Community	6. Demonstrably special to the local community
Evidence from Community Submission (Toolkit)	Yes (G) Need to be considered as a whole as they form an integral part of the approach to in the village to the west. Site A, B & C C – land south of Old Manor Farm House	Yes (G)	Yes (G) The Council feels that this application has the support of the local community and those who walk through Ranbury and across the footpath (which is used regularly).
Officer Site Visit	Yes (G)	Yes (G) – central	Yes (G)
Board Meeting	Yes (G)	Yes (G) – central	Yes (G)

Sites must meet at least one of the five following criteria in the toolkit checklist:

	Beauty	Historic Significance	Recreational Value	Tranquility	Wildlife	Any other reason

Evidence from Community Submission (Toolkit)	Yes (G)	Yes (G) Sites A, B, C enhance the rural approach to the village ensuring attractive transition from the open countryside into the village. form a "backdrop" to listed buildings on north side of road. Has altered little over the last three to four hundred years.	No (R)	Yes (Y)	Yes. (G) site C underwent forestry work (assisted by public funds). Acts as a reservoir area for wildlife – kites, buzzards, kestrels, owls, woodpeckers, badgers, foxes	Sites A, B and C lie within the old hamlet of Ranbury which was previously part of the parish of Ampney St Peter, and therefore historically not incorporated in to Poulton and an entity in its own right.
Officer Site Visit	Nothing obvious from site visit (A)	Yes – (G) setting	Agree (R)	Not sure – (A) close to busy road	No – (R) Nothing exceptional	
Board Meeting	Agree with site visit (A)	Yes – (G) setting	Agree (R)	Not sure – (A) close to busy road	No – (R) Nothing exceptional	

Poulton – Site C

All sites must meet the following **six** criteria		All sites must meet at least one of the **five**	
1. Relevant Planning History	1 point (G)	1. Beauty	0.5 point (A)
2. Not allocated in the Local Plan	1 point (G)	2. History	1 point (G)
3. Not an extensive tract of Land	1 point (G)	3. Recreational Value	0 point (R)
4. Local in Character	1 point (G)	4. Tranquility	0.5 point (A)
5. In proximity to the local community	1 point (G)	5. Wildlife	1 point (G)
6. Demonstrably Special to the Local community	1 point (G)	Any other reason	
Total 6 out of 6	Total 3 out of 5		

Poulton – Site C - Additional Evidence:

Evidence from Community Submission (Toolkit)		
	Parish/Town Council	
	Community Support – petitions	The Council feels that this application has the support of the local community and those who walk through Ranbury and across the footpath (which is used regularly).
	Letters of support from other organisations	

Poulton – Site C - Decision:

Toolkit Evidence	Yes (G)
Officer Site Visit	Yes (G)
Local Green Space Decision Board	Yes (G)
Yes. Site will go forward with Local Plan – It meets the Toolkit test. Total 9 out of 11	

032: Poulton East - The Butts

Sites must meet all the following six criteria in the toolkit checklist:

7. Relevant Planning History	8. Not allocated in the Local Plan	9. Not an extensive plot of land
(R) No , there is currently an application for an agricultural building on part of the site which is not visible from the road.Yes, the main part of the site is and could be a green open space	NA. (G)	No,(G) Not an extensive plot of land. 0.52 Ha

	10. Local in Character	11. In proximity to the Local Community	12. Demonstrably special to the local community
Evidence from Community Submission (Toolkit)	Yes (G)	Yes (G)	Yes (G)
Officer Site Visit	Yes (G)	Yes (G)	Nothing obvious (A)
Board Meeting	Yes (G)	Yes (G)	Nothing obvious (A)

Sites must meet at least one of the six following criteria in the toolkit checklist:

	Beauty	Historic Significance	Recreational Value	Tranquility	Wildlife	Any other reason
Evidence from Community Submission (Toolkit)	Yes (G) Area is significant from an aesthetic viewpoint it creates an open &rural view within the village. As there is no housing. It is probably one of the most attractive parts of the village.	Yes (G) The site is shown on old maps of the village as being land known as "The Butts	No (R) – no access	Yes (G) The open aspect creates a tranquil feel especially as it provides a break between residential properties	No (R) species normally found or seen in rural areas	
Officer Site Visit	Pretty but not beautiful (A)	Nothing (A) obvious	No (R)	Peaceful, but not tranquil (A)	No (R) Nothing significant	
Board Meeting	Agree – pretty but beautiful (A)	Nothing (A) significant	No (R)	Agree – (A) Peaceful but not tranquil	Agree – No (R)	

Poulton – The Butts

All sites must meet the following **six** criteria		All sites must meet at least one of the **five**	
1. Relevant Planning History	0 point (R)	1. Beauty	0.5 point (A)
2. Not allocated in the Local Plan	1 point (G)	2. History	0.5 point (A)
3. Not an extensive tract of Land	1 point (G)	3. Recreational Value	0 point (R)
4. Local in Character	1 point (G)	4. Tranquility	0.5 point (A)
5. In proximity to the local community	1 point (G)	5. Wildlife	0 point (R)
6. Demonstrably Special to the Local community	0.5 point (A)	Any other reason	
Total 4.5 out of 6		Total 1.5 out of 5	

Poulton – The Butts - Additional Evidence:

Chapter 1
Introduction

1.1 This study looks at how green spaces and natural features across Cotswold District can support future growth in the Cotswold District Local Plan by helping to reduce recreation pressure on protected areas, by providing access to similar quality, attractive local alternative green spaces.

What is recreation mitigation?

1.2 Many protected habitats and species can be damaged or disturbed by high visitor numbers. Activities like dog walking, cycling or even repeated footfall can disturb wildlife, reduce breeding success and lead to the erosion of fragile ecosystems. National planning policy and environmental legislation (the Conservation of Habitats and Species Regulations 2017 (as amended), or 'Habitats Regulations') include provisions that seek to ensure that plans and projects (including applications for planning permission) are not approved where they could harm the integrity of certain designated sites, including Special Areas of Conservation (SACs). The process of determining the impact on these designated sites is known as a Habitats Regulations Assessment or HRA, and involves a screening stage and 'Appropriate Assessment' stage.

1.3 The Habitats Regulations establish that the local planning authority is the competent authority responsible for undertaking the relevant screening stage and, where relevant, the Appropriate Assessment, prior to adopting the Local Plan or issuing any planning permissions it determines. There is a statutory requirement for the competent authority to consult Natural England in relation to the Appropriate Assessment prior to a decision being made. A separate HRA Report is being prepared for Cotswold District Council in relation to the new Local Plan.

1.4 Mitigation needs to be considered in the Local Plan because without adequate mitigation provision, new development allocated in the plan could lead to increased recreational pressure on designated sites, and the Local Plan will not be able to be adopted. Identifying alternative green spaces forms a key part of the mitigation strategy for residential site allocations located near sensitive ecological sites and they need to be delivered alongside new housing development. Understanding existing alternative green space capacity and identifying opportunities for new provision helps ensure that growth can be accommodated while still protecting the designated sites and meeting Cotswold District Council's statutory requirements.

Within Cotswold District this mitigation comprises three main measures:

- Suitable Accessible Natural Greenspace (SANG): new or enhanced greenspace, designed to divert recreation trips **away from** designated sites.
- Alternative Natural Recreational Greenspaces (ANRG): new or enhanced greenspace, public right of way enhancements, and high quality green infrastructure, designed to divert recreation trips **away from** designated sites.
- Strategic Access Management and Monitoring (SAMM): measures to manage the residual impact **at the** designated sites.

Suitable Alternative Natural Greenspace

1.5 Suitable Alternative Natural Greenspaces (SANGs) are high-quality, accessible green spaces that are designed to attract people away from sites designated as Special Protection Areas (SPAs), Special Areas of Conservation (SACs) and Ramsar sites. They were initially developed in relation to heathland habitats (the Dorset Heathlands and Thames Basin Heaths SPAs) and the ground-nesting bird species within them that are sensitive to disturbance (nightjar, woodlark and Dartford warbler); but the development and use of SANGs is now applied to a much broader range of protected habitats and sites. They act as an alternative place for people to walk, exercise and enjoy nature, helping to reduce recreational pressure on the SACs and SPAs.

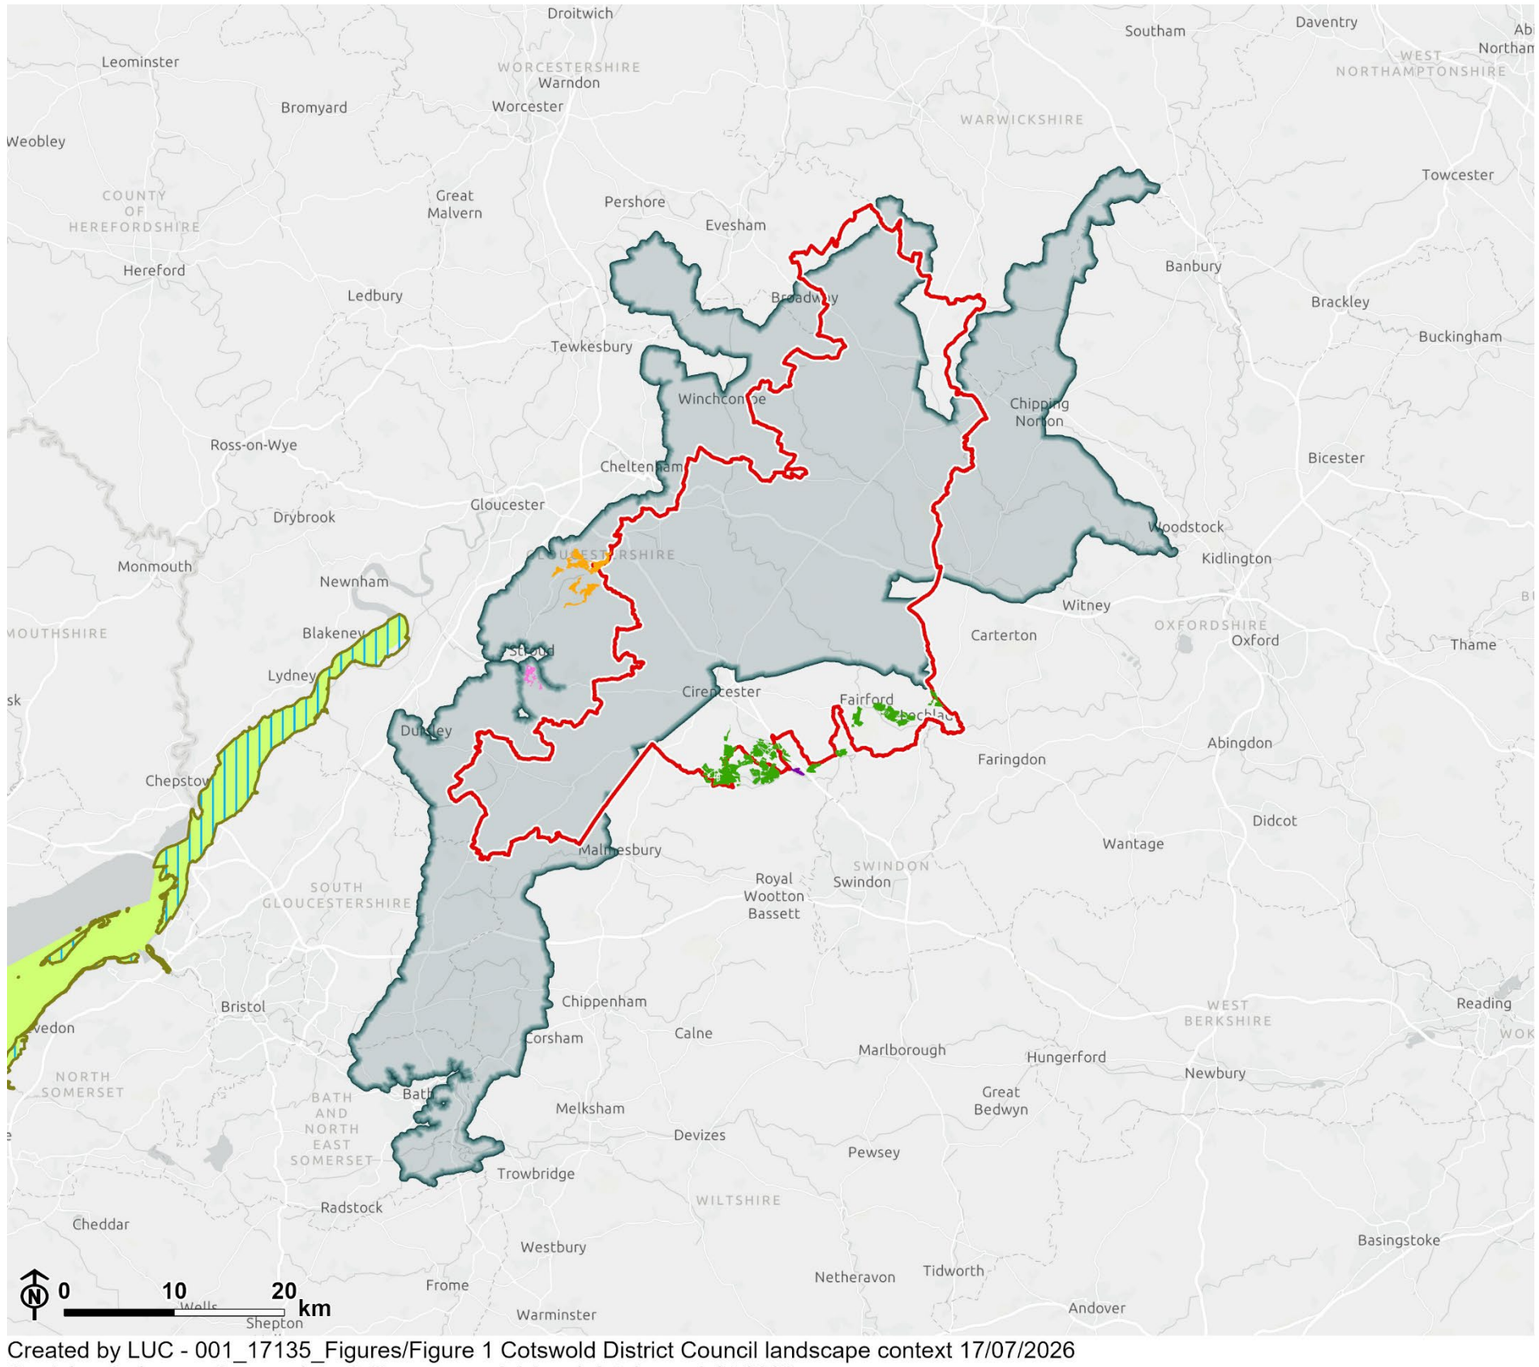
1.6 The objective of SANG delivery is to offer a naturalistic green space that is appealing and more conveniently located than the protected areas they relieve pressure from. They do not need to exactly replicate the sites they are diverting trips from but must be attractive and local enough to result in people choosing the SANG (for example for dog walking) over the more sensitive site. To do this, SANGs must meet certain quality standards, such as providing attractive walking routes, areas for dogs to be walked off lead, good signage, car parking where appropriate and a natural, enjoyable environment for visitors.

Alternative Natural Recreational Greenspaces

1.7 Alternative Natural Recreational Greenspaces (ANRG) is an approach to recreation mitigation where is has not been deemed necessary to apply the stricter SANG design requirements. ANRG can be of a more flexible design, resembling enhanced green infrastructure and open spaces as opposed to the key requirements for naturalness and a variety of habitats in SANG.

1.8 For the purposes of this strategy, ANRG forms part of the wider green infrastructure network but is specifically intended to provide recreational mitigation for Habitats Regulations purposes.

Strategic Access Management and Monitoring



1.9 Recognising that not all visitors will be diverted through the use of additional green spaces outside of the designated sites; the overall mitigation package incorporates measures to address residual impacts at the designated sites. Strategic Access Management and Monitoring (SAMM) measures include engagement and awareness raising, including through ranger time, better information and interpretation and education campaigns, and monitoring of visitors and the integrity of the habitats and species of the designated site to assess the effectiveness of the relevant mitigation measures.

Why does Cotswold District Council need this study?

1.10 This Study will help to shape and support the delivery of Cotswold District Council's (CDC) emerging Local Plan which will guide development from 2026 to 2043. With significant population growth and need for new homes to be built, the new developments within the district have the potential to impact on internationally important biodiversity sites (Habitats sites), in particular the Cotswold Beechwoods SAC and North Meadow and Clattinger Farm SAC as shown in **Figure 1.1**. These sites are currently being damaged by visitors to the sites, and that damage (recreational impact) is likely to increase as more houses and holiday accommodation are built.

1.11 Cotswold District Council, as a 'competent authority', is legally obliged under the Habitats Regulations to consider whether planning applications would affect the biodiversity of any SAC; and can only approve a planning application where the proposals will not impact on the qualifying habitats and species of the SAC. This consideration is undertaken by a process called Habitats Regulations Assessment (HRA).

1.12 In the coming years, future CDC Local Plans will be shaped by the emerging Spatial Development Strategy (SDS). This follows national planning reforms that introduce mandatory sub-regional SDSs to guide long-term strategic growth across England. Cotswold District lies entirely within Gloucestershire which is currently considered an area of the country where there are a range of plausible SDS geographies, and/or where possible future devolution arrangements are particularly uncertain. For these areas, consultation is ongoing regarding the potential SDS geographies, as well as the prospective alignment of public service delivery boundaries.

What is the status of the Local Plan and its evidence base?

Cotswold District Local Plan (2011–2031)

1.13 The adopted Cotswold District Local Plan (2011–2031) is supported by a comprehensive evidence base which underpins its spatial strategy, policies and site allocations. This evidence comprises a wide range of demographic, economic and technical information, including population projections, economic forecasts, land supply data and analysis of existing planning commitments. The Local Plan policies have been monitored since the plan was adopted, and further data has become available through this process.

1.14 A suite of topic-specific technical studies underpins individual policy areas within the Plan. These include, inter alia, evidence relating to:

- economic growth and employment land requirements;
- retail need and town centre performance;
- infrastructure provision, through the Infrastructure Delivery Plan (IDP);
- transport and movement; and
- environmental constraints and capacity, including flood risk, water infrastructure and ecological impacts.

1.15 In addition, the evidence base incorporates detailed environmental and heritage assessments, including landscape character studies, conservation area appraisals and archaeological evidence. This reflects the particular sensitivities of the District, including the extensive coverage of the Cotswolds Area of Outstanding Natural Beauty (AONB).

1.16 The Local Plan is supported by a Sustainability Appraisal (SA), undertaken at each stage of plan preparation, which tests the environmental, social and economic impacts of the strategy and proposed allocations.

1.17 In 2020, Cotswold District Council began work on a Partial Update to the Local Plan, with consultation on the Local Plan Partial Update (LPPU) 'Issues and Options' (Reg.18) taking place in 2022. The Council subsequently began an update to the Local Plan development strategy. In early 2024, the Council consulted on development strategy, partial update to policies, and an 'initial ideas' document. In July 2025, the Council merged the LPPU and the ongoing work on the development strategy into a Full Local Plan Review (FLPR). In November 2025, the Council undertook a further Regulation 18 "Preferred Options" consultation on the FLPR, marking a more advanced stage in the preparation of the replacement Local Plan, which is intended to guide development between 2026 and 2043.

Cotswold District Local Plan (2026-2043) Regulation 19 Submission (August 2026)

1.18 The Cotswold District Local Plan (2026-2043) Regulation 19 Submission (August 2026) (the Submission Local Plan) sets out policies and proposals to meet the challenges facing the area over the period 2026-2043. The Regulation 19 Local Plan builds upon the earlier Regulation 18 draft, incorporating consultation feedback and presenting the final proposed plan for submission and examination. The Submission Local Plan has been prepared taking account of the National Planning Policy Framework (NPPF) (December 2024) and other relevant national policy and guidance, alongside an evolving evidence base.

1.19 The Submission Local Plan aims to deliver a diverse range of housing, including a significant increase in socially rented and affordable homes, enabling residents of all ages and backgrounds to live securely and sustainably. New development will offering high-quality homes, employment opportunities, and essential services, all supported by integrated infrastructure and sustainable transport networks.

1.20 The Submission Local Plan presents a Spatial Vision for Cotswold District up to 2043 with development guided by a Spatial Strategy that prioritises environmental stewardship, social equity, and economic vitality, while respecting the District's unique landscape, heritage, and character.

1.21 The Vision is supported by 6 Strategic Objectives. The Strategic Objectives set out in the Submission Local Plan are:

- SO1: Ensure infrastructure and services support sustainable communities

- SO2: Respond to the climate crisis through adaptation and mitigation
- SO3: Conserve and enhance the natural, built, and historic environment
- SO4: Deliver inclusive, healthy, and affordable housing
- SO5: Enable a vibrant, low-carbon local economy
- SO6: Promote sustainable transport use and connectivity

1.22 The Spatial Strategy (below) is underpinned by 6 Core policies:

- Core Policy 1: Addressing Climate Change
- Core Policy 2: Meeting Housing Needs in Cotswold District: Strategic Sites
- Core Policy 3: Meeting Housing Needs in Cotswold District: Non-Strategic Sites
- Core Policy 4: Settlement Hierarchy
- Core Policy 5: Meeting Business and Employment Needs in Cotswold District
- Core Policy 6: Infrastructure Delivery

1.23 The Submission Local Plan also sets out three Area Strategies to support the appropriate development of different parts of the district, which are set out in Chapters 5-7 of the Plan. The Area Strategies are as follows:

- Cirencester and Surrounding Villages Area Strategy
- South Cotswold Area Strategy
- North Cotswold Area Strategy

1.24 The Submission Local Plan designates site allocations for residential and employment sites across the District. Residential site allocations relevant to this study are discussed further in Chapter 3.

Residential

1.25 Core Policy 2 sets out that the housing requirement for the Cotswold District is for 17,935 homes to be delivered in the Plan period between 2026 and 2043. The Plan makes provision for around 19,000 dwellings by 2043.

1.26 Around 11,500 dwellings will be delivered through 10 strategic allocations and one saved strategic allocation from the previous Local Plan 2011-2031. Around a further 1,500 dwellings will be delivered through non-strategic allocations (addressed in Core Policy 3). Additional dwellings will also be delivered through Neighbourhood Development Plans or the Development Management process.

Employment

1.27 Core Policy 5 establishes that to meet the land requirement of 10.4ha for office and R&D development, and 39.2ha for industrial development over the Plan period (2026 to 2043), a further 29 ha is needed beyond known completions and commitments.

1.28 The Plan identifies 29ha for future development across 5 strategic employment allocations. Additional employment land will also be delivered through the Development Management process.

Chapter 2
Habitat Sites

2.1 There are two designated sites that are the focus of this study, the Cotswold Beechwoods Special Area of Conservation (SAC) and the North Meadow and Clattinger Farm SAC. This chapter provides a description of each site, their qualifying features (i.e. habitats and species for which they are designated), relevant conservation objectives and key vulnerabilities. This information is taken from Standard Data Forms and Natural England's Site Improvement Plans **[See reference 1]**.

Cotswold Beechwoods SAC

Site description

2.2 The Cotswold Beechwoods represent the most westerly extensive blocks of *Asperulo-Fagetum* beech forests in the UK. The woods are floristically rich, and rare plants include red helleborine *Cephalanthera rubra*, stinking hellebore *Helleborus foetidus*, narrow-lipped helleborine *Epipactis leptochila* and wood barley *Hordelymus europaeus*. There is a rich mollusc fauna. The woods are structurally varied, including blocks of high forest and some areas of remnant beech coppice.

Qualifying features

2.3 Annex 1 habitats that are a primary reason for the selection of this site:

- 9130 *Asperulo-Fagetum* beech forests

2.4 Annex I habitats present as a qualifying feature, but not a primary reason for selection of this site:

- 6210 Semi-natural dry grasslands and scrubland facies on calcareous substrates (*Festuco-Brometalia*) (important orchid sites)

Conservation objectives

2.5 Ensure that the integrity of the site is maintained or restored as appropriate, and ensure that the site contributes to achieving the Favourable Conservation Status of its Qualifying Features, by maintaining or restoring;

- The extent and distribution of qualifying natural habitats;
- The structure and function (including typical species) of qualifying natural habitats; and
- The supporting processes on which qualifying natural habitats rely.

Key vulnerabilities

2.6 The main current threats to the site include:

- Invasive Species - The dumping of garden waste and the consequent spread of invasive plants is an on-going threat. The spread of the non-native sycamore provides a challenge and has made particular use of canopy gaps created by storm damage. Although sycamore is considered an acceptable component of woodlands, including beechwoods, on the continent, in the Cotswold it tends to dominate understorey and canopy to the detriment of other (native) tree species.
- Deer - Deer browsing of regenerating trees (and possibly ground flora) remains a major threat to favourable condition throughout the beechwoods.
- Invasive Species - Grey squirrel numbers have increased sharply over the past decade or so and now cause significant damage to tree species, in particular beech. In places, this can lead to pole stage beech being systematically ring barked and killed.
- Disease - Although not known to be present in the Cotswold as yet, Chalara (ash disease) is a major future threat to the beechwoods.
- Public Access/Disturbance - A particular increase has been the use of mountain bikes and horse-riding which use the woods far beyond the limited network of bridleways. This has created numerous additional trackways and so increasing the erosion of the ground flora and potentially opportunities for water erosion. Although the routes away from bridleways are not usually permitted, much of the SAC woodland is NNR or has public access by foot. Additionally, dog walking has increased within the SAC especially at Coopers Hill where car parking is available. This has become a particular issue where professional dog walkers release large numbers of dogs (up to 12) to run uncontrolled through the woods. This causes disturbance to wildlife as well as local nutrification through dog faeces.
- Changes in Species Distributions - There is a risk that global warming will increase the risk of drought to beech trees (which are shallow rooted).

- Air Pollution: impact of atmospheric nitrogen deposition - Nitrogen deposition exceeds site relevant critical loads. High atmospheric nitrogen levels could affect the SAC features through changes in ground vegetation and mycorrhiza; nutrient imbalance; changes to soil fauna; increase in tall grasses; decline in diversity; increased mineralisation; nitrogen leaching; or surface acidification.

North Meadow and Clattinger Farm SAC

Site description

2.7 North Meadow and Clattinger Farm Meadows SAC consists of a series of traditionally managed unimproved grasslands within the floodplain of the Upper Thames which continue to be managed as pasture and as hay-meadow.

2.8 It contains a rich variety of species-rich grassland types including the rare MG4 community for which the SAC is designated as well as a number of notable plant species. These grasslands represent rare and scattered remnants of a much more widespread unimproved grassland habitat before agricultural intensification and extensive gravel quarrying locally were responsible for widespread losses of this habitat and its subsequent fragmentation.

Qualifying features

2.9 Annex I habitats that are a primary reason for selection of this site:

- 6510 Lowland hay meadows (*Alopecurus pratensis, Sanguisorba officinalis*)

Conservation objectives

2.10 Ensure that the integrity of the site is maintained or restored as appropriate, and ensure that the site contributes to achieving the Favourable Conservation Status of its Qualifying Features, by maintaining or restoring;

- The extent and distribution of qualifying natural habitats;
- The structure and function (including typical species) of qualifying natural habitats; and
- The supporting processes on which qualifying natural habitats rely.

Key vulnerabilities

2.11 The main current threats to the site include:

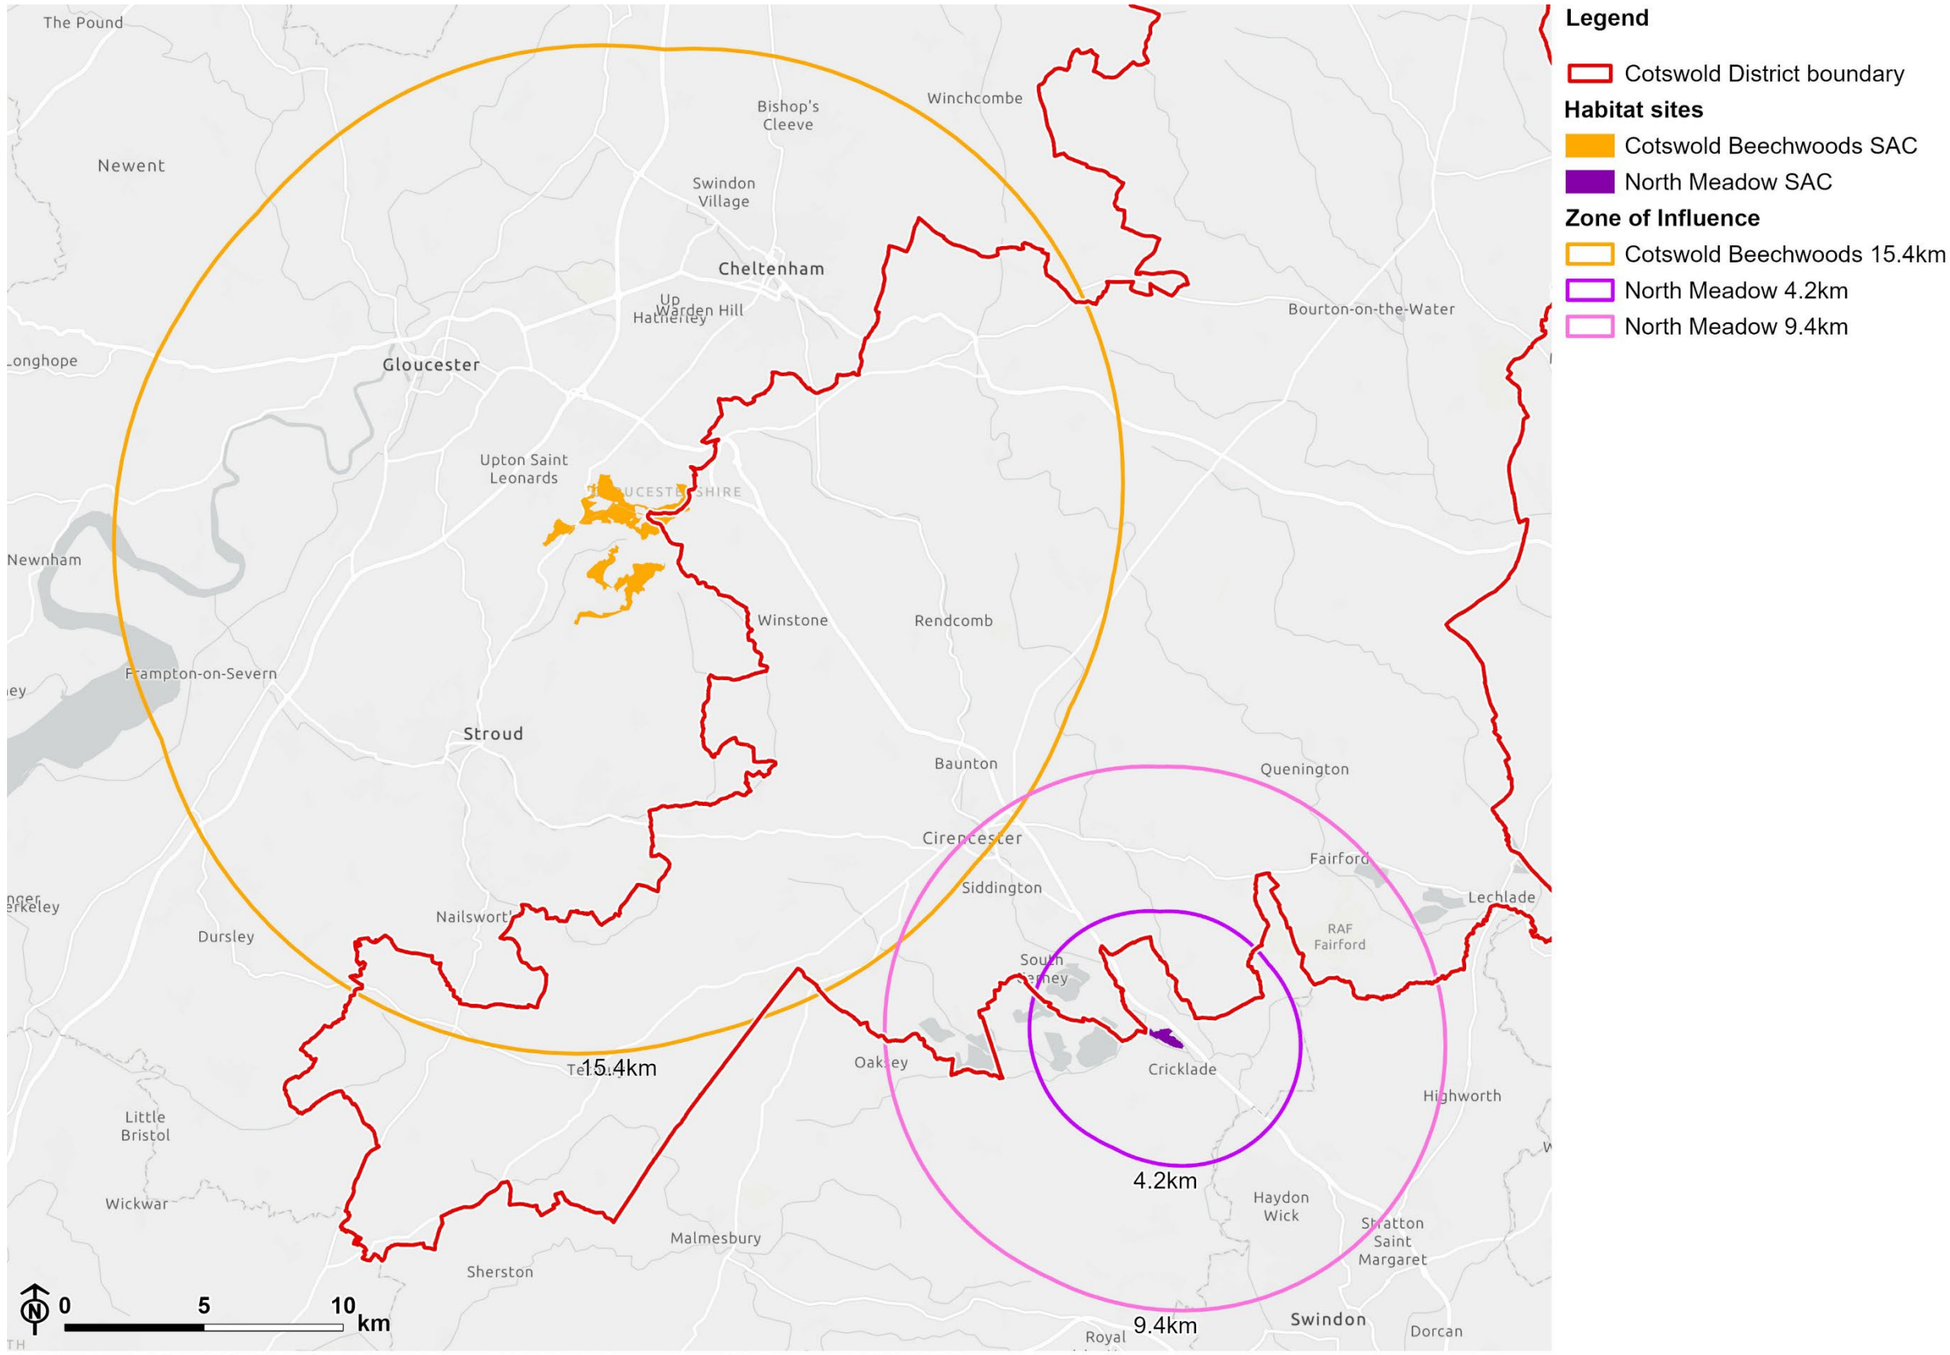
- Inappropriate Water Levels - An effective WLMP needs to be in place in order to protect the integrity of the site. There have been several unseasonal floods over the last six years which are beginning to cause changes and losses in the vegetation communities on the site.
- Water Pollution - Both sediment and nutrient input are of concern. A diffuse pollution plan is in place and catchment sensitive farming initiative covers the catchment. Diffuse pollution has the potential to affect aquatic habitats and species as well as habitat quality in areas of riverside habitat supporting *Vertigo moulinsiana*. Diffuse pollution is arising from highway runoff as well as from farmland. Pollution also results from overflowing sewers (a result of high groundwater levels infiltrating sewers) with ongoing/recurring incidents at numerous locations on the River Lambourn.
- Habitat Fragmentation - The two component SSSIs are located 8km apart. Inclusion and restoration of a number of intervening sites locally would increase the habitat, thereby making it more resilient to fluctuating water levels in the face of climate change. The NNR team at North Meadow has, over a number of years, been working to achieve this aim. Also, one option is that additional land should be included within the North Meadow SSSI for this purpose. This would help buffer the site, possibly provide space for adaptation in anticipation of the effects of climate change, and better manage visitor impacts.
- Commons Management - Fencing is required to keep livestock from straying off site. North Meadow NNR is common land and it is the responsibility of neighbouring landowners to erect fences. There are a number of problems involved in achieving this.
- Public Access/Disturbance - There is increasing visitor pressure especially during the flowering time of Snake's-head Fritillary leading to localised damage on sites in the SAC.
- Water Pollution - The SAC's hay meadow vegetation communities are sensitive to elevated nutrient levels. With increasing flooding there is an increased risk of flood water carrying diffuse pollution onto the site and causing soil enrichment with negative consequences for the species richness of the meadows.

Zone of Influence

2.12 A Zone of Influence (ZoI) is a designated buffer radius around a protected ecological site (such as a Special Protection Area or Special Area of Conservation). In the District, any new residential development within these zones must provide or fund mitigation in the form of SANG or ANRG, and SAMM.

2.13 Using data from visitor surveys, the 75th percentile has become a standard metric for defining a zone of influence for recreation, as it represents the area from which most visitor originate. Such a figure is typically used for catchment analysis in most SAC recreation mitigation strategies because it excludes the upper distances travelled by only a few visitors that skew calculated averages, providing a more representative understanding of travel patterns.

Cotswold Beechwoods SAC ZoI



2.14 To ensure that there is a strategic approach to delivering mitigation for recreational impacts at the Cotswold Beechwoods SAC, in 2022 the relevant Local Authorities engaged Footprint Ecology to prepare a Recreation Mitigation Strategy for the Cotswold Beechwoods SAC **[See reference 2]**.

2.15 The Strategy applies to a zone of influence of 15.4km from the Cotswold Beechwoods SAC, with the boundary of the zone adjusted slightly to reflect the local geography, accessibility and local authority boundaries. The zone therefore encompasses all of Cheltenham and Gloucester administrative boundary and part of Cotswold, Stroud and Tewkesbury.

2.16 Within the entirety of the 15.4km zone of influence, all new residential growth will be expected to provide mitigation in the form of SANG and SAMM.

2.17 The Cotswold Beechwoods SAC ZoI is shown in Figure 2.1

Figure 2.1: Zones of Influence for Cotswold Beechwoods SAC and North Meadow and Clattinger Farm SAC

North Meadow and Clattinger Farm SAC ZoI

2.18 To mitigate recreational impacts associated with new development on the North Meadow part of the North Meadow and Clattinger Farm SAC, an interim strategy was prepared by Cotswold District Council, Swindon Borough Council, and Wiltshire Council in partnership with Natural England **[See reference 3]**.

2.19 The 2023 interim recreation mitigation strategy identifies two groups of visitors to the SAC: local year-round users, and fritillary visitors. These groups were shown to have different starting origins, exhibit different behaviours, and have different reasons for visiting, necessitating two ZoIs, within which different forms of mitigation are appropriate:

- Inner Zone – for local users arriving on foot and by car all year round set at 0 - 4.2km from the boundary of the SAC. It represents the area within which 75% of local year-round users originate.
- Outer Zone – for fritillary visitors and is set at 4.2 - 9.4km from the boundary of the SAC. It represents the area within which 75% of those that come to view the fritillaries during the main summer flowering season originate.

2.20 Given the differences between the users, a different range of mitigation measures is required in each ZoI:

- Within the inner ZoI (0 – 4.2km) both on-site (SAMMs) and off-site (ANRG) measures will need to be delivered as mitigation for any potential recreational impacts.
- Within the outer ZoI (4.2 – 9.4km), for most developments only on-site measures (SAMMs) will need to be delivered as mitigation for any potential recreational impacts. Larger developments may need to provide additional mitigation (e.g. ANRG) as advised by NE.

2.21 The North Meadow and Clattinger Farm SAC ZoIs are shown in Figure 2.1

Development within a ZoI

2.22 The requirement to consider the possibility of likely significant effects on the SACs applies to all types of residential development. This Recreation Mitigation Study focuses on the effects arising from the types of residential developments listed below:

- Houses in Multiple Occupation (sui generis);

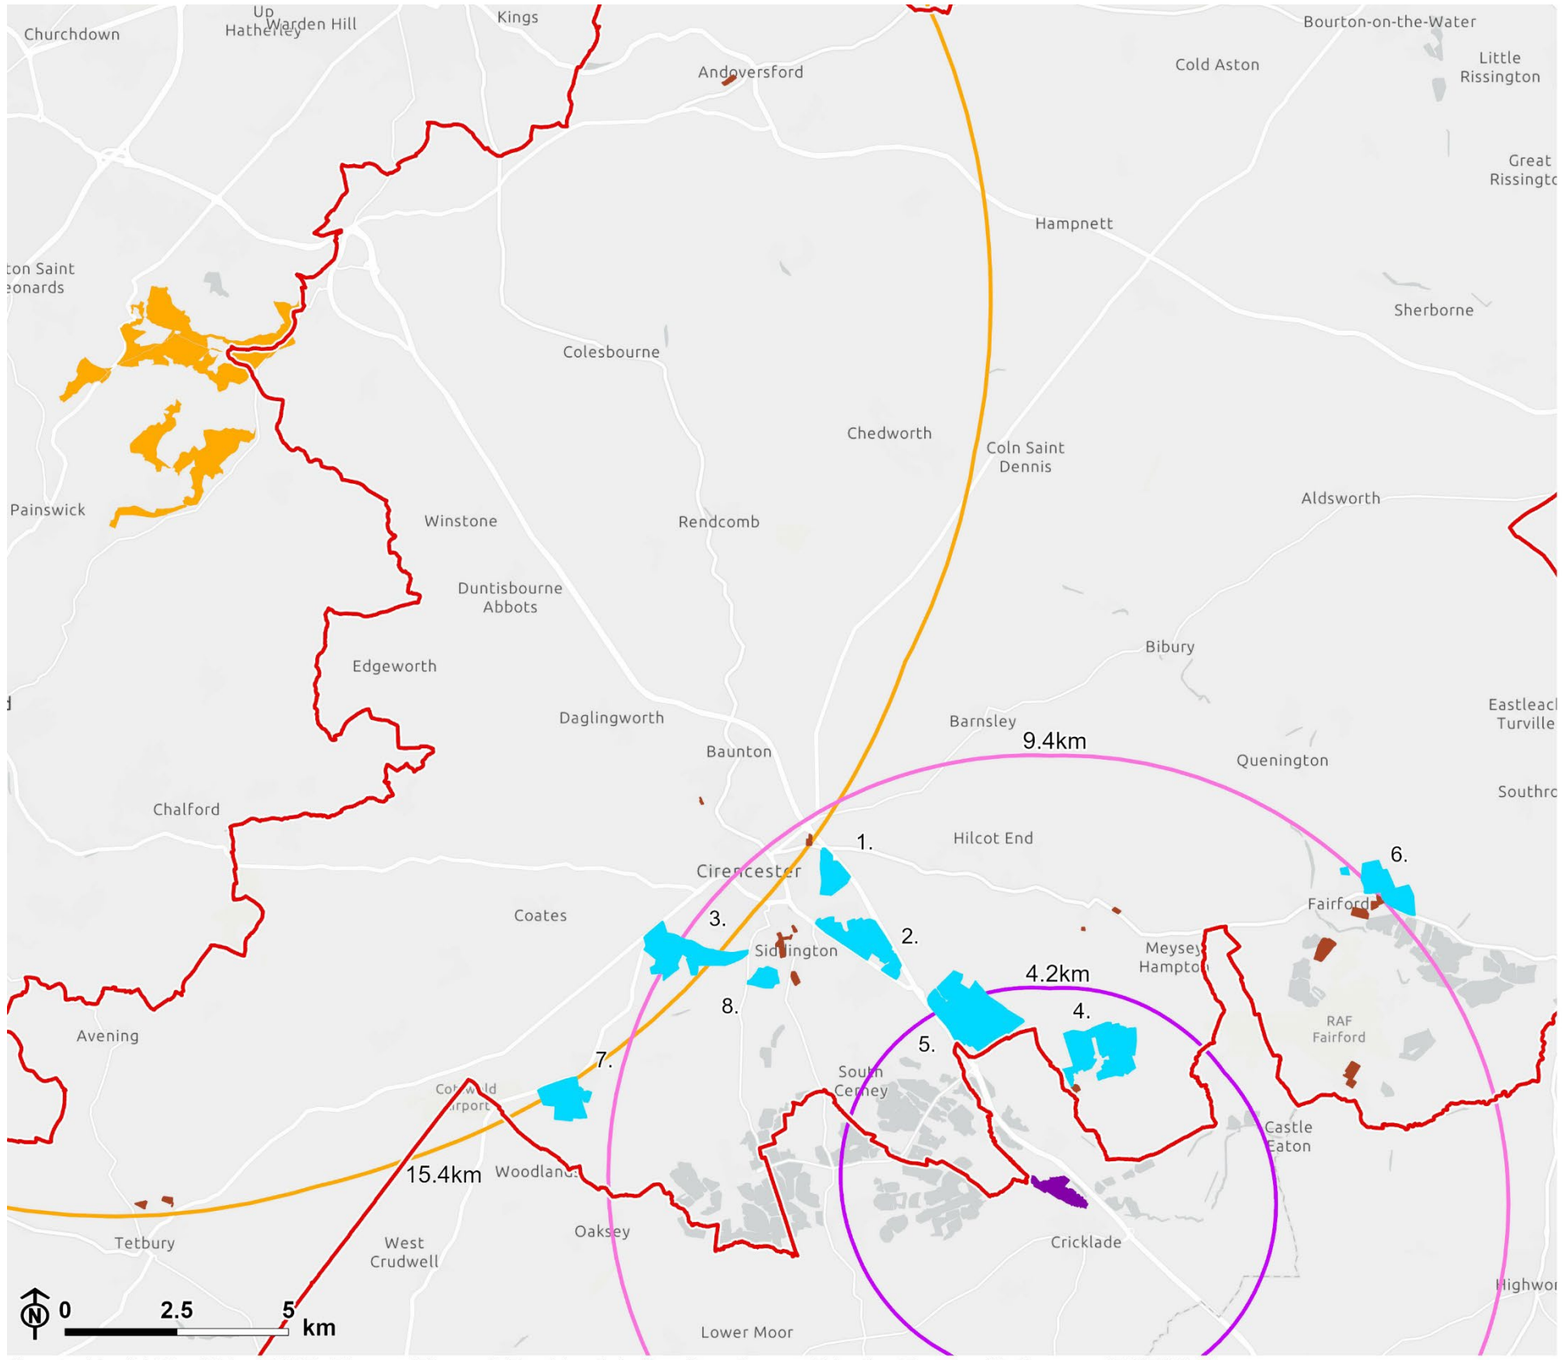
- Residential institutions within the C2 Use Class where the residents are not severely restricted by illness or mobility;
- Student accommodation;
- Sites for gypsy, travellers and travelling showpeople;
- Tourist accommodation, including self-catering, caravan and touring holiday accommodation; and
- Residential annexes and other ancillary accommodation.

Chapter 3
Mitigation Requirements

How much mitigation is required?

3.1 Natural England guidance requires that for a minimum quantity provision of 8 ha of SANG per 1,000 new residents should be provided **[See reference 4]**, this quantity standard has also been to ANRG. CDC has provided details of the proposed residential site allocations identified as part of the emerging Local Plan, and those saved from the previous Local Plan. In total, 22 allocations are within the Cotswold Beechwoods SAC and North Meadow and Clattinger Farm SAC ZoIs and will need to provide or contribute to strategic mitigation for recreation pressure.

3.2 The locations of the site allocations and presence within ZoIs are shown in **Figure 3.1.**



Types of development

3.3 Residential site allocations have been categorised as follows:

- Strategic sites;
- Non-strategic sites in principal settlements;
- Non-strategic sites in non-principal settlements; and
- Saved allocations from 2011-2031 Local Plan.

3.4 In addition to residential site allocations, windfall development figures over the Local Plan period for the parishes that fall within the ZoIs have been provided by CDC and included within this study.

Figure 3.1: Residential site allocations within the Zones of Influence

Legend

- Cotswold District boundary
- Strategic allocations
- Residential site allocations

Habitat sites

- Cotswold Beechwoods SAC
- North Meadow SAC

Zone of Influence

- Cotswold Beechwoods 15.4km
- North Meadow 4.2km
- North Meadow 9.4km

Strategic allocations

1. Cirencester - Land east of Kingshill Lane
2. Cirencester - Land south east of Cirencester and south of Preston
3. Cirencester - Steadings southern extension
4. Down Ampney - Land surrounding Down Ampney
5. Driffield - Land south of Driffield
6. Fairford - Land north east of Fairford
7. Kemble - Land south west of Kemble
8. Siddington - Land south west of Siddington

Contains Ordnance Survey data © Crown copyright and database right 2026.
Contains data from OS Zoomstack. © Natural England.

Assumptions

3.5 The basis of this approach and the assumptions underpinning it were developed in consultation with Natural England and CDC. To calculate the area of mitigation required, the following assumptions have been applied:

- An average household size of 2.2 persons per dwelling has been applied across the whole Local Plan period and beyond as shown in the Population uplift columns in **Table 3.1**. Current population growth figures provided by CDC use an average household figure of 2.20 for 2026, a figure that is projected to decrease to 2.06 by 2043. ONS data for 2021 gives a figure of 2.24 for Cotswold District, against an England average of 2.42 **[See reference 5]**.
- For sites that lie within two ZoIs, the sites will need to contribute financially to both on-site mitigation packages (SAMM).

Total mitigation requirements

3.6 In total, there is the potential for 11,675 new dwellings delivered across the new Local Plan Period within the Cotswold Beechwoods SAC and North Meadow and Clattinger Farm SAC zones of influence. Using the CDC occupancy rate of 2.2, this development will result in a population uplift of 25,685 persons.

3.7 The associated increase in recreational impacts on the Cotswold Beechwoods SAC and North Meadows SAC will require mitigation in the form of an additional 60.80 hectares of SANG and 70.08 hectares ANRG as shown in **Table 3.1**. Note that the total mitigation requirements do not include developments solely within the 9.4km North Meadow and Clattinger Farm SAC ZoI, as development here is only required to make a SAMM contribution to the SAC.

Table 3.1: Total mitigation requirements by development type

Development type	Housing delivery	Population uplift	Area of SANG required (ha)	Area of ANRG required (ha)
Non-strategic; non-principal settlements	-	-	-	-
Non-strategic; principal settlements	91	200.20	1.61	-

Development type	Housing delivery	Population uplift	Area of SANG required (ha)	Area of ANRG required (ha)
Saved allocations from 2011-31 Local Plan	96	211.20	1.69	-
Strategic site allocation	6,264	13,780.00	41.94	68.29
Windfall	985	2,167.00	15.54	1.80
Grand Total	**5,524**	**12,152.80**	**60.77**	**70.08**

Strategic site allocations

3.8 The bulk of the housing will be delivered by strategic site allocations, and it is expected that, where required, these sites will also provide for all of their SANG and ANRG requirements as bespoke onsite mitigation. High level masterplanning works has shown the amount of land available for onsite SANG and ANRG at these strategic allocations. **Table 3.2** shows the strategic allocations mitigation needs and area of mitigation drawn in the masterplans.

Table 3.2: Total Strategic Site Allocation mitigation needs vs delivery

Area of SANG required (ha)	Masterplan SANG drawn (ha)	Area of ANRG required (ha)	Masterplan ANRG drawn (ha)
41.94	45.90	68.29	83.70

3.9 Tables 3.3 and 3.4 detail the ZoI in which a specified strategic site allocation falls, the mitigation requirements, and the amount of mitigation currently identified in the strategic site allocation masterplans. The mitigation strategy and associated capacity assumptions remain subject to agreement through future Habitats Regulations Assessment work and consultation with Natural England.

Table 3.3: Strategic site allocation context

Development details		Population uplift in Local Plan Period		Zone(s) of Influence		
Settlement	**Site Name**	**New homes proposed**	**Occupation (2.2)**	**Cotswold Beechwoods SAC**	**North Meadow and Clattinger Farm SAC 4.2km**	**North Meadow and Clattinger Farm SAC 9.4km**
Cirencester	Land east of Kingshill Lane	613	1,349			y
Cirencester	Land southeast of Cirencester and south of Preston	1,368	3,010			y

Fairford	Land northeast of Fairford	0	0	0	0
Kemble	Land southwest of Kemble	17.93	0	19.3	0
Siddington	Land southwest of Siddington	0	0	0	0

Additional SANG needs

3.10 Tables 3.1 and 3.2 show that the onsite mitigation at Strategic Allocations will be able to meet the SANG and ANRG requirements for the Strategic Allocations, and the wider ANRG requirements for non-strategic and windfall development. However, there is a need to secure an additional 18.84 ha of SANG for the 1,070 dwellings delivered by non-strategic residential and windfall development within the Cotswold Beechwoods ZoI.

3.11 Not all development proposals will be capable of delivering bespoke onsite mitigation. In particular, smaller schemes and windfall developments may find opportunities to provide new SANG within the site boundary to be limited. To maintain flexibility and support sustainable growth, financial contributions may therefore be secured in lieu of on-site provision and used to purchase units or capacity at a Strategic SANG or capacity at other mitigation sites.

3.12 Although there is no minimum size specified for SANG or ANRG, work undertaken in relation to the Thames Basin Heaths SPA established a minimum size of 2ha for ‘small SANG’. However, small SANG sites of this size cannot accommodate the necessary SANG features such as the required length of circular walk and therefore would need to be linked to other larger SANG sites that do provide that feature. The Cotswold Beechwoods SAC Recreation Mitigation Strategy advises that small SANGs are generally unsuitable for mitigating the recreational impacts on the SAC stating that “SANGs should be large sites of at least 40ha (which will accommodate suitably long routes), however smaller sites (15ha and above) may work, depending on the location and quality”.

Strategic SANG site

3.13 A site to the south of the Kemble Strategic site allocation has been identified within the Masterplanning work to be available and capable of providing sufficient SANG capacity. It is located within the vicinity of the majority of the proposed development within the district and has a reasonable prospect of being delivered to meet the SANG needs.

3.14 This site would be designated as a Strategic SANG, and, with the agreement of NE, would need to be brought up to SANG standard. The key SANG enhancements required by such a site are discussed in **Chapter 6**.

3.15 The new strategic SANG will require a Management Plan which has been agreed with NE, and should detail the open space works required to enhance the land to full SANG status, its ongoing management, and in-perpetuity maintenance. Enhancement works can be carried out on an incremental basis in advance of development coming forward and will need to include measures such as new footpaths, planting, signage, interpretation boards and bins.

3.16 Developments using the new strategic SANG capacity as mitigation will be required to make financial contributions towards the enhancement and in-perpetuity management and maintenance through a combination of s106 agreements and the Community Infrastructure Levy (CIL).

3.17 Each development using the Strategic SANG cannot be occupied until the relevant enhancement works are provided at the SANG. This can be delivered via a s106 obligation to restrict occupation, which would be required to be entered into by the developer. The Council or developer/SANG management company should not wait for the CIL receipts to come in but instead ‘pump prime’ SANG enhancement works, the cost of which is then paid back by an equivalent amount from CIL receipts. This enables occupation of development sites to take place in a timely manner.

3.18 Currently, the proposed Strategic SANG site has been drawn at 30ha which would give it a SANG mitigation capacity of 3,750 dwellings, a surplus of 11.16ha on top of the 18.84 ha need as discussed above in **3.10**.

Chapter 4
Mitigation Sites and Catchments

Mitigation sites

4.1 The location and quantity of proposed recreation mitigation sites is shown below in **Table 4.1**. The total uplift in population that will increase recreational pressure on the Habitats Sites is 12,152.80. The mitigation currently identified in the strategic site masterplans and the additional strategic SANG has the potential to deliver a surplus of capacity for a population of 7,825.20 persons which equates to 3,556 homes.

4.2 The mitigation areas listed in Table 4.1 are identified within strategic site masterplans and represent indicative provision. The mitigation areas will require detailed design, ecological assessment and agreement with Natural England at the planning application stage.

Table 4.1: Recreation mitigation sites

Site name	Mitigation type	Mitigation size (ha)	Population capacity
Steadings southern extension	SANG	28.70	3,587.50
Land surrounding Down Ampney	ANRG	32.00	4,000.00
Land south of Driffield	ANRG	51.70	6,462.50
Land southwest of Kemble	SANG	19.30	2,412.50
Strategic SANG site	SANG	30.00	3,750.00
		Total	19,950.00

4.3 The maximum capacity shown in the final column of Table 4.1 is an estimate based on the area of the sites and would need to be reviewed at the time of a planning application. The capacity could reduce, for example, if parts of the site are found to be unsuitable as mitigation, or if the mitigation area is reduced.

4.4 The surplus mitigation capacity delivered by the Strategic SANG site provides flexibility to accommodate windfall development and potential future growth beyond current allocations. The mechanism by which surplus capacity will be allocated, reserved and monitored should be agreed and maintained through the Council's monitoring framework.

Mitigation catchments

SANG catchments

4.5 The catchment of SANG will depend on the individual site characteristics and location, and their location within a wider green infrastructure network. Where a SANG does not include a car park, the catchment area is considered to be 400m, in all other cases the catchment area is determined by the overall size of SANG, as shown in **Table 4.2** below:

Table 4.2: SANG catchments

SANG size	Catchment area
Any size but without car parking	400m
2 to 12 hectares	2 km
12 to 20 hectares	4 km
Greater than 20 hectares	5 km

4.6 Residential developments with a net increase of 10 or more units that are allocated to a SANG should ideally be located within a specified SANG catchment area. Developments with a net increase of less than 10 units generally do not need to be within a specified SANG catchment provided that there is sufficient overall SANG capacity.

ANRG catchments

4.7 Cotswold District Council does not currently specify the distance that an ANRG should be from the development that it serves. However, for the purposes of this study (and in line with approaches used elsewhere), the ANRG catchments in **Table 4.3** have been applied to align with the Natural England Green Infrastructure Framework (NEGIF) Accessible Greenspace Standard **[See reference** 6**]**:

Table 4.3: ANRG catchments

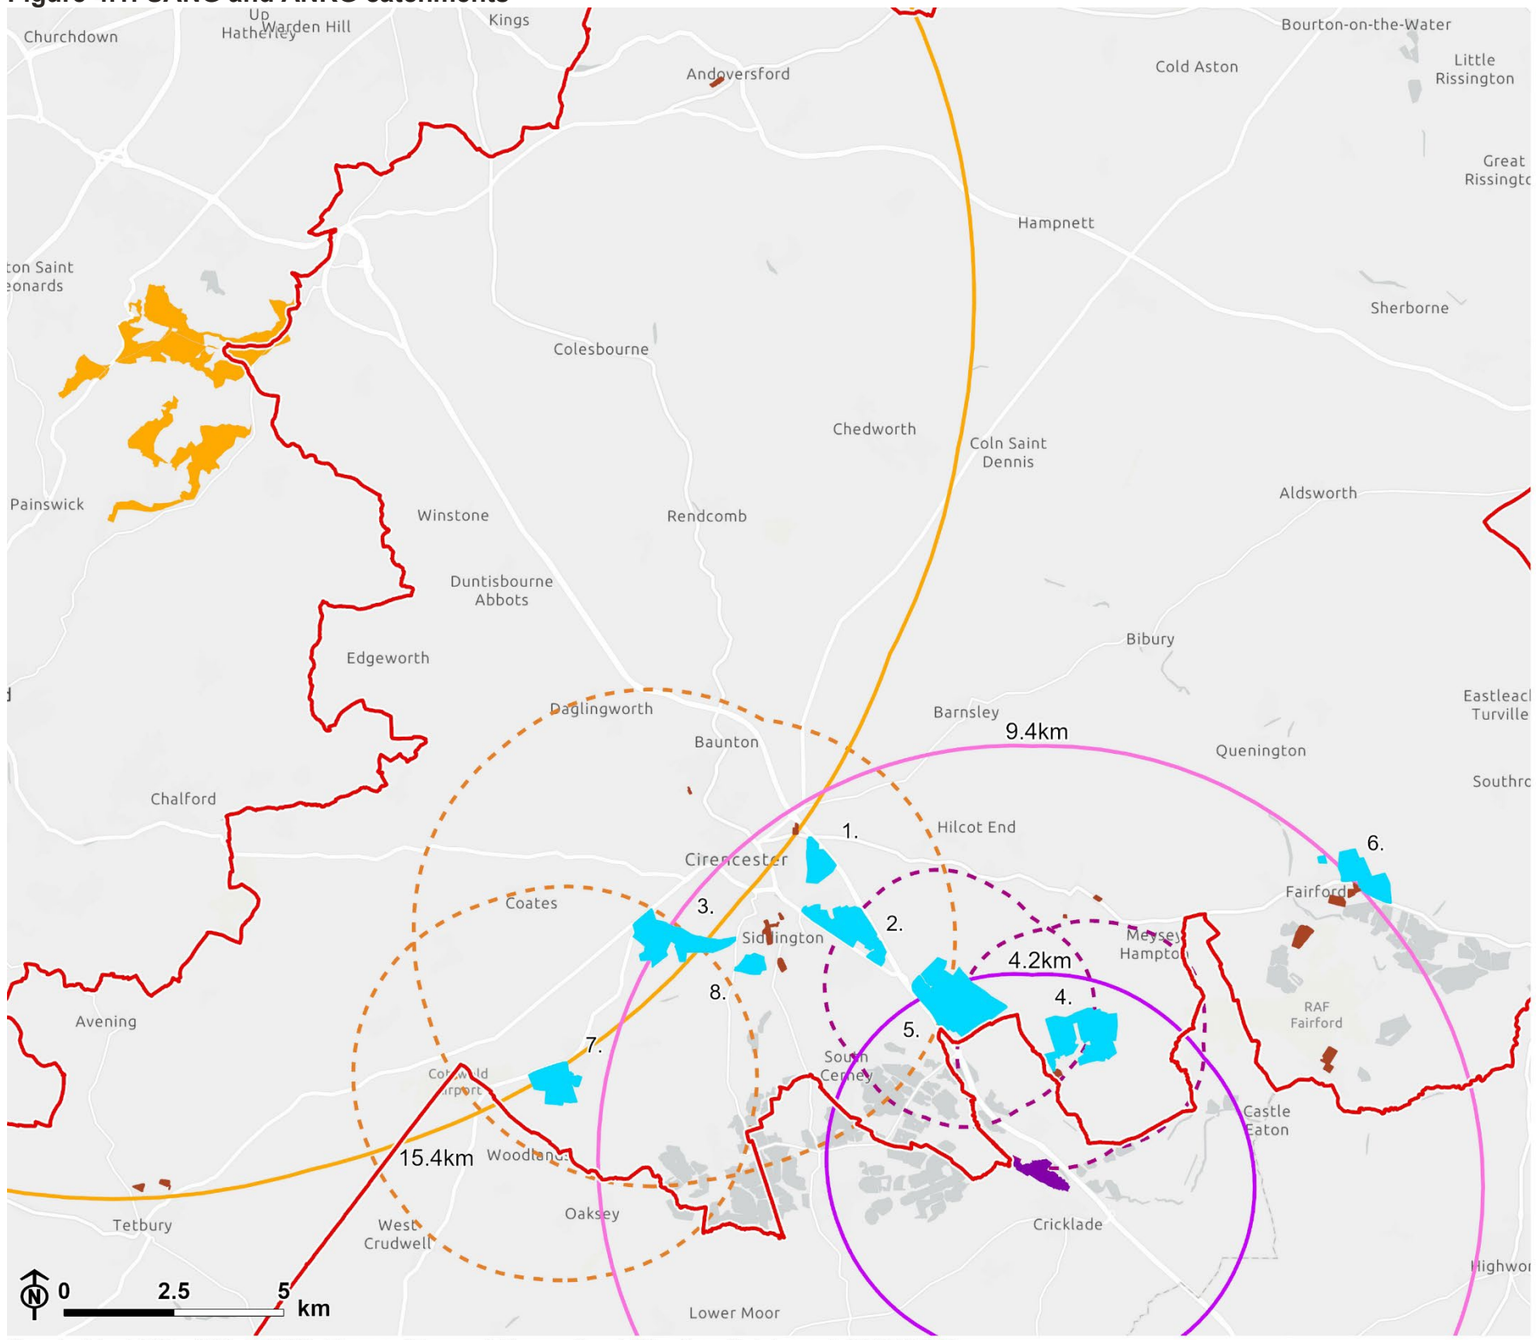
Access standard criteria	Minimum size (ha)	Catchment radius (km unless otherwise stated)
Local	2	300m
Neighbourhood	10	1

Access standard criteria	Minimum size (ha)	Catchment radius (km unless otherwise stated)
Wider neighbourhood	20	2
District	100	5
Sub-regional	500	10

Site Allocations and catchments

4.8 The site allocations that could be served by the mitigation sites depends on their location and the capacity of the SANG or ANRG. The site allocations that could be served by each potential SANG or ANRG, based on the catchments discussed above, are shown in **Figure 4.1 and 4.2**.

4.9 As discussed In **Chapter 3**, with the addition of a new Strategic SANG site, the overall provision of SANG would be greater than the total SANG requirement. Additionally, as shown in **Figures 4.1 and 4.2**, the total combined mitigation has the potential to form a mitigation network. As defined in NE guidance **[See reference 7]** and the TBH Delivery Framework **[See reference 8]**, where several SANG/ANRG sites are in proximity or adjacent, they can be used and visited as one single entity. This approach allows for the use of links between mitigation units to deliver a circular walk and meet all the requirements in combination



4.10 The following site allocations are not within the catchments of any of the potential SANG or ANRG:

- Land adjacent to Blind Lane, (draft policy T31B), 44 homes in the Cotswold Beechwoods SAC ZoI requiring 0.77 ha of SANG mitigation. The nearest SANG provision would be at Steadings southern extension which is approximately 18.5 km away.
- Land north-west of Highfield Cottage, (draft policy T71A), 50 homes in the Cotswold Beechwoods SAC ZoI requiring 0.88 ha of SANG mitigation. Residents may be willing to travel to the new Kemble SANG which is approximately 8.5 km away.
- Land to rear of Templefields and Crossfields, (draft policy A2), 52 homes in the Cotswold Beechwoods SAC ZoI requiring 0.92 ha of SANG mitigation. Residents may be willing to travel to the new Kemble SANG which is approximately 9 km away.

4.11 Further consideration should be given to how developments outside identified catchments will be effectively mitigated, including whether alternative mitigation

provision, revised catchments or financial contributions towards strategic mitigation are required.

Chapter 5
SANG, ANRG, and SAMM Costs

What are the Council doing now?

Cotswold Beechwoods SAC

5.1 Current mitigation measures (on-site e.g. rangers and signage; off-site e.g. the provision of suitable alternative natural greenspaces) are secured through financial contributions using a Section 111 legal agreement, which states that the applicant will pay the Council a £771.79 mitigation contribution for each unit of accommodation plus a £130 administration fee per S.111 agreement which consists of:

- Onsite measures (SAMM contributions) – £221.33 per unit
- Off-site measures – £550.46 per unit (in some limited instances developments may provide their own SANG instead.)

North Meadow and Clattinger Farm SAC

5.2 Current mitigation measures (on-site e.g. rangers and signage; off-site e.g. the provision of suitable alternative natural greenspaces) are secured through financial contributions using a Section 111 legal agreement, which states that the applicant will pay the Council a mitigation contribution for each unit of accommodation (shown below) plus a £130 administration fee per S.111 agreement:

- Inner zone – £836.21/unit, and
- Outer zone - £356.21/unit.

5.3 ANRG provision is required for developments of 50 units and above within the inner zone, for these developments the level of contribution may be amended and is resolved on a case-by-case basis.

Indicative costings

5.4 The costings below have been based on a series of cost models developed for the delivery of the Strategic SANG. The SANG cost per dwelling is based on:

- Land purchase;

- Creation of SANG features; and
- In perpetuity (80 year) maintenance costs.

Land purchase

5.5 The land purchase price used is £28,000 per ha for agricultural land in the South West of England as defined by the Ministry of Housing, Communities & Local Government (MHCLG) and is based on a residual land valuation model which utilises a mix of large-scale datasets and published government statistics **[See reference 9]**.

Creation of SANG features

5.6 A model site has been costed based upon the required SANG characteristics as set out by Natural England **[See reference 10]**. Interventions have been costed using Spon's External Works and Landscape Price Book 2026 **[See reference 11]**.

5.7 The total per hectare cost for the creation of an appropriate SANG site has been calculated to be £17,615.64.

In perpetuity maintenance

5.8 The maintenance activities and associated costs have been calculated using Spon's External Works and Landscape Price Book 2026. Mitigation sites need to be guaranteed 'in perpetuity' which in this instance is taken to be a period of at least 80 years.

5.9 The total per hectare in-perpetuity maintenance cost has been calculated as £472,040.

5.10 Table 5.1 shows the calculation used to estimate the SANG contribution for the new Strategic SANG:

Table 5.1: Estimated SANG/ANRG contribution

Item	Cost
Land purchase (per ha)	28,000.00
Intervention (per ha)	17,615.64
Maintenance (per ha in perpetuity)	472,040.00
Total (per ha)	**517,655.64**

Item	Cost
Total Strategic SANG cost (18.84 ha)	£9,752,655.64
Cost per dwelling (assume 1,070 houses)	£9,114.61

Total estimated Strategic SANG contribution required

The total contribution per dwelling on those developments that fall within the relevant ZoIs and are not provided for by the onsite SANG/ANRG delivered by the Strategic Allocations has been calculated to be **£9,114.61**.

SAMM contributions

5.11 Developments that provide bespoke SANG/ANRG will not need to pay a recreation mitigation tariff but must still pay SAMM contributions. For SANG/ANRG mitigation, the contribution will be set by, and paid directly to, the provider and owner of the private SANG/ANRG. In this case, 'private' refers to ownership only and does not indicate a restriction on public access; all SANG/ANRGs must be publicly accessible. The SAMM contribution will continue to be paid to the Council and passed on to the administrative body.

5.12 Table 5.2 shows the estimated total contributions that will be collected for all development types. Note that the contributions calculated do not include the Council's admin fee which is charged on a per application basis.

Table 5.2: Total SAMM contributions

Development Type	Dwellings	Total Beechwoods SAMM contribution (£221.33 per dwelling)	Total North Meadow SAMM contribution (£356.21 per dwelling)
Non-strategic; non-principal settlements	169		£60,199.49
Non-strategic; principal settlements	388	£20,141.03	£138,209.48

Development Type	Dwellings	Total Beechwoods SAMM contribution (£221.33 per dwelling)	Total North Meadow SAMM contribution (£356.21 per dwelling)
Saved allocations from 2011-31 LP; no planning permission	96	£21,247.68	
Strategic Site	9,758	£527,650.72	£3,112,562.98
Windfall	1,264	£195,434.39	£135,716.01
Grand Total	**11,675**	**£764,473.82**	**£3,446,687.96**

Chapter 6
SANG and ANRG Delivery

What characteristics should a SANG have?

6.1 SANGs should divert trips away from the SACs, and this is best achieved by diverting local trips e.g. dog walks, rather than by trying to directly recreate the appeal of the SACs elsewhere. The Footprint Ecology Cotswold Beechwoods SAC Recreation Mitigation Strategy **[See reference** 12**]** sets out the required features of SANG as a checklist, referencing Natural England guidance. Characteristics include:

Must haves

- For all sites larger than 4ha there must be adequate parking for visitors, unless the site is intended for local use, i.e. within easy walking distance (400m) of the developments linked to it. The amount of car parking space should be determined by the anticipated use of the site and reflect the visitor catchment of both the SANG and the SAC.
- Possible to complete a circular walk of 2.3-2.5km around the SANG.
- Car parks must be easily and safely accessible by car and should be clearly sign posted.
- The accessibility of the site must include access points appropriate for the visitor use the SANG is intended to cater for.
- The SANG must have a safe route of access on foot from the nearest car park and/or footpath/s
- All SANG with car parks must have a circular walk which starts and finishes at the car park.
- SANG must be designed so that they are perceived to be safe by users; they must not have tree and scrub cover along parts of the walking routes.
- Paths must be easily used and well maintained but most should remain unsurfaced to avoid the site becoming too urban in feel.
- SANG must be perceived as semi-natural spaces with little intrusion of artificial structures, except in the immediate vicinity of car parks. Visually sensitive way-markers and some benches are acceptable.

- All SANG larger than 12 ha must aim to provide a variety of habitats for users to experience.
- Access within the SANG must be largely unrestricted with plenty of space provided where it is possible for dogs to exercise freely and safely off lead.
- SANG must be free from unpleasant intrusions (e.g. sewage treatment works smells etc).

Should haves

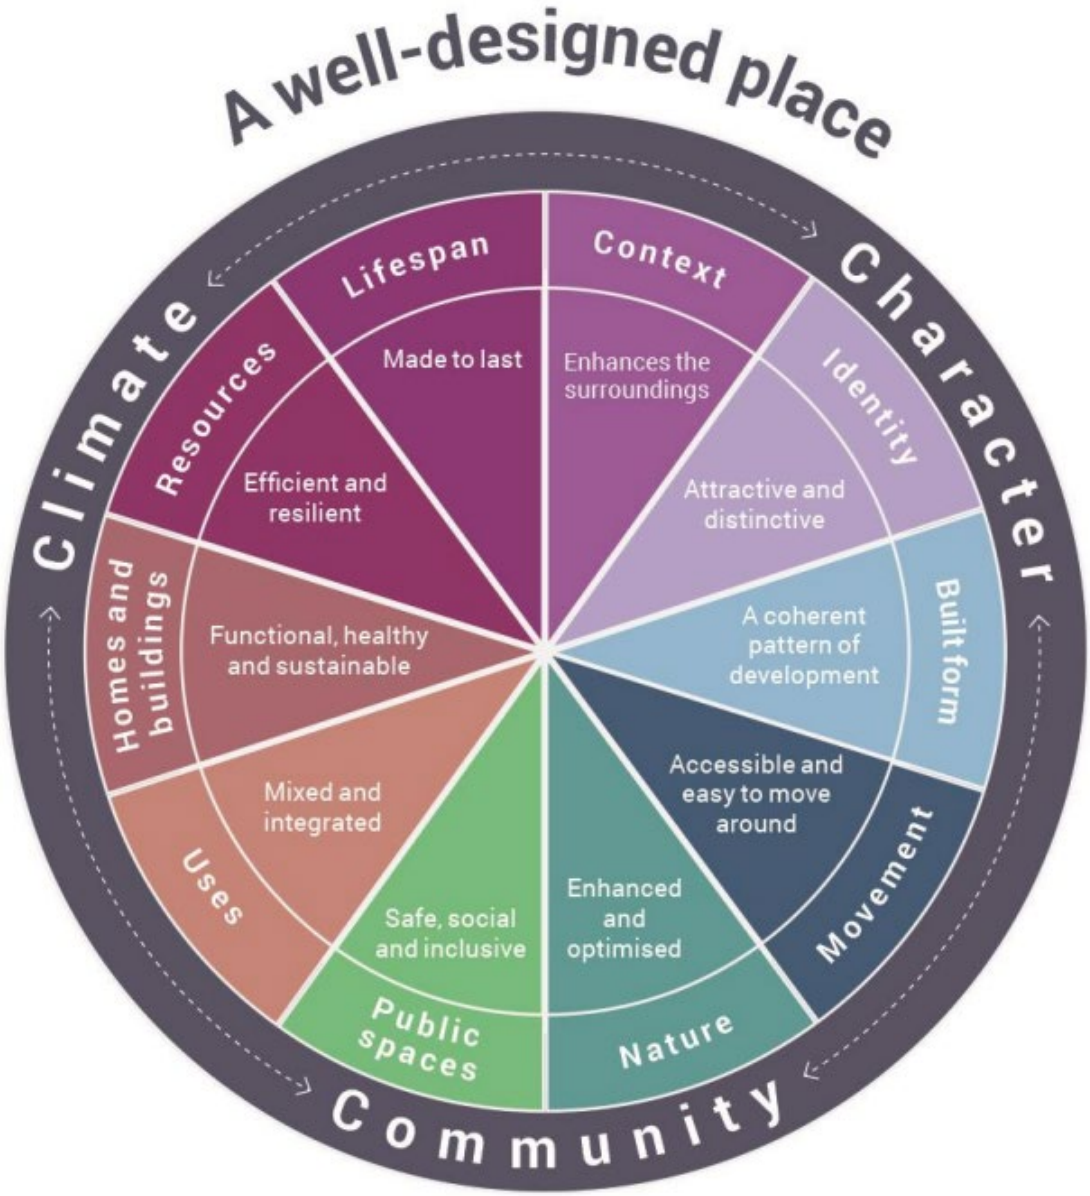
- SANG should be clearly sign-posted or advertised in some way.
- SANG should have leaflets and/or websites advertising their location to potential users. It would be desirable for social media to be used as well, with the goal of reducing paper use. Although a leaflet for a new home is desirable.

Desirable

- It would be desirable for an owner to be able to take dogs from the car park to the SANG safely off the lead.
- Where possible it is desirable to choose sites with a gently undulating topography for SANG
- It is desirable for access points to have signage outlining the layout of the SANG and the routes available to visitors.
- It is desirable that SANG provide a naturalistic space with areas of open (non-wooded) countryside and areas of dense and scattered trees and shrubs. The provision of open water is encouraged and desirable on sites. However large areas of open water cannot count towards capacity.
- Where possible it is desirable to have a focal point such as a viewpoint, monument etc within the SANG.

What characteristics should ANRG have?

6.2 Discussions with Natural England during this study yielded the recommendation that for offsite mitigation within the inner North Meadow and Clattinger Farm SAC ZoI, it would be more proportionate and pragmatic to look at the wider green infrastructure provision as a whole, rather than a SANG, and the accompanying requirements. It has been agreed that the flexibility of ANRG and viewing green infrastructure as a whole will deliver more functionality and better protect North



Meadow and Clattinger Farm SAC from the recreational impacts of growth in the area.

6.3 The green infrastructure that ANRG will look to deliver is essential and integral to well-designed places and should not be regarded as an optional enhancement. Green infrastructure and its ecosystem functions are essential for successful urban, or rural environments. The National Planning Policy Framework makes it clear that the creation of high-quality buildings and places should be fundamental to the planning and development process **[See reference** 13**]**.

6.4 The National Design Guide, the National Model Design Code (NMDC) and Guidance Notes for Design Codes, illustrate how places that are beautiful, healthy, greener, more biodiverse, enduring, and successful, can be designed. The National Design Guide considers how we recognise well-designed places, by outlining and illustrating ten characteristics that should form the basis for the design of ANRG, see Box below and **Figure 5.1**:

- Context – enhances the surroundings.
- Identity – attractive and distinctive.
- Built form – a coherent pattern of development.
- Movement – accessible and easy to move around.
- Nature – enhanced and optimised.
- Public spaces – safe, social, and inclusive.
- Uses – mixed and integrated.
- Homes and buildings – functional, healthy, and sustainable.
- Resources – efficient and resilient.
- Lifespan – made to last.

Figure 5.1: The ten characteristics of well-designed places [See reference **14**]

Delivery recommendations for SANG and ANRG

SANG and ANRG contributions

6.5 Contributions should be in proportion to the proposed development and sufficient to avoid and mitigate adverse effects. The level of the financial contribution depends upon the number of bedrooms in a dwelling and are secured through S106 agreements. These contributions are pooled to ensure the mitigation strategy can respond to changing opportunities.

6.6 SANG and ANRG contributions will fund the creation or upgrade of existing sites to SANG or ANRG status and will deliver:

- **SANG enhancements** and infrastructure works to upgrade a site to SANG status in accordance with the relevant SANG Management Plan.
- **ANRG enhancements** and infrastructure works to upgrade a site to ANRG status in accordance with the relevant ANRG Management Plan.
- **In perpetuity maintenance** ensuring that the SANG is maintained and managed for the in-perpetuity period (80+ years). This comprises matters such as repairs, planting, SANG wardens and staff.
- **Monitoring** of visitors and the integrity of the habitats and species of the designated site to assess the effectiveness of the relevant mitigation measures.

6.7 The package of strategic measures that SANG contributions will fund is to be kept under review, items that the contributions should also look to enable include:

- **Administration and education** including the production of SANG/ANRG management plans, project management of enhancement and repair works, and local promotion of SANG and ANRG.
- **Facilitation** efforts such as priming future SANG enhancement works to meet additional need, operating and reviewing the strategy, and paying any service costs.

Management and monitoring

6.8 Regular monitoring of each mitigation project is essential to ensure that it is effective in achieving its aim to provide a realistic alternative recreational space for new residents delivered through the Local Plan Period. This will also provide transparency to the process and help inform future Recreation Mitigation Strategy reviews. Monitoring proposals are summarised in **Table 6.1**.

6.9 Of particular importance is the ability of each project to achieve its mitigation potential and effectively attract new visitors from the SACs. Baseline quantitative visitor surveys should be undertaken on currently publicly accessible sites prior to the commencement of enhancement works and 3-6 months following completion of works. Detailed visitor surveys should be completed every 5 years thereafter and should follow a clear methodology prepared in consultation with Natural England.

6.10 Monitoring of the integrity of the habitats and species of the SANG site should be undertaken to ensure that the infrastructure interventions are successful in that there are no adverse effects on the SANG site due to the increase in recreational

visitor pressure. Pre-delivery ecological surveys should be used to baseline future surveys conducted at intervals of no more than 5 years.

6.11 Monitoring indicators have also been proposed for the provision of SANG contribution collections to enable an assessment of the performance of the Strategy in the delivery of its financial objectives and to provide transparency on income and expenditure. The income and expenditure information should be presented in the Council's annual statements, and the performance of the strategy should be reported as part of the Council's planning policy monitoring. The Council should periodically review mitigation tariffs and cost assumptions to ensure contributions remain sufficient to deliver mitigation and long-term management requirements.

Table 6.1: Proposals for SANG monitoring

Area	Indicator	Data source	Frequency
Funding	Total value of SANG/ANRG contributions collected	S106 monitoring and reporting	Ongoing internal monitoring and annual reporting
Delivery	Total expenditure on SANG/ANRG projects	Internal monitoring of capital and management works	Annual reporting
SANG/ANRG use	Visitor numbers	Quantitative visitor survey	Prior to works. 3-6 months following completion. Every 5 years thereafter
SANG/ANRG resilience	Ecological surveys	Observations and recording on-site	Prior to works. Every 5 years thereafter

Governance options

6.12 There are several different governance models under which on- and off-site SANG can be delivered and managed, and each option has benefits and drawbacks. Governance models with clearer long-term accountability, for example Council ownership, trusts, or third-party provider with a proven track record, generally carry

less risk. Additionally, the more the governance structure relies on future revenue streams, the greater need is for strong protections, ring-fencing, and enforceable legal mechanisms to demonstrate long-term security.

6.13 Where mitigation capacity delivered by strategic allocations is intended to mitigate impacts arising from other developments, appropriate legal and governance mechanisms will be required to secure access to that capacity and ensure its long-term management.

6.14 Mitigation must be in place before occupation and the SANG needs to be available in time for first occupation, although phasing may be possible by agreement. If the build programme is tight, governance models that allow faster mobilisation (for example developer-controlled build with later transfer to the Council, or third-party capacity purchase) can reduce this time risk.

6.15 Where the developer does not transfer to the Council, it is essential that a fallback, such as Council step-in rights with full cost recovery, is guaranteed so that if the alternative management arrangement fails, the SANG continues to function as mitigation for the full in-perpetuity period.

6.16 Governance options include:

Strategic SANG delivered and managed by the Local Authority (developer pays tariffs – Council delivers)

6.17 Instead of building a bespoke on-site SANG, the developer will pay into the Authority's strategic SANG programme. The Council then delivers enhancements and long-term management. The strategic SANG mitigation package should also incorporate measures to address residual impacts at the designated site (referred to as Strategic Access Management and Monitoring (SAMM)).

6.18 Benefits:

- Reduced technical burden. The Council controls design standards and delivery, which can reduce developer risk of non-compliance.
- Consistency. Strategic sites usually have agreed management plans and an established visitor offer.
- Useful for smaller schemes. Particularly where bespoke SANG is not realistic.

6.19 Drawbacks:

- Delivery constraints. Strategic SANG, are allocated incrementally and developed either through an up-front capital investment or in phases as S106 funds are collected.
- Geographic constraints. Developments often (unless otherwise agreed with NE) must be within the strategic SANG catchment buffers.
- Less place-based benefit. A strategic site may be less effective at diverting the specific residents of a particular scheme than an on-site/near-site SANG.

Local Authority ownership and management (transfer to the Council)

6.20 SANG land is transferred to the Council (freehold or long lease), and the Council becomes the long-term owner and/or manager, funded by a commuted sum for in-perpetuity management (80+ years).

6.21 Benefits:

- High confidence for sign-off. Councils are familiar competent authority partners and can provide governance certainty, which helps demonstrate mitigation will operate for the required in-perpetuity period.
- Operational resilience. Councils typically have established parks or countryside teams and procurement routes for maintenance, inspections, and public liability controls.
- Clear accountability. Ownership, management responsibility, and public access duties sit with one body, reducing ambiguity in enforcement and reporting.

6.22 Drawbacks:

- Higher upfront cost. Commuted sums can be significant, particularly when based on per-hectare rates plus monitoring and administration and may affect viability compared to private management options.
- Adoption is discretionary. Councils are under no obligation to accept transfers, and will prioritise allocations in line with strategic objectives, so acceptance cannot be assumed.
- Delivery programme dependency. If the Council is delivering enhancement works, occupation controls still require works to be delivered before occupancy therefore project timing may sit outside the developer’s direct control.

Developer retains ownership but contracts management to a managing agent

6.23 In this scenario, the developer or a successor landholding company keeps the land but appoints a professional land manager to deliver the management plan, funded through ring-fenced arrangements secured via S106 and/or a dedicated management fund.

6.24 Benefits:

- Programme control. The developer can mobilise works quickly, align phasing with occupations, and avoid adoption delays.
- Professional delivery. A specialist manager can be procured for the precise skill sets needed (i.e. visitor infrastructure, habitat management, dog management, access safety).
- Potential cost efficiency. If structured and managed well, lifecycle maintenance costs can be lower than local authority commuted sums.

6.25 Drawbacks:

- Long-term governance risk. The key management consideration is that mitigation is secured and effective in perpetuity. Ensuring durable funding and accountability over decades can be more complex for a private organisation than a public body.
- Approval scrutiny. Authorities will typically require assurance that the organisation has the skills and resources to manage in perpetuity and often require fallback mechanisms.
- Enforcement complexity. If ownership changes hands, the Council must rely on legal covenants or S106 provisions to enforce standards, meaning that the drafting of any agreement must be a robust process.

Management Company funded by service charges (resident-funded estate management)

6.26 Here, a private management company is established or appointed and funded via estate charges or service charges on the development, managing the SANG under a secured management plan.

6.27 Benefits:

- Reduces upfront commuted sum. This model shifts a portion of long-term cost from upfront developer payment to ongoing estate funding.
- Local stewardship and engagement. If well governed, residents can influence quality standards and take ownership of outcomes.

6.28 Drawbacks:

- Credibility with in-perpetuity mitigation: Mitigation funding needs to be secured for 80+ years. Here the reliance on future service charge collection can be seen as higher risk unless strongly protected.
- Resident contribution collection risk. Service charge arrears, disputes, or future cost inflation can undermine the delivery of required management outcomes.
- Governance stability. Company failure, sale, or re-structuring needs strong fallback provisions to ensure continuity of management

Community Trust / Charitable Trust / Community Interest Company (CIC)

6.29 In this model, the SANG is owned and/or managed by a non-profit body (i.e. trust or CIC) with a defined constitution, often with a dedicated endowment or commuted sum, delivering management in perpetuity.

6.30 Benefits:

- Goal alignment. A conservation or recreation trust can be highly aligned to visitor management, education, and habitat outcomes.
- Public acceptability. Trust models can be positively perceived, especially if the SANG functions as a community asset.
- Specialist governance. Boards can include ecological and community expertise, improving outcome delivery.

6.31 Drawbacks:

- Authority assurance needed. Where a developer proposes a body other than the Council, they must demonstrate or provide assurance the organisation will remain in existence and has resources and skills for in-perpetuity delivery. Fallback positions should also be set out.
- Set-up time and cost: Establishing a credible trust with proper governance, insurances, staffing, and reporting can add time and complexity to SANG delivery

- Funding robustness. Like other non-Council options, it will need to be clearly demonstrated that funding is secured for the full in-perpetuity (80+ year) period.

Third-party SANG provider (landowner sells SANG capacity)

6.32 Here a landowner brings forward a SANG and sells capacity to multiple developments via private contract, with the Council confirming catchment and capacity and securing obligations in S106 (including SAMM where relevant).

6.33 This model requires that the SANG is upgraded to the appropriate standard, has been assessed have the required mitigation capacity, made publicly accessible, and has in-perpetuity maintenance guaranteed.

6.34 Benefits:

- Fast route for constrained sites. Developers without land can secure mitigation quickly if capacity exists.
- Specialist land management. Some third-party providers are estates with strong land management capability.
- Scalability. One SANG can serve multiple schemes if capacity and catchment criteria are met.

6.35 Drawbacks:

- Less direct control. The developer relies on a third party to deliver and maintain the SANG standard and any required upgrades.
- Approval and timing risk. Occupation is typically restricted until capacity is secured, the SANG is open, and in-perpetuity maintenance is guaranteed, so any delay in the third-party programme can delay occupations.
- Contract complexity. A contract with the SANG owner is needed, as is an S106 agreement tying the mitigation to the development and securing any strategic monitoring and management contributions.

Carbon Footprint

The format of this report is optimised for reading digitally in pdf format. Paper consumption produces substantial carbon emissions and other environmental impacts through the extraction, production and transportation of paper. Printing also generates emissions and impacts from the manufacture of printers and inks and from the energy used to power a printer. Please consider the environment before printing.

Accessibility

JBA aims to align with governmental guidelines on accessible documents and WCAG 2.2 AA standards, so that most people can read this document without having to employ special adaptation measures. This document is also optimised for use with assistive technology, such as screen reading software.

Contract

JBA Project Manager	Mike Williamson BSc MSc CGeog FRGS EADA
Address	Phoenix House, Lakeside Drive, Centre Park, Warrington, WA1 1RX
JBA Project Code	2025s1921

This report describes work commissioned by Cotswolds District Council by an instruction dated 23 December 2025. The Client's representative for the contract was Joanne Corbett of Cotswold District council. Kira Khangura and Laura Thompson of JBA Consulting carried out this work.

Purpose and Disclaimer

Jeremy Benn Associates Limited ("JBA") has prepared this Report for the sole use of Cotswold District Council and its appointed agents in accordance with the Agreement under which our services were performed.

JBA has no liability for any use that is made of this Report except to Cotswold District Council for the purposes for which it was originally commissioned and prepared.

No other warranty, expressed or implied, is made as to the professional advice included in this Report or any other services provided by JBA. This Report cannot be relied upon by any other party without the prior and express written agreement of JBA.

JBA disclaims any undertaking or obligation to advise any person of any change in any matter affecting the Report, which may come or be brought to JBA's attention after the date of the Report.

The methodology adopted and the sources of information used by JBA in providing its services are outlined in this Report. The work described in this Report was undertaken between December 2025 and June 2026 and is based on the conditions encountered and the information available during the said period. The scope of this Report and the services are accordingly factually limited by these circumstances.

The conclusions and recommendations contained in this Report are based upon information provided by others and upon the assumption that all relevant information has been provided by those parties from whom it has been requested and that such information is accurate. Information obtained by JBA has not been independently verified by JBA, unless otherwise stated in the Report.

Definitions

1D model: One-dimensional hydraulic model.

2D model: Two-dimensional hydraulic model.

Annual Exceedance Probability: The probability (expressed as a percentage) of a flood event occurring in any given year.

Brownfield: A previously developed parcel of land.

Climate change: Long term variations in global temperature and weather patterns caused by natural and human actions.

Design flood: A flood event of a given annual flood probability, which is generally taken as: fluvial (river) flooding likely to occur with a 1% annual probability (a 1 in 100 chance each year), or surface water flooding likely to occur with a 1% annual probability (a 1 in 100 change each year), plus an appropriate allowance for climate change, against which the suitability of a proposed development is assessed and mitigation measures, if any, are designed.

Flood defence: Infrastructure used to protect an area against floods such as floodwalls and embankments; they are designed to a specific Standard of Protection (SoP) (design standard).

Green infrastructure: A network of multi-functional green and blue spaces and other natural features, urban and rural, which is capable of delivering a wide range of environmental, economic, health and wellbeing benefits for nature, climate, local and wider communities and prosperity.

Greenfield: An undeveloped parcel of land.

Lead Local Flood Authority: The unitary authority for the area or if there is no unitary authority, the County Council for the area.

Main river: A watercourse shown as such on the statutory main river map held by the Environment Agency (EA). They are usually the larger rivers and streams. The EA has permissive powers (not duties) to carry out maintenance and improvement works on main rivers).

Major development: Defined in the National Planning Policy Framework (NPPF) as a housing development where 10 or more homes will be provided, or the site has an area of 0.5 hectares or more, or as a non-residential development with additional floorspace of 1,000m² or more, or a site of 1 hectare or more, or as otherwise provided in the Town and Country Planning (Development Management Procedure) (England) Order 2015 (gov.uk).

Natural Flood Management (NFM): Techniques that work with nature to reduce the risk of flooding for communities.

Ordinary watercourse: Any river, stream, ditch, drain, cut, dyke, sluice, sewer (other than a public sewer) and passage through which water flows but which does not form part of a

main river. The local authority or Internal Drainage Board (IDB) has permissive powers (not duties) on ordinary watercourses.

Permissive powers: Authorities have the power to undertake flood risk management activities, but not a duty to do so. This will depend on priorities in flood risk management.

Return period: An estimate of the interval of time between events of a certain intensity or size, in this instance it refers to flood events. It is a statistical measurement denoting the average recurrence interval over an extended period of time.

Riparian owner: A riparian landowner, in a water context, owns land or property, next to a river, stream or ditch.

Risk Management Authority (RMA): The EA; a Lead Local Flood Authority; a District Council in an area where there is no unitary authority; an internal drainage board; a water company and a highway authority.

Risk: In flood risk management, risk is defined as a product of the probability or likelihood of a flood occurring, and the consequence of the flood.

Stakeholder: A person or organisation affected by the problem or solution or interested in the problem or solution. They can be individuals or organisations, includes the public and communities.

Sustainable Drainage Systems (SuDS): Methods of management practices and control structures that are designed to drain surface water in a more sustainable manner than some conventional techniques, such as grates, gullies, and channels.

Windfall site: A site which becomes available for development unexpectedly and therefore not included as allocated land in a planning authority's Local Plan.

Executive Summary

This report provides a comprehensive and robust evidence base on flood risk issues to support the development of planning policies for the new Local Plan for Cotswold District. This report uses the best available information, including input from key stakeholders. The SFRA applies the latest national planning policy and guidance, including:

- National Planning Policy Framework (NPPF) (gov.uk), last updated in February 2025.
- Planning Practice Guidance (PPG): Flood risk and coastal change (gov.uk) updated in September 2025.
- The latest Environment Agency climate change guidance (gov.uk) (updated in July 2021 and May 2022).
- The Environment Agency 'How to prepare a strategic flood risk assessment' (gov.uk) guidance, last updated in August 2025.
- The Association of Directors of Environment, Economy, Planning & Transport (ADEPT) 'Strategic flood risk assessment good practice guidance' (adeptnet.org.uk).

Introduction

To support the development of the new Local Plan for Cotswold District Council (referred to hereafter as the Council), the key objectives of the assessment are:

- To collate and analyse the latest available information and data for current and future (i.e., climate change) flood risk from all sources, and how these risks may be mitigated against.
- To inform decisions in the new Local Plan, including informing the sustainability appraisal, the selection of development sites, and planning policies.
- To provide evidence to support the application of the Sequential Test for the allocation of new development sites, to support the Council in the preparation of the new Local Plan.
- To provide a comprehensive set of maps presenting flood risk from all sources that can be used as evidence base for use in the new local plan.
- To help decide when a Flood Risk Assessment (FRA) will be required for individual planning applications.
- To provide advice for applicants carrying out site-specific FRAs, including those at risk from sources other than river flooding, or at risk of flooding in the future due to climate change, and outline specific measures or objectives that are required to manage flood risk.
- To provide the basis for applying the Sequential Test on planning applications, including by identifying sources of flooding other than those in 'Flood Zones' and those at risk of flooding in the future.

- To identify opportunities to reduce the causes and impacts of flooding and gather information on the land that is likely to be required for flood risk management structures.

Summary of Cotswold and flood risk

Cotswold administrative area is situated in the south of England within the county of Gloucestershire. Over 90,800 people live in the Cotswold administrative area, according to the 2021 Census. The area covers approximately 1,165km^2 of land, it is rural and sparsely populated, with numerous villages and hamlets. The largest town is Cirencester and is home to approximately 22% of the population of the district.

Flood risk from all sources has been assessed in this SFRA. This study has shown that the most significant sources of flood risk across Cotswold are fluvial and surface water. The points below summarise the findings:

Fluvial: The majority of fluvial risk comes from the River Churn which flows through Cirencester and South Cerney. There is also fluvial flood risk along the River Thames and the River Coln along the southern border of the district. Fluvial flood risk is discussed in Section 4.4.1 and the flood extents are shown in the interactive GeoPDF mapping (Appendix B)

Surface Water: The Environment Agency's (EA) Risk of Flooding from Surface Water (RoFSW) highlights several communities in the district at risk from surface water flooding. Areas to the north of the district appear at highest risk of surface water flooding, including Chipping Campden, Moreton-in-Marsh, Evenlode and Bourton-on-the-Water. Other key areas of risk are present in the south of the district, most notably Cirencester, Down Ampney, South Cerney and Lechlade on Thames. Surface water flood risk is discussed in Section 4.5 and the flood extents are shown in the interactive GeoPDF mapping (Appendix B)

Climate Change: Areas at risk of flooding today are likely to be at increased risk in the future and the frequency of flooding will also increase in such areas, due to climate change. Flood extents will increase; in some locations this may be minimal, but flood depth, velocity and hazard may have more of an impact due to climate change. This SFRA provides an assessment of the impacts of climate change on fluvial and surface water flood risk. The approach to climate change is discussed in Section 5 and the flood extents are also shown in the interactive GeoPDF mapping in Appendix B.

Sewer: Thames Water, Wessex Water and Severn Trent Water provide water and sewerage services across the district and have provided details of historic sewer flooding Sewer flood risk is discussed in Section 4.6.

Groundwater: The risk of groundwater emergence within Cotswold is varied. There are several areas shown in the JBA Groundwater Emergence Map where groundwater levels are either at or very near the ground surface, as detailed in Section 4.7 and shown in the interactive GeoPDF mapping in Appendix B.

There is no national risk-based groundwater flood dataset of a suitable resolution to inform the areas at risk from groundwater flooding; however, emergence mapping when considered in conjunction with topography and surface water flow paths can indicate areas where groundwater is likely to emerge, and the flow paths it may take once above the ground.

Reservoirs: There are 10 reservoirs located outside Cotswold, which present a potential risk of flooding within the district. The level and standard of inspection and maintenance required under the Reservoirs Act means that the risk of flooding from reservoirs is relatively low. However, there is a residual risk of a reservoir breach, and this risk should be considered in any site-specific FRAs (where relevant) in accordance with the updated PPG: Flood risk and coastal change. Reservoir flood risk is discussed in Section 4.8.1 and flood extents are shown in the interactive GeoPDF mapping in Appendix B.

Defences

The EA Asset Information Management System (AIMS) dataset provides information on flood defence assets across Cotswold. The majority of flood defences within Cotswold District are present along the River Windrush, River Leach, River Coln and River Churn, as flood embankments and walls. Further information on defences across Cotswold is available in Section 6 and is shown in the interactive GeoPDF mapping in Appendix B.

How to use this report

The SFRA provides recommendations regarding all sources of flood risk across the district, which can be used to inform policy on flood risk within the new Local plan. This includes how the cumulative impact of development should be considered.

It provides the latest flood risk data and guidance to inform the Sequential Test, for both allocations and individual planning applications and provides guidance on how to apply the Exception Test.

This SFRA is a strategic assessment of flood risk and does not replace the need for site-specific FRAs, where required. The SFRA provides guidance for the development industry and development management officers to establish when an FRA is required and to assess whether site-specific FRAs meet the required quality standard (Section 7). This should be used alongside the EA's FRA Guidance (gov.uk). The SFRA can be used to help identify which locations and developments may require emergency planning provision.

The SFRA will also be helpful for developing community level flood risk policies in high flood risk areas. Similarly, all known available recorded historical flood events across the district are listed in Section 4.3. This can be used to supplement local knowledge regarding areas worst hit by flooding. Ongoing and proposed flood alleviation schemes planned within the district are outlined in Section 6.5 and Section 8 discusses mitigations, resistance and resilience measures which can be applied to alleviate flood risk to an area.

Table 1-1 sets out the contents of the SFRA and how users should use the information provided through the document and appendices.

Mapping

The SFRA mapping in Appendix B highlights on a strategic scale flood risk from fluvial, surface water and reservoirs sources, and where groundwater emergence may occur; as well as where the effects of climate change are most likely. The mapping also shows the location of raised flood defences, flood warning and alert areas and locations where there is the potential for NFM to be implemented. The maps are useful to provide a community level view of flood risk but may not identify if an individual property is at risk of flooding or depict small scale changes in flood risk. Local knowledge of flood mechanisms will need to be included to complement this mapping.

The mapping data should always be supplemented by direct consultation with the relevant wastewater company to ascertain if there is any site-specific risk from a public sewer. This is because sewer flood risk information is not publicly available and would need to be considered on a site-specific basis.

1 Introduction

1.1 Purpose of a Strategic Flood Risk Assessment (SFRA)

Cotswold District Council (referred to hereafter as the Council) acts as the Local Planning Authority (LPA). In its role as LPA, the Council is responsible for producing a Local Plan, determining planning applications, enforcement in response to breaches of planning control, and supporting neighbourhood planning.

As set out in the National Planning Policy Framework (NPPF), 2025 (Paragraph 171) "*Strategic policies should be informed by a strategic flood risk assessment and should manage flood risk from all sources. They should consider cumulative impacts in, or affecting, local areas susceptible to flooding, and take account of advice from the Environment Agency and other relevant flood risk management authorities, such as lead local flood authorities and internal drainage boards*."

This SFRA will form a key part of the evidence base for the Council's new Local Plan and will inform future planning decisions. It will be used to assist in the formulation of land allocations for development and specific policies in relation to water management and adapting to climate change.

1.2 Relevance of the SFRA

The 'How to prepare a Strategic Flood Risk Assessment guidance', 2025 (gov.uk) sets out the requirements that the LPA must address within their SFRA and has been used to undertake this Level 1 SFRA.

This Level 1 SFRA has been developed using the best available information, supplied at the time of preparation. Appendix G details the information supplied and included in the Level 1 SFRA. Over time, new and updated information will become available to inform planning decisions:

- The Environment Agency (EA) regularly reviews and updates its hydrology, hydraulic modelling, and flood risk mapping.
- The EA published the national flood risk assessment 2 mapping (NaFRA2) and national coastal erosion risk mapping (NCERM). Regular updates to flood risk information datasets are ongoing.
- Other datasets used to inform this SFRA may also be updated periodically and following the publication of this SFRA, new information on flood risk may be provided by other Risk Management Authorities (RMAs).

The SFRA should be a live document that is easily updateable to reflect the latest information. Links have been provided for relevant guidance documents and policies published by RMAs such as Gloucestershire County Council (GCC) in its role as the Lead Local Flood Authority (LLFA) and the EA. When considering this Level 1 SFRA to help prepare site specific flood risk assessments (FRA), it is important to check with the source organisation that the most up to date information is used.

As the data available for SFRAs and the relevant legislation is continually changing, the SFRA should be updated to reflect changes where applicable and reasonably practicable. Under any changes in guidance or legislation, the implications on the SFRA should be considered and a review undertaken where this is deemed necessary.

1.3 Levels of SFRA

The PPG: Flood risk and coastal change (gov.uk) identifies two levels of SFRA.

Level 1 SFRAs are high-level strategic documents and do not go into detail on an individual site-specific basis. Where potential site allocations are not at major flood risk and where development pressures are low, a Level 1 assessment may be sufficient, without the LPA needing to progress to a more detailed Level 2 assessment. The Level 1 assessment should be of sufficient detail to enable application of the Sequential Test, to inform the allocation of development to areas of lower flood risk.

A Level 2 assessment is required where land outside flood risk areas cannot appropriately accommodate all necessary development, creating the need to apply the NPPF's Exception Test if relevant, or if the LPA believe they may receive high numbers of applications in flood risk areas on sites not identified in the Local Plan. In these circumstances the assessment should consider the detailed nature of the flood characteristics from all sources, both now and in the future.

This report and associated appendices fulfil the requirements of a Level 1 SFRA.

1.4 Local Plan area

Cotswold District Council administrative area is situated in the south of England within the county of Gloucestershire. The south of the district is bordered by Wiltshire whilst the east borders the West Oxfordshire district. Stratford-upon-Avon and Wychavon districts border the north whilst Tewkesbury, Stroud and Cheltenham districts border the west. Over 90,800 people live in the Cotswold administrative area, according to the 2021 Census. Cotswold is a largely rural district covering 1,165 km^2. The largest town is Cirencester and is home to approximately 22% of the population of the district with numerous villages and hamlets located across the district.

The landscape is exceptionally distinctive. The Cotswolds National Landscape (CNL) (formerly known as the Cotswolds Area of Outstanding Natural Beauty (AONB)) is a national designation which affords the highest level of landscape protection and covers nearly three quarters of the district. In addition, there are locally designated Special Landscape Areas and the Cotswold Lakes (formerly known as the Cotswold Water Park), internationally important for its nature conservation. Coupled with this natural beauty the district has an abundance of built heritage and archaeology, creating a unique 'Cotswold Character'. The district has many listed buildings and a significant number of conservation areas. Several parks are listed on the English Heritage list of historic parklands. The district also has 238 scheduled ancient monuments.

The main river catchment is the Thames catchment which extends over an area of almost 13,000 km^2. The topography of the catchment is characterised by rural landscapes, rolling hills and wide, flat river floodplains with the east comprising a significantly more urban environment. The west of the district is comprised of hilly, upland areas. The nature of the topography indicates a faster, 'flashy' system in the uplands with water levels and flows responding to rainfall in a shorter time. In contrast, the flatter lower-lying parts of the lower catchment show slower responses.

The Thames is a 346-kilometre-long watercourse, rising in the west in Gloucestershire, flowing through the Cotswold district, Oxfordshire and Buckinghamshire. The River Thames has its source upstream of Kemble and continues as an ordinary watercourse in the Cotswold district at Thames Head (ST 9804 9947), very soon being classed as a main river less than 1km downstream. The river then flows through Greater London, with the channel becoming more artificially engineered and straightened, before reaching the Thames Estuary to the east. The Thames has a number of tributaries in its upstream phase that have the potential to be a source of risk for settlements within the Cotswolds, including the River Churn, River Coln, and Ampney Brook.

The River Churn flows through Cirencester, where it is the main source of flood risk to properties and roads in Cirencester, South Cerney and Siddington. Historical blockage of culverts on the River Churn in the Spitalgate Lane area may have contributed to fluvial flood risk in the past. The River Churn is also recorded to have flooded several residential properties at Watermoor, South Cerney and Cerney Wick.

The River Coln rises as several minor rivers in the hills north of Withington. It is classed as a main river from Chedworth Woods onwards. From here it winds its way south eastwards through Bibury, Coln St Aldwyns and Fairford and past the Cotswold Water Park before flowing into the River Thames. The main areas described as being at risk in Fairford are Milton Street and the A417.

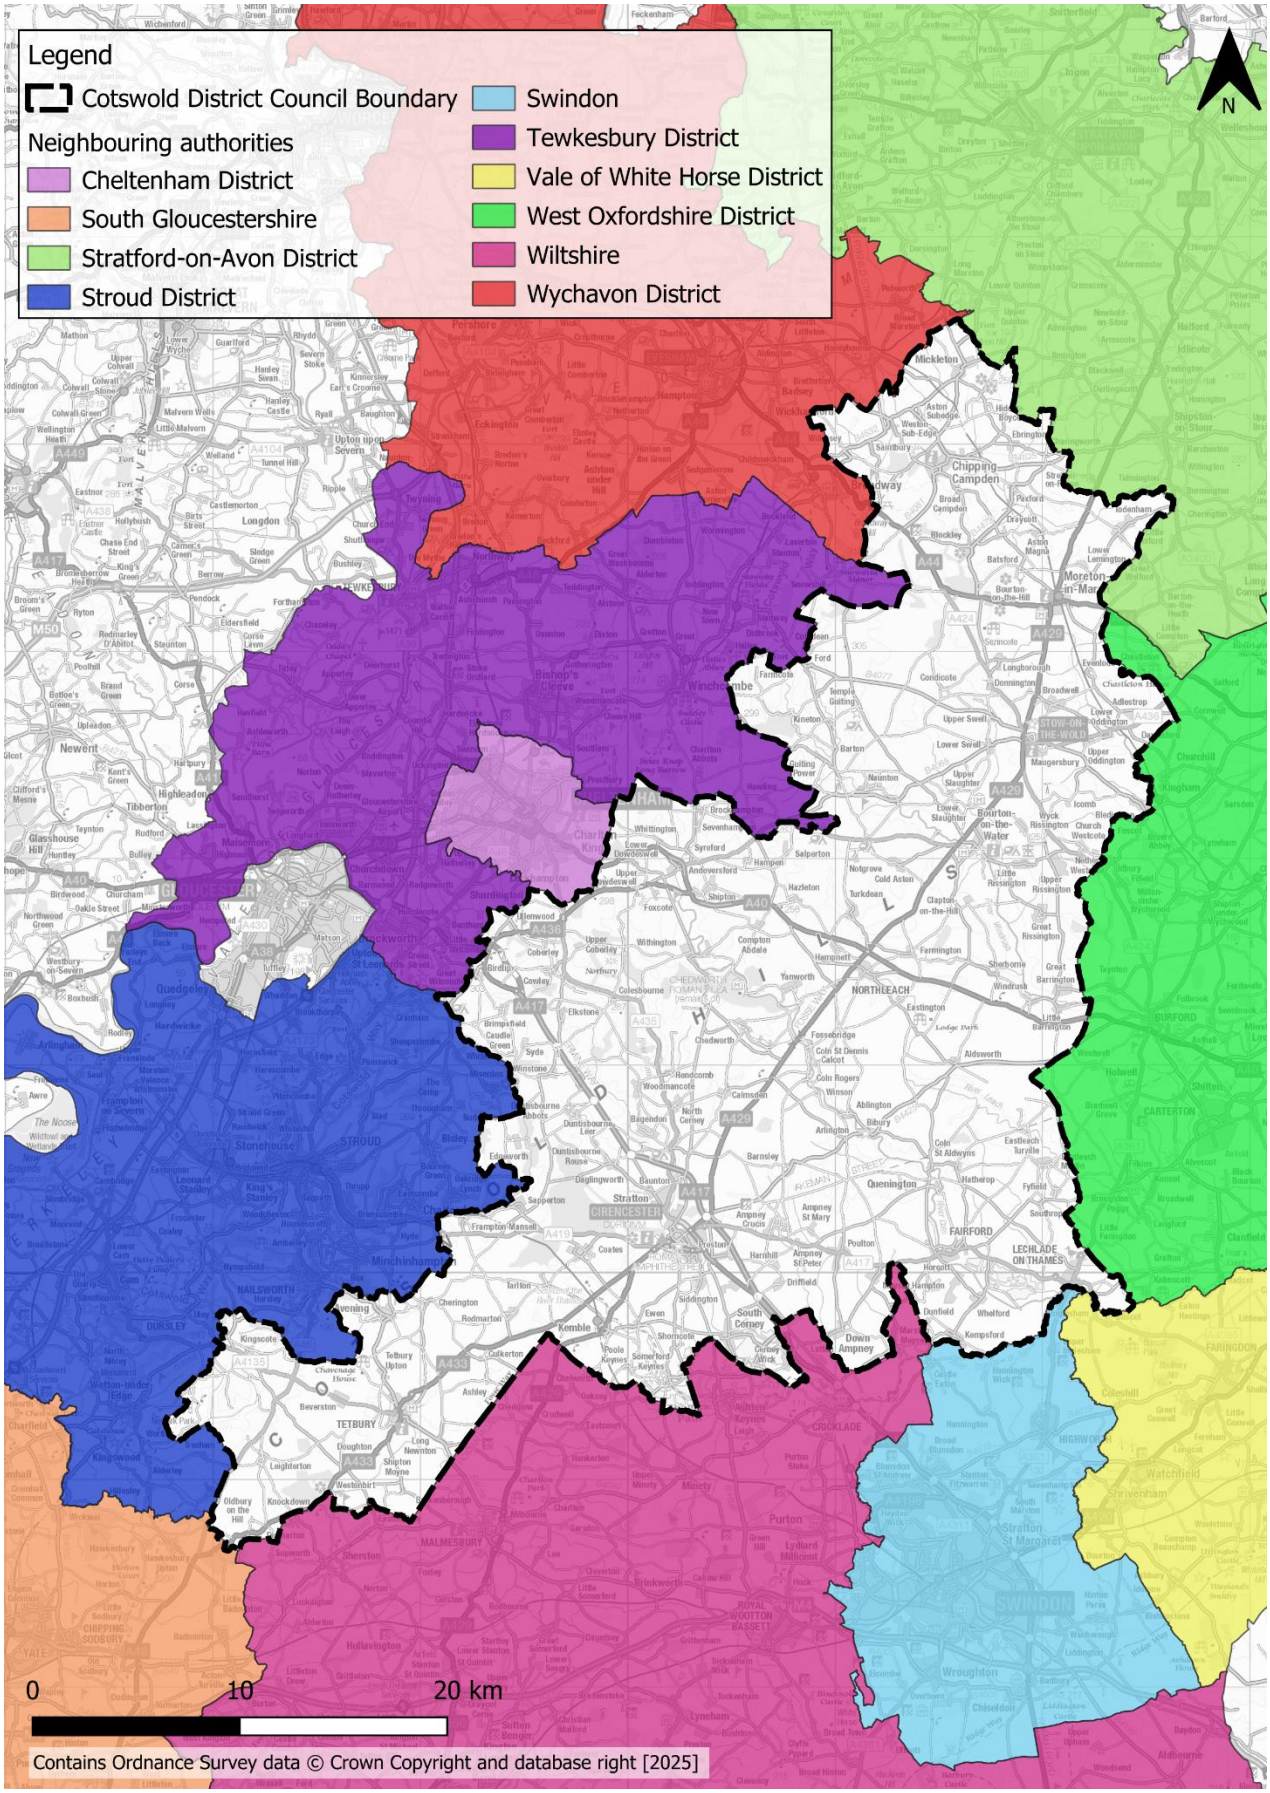

Figure 1-1: Cotswold District and its neighbouring authorities

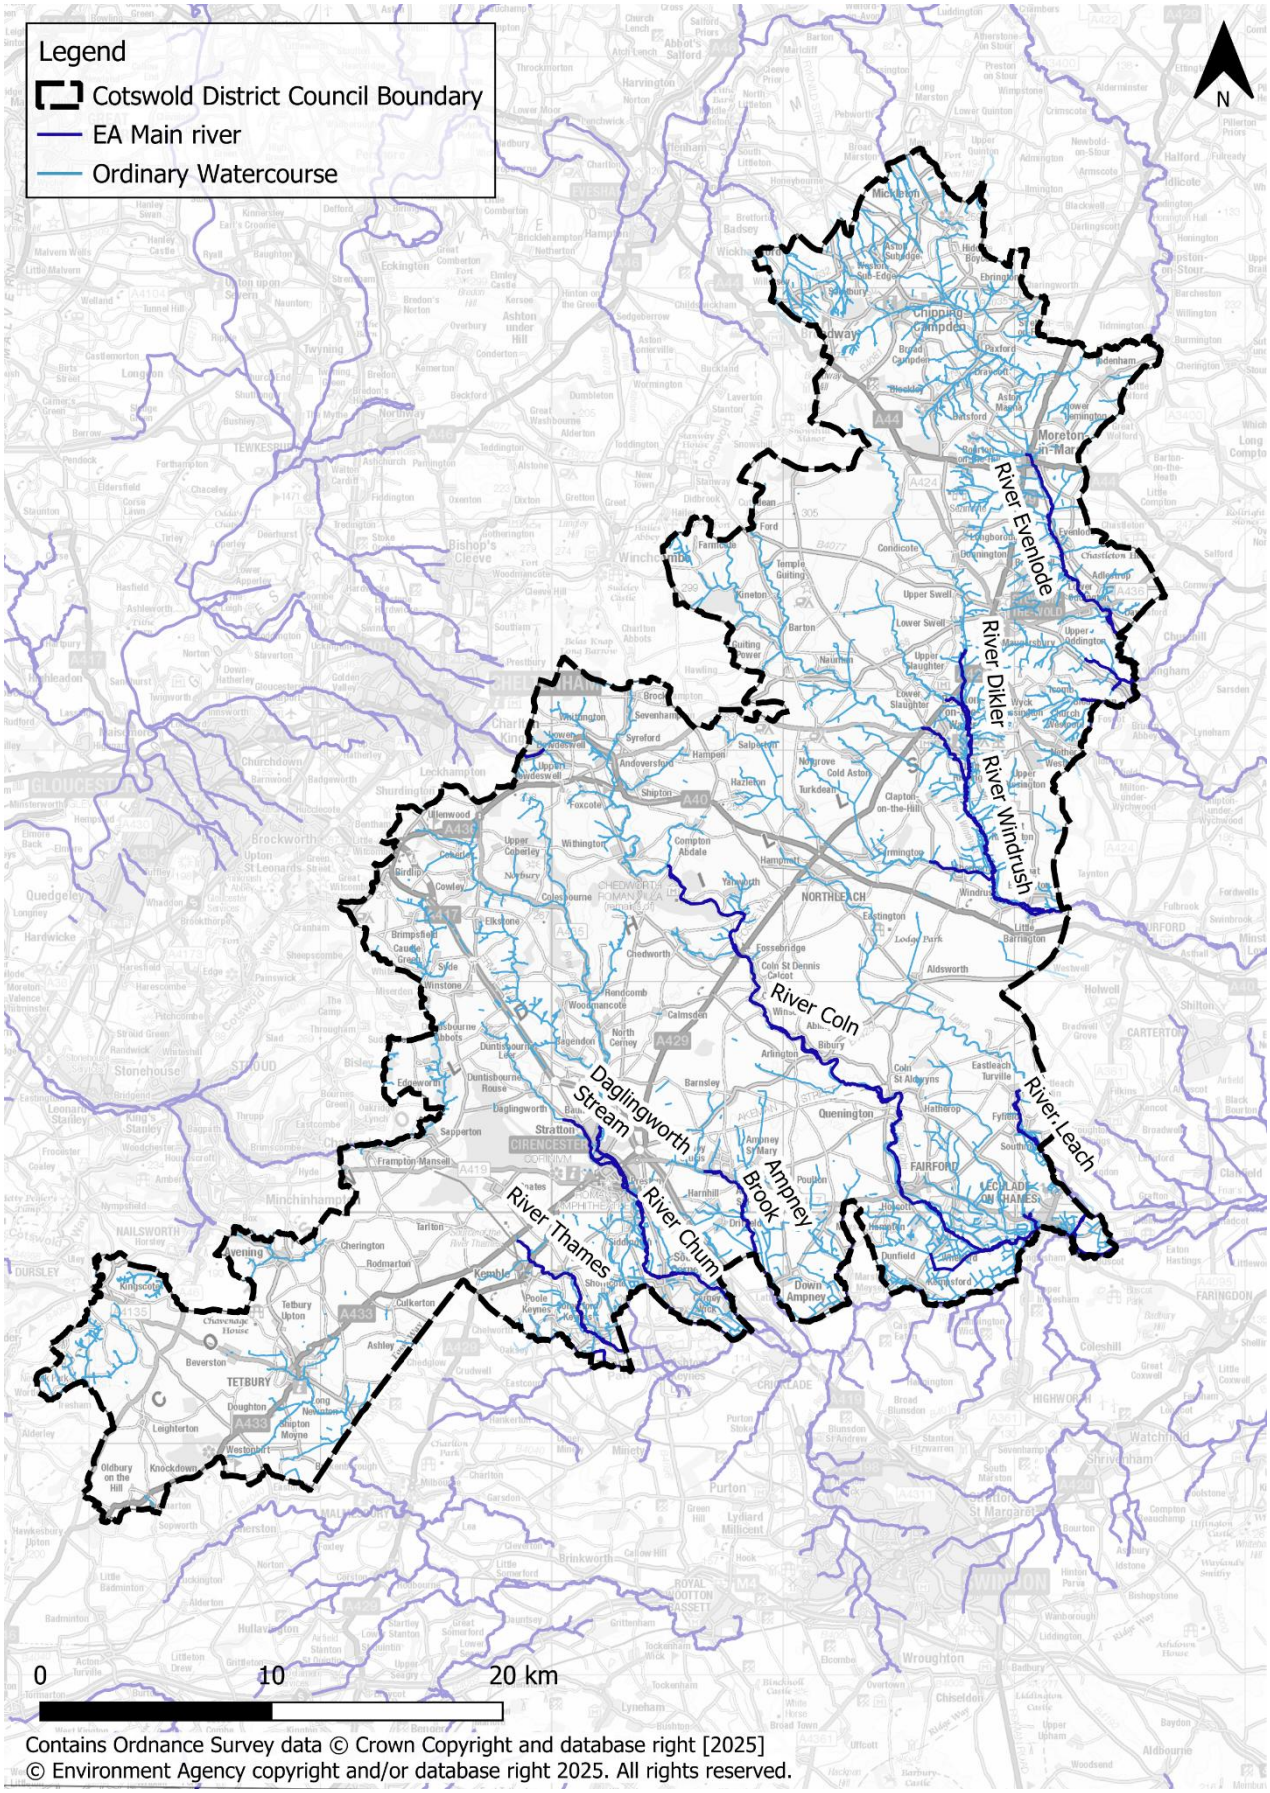

Figure 1-2: Main rivers and other watercourses across Cotswold

1.5 Consultation

SFRAs should be prepared in consultation with other Risk Management Authorities (RMAs). In addition to the LPA the following parties have been consulted during the preparation of the Level 1 SFRA through data requests and draft report reviews:

- Environment Agency
- Lead Local Flood Authority (Gloucestershire County Council)
- Severn Trent Water
- Thames Water
- Wessex Water
- Stratford-on-Avon District Council
- Wychavon District Council
- Tewkesbury Borough Council
- Cheltenham Borough Council
- Stroud District Council
- South Gloucestershire Council
- Wiltshire Council
- Swindon Borough Council
- Vale of White Horse District Council
- West Oxfordshire District Council

The 'How to prepare a Strategic Flood Risk Assessment guidance' (gov.uk) also recommends consultation with:

- Emergency planners
- Emergency services
- Reservoir owners or undertakers
- Highways authorities (National Highways and Gloucestershire County Council)
- Catchment partnerships (Section 12.1)
- Regional flood and coastal committees (Wessex Regional Flood and Coastal Committee)

1.6 Structure of this report

Table 1-1 sets out the contents of this Level 1 SFRA report and appendices, and how to use each section.

Table 1-1: Content of this Level 1 SFRA report

Section	Contents	How to use
Executive summary	This section focuses on how the SFRA can be used by planners, developers, and neighbourhood planners.	Users should refer to this section for a summary of the Level 1 findings and recommendations.
1. Introduction	This section provides a background and context to the study and the Local Plan Area. It also details the organisations involved in the SFRA.	Users should refer to this section for general information and context.
2. Policy and strategy for flood risk management	This section sets out the relevant legislation, policy, and strategy for flood risk management at a national, regional, and local level.	Users should refer to this section for any relevant policy which may underpin strategic or site-specific assessments.
3. Sequential and Exception Tests	This section provides an overview of national planning policy, application of the sequential approach, and the Sequential/Exception Test process. It provides guidance for the Council and developers on the application of the Sequential and Exception Test for both allocations and windfall sites, at allocation and planning application stages.	Users should use this section to understand and follow the steps required for the Sequential and Exception Tests.
4. Understanding flood risk	This section introduces the concept of flood risk and provides an overview of the local characteristics of flooding affecting Cotswold and key risks including historical flooding incidents and flood risk from all sources, as well as characteristics that influence flood risk including topography, geology and soils.	This section should be used to understand all sources of flood risk across Cotswold including where has flooded historically.

Section	Contents	How to use
5. Impact of climate change	This section outlines the latest climate change guidance published by the EA and how this was applied to the SFRA. It also sets out how developers should apply the guidance to inform site-specific FRAs.	This section should be used to understand the climate change allowances for a range of epochs and conditions, linked to the vulnerability of a development.
6. Flood risk infrastructure	This section provides a summary of current flood defences and asset management and future planned schemes.	This section should be used to understand if there are any defences or flood schemes in a particular area, for further detailed assessment at site specific stage.
7. Flood risk management requirements for developers	This section contains guidance for developers on FRAs, considering flood risk from all sources, and principles of managing flood risk in developments.	Developers should use this section to understand requirements for FRAs and what conditions/guidance documents should be followed, as well as mitigation options.
8. Principles for site design and master planning	This section contains guidance for developers on principles of managing flood risk in developments through site design and master planning.	Developers should use this section to understand what should be considered within the site design and master planning stages of a development.
9. Surface water management and SuDS	This section provides an overview of SuDS, including signposting to relevant guidance, as well as guidance for developers on surface water drainage strategies, considering any specific local standards and guidance for SuDS from the LLFA.	Developers should use this section to understand what national, regional, and local SuDS standards are applicable. Hyperlinks are provided.
10. Flood warning and emergency planning	This section provides an overview of the requirements for emergency plans, include any local emergency planning arrangements, and an overview of the available flood alerts and warnings.	Developers should use this section to understand requirements for emergency planning.

Section	Contents	How to use
11. Cumulative Impact Assessment	This section details the cumulative impact assessment, which identifies which catchments are most likely to be sensitive to increased flood risk as a result of future development.	Planners should use this section to help develop policy recommendations for the potential cumulative impacts of development.
12. Strategic flood risk solutions	This section sets out wider strategic solutions that may offer potential to reduce flood risk across Cotswold, including natural flood management. It also details current partnership working opportunities within Cotswold.	Planners should use this section to help develop policy recommendations for strategic flood risk solutions to reduce flood risk across Cotswold, with a particular emphasis on natural flood management and nature-based solutions. Developers should use this section to consider options for strategic solutions and natural flood management techniques and nature-based solutions.
13. Summary, recommendations and next steps	This section outlines planning policy recommendations. It also sets out the recommended next steps and potential future work.	Developers and planners should consider the recommendations made in this section. Developers should refer to the Level 1 SFRA recommendations when considering site specific assessments.
Appendix A	Provides a background to the flood risk policy documents that are relevant to the authority area.	Planners and developers should use this appendix, in conjunction with Section 2 of this report, to understand the relevant flood and water management policy and guidance for development.
Appendix B	Provides the flood risk mapping for the SFRA.	Planners and developers should use these maps to identify key areas of flood risk from different sources.
Appendix C	Technical note explaining the methodology behind the delineation of the functional floodplain (Flood Zone 3b)	Planners and developers should use this appendix to understand the datasets used to

Section	Contents	How to use
	and future functional floodplain for this Level 1 SFRA.	inform the functional floodplain extents.
Appendix D	Excel spreadsheet containing an assessment of flood risk to the potential development allocations based on all available sources of flood risk including for climate change where available. Each potential allocation is assigned a strategic recommendation based on risk and vulnerability.	Planners should use this appendix to understand the level of risk to each potential allocation and associated recommendations for development. Planners should use this appendix to assist in the application of the Sequential Test for Local Plan preparation.
Appendix E	Summarises the outcomes of the sites assessment process recorded in Appendix D.	Planners and developers should use this appendix to understand the level of risk to each potential allocation and associated recommendations for development. Planners should use this appendix to assist in the application of the Sequential Test for Local Plan preparation.
Appendix F	Details the methodology and results for the cumulative impact assessment.	Planners should use this appendix, in conjunction with Section 11 of this report, to help develop policy recommendations for the cumulative impacts of development.
Appendix G	Details the data used to inform the SFRA, including when the data was provided, any associated licensing, and where the data can be obtained from.	Planners and developers should use this appendix to understand what data has been used in the SFRA, whether it has since been updated, and where to access the latest data from.
Appendix H	Sets out the recommended methodology for carrying out the Sequential Test, including how each source of flood risk should be considered following consultation with the EA.	Planners and developers should consider this appendix to inform the application of the Sequential Test.

2 Policy and strategy for flood risk management

This section, along with Appendix A which contains greater detail, sets out the flood risk management roles and responsibilities for different organisations and relevant legislation, policy, and strategy.

2.1 Roles and responsibilities

There are different organisations in and around the district that have responsibilities for flood risk management, known as RMAs. These are listed in Table 2-1 with a summary of their responsibilities.

Further information on the roles and responsibilities of the RMAs is available in Annex A of the National Flood and Coastal Erosion Risk Management Strategy (FCERM) (gov.uk) for England. The Local Government Association (gov.uk) also provides further information on the roles and responsibilities for managing flood risk. The National flood risk standing advice for local planning authorities (gov.uk) provides advice on when to consult the EA.

Table 2-1: Roles and responsibilities for RMAs

Risk Management Authority	Strategic Level	Operational Level	Planning role
EA	Strategic overview for all sources of flooding, National Strategy, flood forecasts and warnings and general supervision	Main River (e.g., River Thames) and reservoirs (Flood Risk Activity Permits, enforcement, and works), flood warning	Statutory consultee for certain development in Flood Zones 2 and 3 and all works within 20 metres of a main river.
Gloucestershire County Council as LLFA	Coordination of Local Flood Risk Management and maintaining a Local Flood Risk Management Strategy (LFRMS)	Surface water, groundwater, and ordinary watercourses (consenting, enforcement, and works)	Statutory consultee for major developments
Severn Trent Water, Thames Water and Wessex Water	Asset Management Plans, supported by Periodic Reviews (business cases), develop drainage and wastewater management plans (DWMPs)	Public sewers and some reservoirs	Non-statutory consultee

Risk Management Authority	Strategic Level	Operational Level	Planning role
Highways Authorities - National Highways for motorways and trunk roads and Cotswold District Council for non-trunk roads	Highway drainage policy and planning	Highway drainage	Statutory consultee regarding highways design standards and adoptions

2.1.1 Riparian ownership

Land and property owners are responsible for the maintenance of watercourses either on or next to their properties, called riparian owners. Riparian owners are also responsible for the protection of their properties from flooding as well as other management activities, for example by maintaining riverbeds/banks, controlling invasive species, and allowing the flow of water to pass without obstruction. More information can be found on the government website in the EA publication 'Owning a watercourse' (gov.uk).

When it comes to undertaking works to reduce flood risk, the EA, and the Council do have permissive powers, but limited resources must be prioritised and targeted to where they can have the greatest effect. Permissive powers mean that RMAs are permitted to undertake works but are not obliged.

3 Sequential and Exception Tests

This section summarises national planning policy for development and flood risk and the application of the Sequential and Exceptions Tests for both planners and developers.

3.1 National Planning Policy Framework and Guidance

The NPPF (February 2025) (gov.uk) sets out government's planning policies for England. It must be considered in the preparation of local plans and is a material consideration in planning decisions. The NPPF advises on how flood risk should be considered to guide the location of future development and FRA requirements. The NPPF states that:

"*Inappropriate development in areas at risk of flooding should be avoided by directing development away from areas at highest risk (whether existing of future). Where development is necessary in such areas, the development should be made safe for its lifetime without increasing flood risk elsewhere*" (paragraph 170).

The Sequential and Exception Tests help to guide this process.

The Flood Risk and Coastal Change PPG, 2025 (gov.uk) sets out how the policy should be implemented. Diagram 1 in the PPG (Paragraph: 007 Reference ID: 7-007-20220825) sets out how flood risk should be considered in the preparation of local plans. The PPG states that:

"A strategic Flood Risk Assessment should be used to apply the Sequential Test and, where necessary, the Exception Test when determining land use allocations" (paragraph 009).

3.2 The Sequential Test

Firstly, land at the lowest risk of flooding from all sources should be considered for development. A test is applied called the 'Sequential Test' to do this. Figure 3-1 summarises the Sequential Test.

The LPA will apply the Sequential Test to strategic allocations for the potential inclusion in the local plan. For all other developments, evidence must be supplied to the LPA, with a planning application, that the development has passed the test if any proposed building, access and escape route, land-raising or other vulnerable element will be:

- In Flood Zone 2 or 3 of the Flood Map for Planning (FMfP), See Section 4.4.1 for information on the FMfP;
- In Flood Zone 3b and your development is not incompatible;
- Within 'Flood Zones plus climate change' of the FMfP, showing it is at increased risk of flooding from rivers in the future;
- In Flood Zone 1 and the FMfP shows it is at risk of flooding from surface water;
- In Flood Zone 1 and the SFRA shows it will be at increased risk of flooding during its lifetime; or

- Subject to sources of flooding other than from rivers

The requirements for developers are set out in the FRA Standing Advice (gov.uk).

The LPA should define a suitable search area for the consideration of alternative sites in the Sequential Test. Based on the latest updates to the PPG, sites can be considered 'reasonably available' if their location is suitable for the type of development proposed, they are able to meet the same development needs and they have a reasonable prospect of being developed at the same time as the proposal (Paragraph: 027a Reference ID: 7-027a-20220825).

The Sequential Test can be undertaken as part of a local plan sustainability appraisal. Alternatively, it can be demonstrated through a free-standing document, or as part of Strategic Housing Land/Employment Land Availability Assessments.

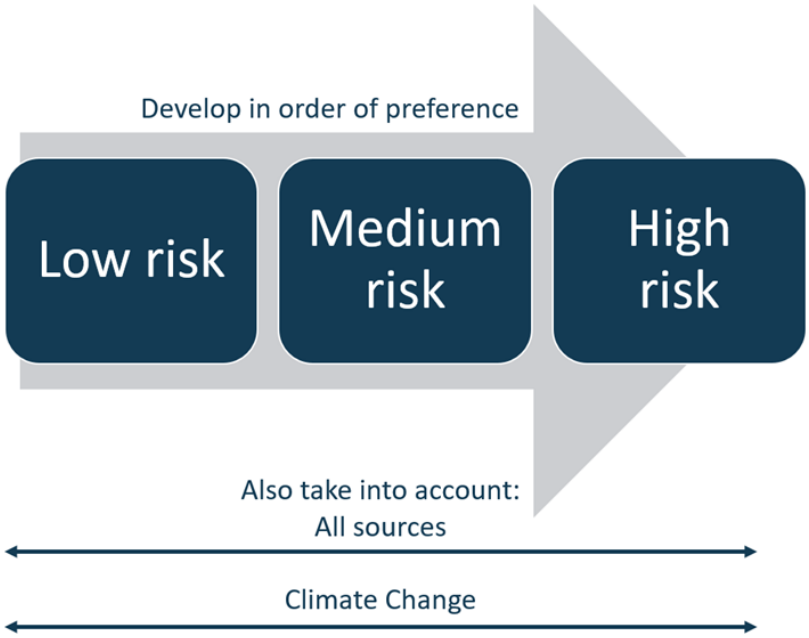

Figure 3-1: The Sequential Test

Whether any further work is needed to decide if the land is suitable for development will depend on both the vulnerability of the development and the Flood Zone it is proposed within. Table 2 of the PPG (gov.uk) (Paragraph: 079 Reference ID: 7-079-20220825) shows whether, having applied the Sequential Test first, the vulnerability of development is not compatible with a particular Flood Zone and where the Exception Test is required to determine the suitability of that vulnerability of development to the Flood Zone.

Figure 3-2 illustrates the Sequential Test as a process flow diagram using the information contained in this SFRA to assess potential development sites against areas of flood risk and development vulnerability compatibilities. This is a stepwise process, but a complex one, as several of the criteria used are qualitative and based on experienced judgement. The process must be documented, and evidence used to support decisions recorded.

In addition, the risk of flooding from other sources and the impact of climate change must be considered when considering which sites are suitable to allocate. Appendix H addresses the use of flood risk information in the performance of the Sequential Test.

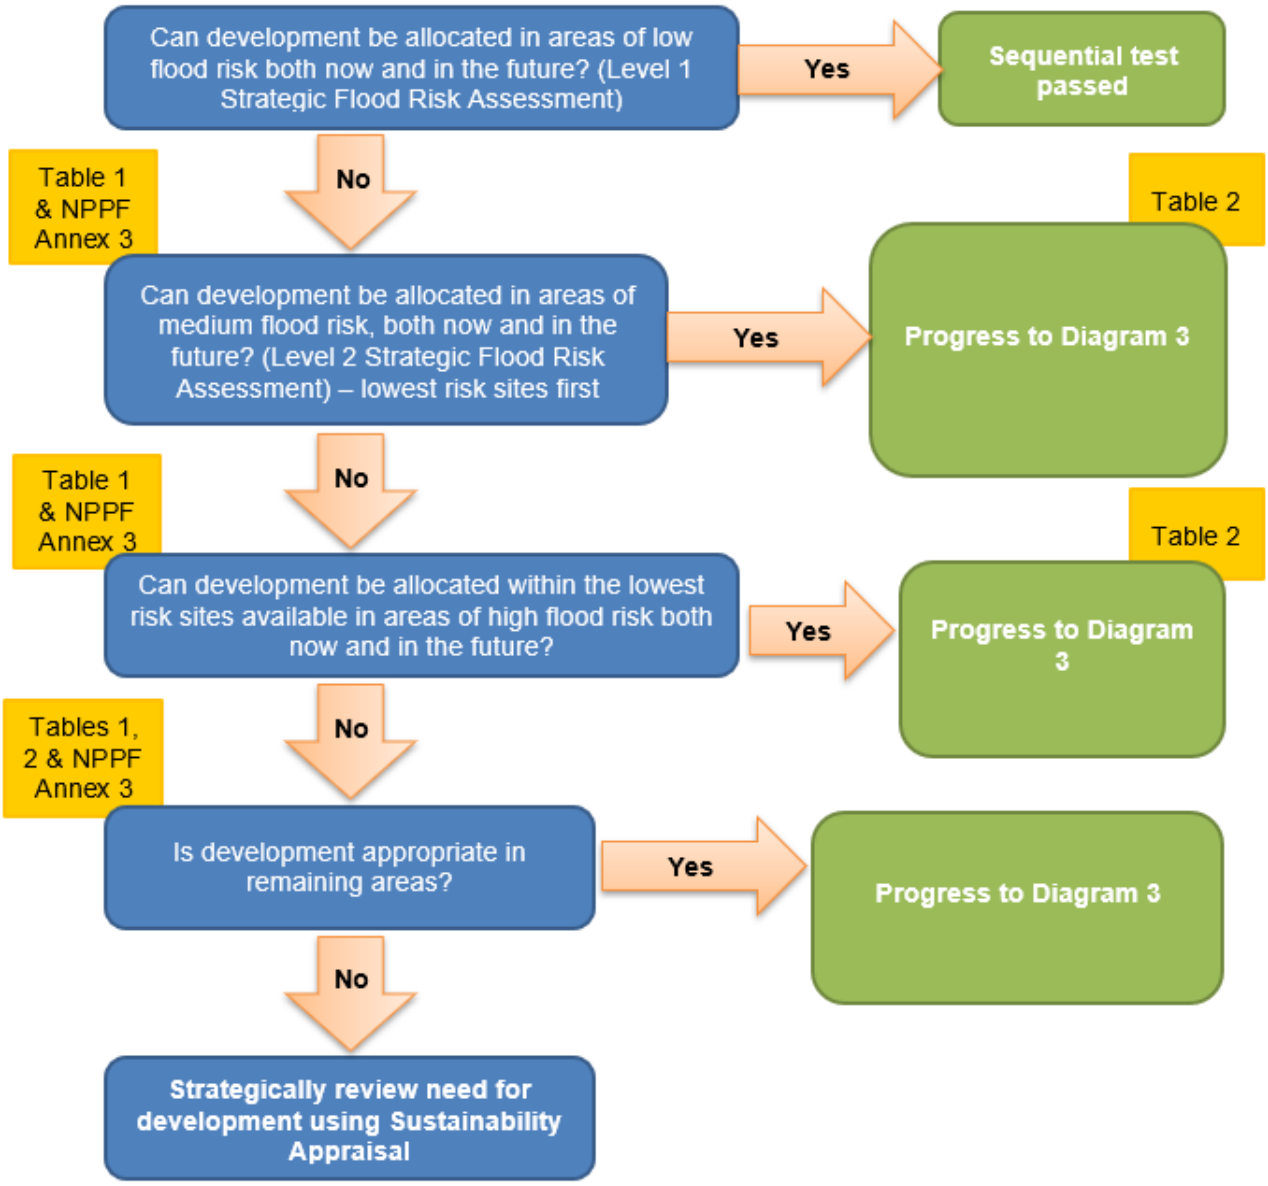

Diagram 2 of PPG: Flood Risk and Coastal Change (paragraph 026, Reference ID 7-026-20220825) Revised September 2025.

Figure 3-2: Application of the Sequential Test for plan preparation

3.2.1 The risk-based approach

The NPPF takes a risk-based approach to development in flood risk areas.

Since July 2021, the approach has adjusted the requirement for the Sequential Test (as defined in Paragraph 172 of the NPPF) so that all sources of flood risk are to be included in the consideration.

The PPG further states:

"*Other forms of flooding need to be treated consistently with river and tidal flooding in mapping probability and assessing vulnerability, so that the sequential approach can be applied across all areas of flood risk*" (paragraph 023).

The general implications of these approaches are summarised as follows:

- The Sequential Test must be based on mapping that enables decision making according to a prioritisation based on a risk-based sequence (for river flooding national mapping is available that describes low, medium and high-risk Flood Zones but comparable mapping of this specific type and quality is not available for other sources; for river flooding the risk zones are based on the assumption that no flood risk management features are present, with the exception of Flood Zone 3b (the functional floodplain)).
- The other sources of flood risk that can potentially be included in the Sequential Test are surface water, groundwater, sewer flooding and reservoir flooding (or other water impounding features such as canals).
- It follows that proposed new development placed in locations at high or medium risk from flooding from other sources now and in the future (note that the explicit requirement to include climate change in the test, as set out in the September 2025 PPG may require the preparation of additional modelling and mapping or use of proxies) should be accompanied by evidence that the site can remain safe for its lifetime and pass the Exception Test (if applicable) (through a Level 2 SFRA).

A basic requirement for the Sequential Test to be performed is that appropriate, competent mapping can be prepared to enable logical comparison of the flood risk from different sources at alternative locations, both now and in the future, as this is fundamental to establishing a logical “risk sequence”.

Appendix H describes the implications of including different sources of flooding both now and in the future in the Sequential Test. It also highlights matters to be considered and identifies a preferred approach. This suggested approach has been consulted on with the EA.

3.3 The Exception Test

It will not always be possible for all new development to be located on land that is not at risk from flooding. To further inform whether land should be allocated, or planning permission granted, a greater understanding of the scale and nature of the flood risks is required. In these instances, the Exception Test will be required. Diagram 3 of the PPG (gov.uk) (Paragraph: 033 Reference ID: 7-033-20220825) summarises the Exception Test (Figure 3-3).

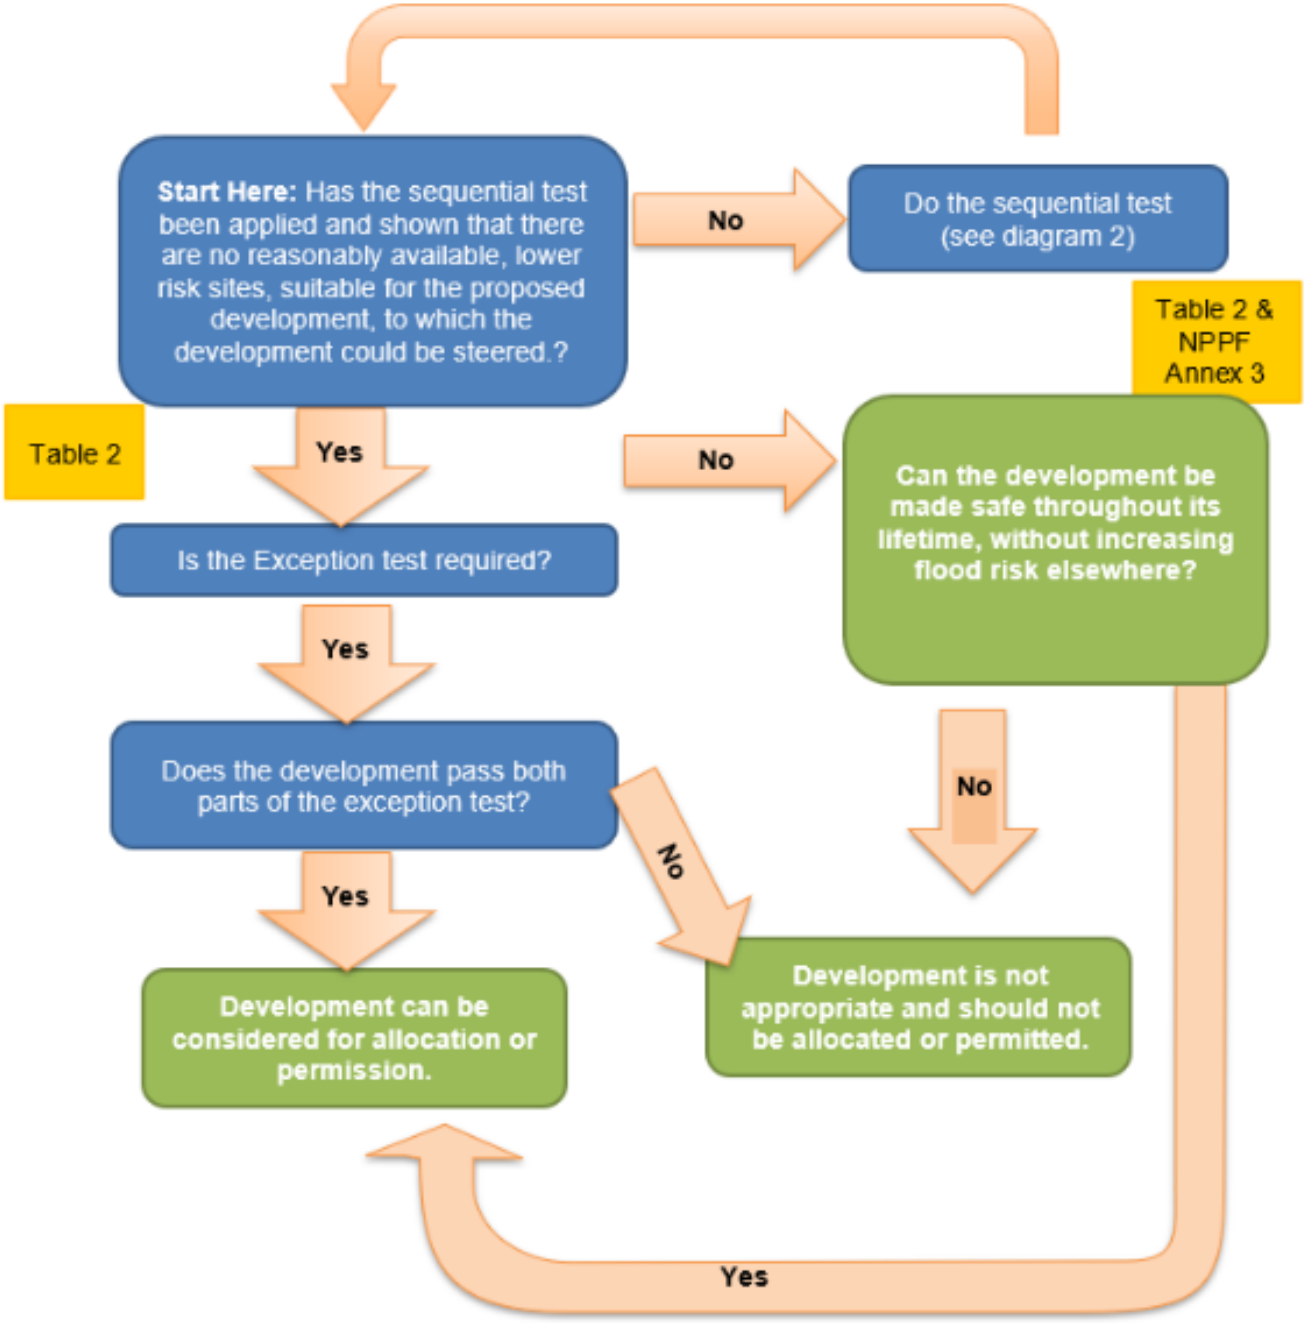

Table 2 of the PPG (gov.uk) sets out when the Exception Test is required but does not reflect the need to avoid flood risk from sources other than rivers and the sea. There is no

guidance on how to consider other sources of flood risk. The Exception Test should only be applied, following the application of the Sequential Test, in the following instances for:

- 'Essential infrastructure' in Flood Zone 3a or 3b.
- 'Highly vulnerable' development in Flood Zone 2 (this is NOT permitted in Flood Zone 3a or 3b).
- 'More vulnerable' development in Flood Zone 3a (this is NOT permitted in Flood Zone 3b).

While the Exception Test is not explicitly required for sites at risk from other sources of flooding, the LPA should follow a similar principle where sites are proposed that are at risk from other sources of flooding, carefully weighing up the wider benefits of development against the risk, ensuring that site users can be kept safe through the lifetime of the development and ensuring residual risk can be safely managed.

For sites proposed for allocation within the local plan that are at flood risk, the LPA should use information provided in a Level 2 SFRA to inform the Exception Test. At the planning application stage, the developer must design the site such that it is appropriately flood resistant and resilient in line with the recommendations in national and local planning policy and supporting guidance and those set out in the SFRA. This should demonstrate that the site will still pass the flood risk element of the Exception Test based on the detailed site level analysis.

† Diagram 3 of PPG: Flood Risk and Coastal Change (paragraph 033, Reference ID 7-033-20220825) Revised September 2025.

Figure 3-3: Application of the Exception Test to plan preparation

There are two parts to demonstrating whether a development passes the Exception Test that should be considered by the LPA when allocating development sites, and developers when required (see Section 3.4 for Exception Test requirements for individual planning applications).

Part A: Demonstrating that the development would provide wider sustainability benefits to the community that outweigh the flood risk.

The LPA will need to set out the criteria used to assess the Exception Test and provide clear advice to enable applicants to provide evidence to demonstrate that it has been passed. If the application fails to prove this, the LPA should consider whether the use of planning conditions and/or planning obligations could allow it to pass the Exception Test. If this is not possible, this part of the Exception Test has failed, and development should not be considered for allocation or granting planning permission.

Wider sustainability objectives should be considered, such as those set out in local plan sustainability appraisals. These generally consider matters such as the local economy, biodiversity, green infrastructure, housing, historic environment, climate change adaptation, flood risk, green energy, pollution, health, transport etc.

The sustainability issues the development will address and how far doing so will outweigh the flood risk concerns for the site should also be considered, e.g., by facilitating wider regeneration of an area, providing community facilities, infrastructure that benefits the wider area, etc.

Part B: Demonstrating that the development will be safe for its lifetime taking account of the vulnerability of its users, without increasing flood risk elsewhere, and, where possible, will reduce flood risk overall.

In circumstances where the potential effects of proposed development are material, a Level 2 SFRA is likely to be needed to inform the Exception Test for strategic allocations to provide evidence that the principle of development can be supported. At the planning application stage, a site-specific FRA will be needed. Both will need to consider the undefended and residual risk and how this will be managed over the lifetime of the development.

3.4 Applying the Sequential Test and Exception Test to individual planning applications

3.4.1 Applying the Sequential Test

The LPA are responsible for considering the extent to which Sequential Test considerations have been satisfied.

Developers should consult with the LPA in the first instance before commencing on a site-specific FRA to determine the Sequential Test requirements for their site, including search area. Developers are required to apply the Sequential Test to all development sites, unless the site is:

- A strategic allocation and the test has already been carried out by the LPA as part of preparing the local plan, or
- A change of use (except to a caravan, camping or chalet site, or to a mobile home or park home site), or

- A minor development (householder development, small non-residential extensions with a footprint of less than 250m²), or
- A development in Flood Zone 1 unless there are other flood risk issues in the area of the development (i.e. surface water, groundwater, reservoir, sewer flooding).

The September 2025 update to the PPG sets out that the Sequential Test is also not required where *"a site-specific flood risk assessment demonstrates clearly that the proposed layout, design, and mitigation measures would ensure that occupiers and users would remain safe from current and future surface water flood risk for the lifetime of the development […], without increasing flood risk elsewhere"* (PPG, Paragraph 027).

It should also be noted that residential sub-divisions are exempt from the definition of minor development and therefore, by default, should also be subject to the Sequential Test.

This SFRA contains information on all sources of flooding and considers the impact of climate change. This should be considered when a developer undertakes the Sequential Test, including the consideration of reasonably available sites at lower flood risk.

Local circumstances must be used to define geographical scope of the Sequential Test (within which it is appropriate to identify reasonably available alternatives). To determine the appropriate search area criteria, include the catchment area for the type of development being proposed. For some sites this may be clear, e.g. school catchments, urban extensions, in other cases it may be identified by other local plan policies. For some sites, e.g. regional distribution sites, it may be suitable to widen the search area beyond LPA administrative boundaries.

As stated in the September 2025 update to the PPG *"…where there are large areas in Flood Zones 2 and 3 (e.g. coastal towns and settlements on major rivers) and development is needed in those areas to sustain the existing community, sites outside them are unlikely to provide reasonable alternatives"* (PPG, Paragraph 027a).

The Sequential Test should be applied proportionately, with a focus on realistic alternatives in areas of lower flood risk that could satisfy the same development need.

The sources of information on reasonably available sites may include but is not restricted to:

- Site allocations in local plans.
- Sites with planning permission but not yet built out.
- Strategic Housing and Economic Land Availability Assessments (SHELAAs)/five-year land supply/annual monitoring reports.
- Locally listed sites for sale.

It may be that a number of smaller sites or part of a larger site at lower flood risk form a suitable alternative to a development site at high flood risk. Ownership or landowner agreement are not acceptable as reasons not to consider alternatives.

3.4.2 Applying the Exception Test

Where a development proposal is in accordance with an allocation made in a local plan following the application of the Sequential and Exception Tests, the Exception Test will only be required to be repeated if:

- Elements of the development that were key to it satisfying the Exception Test at the plan-making stage (such as wider sustainability benefits to the community or measures to reduce flood risk overall) have changed or are not included in the proposed development; or
- The understanding of current or future flood risk has changed significantly.

For developments that have not been allocated in the local plan or where the Sequential Test was not applied at the development plan stage and new information becomes available that identifies a flood risk, developers must undertake the sequential and Exception Tests and present this information to the LPA for approval. The Level 1 SFRA can be used to scope the flooding issues that a site-specific FRA should investigate in more detail to inform the Exception Test for windfall sites.

The applicant will need to provide information that the application can pass both parts of the Exception Test.

4 Understanding flood risk

This section explores what flood risk is, key sources of flooding in Cotswold, and the factors that affect flooding including topography, soils, and geology.

This is a strategic summary of the risk in the district to inform the application of the Sequential and Exceptions Tests if required. Developers should use this section of the SFRA with the flood risk data included in the interactive GeoPDF mapping (Appendix B) to scope out the flood risk issues they need to consider in greater detail in a site-specific FRA to support a planning application. Information in this section should not be used to inform flood risk at a property-level.

4.1 Defining flood risk

Section 3 (subsection 1) of the Flood and Water Management Act 2010 (FWMA) (gov.uk) defines the risk of a potentially harmful event (such as flooding) as "*a risk in respect of an occurrence is assessed and expressed (as for insurance and scientific purposes) as a combination of the probability of the occurrence with its potential consequences*."
Figure 4-1 sets out this definition of risk.

Figure 4-1: Conceptual model depicting how risk can be defined

4.1.1 Probability

The probability of flooding is expressed as a percentage based on the average frequency measured or extrapolated from records over many years. For example, a 1% AEP (annual exceedance probability) indicates the flood level that has a 1% chance of occurring in any one year, not that it will occur at least once every hundred years.

4.1.2 Consequences

The consequences of flooding include fatalities, property damage, disruption to lives and businesses, with severe implications for people (e.g., financial loss, emotional distress, health problems). Consequences of flooding depend on the hazards caused by flooding (depth of water, speed of flow, rate of onset, duration, wave-action effects, water quality), the receptors that are present and the vulnerability of these receptors (type of development, nature, e.g., age-structure, of the population, presence, and reliability of mitigation measures etc).

4.1.3 Source-Pathway-Receptor model

Flood risk can be assessed using the Source-Pathway-Receptor model (Figure 4-2) where:

- The source is the origin of the floodwater, principally rainfall.
- A pathway is a route or means by which a receptor can be affected by flooding, which includes rivers, drains, sewers, and overland flow.
- A receptor is something that can be adversely affected by flooding, which includes people, their property, and the environment.

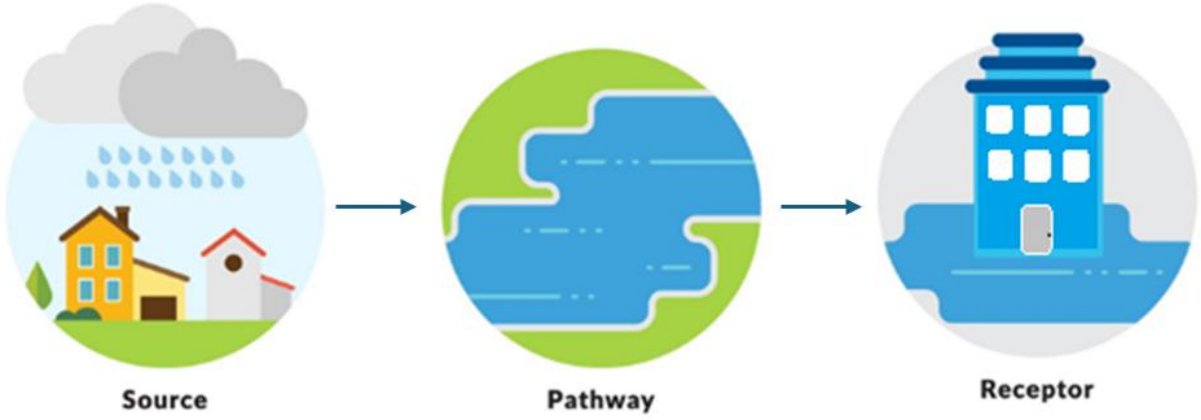

Figure 4-2: Source-Pathway-Receptor model

This is a standard environmental risk model common to many hazards and should be the starting point of any assessment of flood risk. All these elements must be present for flood risk to arise. Having applied the Source-Pathway-Receptor model it is possible to mitigate the flood risk by addressing the source (often very difficult), blocking, or altering the pathway, or removing the receptor, e.g., steer development away.

The planning process is primarily concerned with the location of receptors, taking appropriate account of potential sources and pathways that might put those receptors at risk. It is therefore important to define the components of flood risk to apply this guidance in a consistent manner.

4.2 Topography, geology, and soils

Topography, geology and soil are all important in influencing the way the catchment responds to a rainfall event. The degree to which a material allows water to percolate through it, the permeability, affects the extent of overland flow and therefore the amount of runoff reaching the watercourse. Steep slopes or clay rich (low permeability) soils will promote rapid surface runoff, whereas more permeable rock such as limestone and sandstone may result in a more subdued response due to greater infiltration.

4.2.1 Topography

The National LIDAR Programme (gov.uk) provides elevation data at 1m spatial resolution for all of England.

The topography of the district is influenced by the interbedded nature of the limestones and clays of the Inferior and Great Oolite Group. Towards the western extent of the district the landscape is characterised by a steep scarp face with incised valleys marking the edge of the Cotswold Hills. Here, elevations are in excess of 300 mAOD with the Inferior Oolite rocks forming the main upland area. To the east and south west of the escarpment, the topography of the district becomes rather more undulating, reflecting the regional dip of the Inferior and Great Oolite beds. Towards the south and south eastern extents of the district, valleys of those such as the Evenlode, Windrush and Coln are typically much broader and shallower cut into the underlying softer Lias mudstones. Here, elevations ranging from approximately 165 mAOD in the headwaters to 82 mAOD as the watercourses approach the flatter, wider floodplains of the River Thames. Figure 4-3 shows the topography of the district.

4.2.2 Geology

The geology of the district is complex and is dominated by limestones of the Jurassic age. The limestones within the Great Oolite Group and Inferior Oolite Group cover the majority of the district towards the north-western and central extents and have a significant influence on the topography, drainage and soils of the Cotswolds. Geology information can be viewed on the British Geological Society website here.

Much of the upland areas of the Cotswolds comprises of the Great Oolite Group and demonstrates a greater variety in formations than the Inferior Oolite Group. An area of Lias Group mudstones dominates to the northeast. Towards the south and east of the district in the Upper Thames Valley, the Jurassic limestones of the Great Oolite Group are succeeded by a succession of mudstones including the Oxford clay. These form the broad valleys around the main rivers and streams which flow eastwards.

Sand and gravel drift deposits are mainly associated with the tributaries of the River Thames including the Rivers Churn, Coln, Leach, Windrush and Evenlode and within the Cotswold Water Park towards the south. Here, superficial deposits are thick and extensive. Further drift deposits can be found towards the northeast of the district, overlying the Lias Group mudstones.

Away from the escarpment the drainage is almost entirely south eastwards via the tributaries of the Thames; namely the Rivers Churn, Coln, Leach, Windrush and Evenlode. Where they join the Thames, superficial deposits are thick and extensive. The valleys of the Churn, Coln, Leach and their tributaries tend to be narrow and meandering because they are incised into the limestones of the Inferior Oolite and Great Oolite. They contain narrow tracts of superficial deposits. In contrast, the Windrush and the Evenlode lie in broader shallow valleys cut into soft Lias mudstones and may be flanked by more substantial expanses of terrace deposits and alluvium. In addition, in the case of the Evenlode, which drains the Vale of Moreton, there are broad tracts of till and associated sand and gravel deposits left behind by an ice sheet during the last Ice Age.

A map detailing the extents of this bedrock and further superficial geology across Cotswold can be viewed online in the British Geology Society Geology Viewer (bgs.ac.uk).

The EA also provides mapping of different types of aquifers, the underground layers of water-bearing permeable rock from which groundwater can be extracted. Aquifers are designated as either principal or secondary aquifers. Principal aquifers are designated by the EA as strategically important rock units that have high permeability and water storage capacity.

The majority of the bedrock and superficial geology beneath the district are categorised as Principal aquifers. There are small areas in the south classified as Secondary A aquifers. A secondary aquifer is a permeable layer which can support local water supplies and provide a source of base flow to rivers.

4.2.3 Soils

Soils across the district are varied. Soilscapes are a classification of soils in England and Wales, conveying a summary of the regional differences in the soil landscapes.

Soils across the district are largely classified as Soilscape 3 (shallow lime-rich soils over chalk or limestone). Soil is freely draining and at particular risk to contamination from nitrate. Other soils are present across the authority in small amounts, including Soilscape 9 (lime-rich loamy and clayey soils with impeded drainage), drainage of soils to the stream network may be slightly impeded. Some soils in areas to the south of Stow-on-the-Wold are categorised by Soilscape 18 (slowly permeable seasonally wet slightly acid but base-rich loamy and clayey soils). This soil type is slowly permeable and seasonally wet. In the south east of the district, soils covering areas of Fairfield, Lechlade, Somerford Keynes and South Cerney are categorised as Soilscape 5 (Freely draining lime-rich loamy soils).

The British Geological Survey website (bgs.ac.uk) provides data on soils across the district.

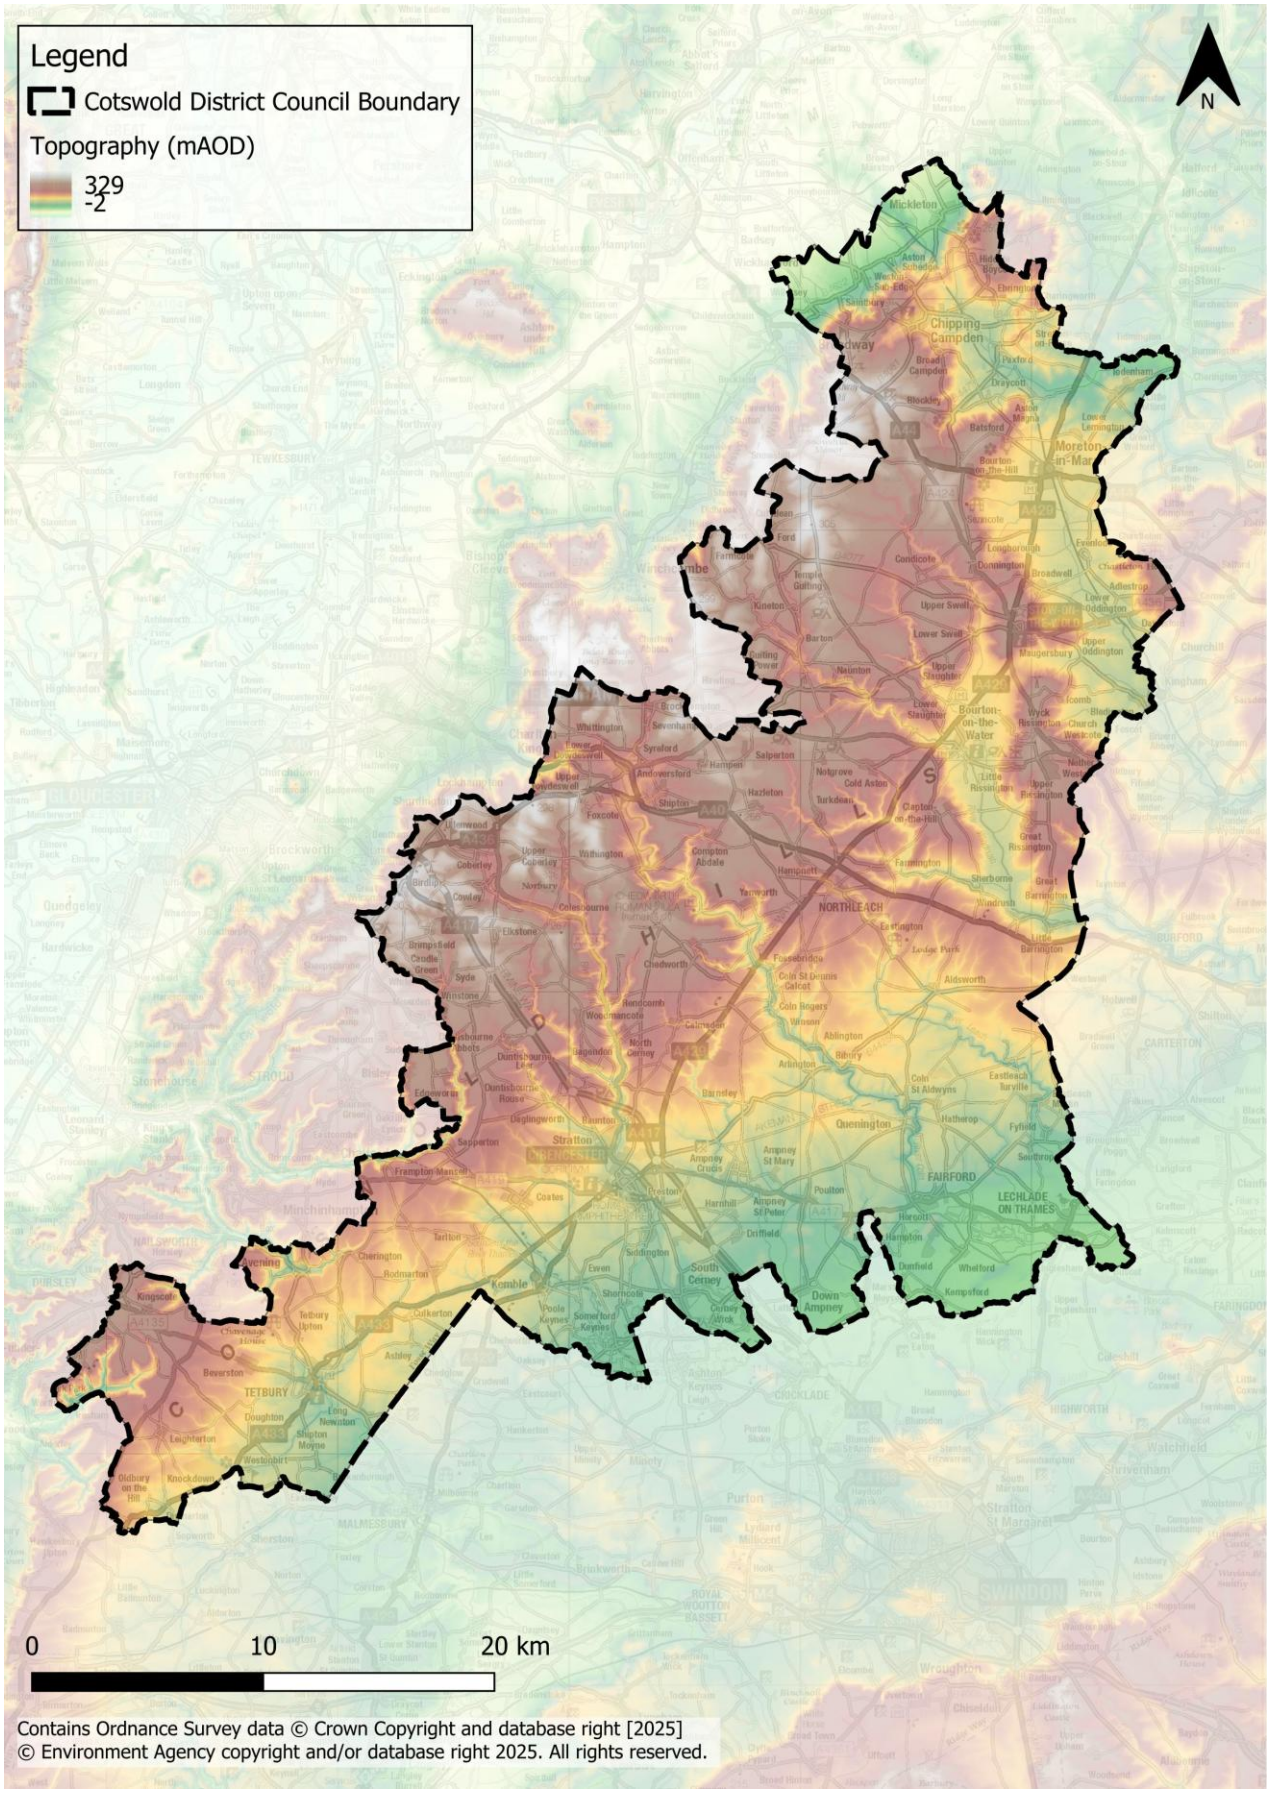

Figure 4-3: EA 1m LiDAR data showing the topography across Cotswold

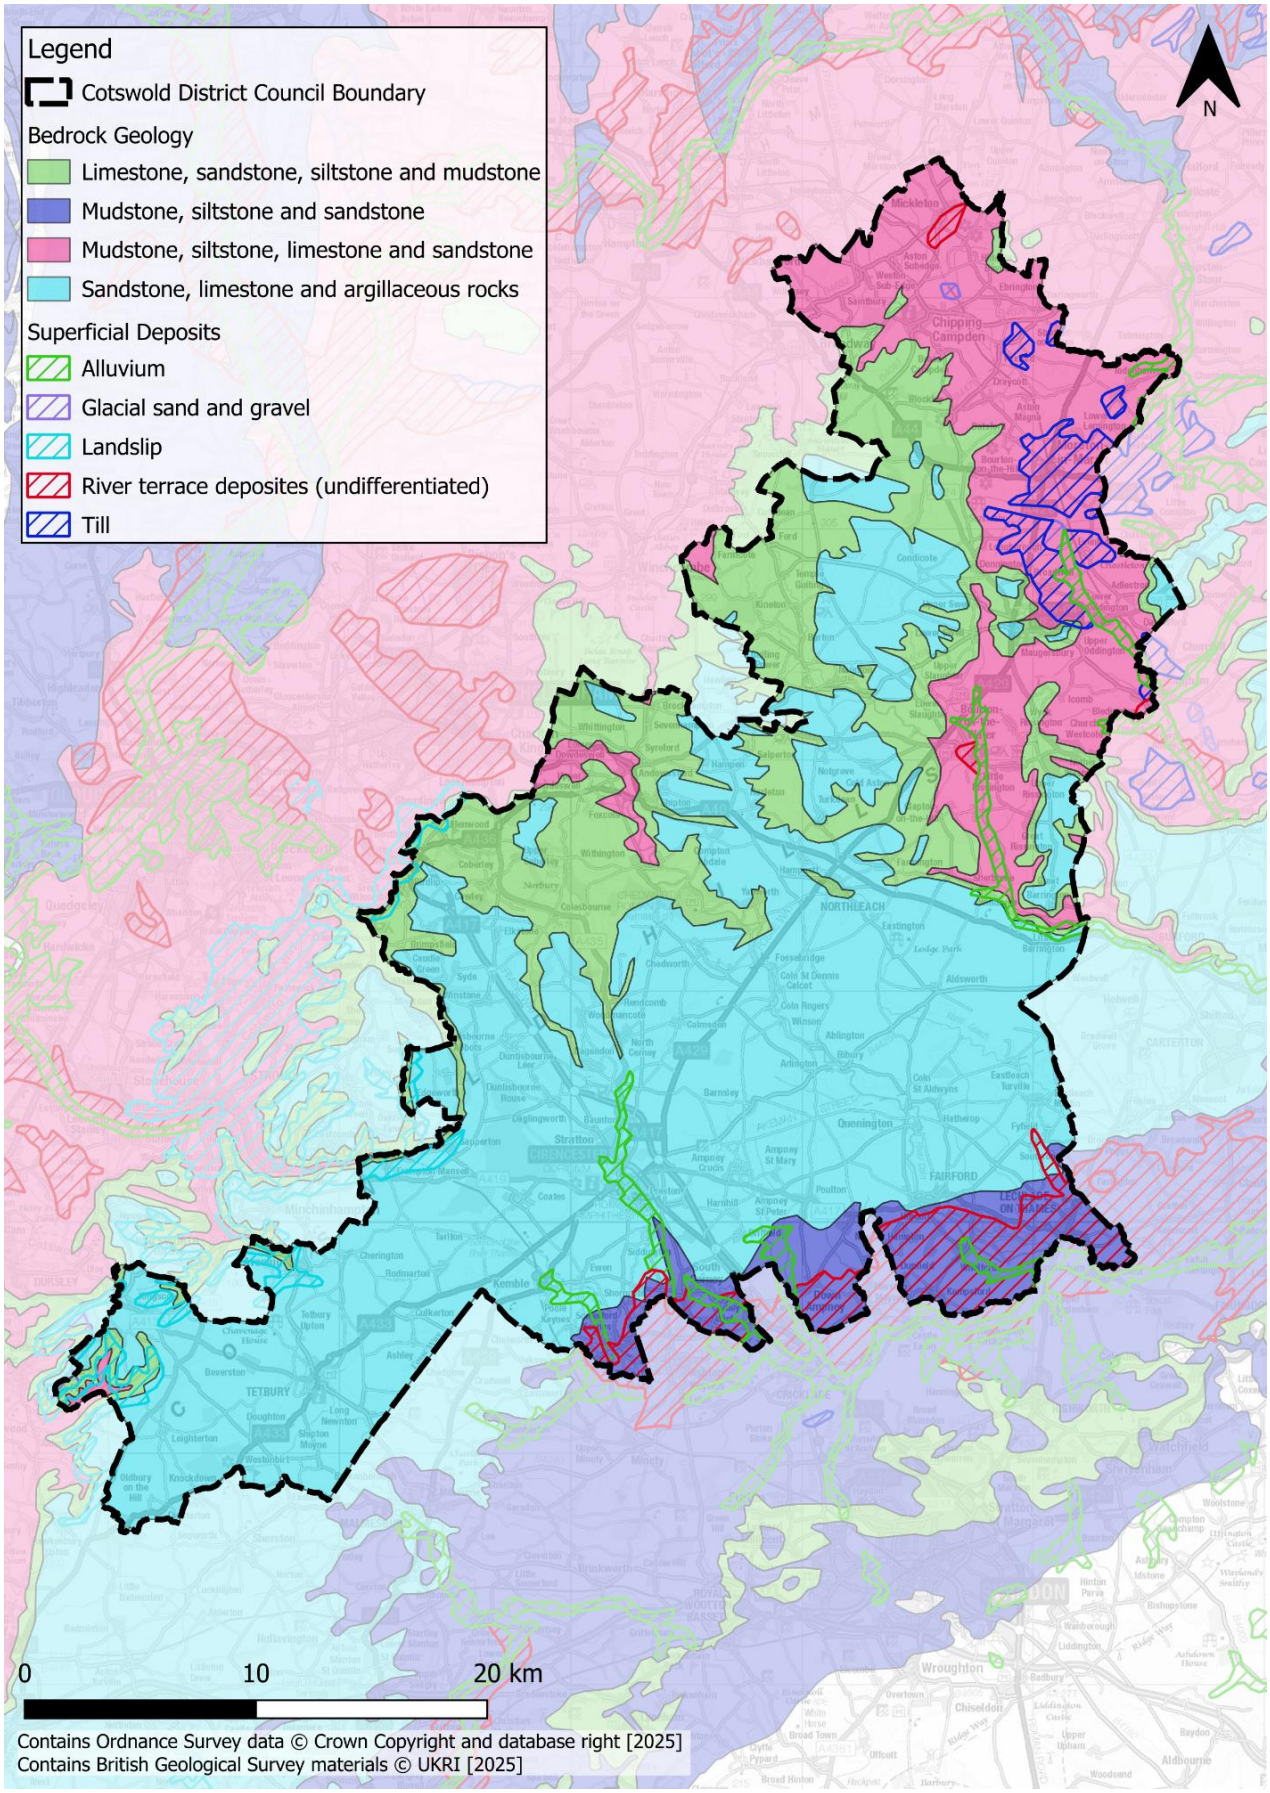

Figure 4-4: Bedrock geology across Cotswold

4.3 Historic flooding

Records of past flood events can help to build a picture of areas and locations that may be prone to flooding and to help confirm flood modelling outputs. Historic flood events can also help RMAs to target where flood risk management or resilience works may be required based on tangible evidence.

4.3.1 LLFA historic flood records

GCC as LLFA, is required, under the FWMA, to maintain and update its historic flood incidents database as and when any locally significant flood incidents occur. The LLFA has a statutory responsibility to investigate and report upon any 'significant' flood events. Figure 4-5 displays the number of LLFA recorded flood incidents, aggregated by ward. The highest number of historic flood events have been recorded in Fosseridge Ward, covering the area to the north and east of Stow-on-the-Wold.

The Gloucestershire Local Flood Risk Management Strategy (LFRMS) (2014) identified that the district has a long history with flooding, with flood events occurring throughout the last 80 years. Notable flood events occurred in the Summer of 2007 and the winter of 2012, due to heavy rainfall causing both surface water and fluvial flooding.

The LFRMS (2014) outlines nine major flood incidents in Cotswold District:

- March 1947
- July 1968
- August 1977
- September 1992
- October 1993
- April 1998
- December 2000
- Summer 2007
- January 2008

4.3.1.1 LLFA December 2020 flooding summary report

The LLFA flood summary report documents the flooding experienced across Gloucestershire on the 23 and 24 December 2020. The event was characterised by a period of intense rainfall, with rivers responding quickly and reaching their highest recorded peak levels. There were 94 reporting of flooding to property experienced across the district, 89 of these residential and five commercial properties. There were five parishes across Cotswold that experienced more than five reports of internal property flooding, namely Bledington, Cirencester, Lower Slaughter, Moreton-in-Marsh and Wyck Rissington.

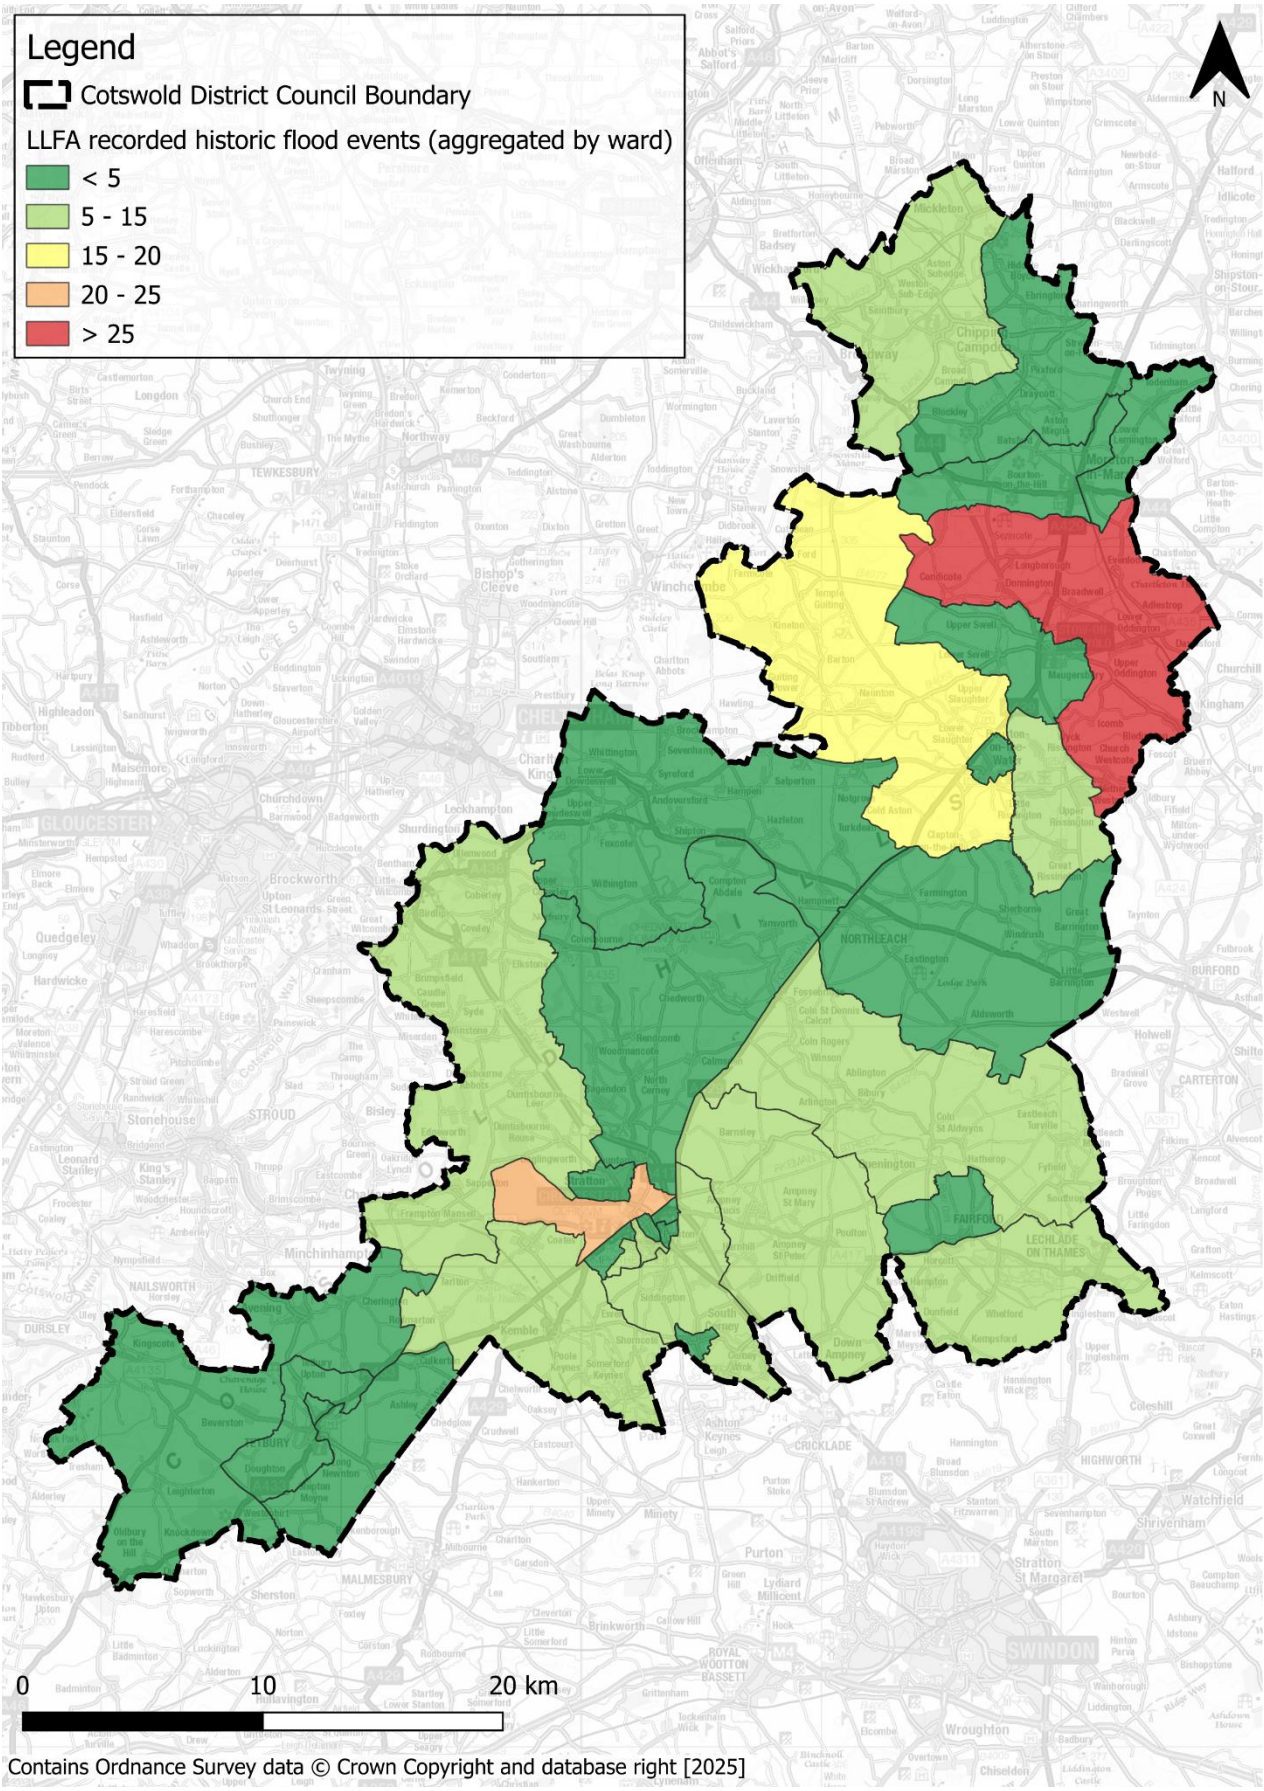

Figure 4-5: LLFA recorded historic flood events (aggregated by ward)

4.3.2 EA Historic Flood Map and Recorded Flood Outlines

The Historic Flood Map (HFM) is a spatial dataset showing the maximum extent of all recorded historic flood outlines from rivers, the sea and groundwater and shows areas of land that have previously been flooded across England. Records began in 1946 when predecessor bodies to the EA started collecting information about flooding incidents. The HFM accounts for the presence of defences, structures, and other infrastructure where such features existed at the time of flooding. It includes flood extents that may have been affected by residual flooding such as overtopping, breaches or blockages. It is also possible that historic flood extents may have changed and that some areas would not flood at present i.e., if a flood defence has been built.

The HFM does not contain any information regarding the specific flood source, return period or date of flooding, nor does the absence of the HFM in an area mean that an area has never flooded, only that records of historic flooding do not exist.

The Recorded Flood Outlines (RFO) dataset does include details of flood events. The difference between the two datasets is that the HFM only contains flood outlines that are ‘considered and accepted’ by the EA following adequate verification of the RFO dataset using certain criteria.

The EA's HFM dataset contains 29 records of flooding in Cotswold. The locations of these incidents are shown in Figure 4-6. Details of these incidents are provided in Table 4-1. Incidents have been recorded from 1947 to 2008. 22 incidents have been caused by the channel capacity being exceeded. Seven incidents have occurred due to surface water or local drainage issues.

Table 4-1: EA Historic Flood Map incidents in Cotswold

Start date	End date	Flood source	Flood cause
01/01/1925	31/01/1925	ordinary watercourse	channel capacity exceeded (no raised defences)
01/01/1947	12/12/1947	main river	channel capacity exceeded (no raised defences)
01/01/1968	12/12/1968	main river	channel capacity exceeded (no raised defences)

22/01/2006	22/01/2006	drainage	local drainage/surface water
19/07/2007	29/07/2007	drainage	local drainage/surface water
19/07/2007	29/07/2007	main river	channel capacity exceeded (no raised defences)
19/07/2007	29/07/2007	ordinary watercourse	channel capacity exceeded (no raised defences)
20/07/2007	23/07/2007	main river	channel capacity exceeded (no raised defences)
12/01/2008	20/01/2008	drainage	local drainage/surface water

Start date	End date	Flood source	Flood cause
12/01/2008	20/01/2008	main river	channel capacity exceeded (no raised defences)
13/12/2013	03/03/2014	main river	channel capacity exceeded (no raised defences)

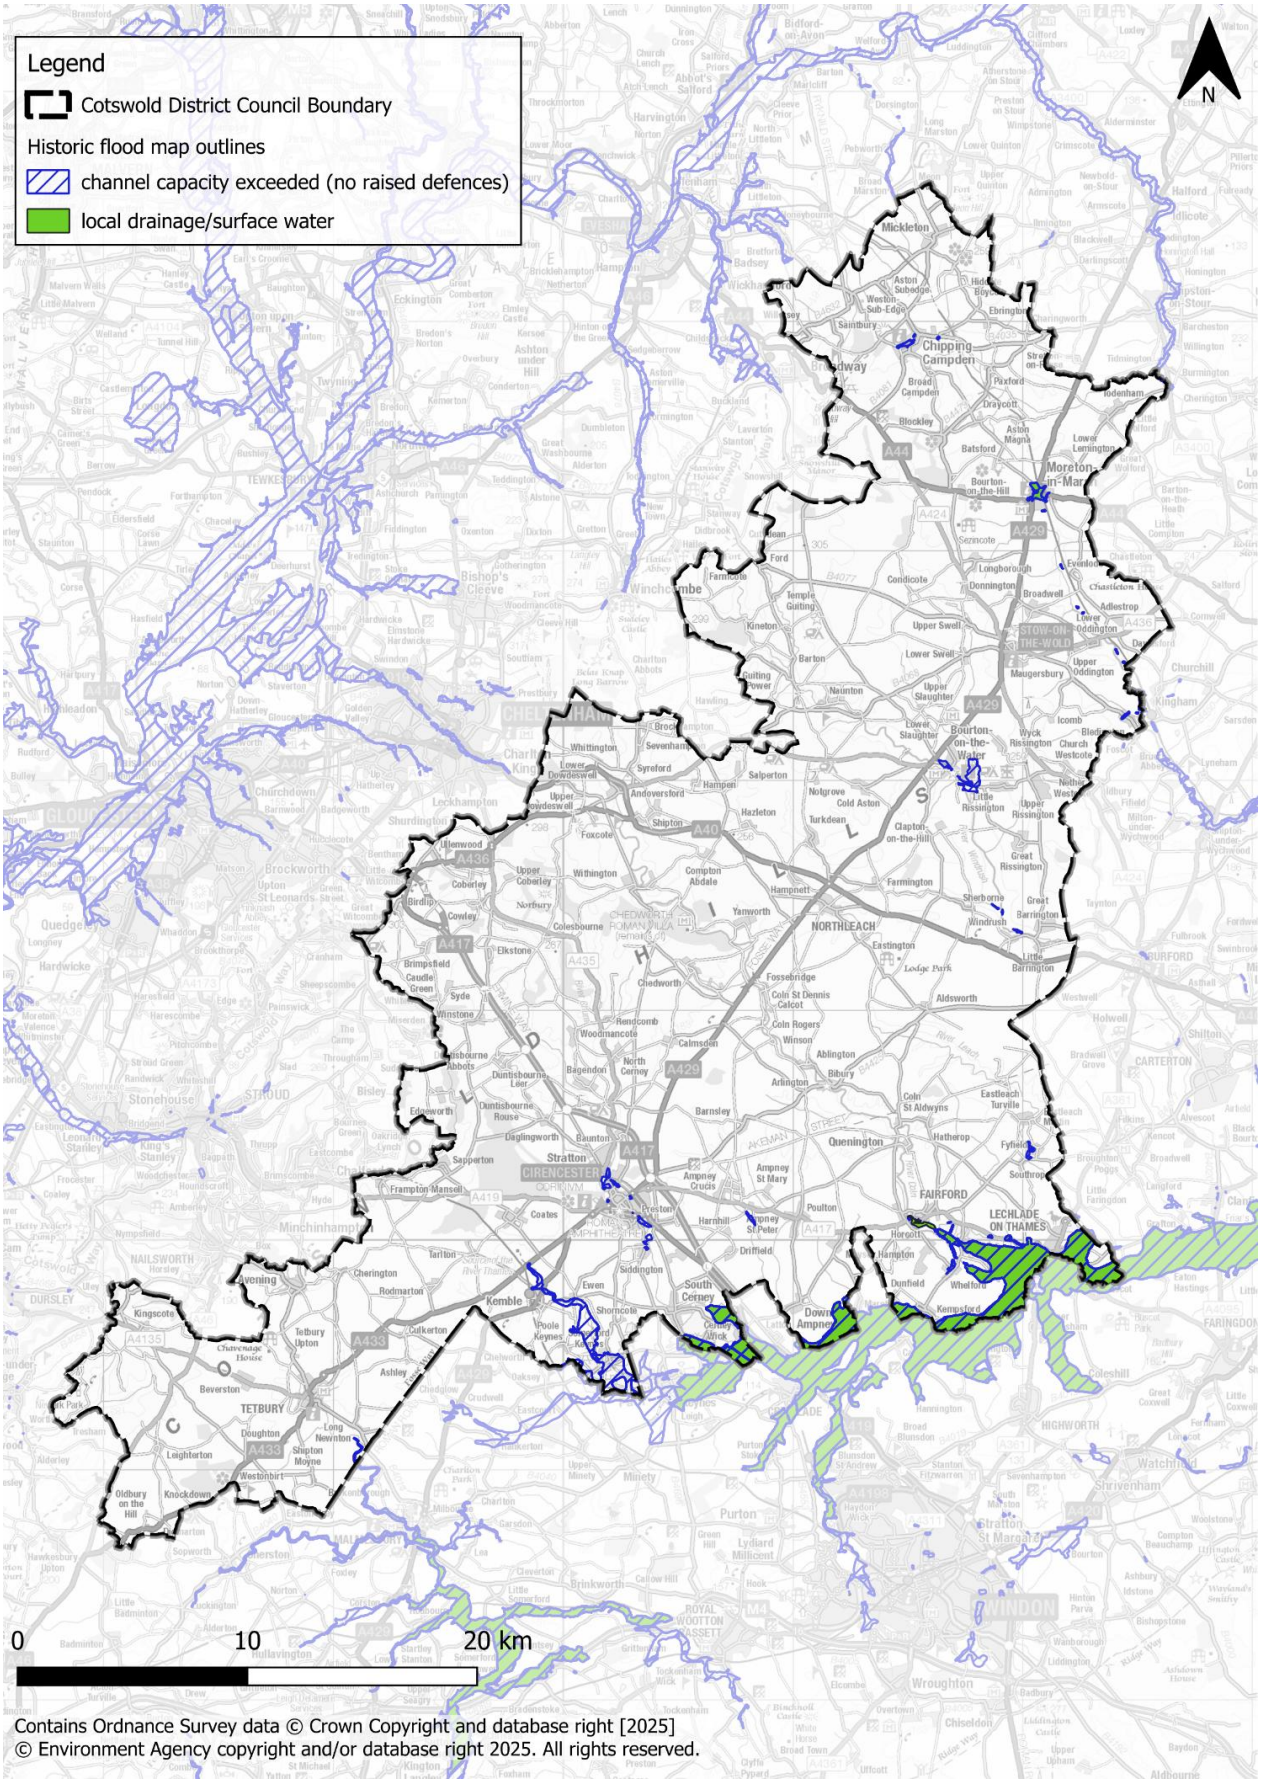

Figure 4-6: EA Historic Flood Map

4.3.3 Historic fluvial flooding

The LFRMS (2014) states that the unprecedented flooding in Gloucestershire in 2007 and also the less severe flooding in 2012 were largely caused by fluvial sources due to heavy rainfall causing high water levels in rivers and brooks. On the 20th of July the equivalent of two months' rain fell in 14 hours, leading to the flooding of approximately 5,000 residential properties and 500 non-residential properties.

4.3.3.1 July 2007

During the July 2007 event, Cotswold District Council received over 1,150 reports of flooded homes and businesses. Approximately 40% of these properties were located in Moreton-in- Marsh, Bourton-on-the-Water and Chipping Campden to the north of the district. In total, 79 towns and villages across the Cotswold District are known to have been affected by the floods in summer 2007.

Rivers were reported as a source of flooding in 42 of the 79 (53%) locations affected. The River Windrush flooded over 100 homes and businesses in Naunton and Bourtonon-the-Water, while the River Churn flooded parts of Cirencester. The River Thames at Lechlade reached record levels and there were over 100 reports of property flooding at the confluence of the Thames and River Leach. The northernmost part of the District is located within the Avon catchment. The River Cam, a sub catchment of the Avon, caused severe flooding to a number of residential properties and businesses in Chipping Campden.

Some of the areas worst-affected by surface water flooding included Moreton-In-Marsh, Fairford and Whelford. Additionally, Thames Water has identified nine areas where properties were flooded internally by sewers (Fairford, South Cerney, Ampney St Peter, Ampney St Mary, Upper and Lower Slaughter, Moreton-in-Marsh, Bourton-on-the-Water, Quenington). However, it recognises that there were many other areas where sewers caused flooding to gardens and open spaces. Further, groundwater was reported as a source of flooding in nine locations. Blewbury Rd East Hagbourne, report on flooding of 20th July 2007.

The flooding followed unprecedented rainfall; the wettest-ever May to July period since national records began in 1766. The Centre for Ecology and Hydrology3 states that May to July produced hydrological conditions with no close modern parallel for the summer period in England and Wales. Met Office records show that an average of 414mm of rain fell across England and Wales during a three month period - 228mm greater than the average May to July rainfall recorded.

4.3.3.2 Winter 2013/14

Flooding problems were experienced in known flood risk areas e.g. Cirencester and South Cerney. Sewer flooding problems were again at Lakeside, Lechlade. The flood events did test the defences at Moreton-in-Marsh and Fairford which were considered to have performed well.

4.3.3.3 December 2020

During the December 2020 flood event, significant flooding was observed in Bledington, Cirencester, Lower Slaughter and Moreton-in-Marsh. The event was characterised by a short period of intense rainfall that fell on saturated ground and elevated river levels, causing widespread flooding across the district. Peak river levels were exceeded by the River Evenlode at Moreton, the River Churn at Cerney Wick and the River Thames at Somerford Keynes.

4.3.3.4 Autumn 2024

Storm Bert caused prolonged periods of heavy rainfall across the Cotswolds in November 2024. This resulted in widespread flooding impacting roads, infrastructure and properties. Bledington was impacted significantly during this event, with at least four properties requiring evacuation, and a further 20 were flooded.

4.3.4 Historic surface water flooding

The LFRMS (2014) states that the Summer 2007 flood event was also partly caused by water overloading the drainage system leading to surface water flooding.

4.3.5 Historic sewer flooding

Severn Trent Water, Thames Water and Wessex Water have provided their sewer flood incident data. Many historic flooding incidents form sewers are at the individual property level and considered sensitive information. The incident locations have therefore been aggregated to ward boundaries, as shown in Figure 4-7. The highest number of recorded incidents have occurred around the areas of Chipping Campden in the north of the district, and around the areas of Shipton Moyne, Long Newnton and Tetbury in the south of the district. It should be noted that the absence of a recorded historic incident doesn't mean sewer flooding has not occurred in a location, only that it hasn't been recorded.

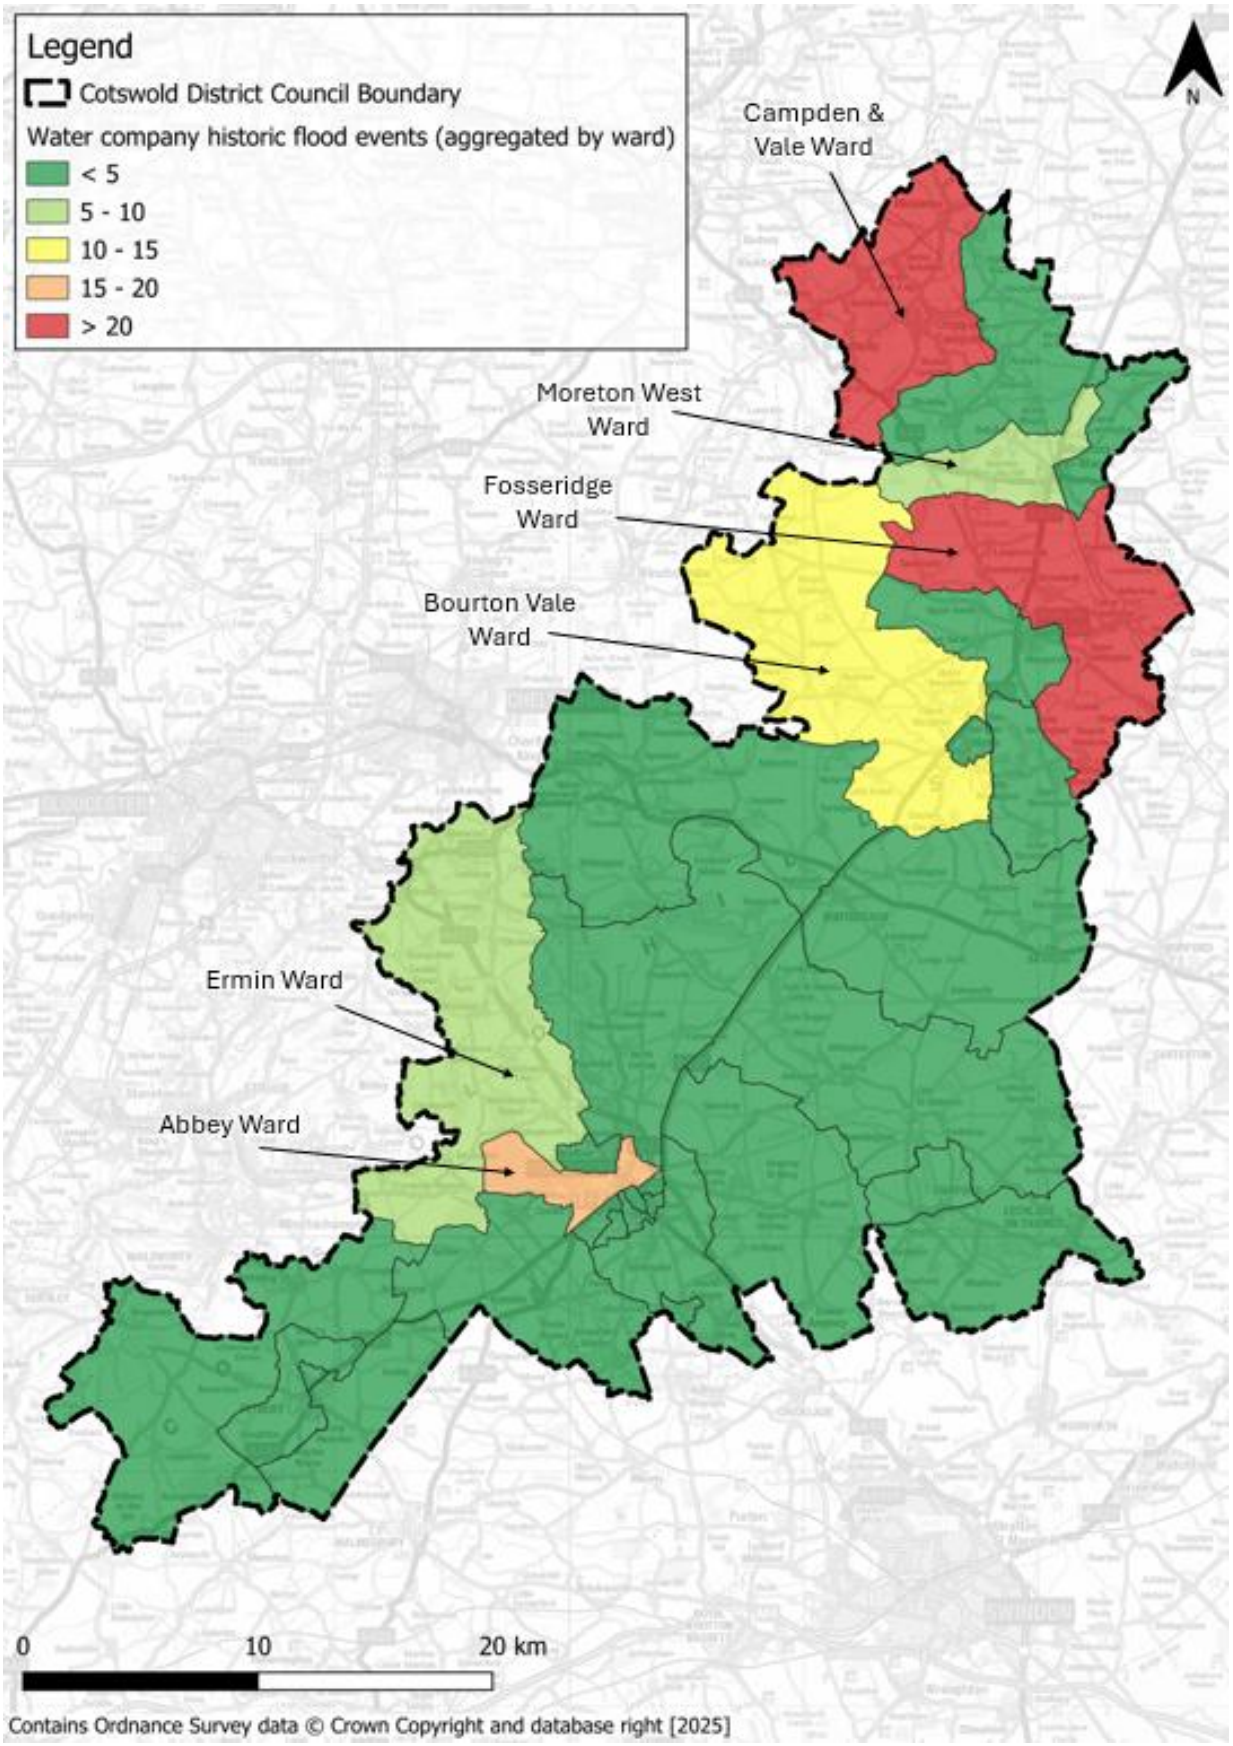

Figure 4-7: Severn Trent Water, Thames Water and Wessex Water historic flood incidents, aggregated by ward

4.3.6 Historic groundwater flooding

There are no records available of historic flooding from groundwater sources.

4.4 Fluvial flood risk

4.4.1 Flood Zones

Present day fluvial flood risk across the district is assessed based on Flood Zones. The definition of the Flood Zones is provided below. The Flood Zones do not consider defences, except when considering the functional floodplain. This is important for planning long term developments as long-term policy and funding for maintaining flood defences over the lifetime of a development may change over time.

The Flood Zones are:

- FMfP Flood Zone 1: Low risk: less than a 0.1% chance of river or sea flooding in any given year.
- FMfP Flood Zone 2: Medium risk: between a 1% and 0.1% chance of river or sea flooding in any given year.
- Flood Zone 3a (distinct from FMfP Flood Zone 3): High risk: between a 3.3% and 1% chance of river flooding in any given year or between a 3.3% and 2% change of flooding from the sea. This Flood Zone includes all areas in the FMfP Flood Zone 3 that are not in Flood Zone 3b.
- Flood Zone 3b: Functional Floodplain: land where water has to flow or be stored in times of flood. Only water compatible and essential infrastructure are permitted in this zone and should be designed to remain operational in times of flood, resulting in no loss of floodplain or blocking of water flow routes. Annex 3 of the NPPF (gov.uk) provides information on flood risk vulnerability. See Appendix C for details on the functional floodplain and how it has been delineated through this SFRA.

Important note on Flood Zone information in this SFRA

The FMfP Flood Zones for Cotswold are shown in Figure 4-8 and are included in the interactive GeoPDF mapping (Appendix B). These have been derived from the EA's Flood Map for Planning (FMfP) (gov.uk), accessed December 2025. Flood Zones 2 and 3a within this SFRA show the same extent as the online FMfP, at the time of publication of this SFRA. An updated Flood Zone 3b extent has been delineated through this SFRA.

The Flood Zones of the FMfP do not cover all catchments or ordinary watercourses with areas <3km². However, where the EA have suitable data for smaller catchments, this will be included in the Flood Zones of the FMfP. As a result, whilst the EA Flood Zones of the FMfP may show an area is in Flood Zone 1, there may be a flood risk from a smaller watercourse(s) not shown in the Flood Zones. Where detailed modelling or the FMfP is not available for a watercourse, the surface water flood extents can be used as a proxy for fluvial risk. At the planning application stage, a detailed model for small watercourses within the vicinity of a site may be required to robustly assess fluvial flood risk.

As stated in EA guidance, flood defences should be considered when delineating the functional floodplain. The methodology for functional floodplain delineation is described in Appendix C. Caution should also be applied where the Flood Zone 3b extent encompasses existing urban areas which would not otherwise be "designed to flood". Developers should consult the LPA on the derivation of the functional floodplain.

Potential development sites shown to be at high or medium risk from fluvial sources should be subject to further investigation through a Level 2 SFRA (Section 13.1).

4.4.2 Summary of fluvial flood risk across Cotswold

According to the EA's FMfP (as shown in Figure 4-8), the majority of fluvial risk is concentrated in the south of the district. An extensive area of Flood Zone 3 is located along the River Churn, which passes through Cirencester and South Cerney. There is also fluvial flood risk along the River Thames and the River Coln along the southern border of the district. Other key areas include the areas located adjacent to the River Dikler, the River Windrush and the River Evenlode.

Present day and future fluvial flood risk within the authority area is included in the interactive GeoPDF mapping (Appendix B). The impacts of climate change on fluvial flooding are discussed in Section 5.2.

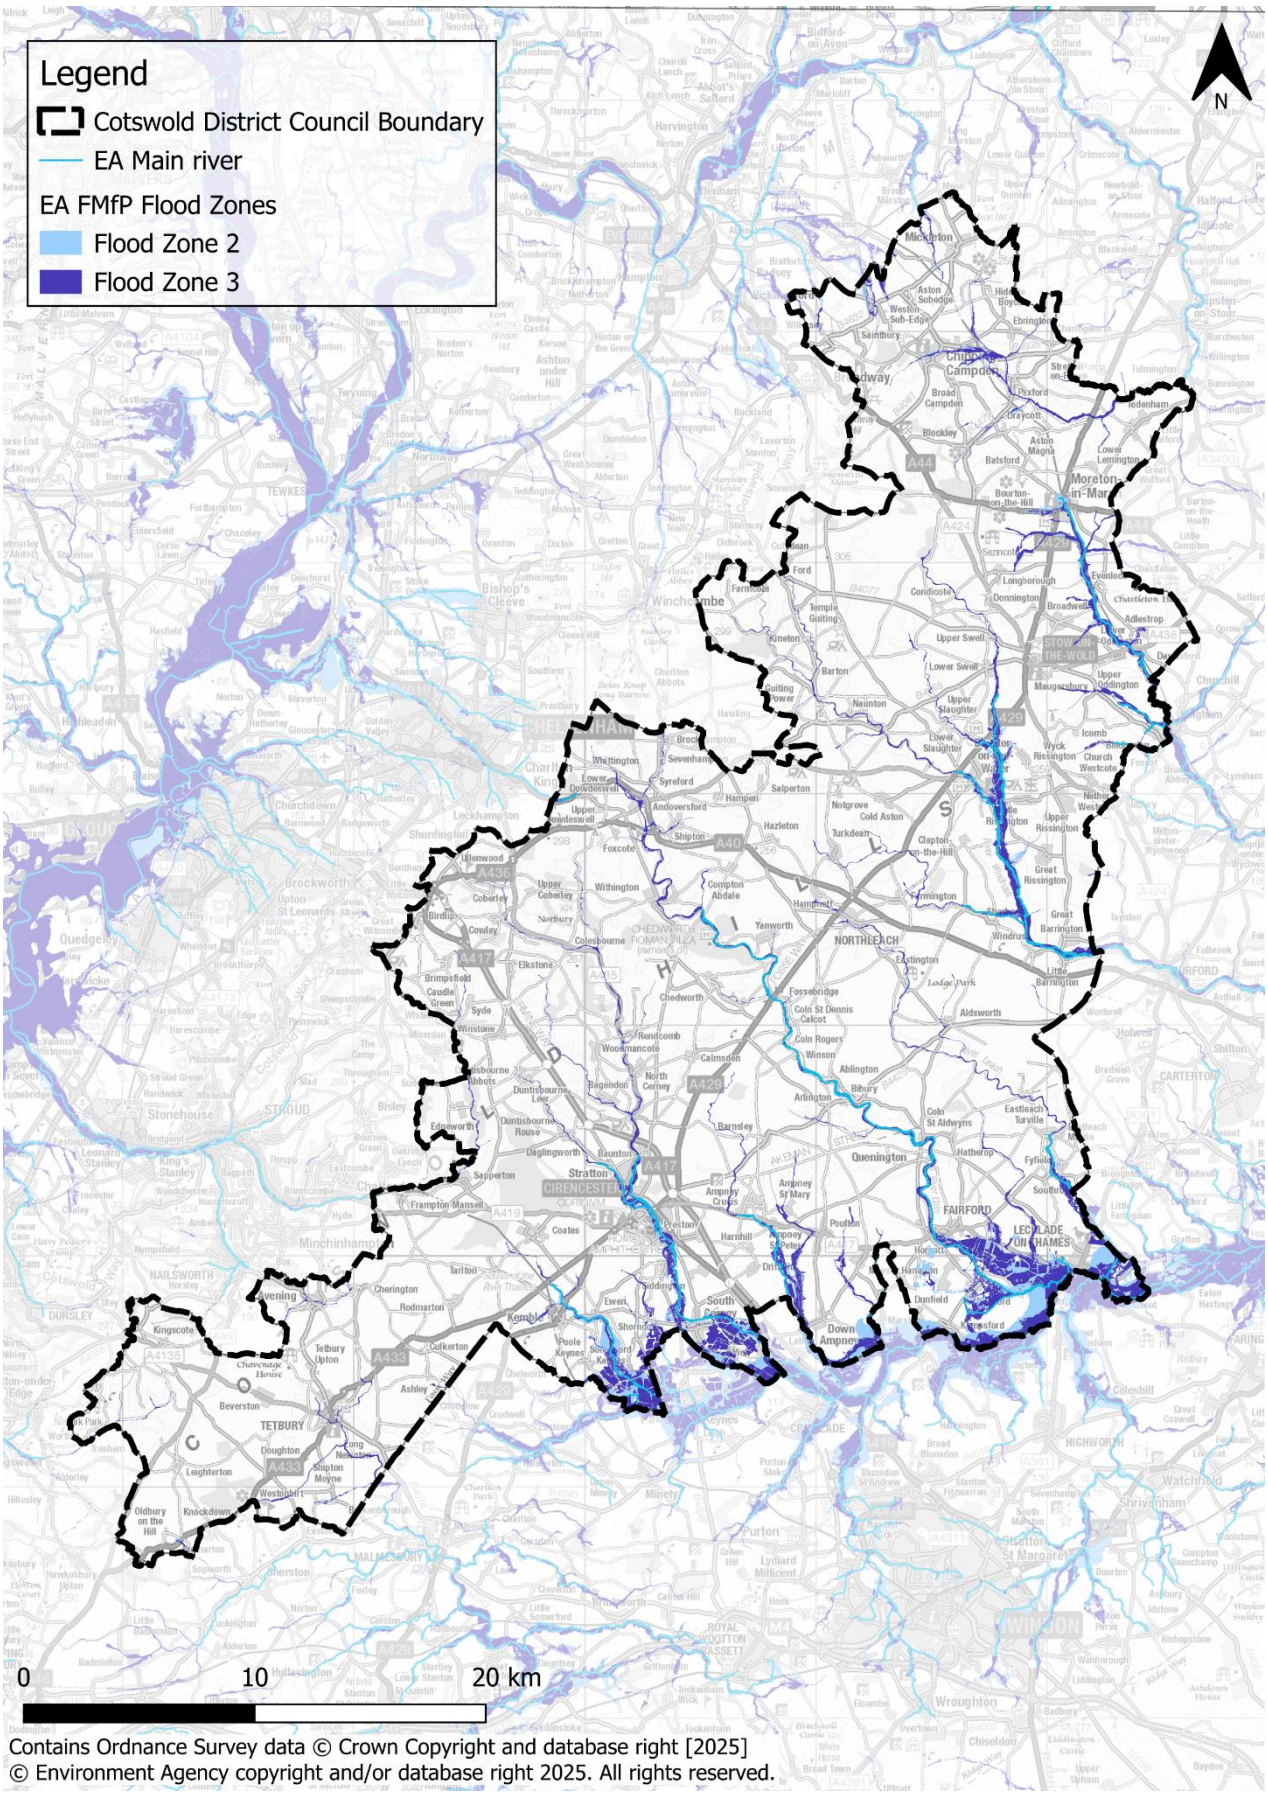

Figure 4-8: EA's Flood Map for Planning for Rivers and Sea - Flood Zones

4.5 Surface water flood risk

Surface water runoff is most likely to be caused by intense downpours e.g. thunderstorms. At times the amount of water falling can completely overwhelm the drainage network, which is not designed to cope with extreme storms. The flooding can also be complicated by blockages to drainage networks, sewers being at capacity and/or high-water levels in watercourses that cause local drainage networks to back up.

The EA's Risk of Flooding from Surface Water mapping (RoFSW) (gov.uk) received a significant update through NaFRA2 and was published January 2025. The RoFSW has been used to assess surface water risk within this SFRA. These maps are intended to provide a consistent standard of assessment for surface water flood risk across England and Wales in order to help LLFAs, the EA, and any potential developers to focus their management of surface water flood risk.

The RoFSW map is an assessment of where surface water flooding may occur when rainwater does not drain away through the normal drainage systems or soak into the ground buy lies on or flows over the ground instead. It is produced using national scale modelling and enhanced with compatible, locally produced modelling from LLFAs. Risk is displayed as one of three likelihood bandings:

- High - greater than or equal to 3.3% (1 in 30) chance in any given year.
- Medium - less than 3.3% (1 in 30) but greater than or equal to 1% (1 in 100) chance in any given year.
- Low - less than 1% (1 in 100) but greater than or equal to 0.1% (1 in 1000) chance in any given year.

The RoFSW map does not map flooding less than 0.075m (7.5cm) in depth. Therefore, where the map may show no flooding, there may be shallow flooding up to a depth of 0.075m. Therefore, the RoFSW should not be used to understand flood risk for individual properties but can be considered suitable for high level assessments such as this SFRA.

Potential development sites shown to be at high or medium risk from surface water should be subject to further investigation through a Level 2 SFRA (Section 13.1).

4.5.1 Summary of surface water flood risk across Cotswold

The EA RoFSW (as shown in Figure 4-9) highlights several communities in the district at risk from surface water flooding. Surface water flow paths generally follow the topography of existing watercourses. Areas to the north of the district appear at highest risk of surface water flooding, including Chipping Campden, Moreton-in-Marsh, Evenlode and Bourton-on-the-Water. Other key areas of risk are present in the south of the district, most notably Cirencester, Down Ampney, South Cerney and Lechlade on Thames.

Surface water flow paths generally follow areas of topographic low spots with areas of isolated ponding. Additionally, surface water flow routes are also established on roads in the more urban areas highlighting risk to transport networks while posing a risk to buildings which water can be routed to.

The RoFSW data for the district is included in the interactive GeoPDF mapping (Appendix B). The impacts of climate change on surface water flooding are discussed in Section 5.3.

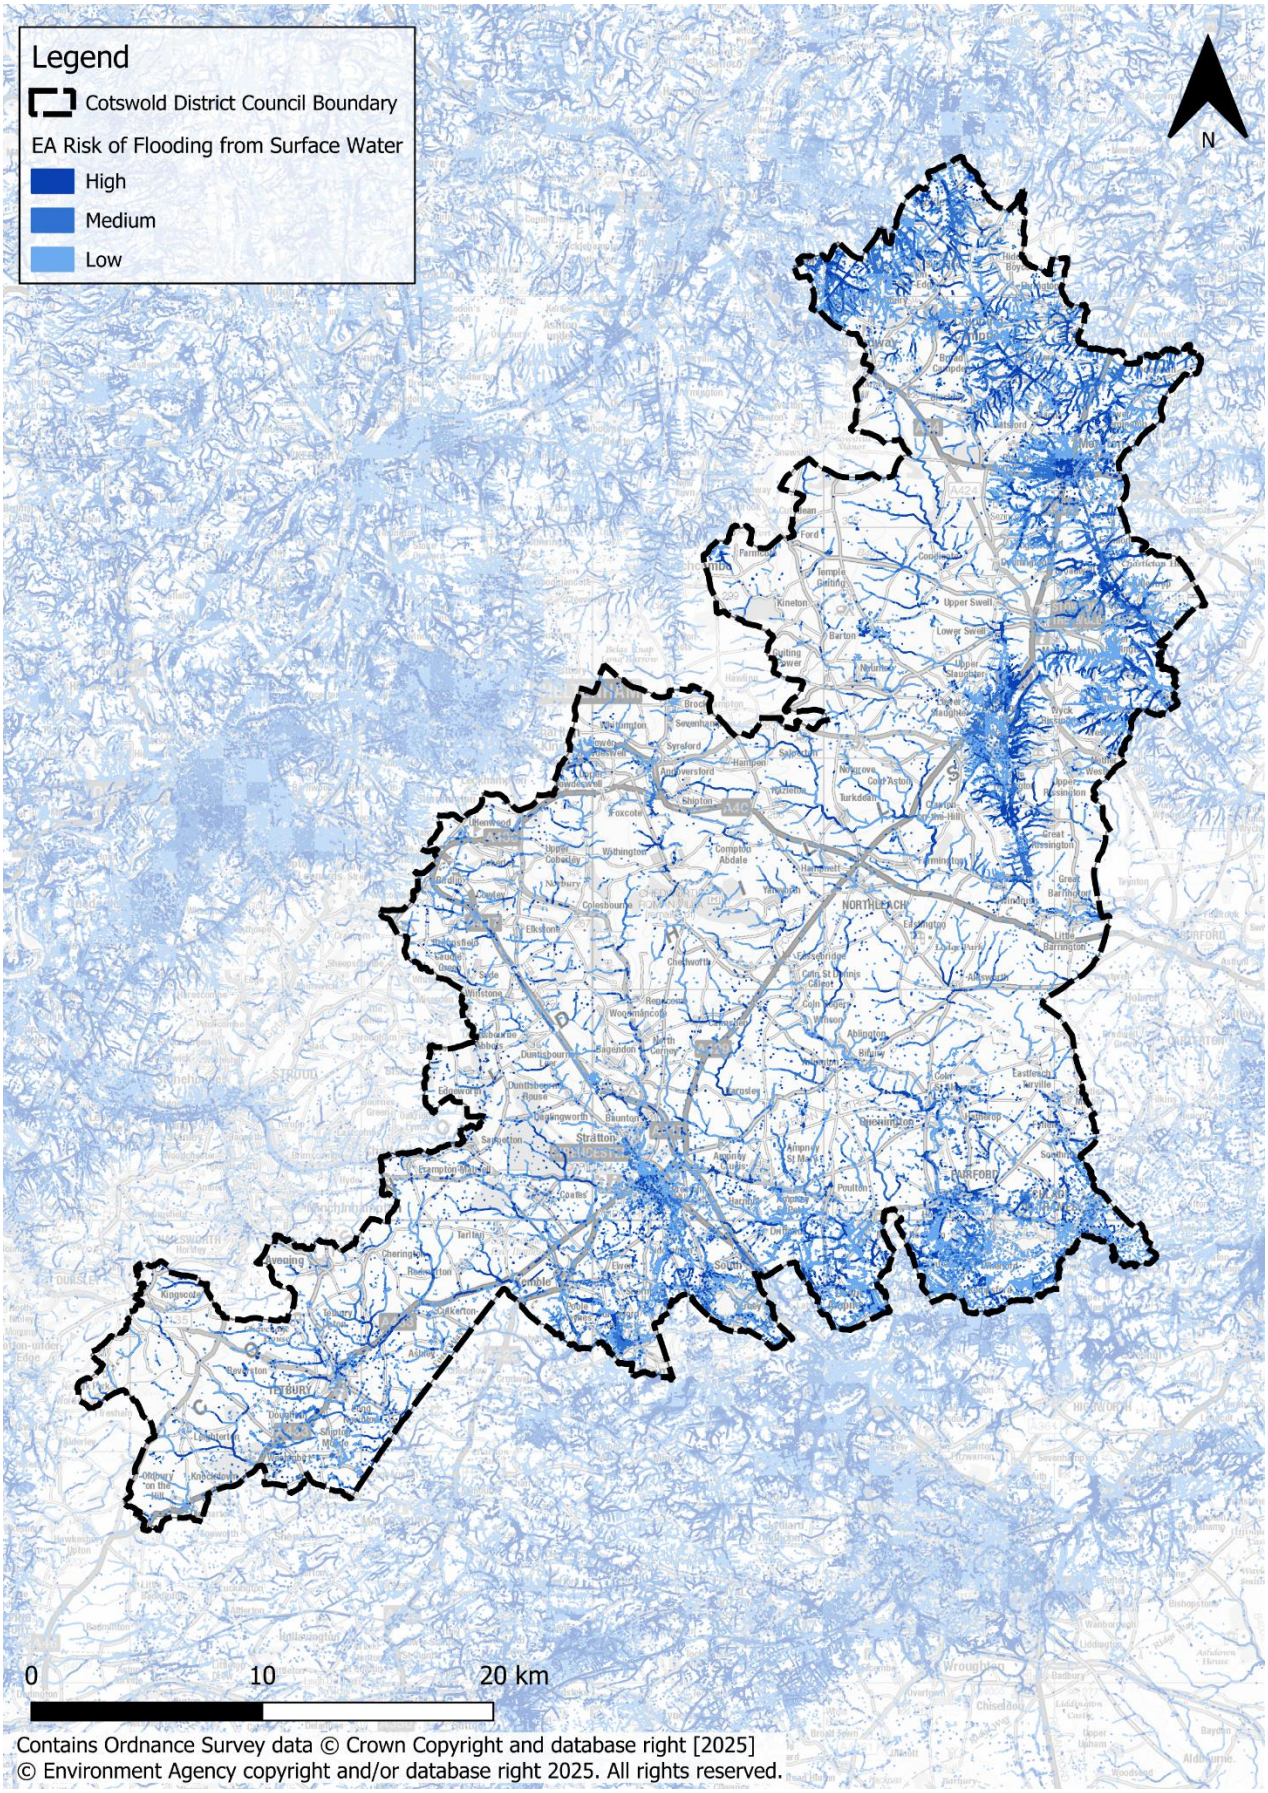

Figure 4-9: EA's Risk of Flooding from Surface Water mapping

4.6 Sewer flood risk

Sewer flooding occurs when intense rainfall/river flooding overloads sewer capacity (surface water, foul or combined), and/or when sewers cannot discharge to watercourses due to high water levels. Sewer flooding can also be caused by blockages, collapses, equipment failure or groundwater leaking into sewer pipes.

Since 1980, the Sewers for Adoption guidelines mean that new surface water sewers have been designed to have capacity for a 3.3% AEP rainfall event, although until recently this did not apply to smaller private systems. This means that sewers can be overwhelmed in larger rainfall and flood events.

New developments should not cause additional pressures on existing sewers due to the requirements to maintain greenfield runoff rates. However, increases in rainfall as a result of climate change can lead to existing sewers becoming overloaded, although this can be reduced through the use of well-designed SuDS to reduce surface water runoff. Water Cycle Studies can also assist LPAs and water companies in planning for new development and subsequent increased pressures on the sewerage and wastewater network.

Severn Trent Water, Wessex Water and Thames Water are the water companies responsible for the management of the sewerage networks across the district, as shown in Figure 4-10.

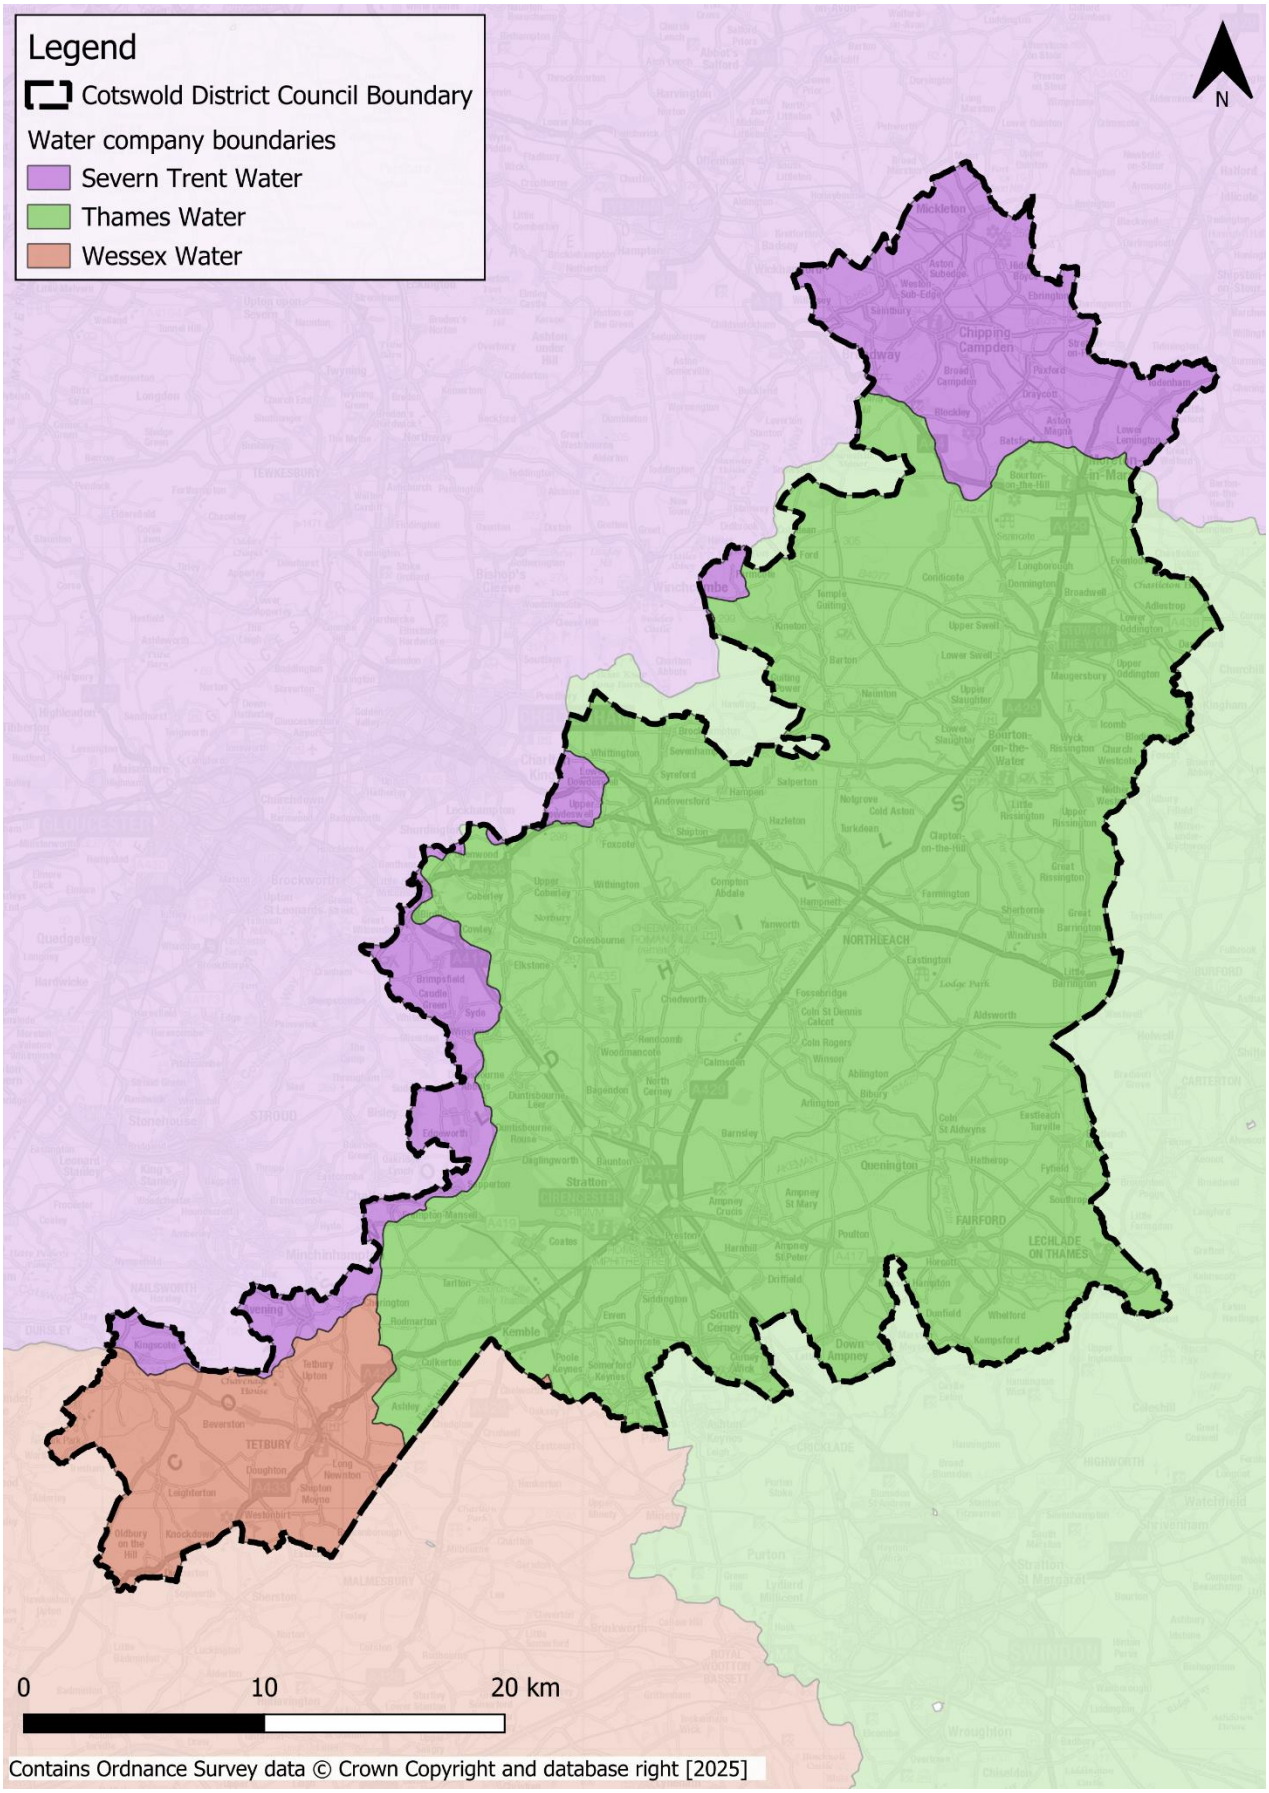

Figure 4-10: Water company boundaries covering Cotswold

4.6.1 Summary of sewer flood risk across Cotswold

Sewer flood risk is greatest in urban locations, particularly in areas where surface water and wastewater share the same combined sewer. Based on the water company historic flood incident data (Figure 4-7), the areas with the highest risk of sewer flooding are Chipping Campden, Tetbury, Long Newnton, Ashley and Shipton Moyne.

4.7 Groundwater flood risk

In general, less is known about groundwater flooding and availability of data is limited. Groundwater flooding can be caused by:

- High water tables, influenced by the type of bedrock and superficial geology.
- Seasonal flows in dry valleys, which are particularly common in areas of chalk geology.
- Rebounding groundwater levels, where these have been historically lowered for industrial or mining purposes.
- Where there are long culverts that prevent water easily getting into watercourses.
- Perched aquifers underlain by impermeable geology, particularly in low lying areas.

Groundwater flooding is different to other types of flooding. It can last for days, weeks, or even months and is much harder to predict and warn for. Monitoring does occur in certain areas, for example where there are major aquifers or in areas of historic mining.

The JBA Groundwater Emergence map shows the likelihood of groundwater emergence posing a risk to both surface and subsurface assets, based on predicted groundwater levels during a 1% AEP event. This divides groundwater emergence into five categories (Table 4-2).

Table 4-2: JBA Groundwater Emergence Map category descriptions

Category	Potential risk
0-0.025 - Groundwater levels are either at or very near (within 0.025m of) the ground surface.	Within this zone there is a risk of groundwater emergence to both surface and subsurface assets. Groundwater may emerge at significant rates and has the capacity to flow overland and/or pond within any topographic low spots.
0.025 - 0.5 - Groundwater levels are between 0.025m and 0.5m below the ground surface.	Within this zone there is a risk of groundwater emergence to both surface and subsurface assets. There is the possibility of groundwater emerging at the surface locally.
0.5 - 5 - Groundwater levels are between 0.5m and 5m below the ground surface.	There is a risk of emergence to subsurface assets, but surface manifestation of groundwater is unlikely.
>5 - Groundwater levels are at least 5m below the ground surface.	Groundwater emergence is not likely.

Category	Potential risk
N/A - no risk	This zone is deemed as having a negligible risk from groundwater flooding due to the nature of the local geological deposits.

It should be noted that this dataset only identifies areas likely to be at risk of groundwater emergence and does not allow for the prediction of the likelihood of groundwater flooding or quantification of the volumes of groundwater that might be expected to emerge in a given area.

Potential development sites shown to be at risk from groundwater emergence should be subject to further investigation through a site-specific FRA (Section 7.2).

4.7.1 Summary of groundwater emergence risk across Cotswold

The risk of groundwater emergence within Cotswold is varied. There are several areas shown in the JBA Groundwater Emergence Map where groundwater levels are either at or very near the ground surface. These areas include:

- Area around and to the south of Moreton-in-Marsh
- Areas of Ashton Keynes and Somerford Keynes
- South of Down Ampney
- Area to the east of Fairford and to the south near RAF Fairford
- Lechlade

A site-specific assessment for groundwater may be required to fully inform the likelihood of emergence to subsurface and surface areas. This may involve seasonal percolation testing and ground investigations. The JBA Groundwater Emergence Map is shown in Figure 4-11 and is included in the interactive GeoPDF mapping (Appendix B).

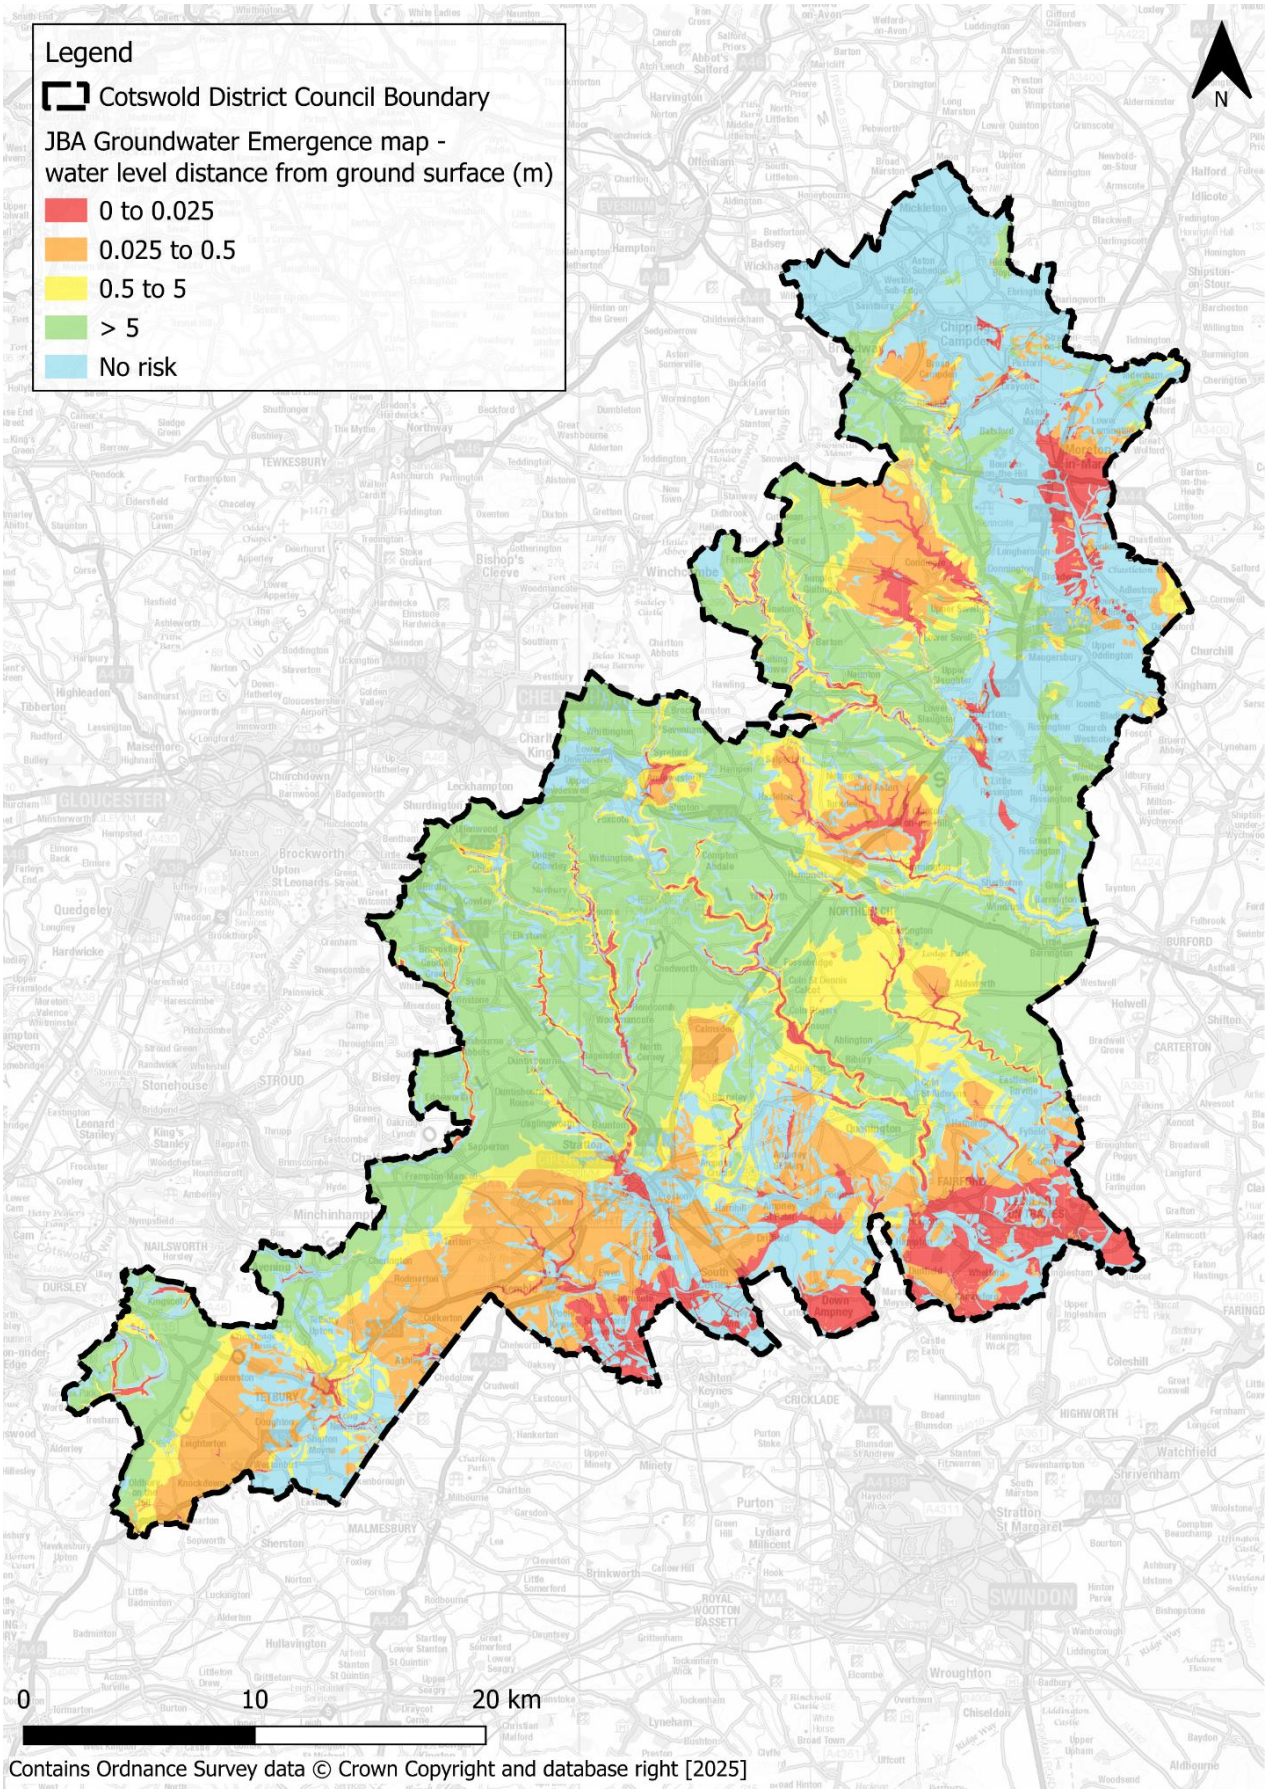

Figure 4-11: JBA Groundwater Emergence Map

4.8 Residual risk

Residual risk comes in two main forms (PPG: Flood Risk and Coastal Change Paragraph: 041):

- Residual risk from flood risk management infrastructure.
- Residual risk to a development once any site-specific flood mitigation measures are taken into account.

Examples of residual flood risk from flood risk management infrastructure include:

- A breach of a raised flood defence, blockage of a surface water conveyance system (culvert), or failure of a pumped drainage system;
- Failure of a reservoir / impounded waterbody; and
- A flood event that exceeds a flood management design standard, such as a flood that overtops a raised flood defence, or an intense rainfall event which the drainage system cannot accommodate.
- This SFRA does not assess the probability of infrastructure failure. However, in accordance with the NPPF, all sources of flooding need to be considered. If a defence breach or overtopping event were to occur, then the consequences to people and property could be significant. It is the responsibility of the developer to fully assess flood risk, propose measures to mitigate it and demonstrate that any residual risks can be safely managed.

Examples of residual flood risk to a single development to consider include:

- The depth of internal flooding predicted after any raising of land or finished floor levels;
- The flood hazard to which people would be exposed on access or escape routes after they have been raised; and
- A failure of flood forecasting or flood warning and the risks associated with people not receiving warnings or not acting upon them.

4.8.1 Reservoir flood risk

Reservoirs with an impounded volume greater than 25,000 cubic metres are governed by the Reservoirs Act 1975 (gov.uk) and are on a register held by the EA. The level and standard of inspection and maintenance required by a Supervising Panel of Engineers under the Act means that the risk of flooding from reservoirs is very low.

Reservoirs have a designated "risk category" set by the potential damage and loss of life in circumstances where there is a breach or an extreme flood event. Reservoirs designated as high risk are subject to increased inspection and maintenance requirements. However, this designation does not mean they are at a high risk of flooding. Allocation of new development downstream of an existing reservoir could potentially change the risk category of the reservoir and result in a legal requirement to improve the structural and hydraulic capacity of the dam. As the cost of implementing such works can be substantial, consideration should be given to whether it would be more appropriate to place development in alternative locations not associated with such risk.

Flooding from reservoirs occurs following partial or complete failure of the control structure designed to retain water in the artificial storage area. Reservoir flooding is very different from other forms of flooding; it may happen with little, or no warning and evacuation will need to happen immediately. The likelihood of such flooding is difficult to estimate but is extremely low compared to flooding from other sources. It may not be possible to seek refuge upstairs from floodwater as buildings could be unsafe or unstable due to the force of water from the reservoir breach or failure.

The EA's Reservoir Flood Map (RFM) shows the potential consequences of reservoir failure. Developers and planners should check the Long-Term Risk of Flooding (gov.uk) before using the reservoir data shown in this SFRA to make sure they are using the most up to date mapping. The EA provide two flooding scenarios for the RFM: a ‘dry-day’ and a ‘wet-day’. The ‘dry day’ scenario shows the predicted flooding which would occur if the dam or reservoir fails when rivers are at normal levels. The ‘wet day’ scenario shows the predicted worsening of the flooding which would be expected if a river is already experiencing an extreme natural flood. It should be noted that these datasets give no indication of the likelihood or probability of reservoir flooding. The EA maps represent a credible worst-case scenario. In these circumstances it is the time to inundation, the depth of inundation, the duration of flooding and the velocity of flood flows that will be most influential.

Potential development sites shown to be at risk from reservoir flooding should be subject to further investigation through a site-specific FRA (Section 7.2).

4.8.1.1 Summary of reservoir flood risk across Cotswold

The RFM shows that there are 10 reservoirs located outside the district which may pose a risk to Cotswold (detailed in Table 4-3). The EA's 'dry-day' and 'wet-day' reservoir flood extent maps are shown in Table 4-3 and are included in the interactive GeoPDF mapping (Appendix B).

Reservoir flood risk largely follows the channels of the River Churn in the south and the River Thames in the southeast of the authority area.

Table 4-3: Reservoirs with flood extents that may impact Cotswold

Reservoir	Easting and Northing	Reservoir owner	Risk Category	Local Authority	Does reservoir flooding impact the district in 'dry day' scenario?
Buscot Park Lake	424900, 196900	The National Trust	High-risk	Oxfordshire	Yes
Buscot Reservoir	423800, 196600	The National Trust	High-risk	Oxfordshire	Yes
Cirencester Park - The Mansion Lake	401700, 201700	Bathurst Estate Farming Limited	High-risk	Gloucestershire	Yes
Coate Water	417500, 182000	Swindon Borough Council	High-risk	Swindon	Yes
Dowdeswell	399000, 219700	Environment Agency	High-risk	Gloucestershire	Yes
Gatcombe Water	386900, 199245	Ede Holdings Limited	High-risk	Gloucestershire	Yes
Kennel Pond, Woodchester	382600, 201100	The National Trust	High-risk	Gloucestershire	No
Middle Pond, Woodchester	382100, 201300	The National Trust	High-risk	Gloucestershire	No
Parkmill Pond, Woodchester	383000, 200900	The National Trust	High-risk	Gloucestershire	No
Stanton Park Lake	417600, 190000	Swindon Borough Council	High-risk	Swindon	No

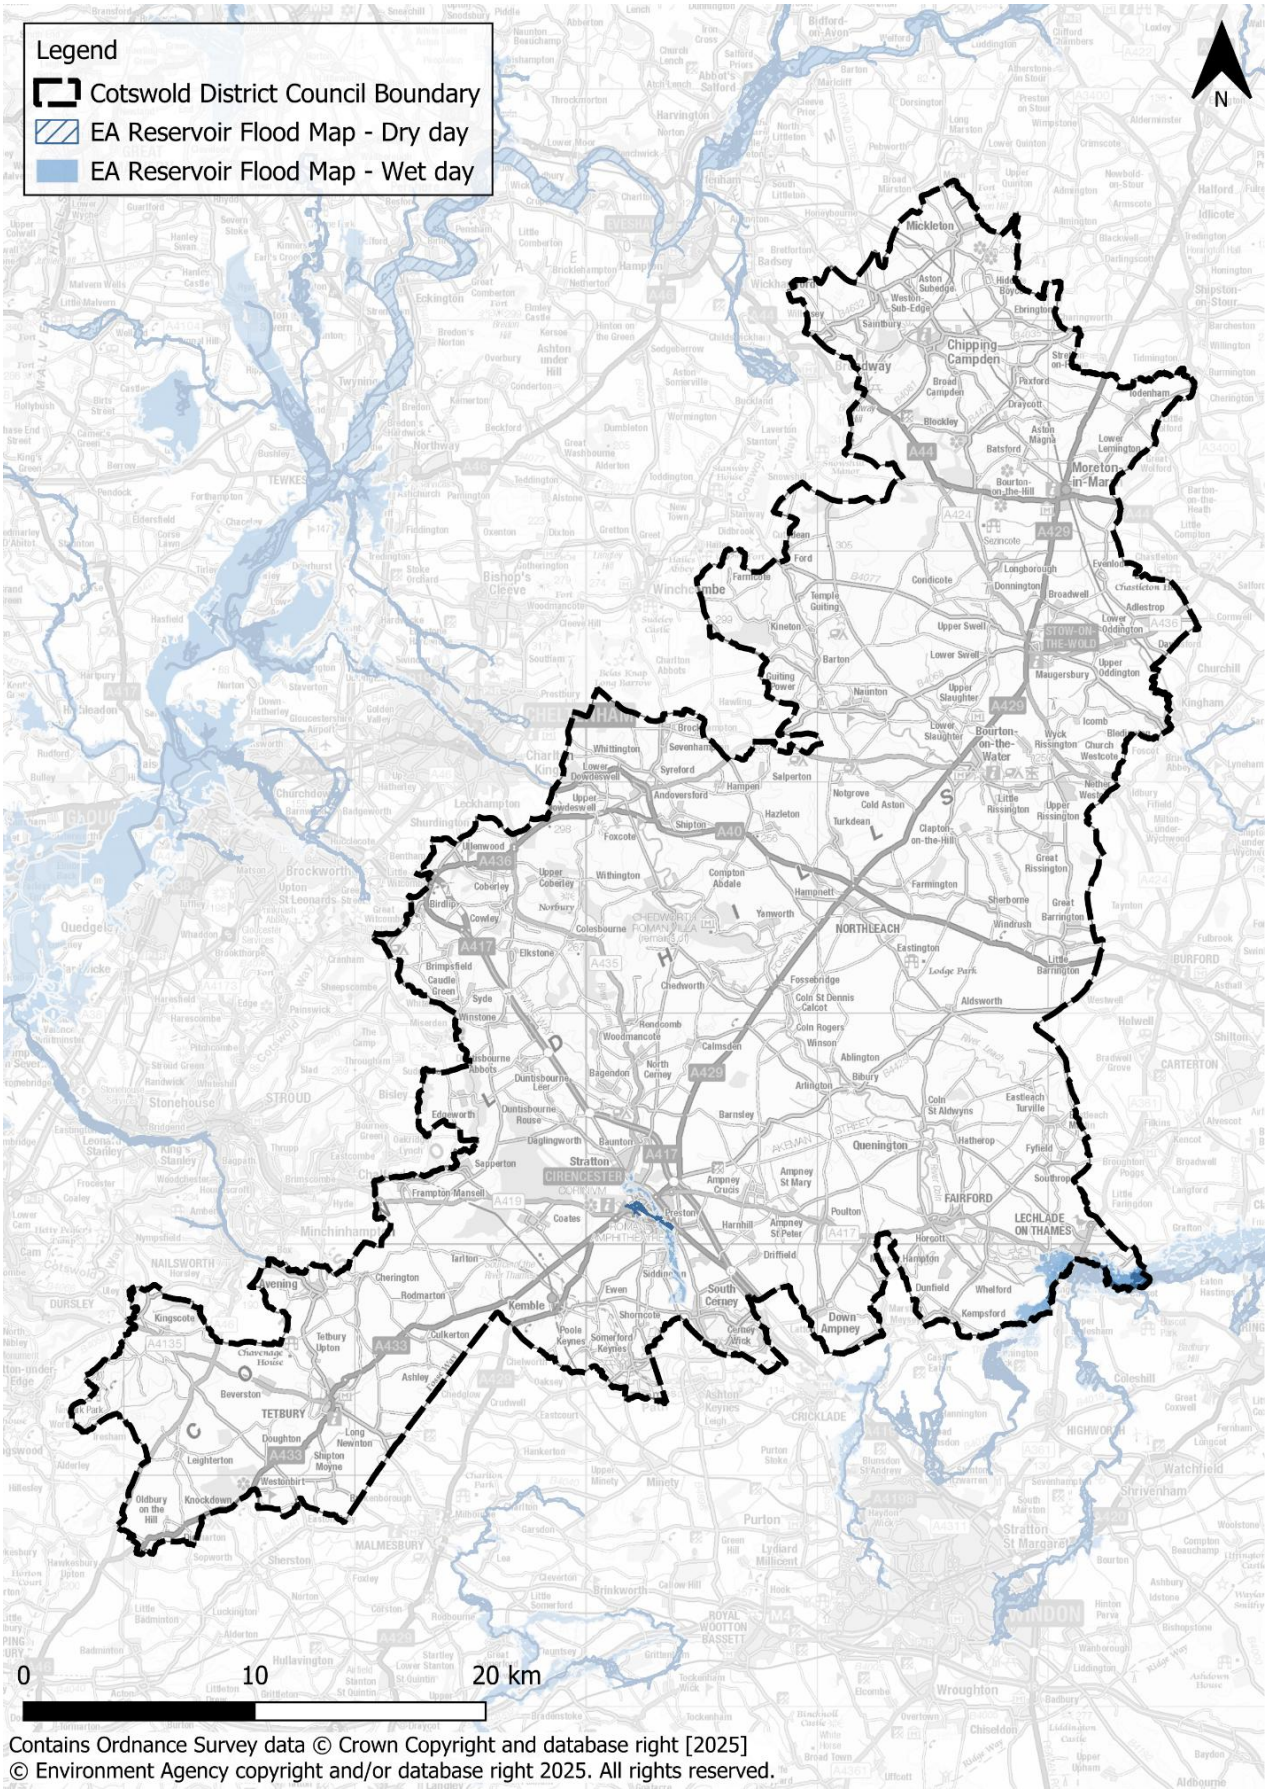

Figure 4-12: EA's Reservoir Flood Map in Cotswold

4.9 Combined sources of flood risk

In urban areas, surface water drainage networks and sewer systems are closely linked, with their interaction significantly influencing flood risk. Traditional urban drainage relies on impermeable surfaces directing rainwater into pipes and culverts, which often connect to combined sewers carrying both wastewater and stormwater. During heavy rainfall, these systems can become overwhelmed, leading to overflows that discharge untreated sewage into watercourses, exacerbating flooding and pollution.

4.10 Summary of flood risk in the district

The risk across the district is varied

- Fluvial flood risk predominantly originates from the River Churn, which flows through Cirencester and South Cerney. There is also fluvial flood risk along the River Thames and the River Coln along the southern border of the district. Historic fluvial flood events have significantly impacted the village of Bledington.
- Surface water risk is scattered across the study area. Notably this includes Chipping Campden, Moreton-in-Marsh, Evenlode and Bourton-on-the-Water in the north of the authority area and Cirencester, Down Ampney, South Cerney and Lechlade-on-Thames in the south.
- Groundwater emergence risk is varied across the district. Risk is greatest in areas around Moreton-in-Marsh and in the south of the district, covering areas including Down Ampney, Somerford Keynes, Fairford and Lechlade.
- Reservoir flood risk largely follows the channels of the River Churn in the south and the River Thames in the southeast.

5 Impact of climate change

The NPPF sets out that flood risk should be managed over the lifetime of a development, taking climate change into account. This section sets out how the impact of climate change on flood risk should be considered.

5.1 Climate change guidance

The Climate Change Act 2008 (legislation.gov.uk) creates a legal requirement for the UK to put in place measures to adapt to climate change and to reduce carbon emissions by at least 80% below 1990 levels by 2050. This was updated in June 2019 under the Climate Change Act 2008 (2050 Target Amendment) Order (legislation.gov.uk) to a 100% reduction (or net zero) by 2050.

In 2018, the Met Office published new UK Climate Projections (UKCP18) (gov.uk). The EA used these projections to update their guidance on climate change allowances for new developments for peak river flows (July 2021) and peak rainfall intensities (May 2022). This includes information on how these allowances should be included in both SFRAs and FRAs. The guidance adopts a risk-based approach considering the vulnerability of the development and considers risk allowances on a management catchment level, rather than a river basin level. The management catchments for Cotswold are shown in Figure 5-1.

Developers should check Flood risk assessments: climate change allowances (gov.uk) for the most recent guidance before undertaking a detailed FRA.

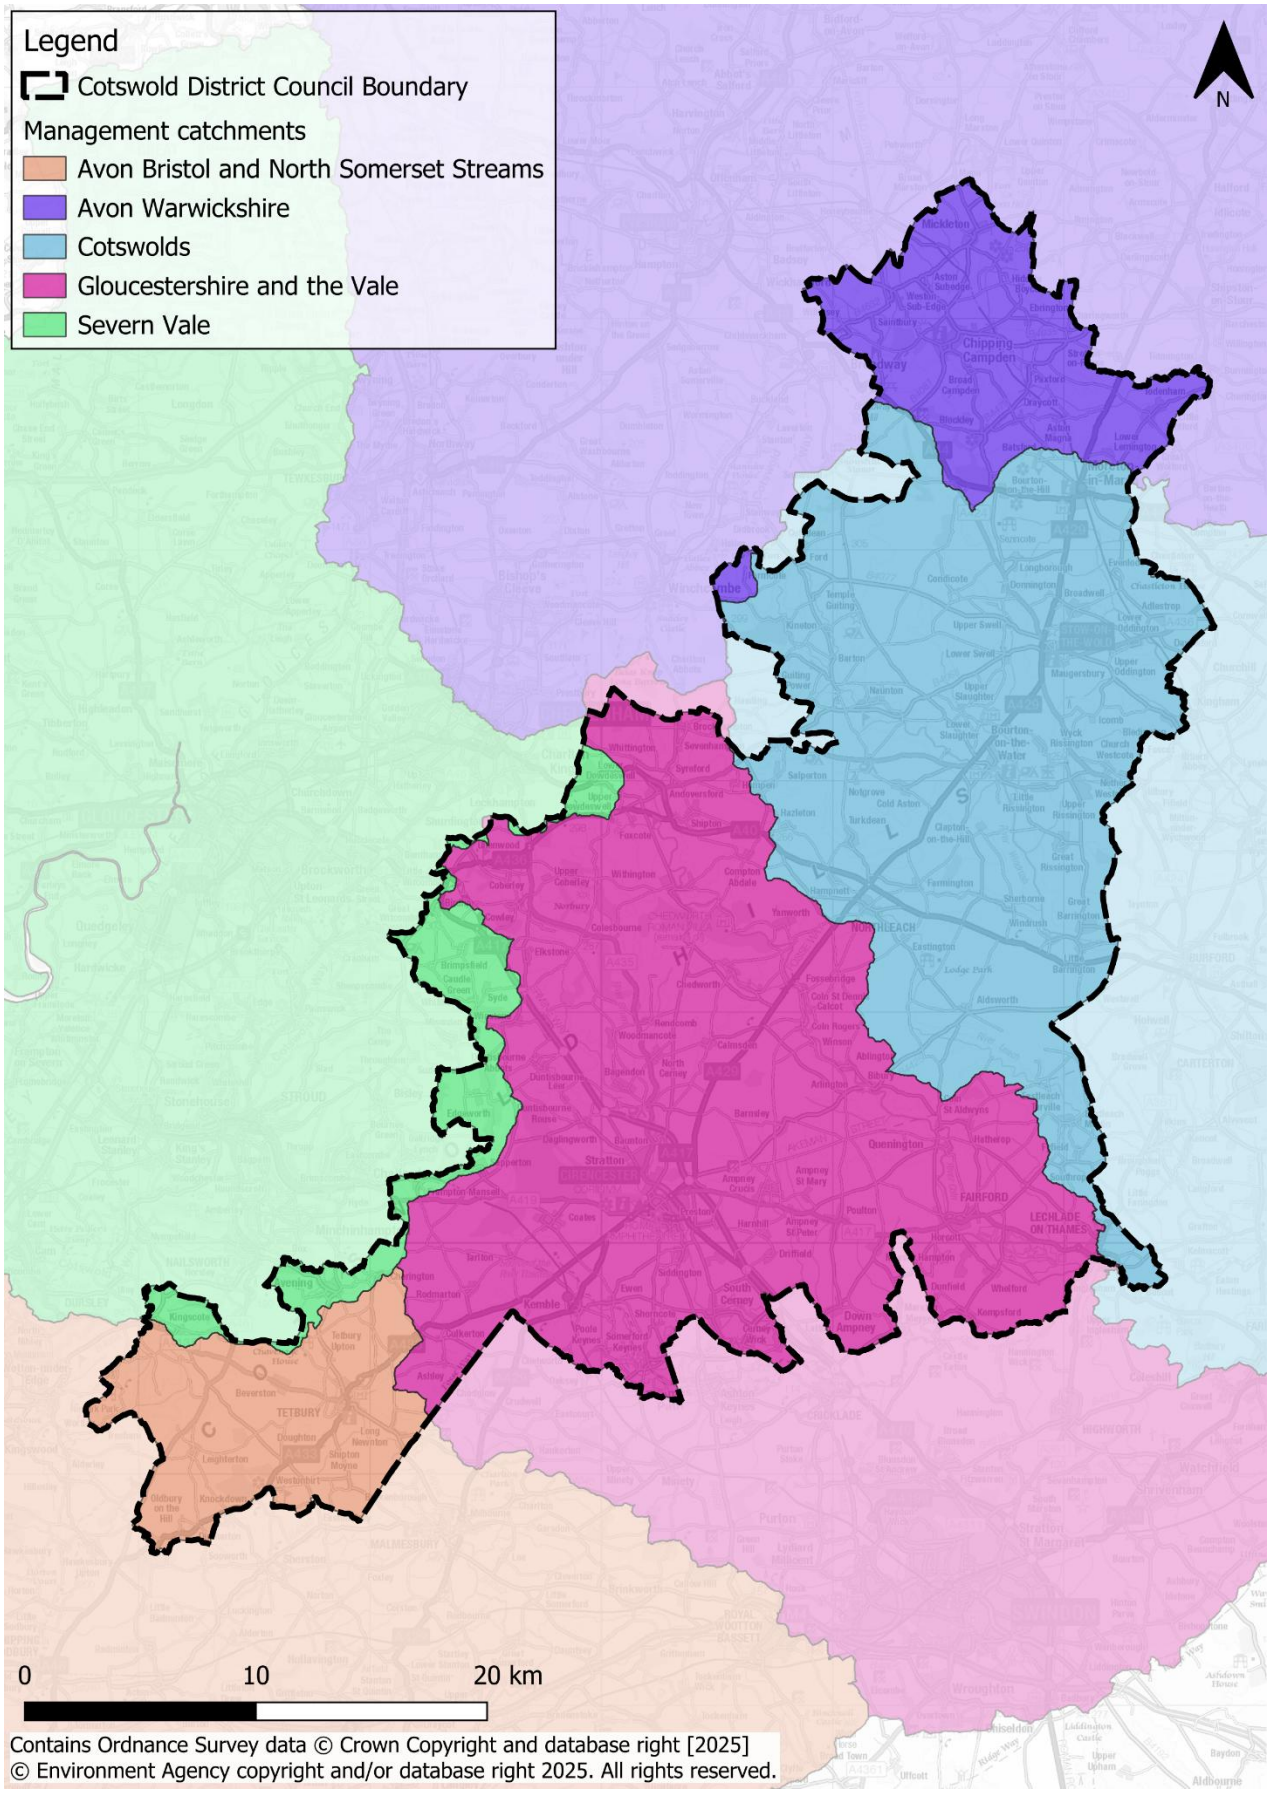

Figure 5-1: Management Catchments (assigned by the EA) across Cotswold

5.2 Peak river flows

Climate change is expected to increase the frequency, extent and impact of flooding, reflected in peak river flows. Wetter winters and more intense rainfall may increase fluvial flooding and surface water runoff and there may be increased storm intensity in summers. Rising river levels may also increase flood risk.

The peak river flow allowances (gov.uk) provided in the guidance shows the anticipated changes to peak flows for the management catchment within which the subject watercourse is located. The range of allowances are based on percentiles which describe the proportion of possible scenarios that fall below an allowance level:

- The central allowance is based on the 50th percentile (exceeded by 50% of the projections in the range).
- The higher central allowance is based on the 70th percentile (exceeded by 30% of the projections in the range).
- The upper end allowance is based on the 95th percentile (exceeded by 5% of the projections in the range).

These allowances (increases) are provided in the form of figures for the total potential change anticipated, for three climate change periods or epochs:

- The '2020s' (2015 to 2039).
- The '2050s' (2040 to 2069).
- The '2080s' (2070 to 2125).

The time period used in the assessment depends upon the expected lifetime of the proposed development. Residential development should be considered for a minimum of 100 years, whilst the lifetime of a non-residential development depends upon the characteristics of that development but a period of at least 75 years is likely to form a starting point for assessment. Further information on what is considered to be the lifetime of development is provided in the PPG (gov.uk).

5.2.1 Peak river flow allowances

The district is located within the Cotswolds, Gloucestershire and the Vale, Avon Warwickshire, Severn Vale and Avon Bristol and North Somerset Streams Management Catchment for peak river flow allowances. Table 5-3 displays the peak river flow allowances that apply to the district authority area.

Table 5-1: Peak river flow allowances for the management catchments covering Cotswold

Management Catchment	Allowance category	Total potential change (%) anticipated for '2020s' (2015 to 2039)	Total potential change (%) anticipated for '2050s' (2040 to 2069)	Total potential change (%) anticipated for '2080s' (2070 to 2125)
Cotswolds	Upper end	31	43	82
	Higher Central	17	21	43
	Central	11	13	30
Gloucestershire	Upper end	33	43	84
	Higher Central	17	19	41
	Central	11	11	26
Avon Warwickshire	Upper end	22	31	59
	Higher Central	12	14	32
	Central	7	8	21
Severn Vale	Upper end	34	52	94
	Higher Central	20	28	53
	Central	14	19	37
Avon Bristol and North Somerset Streams	Upper end	27	38	71
	Higher Central	15	19	39
	Central	10	12	26

5.2.2 Which peak river flow allowance to use?

The EA guidance states that both the central and higher central allowances should be assessed in SFRAs.

The Flood Zone and flood risk vulnerability classification (gov.uk) should be considered when deciding which allowances apply to the development or the plan. Specific guidance for which climate change allowance estimates should be applied can be found in the EA climate change guidance (gov.uk).

5.2.3 Representation of fluvial climate change within the Level 1 SFRA

The EA provided the latest available flood models for watercourses within Cotswold. The central allowance for the 2080s epoch has been assessed for risk of flooding from rivers, as per the EA's guidance on climate change. All seven of the available river models are up to date with the latest climate change allowances, having previously been updated in accordance with the EA peak river flow allowances to produce flood extents to support the

2023 Cotswold SFRA update. The available climate change allowances are stated in Table 5-2. These EA models are still the latest available and have been used to inform the future fluvial risk across Cotswold for this version of the Level 1 SFRA.

The FMfP also now includes the Flood Zones plus Climate Change dataset. This dataset represents how the combined extent of Flood Zones 2 and 3 could increase with climate change, ignoring the benefits of any existing flood defences. This dataset has been used to represent fluvial climate change in areas not subject to detailed modelling. No additional modelling has been completed as part of this Level 1 SFRA.

Table 5-2: EA detailed flood models covering Cotswold

Model	Year	Available 1% AEP event climate change allowances
Bledington Brook	2012	30%, 43%
Churn (Baunton to Siddington)	2011	30%, 43%
Daglingworth Stream FRA	2016	30%, 43%
Thames (MRL to St Johns)	2014	30%, 43%
Thames (St Johns to Shifford)	2011	15%, 25%, 35%, 70%
Windrush (Bourton-on-the-Water)	2014	30%, 43%
Windrush (Bourton-on-the-Water)	2018	10%, 11%, 13%, 15%, 17%, 21%, 25%, 30%, 31%, 35%, 43%, 70%, 82%

5.2.4 Implications of climate change for fluvial risk across the district

According to the available EA detailed model climate change outlines, as shown in Figure 5-2, there is an increase in fluvial flood risk when taking into account the impact of climate change. This is primarily evident along the River Thames and River Churn, in the areas of Cirencester, South Cerney and Fairford.

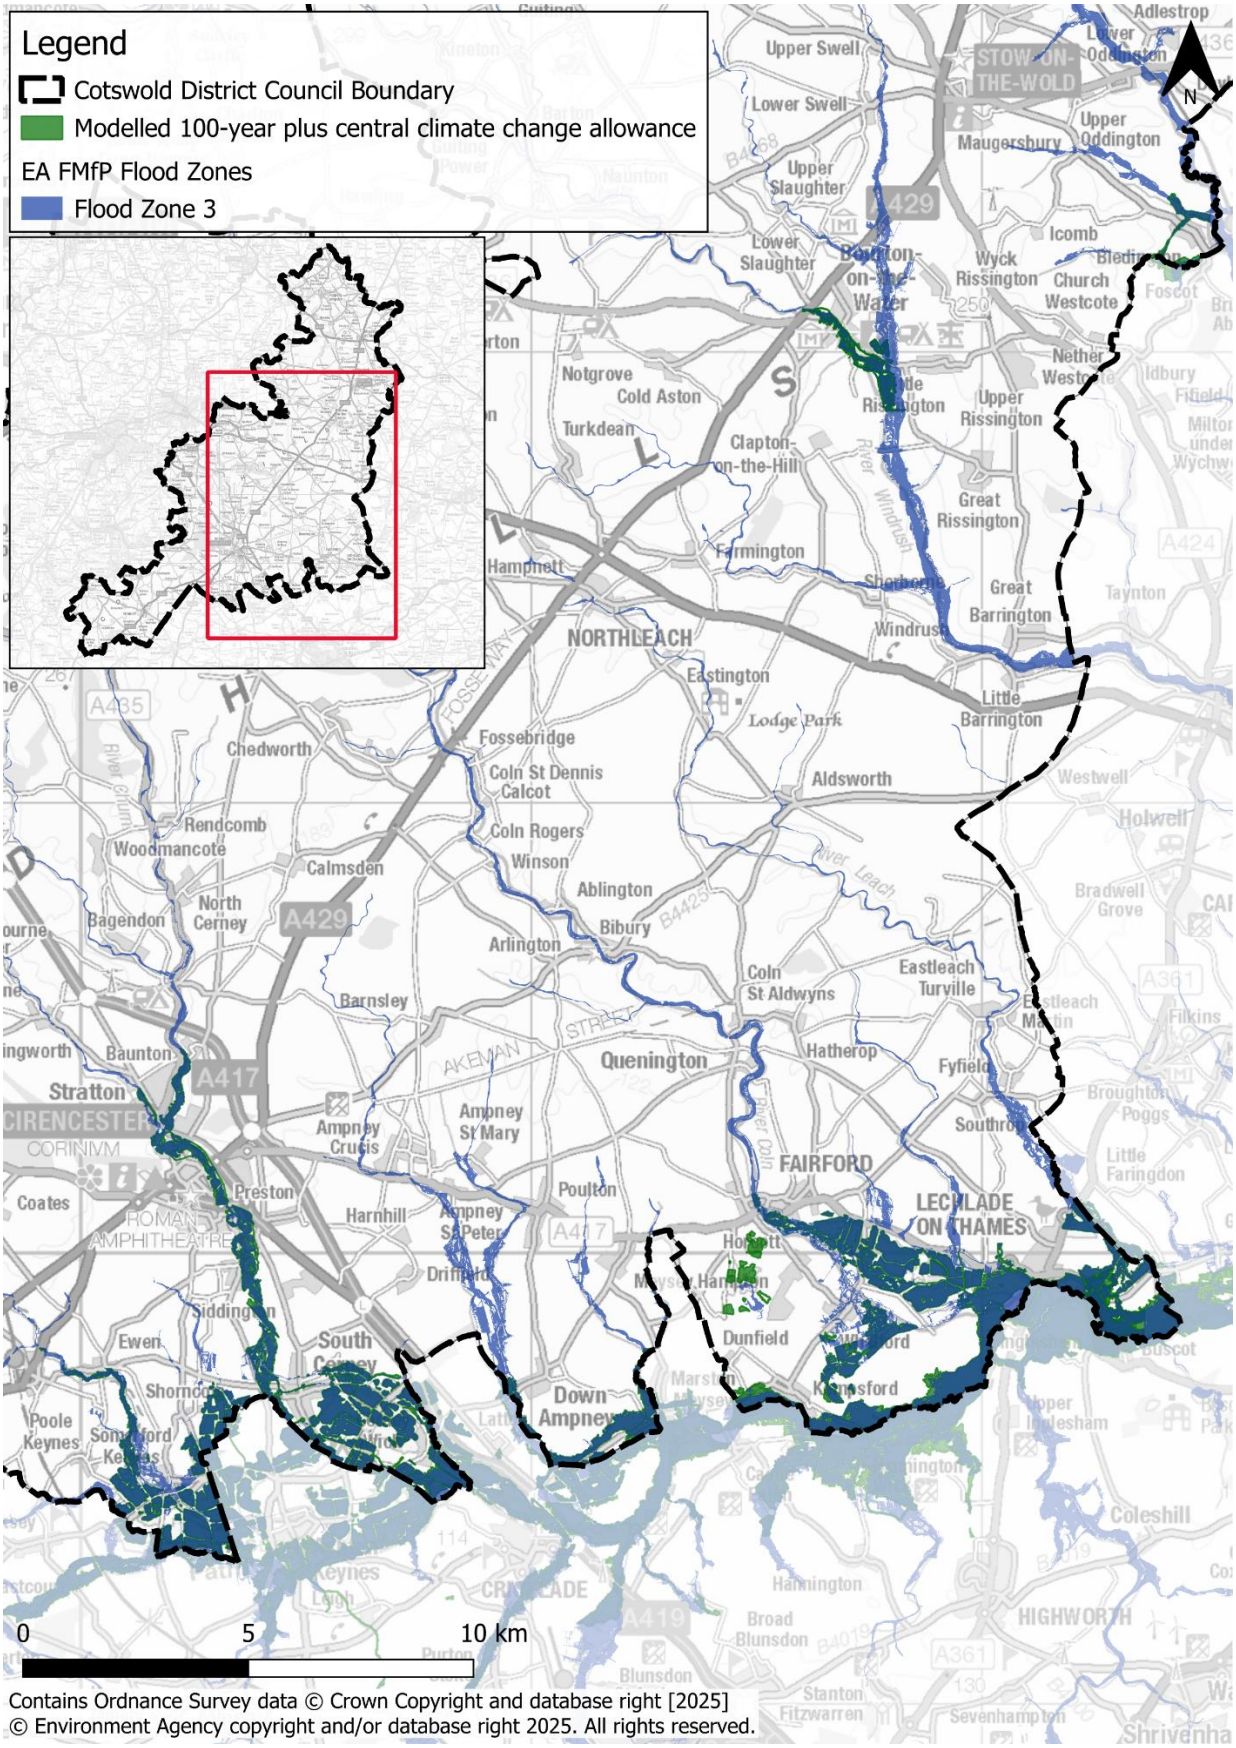

Figure 5-2: EA Detailed Flood Model Outlines - 100-year undefended plus central climate change allowance

5.3 Peak rainfall intensities

Climate change is predicted to result in wetter winters and increased summer storm intensities in the future. This increased rainfall intensity will likely negatively impact land and urban drainage systems, resulting in surface water flooding, due to the increased volume of water entering the systems. The EA have developed a peak rainfall allowances map (gov.uk) which shows anticipated changes in peak rainfall intensity which can be used for site-scale applications (like urban drainage design) and surface water flood mapping in small catchments (<5km^2).

The guidance suggests that direct rainfall modelling may not be suited to larger (>5km^2) catchments with rural land use. In these instances, the guidance states that the fluvial flood risk affected by climate change should be assessed using uplifts from peak river flow allowances (Section 5.2).

5.3.1 Peak rainfall intensity allowances for the district

The district is located within the Cotswolds, Gloucestershire and the Vale, Avon Warwickshire, Severn Vale and Avon Bristol and North Somerset Streams Management Catchment for peak rainfall allowances. Table 5-3 shows the peak rainfall allowances that apply to the district.

Table 5-3: Peak rainfall intensity allowances for small and urban catchments for Cotswold

Management Catchment	Allowance category	Total potential change (%) anticipated for '2050s' (2022 to 2060) 3.3% AEP	Total potential change (%) anticipated for '2050s' (2022 to 2060) 1% AEP	Total potential change (%) anticipated for '2070s' (2061 to 2125) 3.3% AEP	Total potential change (%) anticipated for '2070s' (2061 to 2125) 1% AEP
Cotswolds	Upper end	35	40	35	40
	Central	20	20	25	25
Gloucestershire	Upper end	35	40	35	40
	Central	20	20	25	25
Avon Warwickshire	Upper end	35	40	35	40
	Central	20	20	25	25
Severn Vale	Upper end	35	40	35	40
	Central	20	25	25	25
Avon Bristol and North Somerset Streams	Upper end	35	40	40	45
	Central	20	25	25	25

5.3.2 Which peak rainfall intensity allowance to use?

Rainfall intensity climate change uplifts should be applied to both the 3.3% and 1% AEP events. The recommended epoch and use of either the central or upper end allowances should be based on the design lifetime of the proposed development. Further details are provided within the EA climate change guidance (gov.uk). For FRAs and SFRAs the upper end allowance should be used. The EA guidance recommends that the upper end allowance is considered for both the 3.3% and 1% AEPs for the 2070's epoch (2061 to 2125), unless the allowance for the 2050's epoch (2022 to 2060) is higher, in which case this should be used. This is appropriate for development with a lifetime beyond 2100. For development with an expected shorter lifetime, the central allowance can be used.

5.3.3 Representation of surface water climate change within the Level 1 SFRA

The 2025 RoFSW includes for one modelled climate change scenario, the 2050s central allowance for the 3.3%, 1% and 0.1% AEP events. However, as stated above, the upper end allowance on peak rainfall for the 2070s should be assessed in SFRAs. Therefore, at the time of writing, the national surface water climate change mapping available, is unsuitable for consideration in development planning. For this Level 1 SFRA, the 0.1% AEP event is considered as a conservative, worst case proxy for the 1% AEP plus climate change extent, as consulted on with the EA. The proxy surface water climate change mapping is shown on the interactive GeoPDF mapping in Appendix B.

5.4 Groundwater

The effect of climate change on groundwater flooding, and those watercourses where groundwater has a large influence on winter flood flows, is uncertain. Milder wetter winters may increase the frequency of groundwater flooding incidents in areas that are already susceptible, but warmer drier summers may counteract this effect by drawing down groundwater levels to a greater extent during the summer months. The effect of climate change on groundwater levels for sites in areas where groundwater may be an issue, as informed at a strategic level by the JBA Groundwater Emergence map (Section 4.7), should be considered appropriately at the planning application stage. There is currently no available dataset that assesses the impacts of climate change on groundwater.

5.5 Adapting to climate change

PPG: Climate Change (gov.uk) Paragraph 003 (Reference ID: 6-003-20140612) contains information and guidance for how to identify suitable mitigation and adaptation measures in the planning process to address the impacts of climate change. Paragraph 005 (Reference ID: 6-005-20140306) also provides considerations for the LPA on dealing with the uncertainty of climate risks and accounting for climate change in a realistic way within developments.

The Gloucestershire climate change strategy (2023-2024) sets out how the County Council will reduce contributions to global warming and meet ambitious net-zero targets. It details the commitment of GCC to cut corporate emissions by 80% by 2030 and achieve a net-zero

county by 2045. Initiatives include the installation of EV charge points for residents, the improvement of cycling infrastructure, investment in decarbonisation and waste reduction.

.

6 Flood risk infrastructure

This section provides a summary of existing flood alleviation schemes and assets in Cotswold. Planners should note the areas that are protected by defences where further work to understand the undefended and residual flood risk through a Level 2 SFRA may be beneficial. Developers should consider the benefit they provide over the lifetime of a development in a site-specific FRA.

6.1 Asset management

RMAs hold databases of flood risk management and drainage assets according to their jurisdiction as follows:

- The EA holds a national asset database that is updated by local teams known as the Asset Information Management System (AIMS).
- The LLFA should hold a register of significant local flood risk assets, required under Section 21 of the FWMA (2010).
- Highways authorities (National Highways for major roads in England, GCC for local, minor roads) hold databases of highways drainage assets, such as gullies and connecting pipes.
- Water companies hold records of public surface water, foul and combined sewers, the records may also include information on culverted watercourses.

The databases include the assets the RMAs directly maintain, and also third-party assets. The drainage network is extensive and will have been modified over time. It is unlikely that any RMA contains full information on the location, condition, and ownership of all the assets in their area. RMAs generally take a prioritised approach to collecting asset information, which will continue to refine the understanding of flood risk over time.

6.2 Standards of Protection

Flood defences are designed to give a specific Standard of Protection (SoP), reducing the risk of flooding to people and property in flood prone areas. For example, a flood defence with a 1% AEP SoP means that the flood risk in the defended area is reduced to at least a 1% chance of flooding in any given year.

Over time the actual SoP provided by the defence may decrease, for example due to deterioration in condition, lack of maintenance, or increases in flood risk due to climate change. The understanding of SoP may also change over time as RMAs undertake more detailed surveys and flood modelling studies.

It should be noted that the EA's ongoing hydraulic modelling programme may revise flood risk datasets and, therefore, the SoP offered by flood defences may also be revised. The AIMS dataset contains information on SoP.

6.3 Maintenance

Different authorities have responsibilities relating to maintenance of flood risk assets, set out in Table 6-1. It is important that the authorities work in partnership to maintain flood risk assets and manage flood risk across Cotswold.

Table 6-1: Flood risk asset maintenance responsibilities based on the FWMA (2010)

Authority	Asset maintenance responsibilities
EA	Permissive powers to maintain and improve main rivers, ultimate responsibility for maintaining watercourses rests with the landowner.
Local Authorities	Permissive powers to maintain and improve ordinary watercourses, ultimate responsibility for maintaining watercourses rests with the landowner.
LLFA	Permissive powers, limited resources are prioritised and targeted to where they can have the greatest effect
Highways Authorities	Duty to maintain public roads, making sure they are safe, passable, and the impacts of severe weather have been considered. Responsible for maintaining sections of watercourses where they are crossed by highways.
Water Companies	Duty to effectually drain their area. What this means in practise is that assets are maintained to common standards and improvements are prioritised for the parts of the network that do not meet this standard e.g., where there is frequent sewer flooding.
Riparian Owners	Responsible for the protection of their properties from flooding as well as other management activities, for example by maintaining riverbeds/banks, controlling invasive species, and allowing the flow of water to pass without obstruction.

There is potential for the risk of flooding to increase in areas where flood alleviation measures are not maintained regularly. Breaches in raised flood defences are most likely to occur where the condition of a flood defence has degraded over time. Drainage networks can frequently become blocked with debris which can lead to blockages of culverts and bridge openings.

Developers should not assume that any defence, asset, or watercourse is being or will continue to be maintained throughout the lifetime of a development. They should contact the relevant RMA about current and likely future maintenance arrangements and make future users of the development aware of their obligations to maintain watercourses.

Formal structural defences are given a rating based on a grading system for their condition. A summary of the grading system used by the EA for condition is provided in Table 6-2.

Table 6-2: Grading system used by the EA to assess flood defence condition

Grade	Rating	Description
1	Very good	Cosmetic defects that will have no effect on performance.
2	Good	Minor defects that will not reduce the overall performance of the asset.
3	Fair	Defects that could reduce the performance of the asset.
4	Poor	Defects that would significantly reduce the performance of the asset. Further investigation required.
5	Very poor	Severe defects resulting in complete performance failure.

Source: Condition Assessment Manual – EA 2006

6.4 Major flood risk management assets in Cotswolds

The EA's AIMS dataset includes raised flood defences. Table 6-3 details the locations in the district which benefit from formal flood defences within the AIMS dataset. The LPA, LLFA, and developers should refer to the AIMS Spatial Flood Defences dataset (gov.uk) for further information on specific flood defences in terms of planning development. It is clear from Table 6-3 that there are gaps in information regarding much of the defence network across the district whereby current conditions and SoPs are unknown. Survey of any defences that may provide protection to an area where new development is planned should be carried out. It should be noted that the AIMS dataset does not include all third-party flood defences, therefore there may be existing defences that are not included in Table 6-3.

The AIMS Spatial Flood Defences dataset is shown on the interactive GeoPDF Mapping (Appendix B).

Table 6-3: Locations shown in the EA 'AIMS' dataset

Watercourse	Location	Type	Design SoP (AEP)	Actual SoP (AEP)	Target Condition Rating (1-5)	Actual Condition Rating (1-5)	Asset Maintainer

6.5 Existing and future flood alleviation schemes

The EA manages government investment to reduce flood risk and coastal erosion in England. The LLFA works with the EA and other RMAs to deliver Local Flood Risk Management Strategies, focusing on surface water, groundwater, and ordinary watercourse flooding, and to deliver specific local flood risk management projects outlined in the local strategy and action plan.

6.5.1 Completed schemes in Cotswold

6.5.1.1 Chipping Campden Flood Alleviation Scheme

The Chipping Campden flood alleviation scheme was developed in response to the July 2007 flooding where approximately 115 to 120 properties were affected. The scheme was completed in March 2013. According to the Chipping Campden flood alleviation report the following measures were implemented:

- Creation of clay core earth bund in the grounds of Westington Mill
- Installation of a filter drain on the boundary of Westington Mill and Campden House land
- Channel clearance downstream of blind lane culverts

6.5.1.2 Northleach Flood Alleviation Scheme

The Northleach flood alleviation scheme was developed in response to the July 2007 flooding where approximately 15 to 20 properties were affected. The scheme was completed in August 2013. According to the Northleach flood alleviation report the following measures were implemented:

- New surface water pipe laid along High street to alleviate surface water and highway flooding
- Creation of balancing pond

6.5.1.3 Weston-Sub-Edge flood alleviation scheme

The Weston-Sub-Edge flood alleviation scheme was developed in response to the July 2007 flooding where 16 properties were affected. The scheme was completed in Spring 2013. According to the Weston-Sub-Edge flood alleviation report the following measures were implemented:

- Saintbury brook bank protection
- Surface water diversion scheme, reprofiling driveways and junctions to divert surface water into a carrier pipeline discharge into Coombe brook
- Communal property level protection at Cider Mill Orchard

6.5.1.4 Bledington Village Flood Risk Management

An outline design summary report was completed in 2023 for the Bledington Village Flood Risk Management project. A previous options appraisal was completed which identified the need for raising the level of the existing village ditch bund, which had been overtopped in recent events, and also the creation of a new bund that will limit the ingress of water from the Westcote Brook to the village ditch. The report summarises the desk-based assessments completed to define the best approaches and next steps to move the project forward.

6.5.1.5 Wyck Rissington Pipe Capacity

Modelling has been undertaken to review the pipe capacity under the village green. The modelling will be used to inform the installation of two 250mm culverts beneath the main report through the village, as agreed with the Parish Council.

6.5.1.6 Other schemes

Other completed schemes within the area include:

- Bourton-on-the-Water - several permanent flood defences (Naight Meadow Flood Bund, Congiers Meadow Flood Bund, Rissington Road Flood Bund and Chestnut House Wall)
- Cirencester - offered protection from works associated with the Environment Agency's Churn Strategy to provide a 1 in 30-year SoP, including flood defences, flow control structures and localised management
- Fairford FAS - offered protection from the Fairford Flood Alleviation Scheme, consisting of a combination of walls and bunds in targeted locations throughout the town to provide a 1 in 100-year SoP
- Somerford Keynes - offered protection from the Somerford Keynes Flood Alleviation Scheme, consisting of embankments, channel realignment and a pumping station, providing a 1 in 50-year SoP

6.5.2 Future schemes

6.5.2.1 Queen Street, Chedworth

GCC, as LLFA, and highways have agreed that work is required to improve the condition of the existing drainage infrastructure on Queen Street to ensure maximum capacity for conveying flow. The completion of this work is subject to funding being sourced. The next phase of the work involves further investigations by the highways structures teams on the collapsed culvert beneath the highway at the bottom of Queen Street.

6.5.2.2 Lower Slaughter Weir Overflow Channel

Investigations are ongoing into the reshaping of an overflow channel past the weir on the River Eye. The benefits of the scheme are currently being identified to inform a funding application.

6.5.2.3 South Cerney Road, Siddington

The first design phase has been completed to help improve conveyance around Siddington to reduce flooding at The Common.

7 Flood risk management requirements for developers

This section provides guidance on site-specific FRAs and other principles for managing flood risk in new development.

7.1 Early consultation with statutory and non-statutory consultees

Developers should consult with the EA, the LLFA and the relevant sewerage undertaker at an early stage to discuss flood risk including requirements for site-specific FRAs, detailed hydraulic modelling and foul and surface water drainage assessment and design. It should be noted that some of these consultees may need to charge for data and/or advice requested by developers or landowners. However, developers should first consult the LPA when considering a site for development on whether the site has already been subject to the Sequential Test as part of the local plan making process.

7.2 Site-specific FRAs

7.2.1 What is a site-specific FRA?

A site-specific FRA is carried out by (or on behalf of) a developer to assess the flood risk to and from a development site and should accompany a planning application where required (see Section 7.2.2). It is recommended that the assessment is undertaken by a suitably qualified person or company. The assessment should demonstrate how flood risk will be managed now and over the development's lifetime, taking both climate change and the vulnerability of users into account. The developer should check with the LPA whether they are required to apply the Sequential Test prior to commencing with a site-specific FRA.

The objectives of a site-specific FRA are to establish:

- Whether a proposed development is likely to be affected by current or future flooding from any source.
- Whether a proposed development will increase flood risk elsewhere.
- Whether the measures proposed to deal with these effects and risks are adequate and appropriate.
- The nature of residual risk and whether this can be safely managed.
- The evidence, if necessary, to apply the Sequential Test.
- The evidence, if applicable, to show whether the development will be safe for its lifetime and pass the Exception Test.

7.2.2 When is an FRA required?

As set out in Flood risk assessments: applying for planning permission (gov.uk), a site-specific FRA is required for all development (including minor development and changes of use) proposed:

- In Flood Zones 2, 3, or 3b.
- Within Flood Zone 1 with a site area of 1 hectare or more.
- Within Flood Zone 1 and the FMfP shows it is though shown to be at risk of flooding from surface water.
- In areas with critical drainage problems (as identified by the EA or LLFA).
- Within Flood Zone 1 where the LPA's SFRA shows it will be at increased risk of flooding during its lifetime, as shown in the Environment Agency detailed climate change modelled and the 'Flood Zones plus Climate Change' extent shown on the EA FMfP.
- Where the vulnerability classification is increased and may be subject to sources of flooding other than rivers or sea.

7.2.3 What level of detail is needed in a site-specific FRA?

Site-specific FRAs should be proportionate to the degree of flood risk and the scale, nature, and location of the development. This SFRA can be used by developers as a starting point to identify the initial flood risk to a site however a pre-application consultation is key to define the scope of the FRA and identify data requirements, making sure that latest available datasets are used.

7.2.4 Guidance for FRAs

FRAs should follow the approach recommended by the NPPF (and associated planning practice guidance), and guidance provided by the EA and the LLFA. Guidance and advice for developers on the preparation of site-specific FRAs is available from the following websites with hyperlinks provided:

- Standing Advice on Flood Risk (gov.uk)
- Flood Risk Assessment for Planning Applications (gov.uk); and
- Site-specific Flood Risk Assessment: Checklist (gov.uk)

Guidance should be sought from the EA and the Council at the earliest possible stage, and opportunities should be taken to incorporate environmental enhancements and reduce flooding from all sources both to and from the site through development proposals. Developers should seek to go beyond managing the flood risk and support opportunities to reduce the causes and impacts of flooding, whilst enhancing and conserving the natural environment. PPG: Flood risk and coastal change (gov.uk) Paragraphs 062 - 067 provide further information. Potential strategic solutions to consider are detailed in Section 12 of this report.

7.3 Emergency planning

Safe access and escape routes should always be available from developments. The developer should seek to incorporate an emergency plan and ensure safe refuge points are available if the development site has been identified to be at risk of flooding. Emergency planners, emergency services, the local resilience forum, and all other flood incident responders should be consulted when designing an emergency plan. For further details on emergency planning, see Section 10.2 of this report.

8 Principles for site design and master planning

Flood risk should be considered at an early stage in deciding the layout and design of a site to provide an opportunity to reduce flood risk within the development. This section sets out the principles for site design through ground level modifications, consideration of the impact of defence infrastructure on planning, and property flood resilience.

The NPPF states that a sequential, risk-based approach should be applied to try to locate more vulnerable land uses away from high-risk areas to higher ground and lower flood risk areas, while more flood-compatible development (e.g., recreational spaces) can be located in higher risk areas. Higher risk areas can also be retained and enhanced as natural green space. Whether parking in floodplains is appropriate will be based on the likely flood depths and hazard, evacuation procedures and availability of flood warnings and alerts. The nature of risk to water quality also needs to be considered and mitigated to ensure that accumulated hydrocarbons and other vehicle related pollutants are not released to the aquatic environment.

Waterside areas, or areas along known flow routes, can be included in development layouts as blue green infrastructure, being used for recreation, amenity, and environmental purposes, allowing the preservation of flow routes and flood storage, whilst at the same time providing valuable social and environmental benefits contributing to other sustainability objectives. Appropriate landscaping should provide safe access to higher ground from these areas and avoid the creation of isolated 'dry islands' as water levels rise.

8.1 Modification of ground levels

Modifying ground levels to raise the land above the design flood level is an effective way of reducing flood risk to a particular site in circumstances where the land does not act as conveyance for floodwaters. However, care must be taken as raising land above the flood level could reduce conveyance or flood storage in the floodplain and could adversely impact flood risk downstream or on neighbouring land. Raising ground levels can also deflect flood flows, so analysis should be performed to demonstrate that there are no adverse effects on third party land or property.

If compensatory flood storage is required, following application of the sequential test and sequential approach to site layout, this should be provided on a level for level, volume for volume basis on land that does not currently flood but is adjacent to the floodplain (for it to fill and drain by gravity). This should be provided where development displaces water within the floodplain. It should be in the vicinity of the site and within the red line of the planning application boundary (unless the site is strategically allocated). Where it is not possible to provide onsite compensatory storage, it may be acceptable to provide it off-site if it is hydraulically and hydrologically linked. Stilts and voids are unlikely to be an acceptable method of compensating for losses in floodplain storage.
The PPG: Flood risk and coastal change (gov.uk) Paragraph 049, and Appendix A3 of the

CIRIA Publication C624 (ciria.org) provides guidance on how to address floodplain compensation.

Raising levels can also create areas where surface water might pond during significant rainfall events. Any proposals to raise ground levels should be modelled and fully tested to check that it would not cause increased ponding or build-up of surface runoff on third party land.

Any proposal for modification of ground levels within areas of flood risk will need to be discussed at an early stage with the EA and its impacts assessed as part of a detailed FRA.

8.2 Raised floor levels

If raised floor levels are proposed, these should be agreed with the LPA and the EA. The minimum Finished Floor Level (FFL) may change dependent upon the vulnerability and flood risk to the development.

Developers should refer to the Preparing a flood risk assessment: standing advice (gov.uk) for the latest guidance on FFLs but generally the EA advises the minimum finished floor levels should be set 600mm above the 1% AEP fluvial plus climate change peak flood level (considered to be the standard design event), where the appropriate climate change allowances have been used. An additional allowance may be required because of residual risks relating to blockages to the channel, culvert or bridge and should be considered as part of an FRA. Lowering existing FFLs below the existing levels within the 1% AEP plus climate change floodplain would not be acceptable and should be discouraged. New development offers opportunities to improve the resilience of buildings to flooding.

Building design and raised floor levels are the only way to fully reduce groundwater flood risk, through ensuring FFLs are raised above predicted groundwater levels considering known groundwater issues.

Allocating the ground floor of a building for less vulnerable, non-residential, or non-habitable residential use may be an effective way of raising living space above flood levels. However, it is important to consider the flood risk vulnerability for the whole development to ensure it is compatible with the flood zone. Single storey buildings such as ground floor flats or bungalows are especially vulnerable to rapid rise of water (such as that experienced during a breach of flood defences). This risk can be reduced by use of multiple storey construction and raised areas that provide a point of refuge. However, safe access and escape routes must still be available, particularly when flood duration covers many days.

Similarly, the use of basements should be avoided in areas of flood risk. Habitable uses of basements within Flood Zone 3 and areas at high or medium risk of surface water flooding should not be permitted, whilst basement dwellings (classed as 'highly vulnerable') in Flood Zone 2 will be required to pass the Exception Test.

Where the ground level of a site is below the ground level at the point where the drainage connects to the public sewer, care must be taken to ensure that the proposed development is not at an increased risk of sewer surcharge. It is good practice for the FFLs and manhole cover levels (including those that serve private drainage runs) to be higher than the

manhole cover level at the point of connection to the receiving sewer. Alternatively, mitigation measures may need to be incorporated into the proposals to protect against sewer surcharge.

8.3 Development and raised defences

8.3.1 Undefended and residual risk

Construction of localised raised floodwalls or embankments to protect new development is not a preferred option, as a residual risk of flooding will remain. New defence works would normally be into in place to protect existing development. Compensatory storage must be provided where raised defences remove storage from the floodplain. This is because raised defences prevent floodwater from spreading naturally across the floodplain, which can increase flood levels elsewhere.

Where development is located behind, or in an area that benefits from defences, both the undefended risk and the residual risk of flooding from defence breaching or overtopping must be considered by the developer and it must be demonstrated that they can be safely managed. The assessment of the risk should consider:

- Improvements required to the level of protection afforded by existing defences for future development.
- The future commitment and funding to maintain the current SoP of any existing defences.
- Any disparities between the proposed level of commitment to maintain the current standard of protection and the level of protection required to support future development.
- The effects of climate change on the future SoP afforded by the defences and the associated maintenance and upgrade commitments required.
- Any land required to be safeguarded for affordable future flood risk management measures.

8.3.2 Breach assessment

The assessment of the residual risk from a breach event should consider an assessment of the hazards that might occur from subsequent flood flows, considering depth and flow velocities, so that the safety of people and structural stability of properties and infrastructure can be appropriately considered.

Considerations should include the location of a breach, when it would occur and for how long, the depth of the breach (toe level), the loadings on the defence, and the potential for multiple breaches.

There are various ways of assessing breaches using hydraulic modelling. EA LIT56413 Breach of Defences Guidance (2021) provides some guidance for breach assessment from the EA. It is recommended that the EA is consulted if a development site is located near to a flood defence, to understand the level of assessment required and to agree the location(s) and approach for the breach assessment. Breach assessment can be modelled to inform site allocation through a Level 2 SFRA.

8.3.3 Overtopping assessment

The assessment of the residual risk from overtopping of defences should consider the potential flood hazard to people, based on factors such as the height of floodwaters above the crest of the defence, the proximity and elevation of receptors relative to the defence and the likely depth and velocity of floodwaters in the event of overtopping. The Defra and EA Flood Risks to People guidance document (gov.uk) provides standard flood hazard ratings based on the distance from the defence and the level of overtopping. Overtopping modelling or assessments should be undertaken for any sites located near to defences or perched ponds/reservoirs, accounting for climate change.

8.3.4 Developer contributions

In some cases, and following application of the Sequential Test, it may be appropriate for the developer to contribute to the improvement of flood defence provision that would benefit both the proposed new development and the existing local community. Developer contributions can also be made to maintenance and provision of flood risk management assets, flood warning and the reduction of surface water flooding (i.e. SuDS). LPAs can choose to impose a community infrastructure levy (CIL) on development in their area.

8.4 Buffer strips

The provision of a buffer strip alongside a watercourse allows additional capacity to accommodate climate change and means access to the watercourse, and any structures or defences, is retained for future maintenance purposes. It also helps to avoid the disturbing of riverbanks which may adversely impact local ecology, and the need to have to construct engineered riverbank protection and can also contribute to Biodiversity Net Gain (see Section 12.2). A buffer strip of 8m is recommended for any non-tidal main river. Where flood defences are present, these distances should be taken from the landward toe of the defence.

Building adjacent to riverbanks may cause issues with the structural integrity of the riverbanks and subsequently the building itself, making future maintenance of the river much more difficult. Flood Risk Activity Permits (gov.uk) from the EA are likely to be required for development in these areas alongside any planning permission. There should be no built development within these distances from main rivers/flood defences (where present).

8.5 Property Flood Resilience (PFR)

Property Flood Resilience (PFR) includes a range of measures that can be installed around the perimeter of a building to reduce the risk of internal flooding. PFR can also be used within a building, to minimise the damage done if internal flooding stills occurs. PFR aims to help households and businesses reduce the damage caused by flooding, helping to speed up recovery and reoccupation.

PFR encompasses two main elements:

- Resistance - Resistance measures are installed around the perimeter of a building. These measures aim to reduce or resist the amount of water entering the building, thus reducing the damage caused internally. Examples include flood doors/barriers, anti-flood airbricks, and non-return valves.
- Resilient adaptation (recoverability) - Adaptations made within a property, which aim to reduce the damage caused if internal flooding occurs.

The consideration of resistance measures and resilient adaptation should not be used to justify development in inappropriate locations. However, having applied planning policy there may be some instances where development is permitted in high or medium flood risk areas where application of resistance and resilience measures may be required.

There may also be opportunities for 'change of use' developments to be used to improve the flood resistance and resilience of existing development, which may not have been informed by a site-specific FRA when first constructed.

Further information and guidance on best practice can be found online in the following locations:

- Department for Communities and Local Government Improving the Flood Performance of New Buildings: Flood Resilient Construction (gov.uk)
- CIRIA Property Flood Resilience Code of Practice (ciria.org)
- EA Flood resilience construction of new buildings (gov.uk)

9 Surface water management and SuDS

This section provides an overview of SuDS, including signposting to relevant guidance, as well as guidance for developers on surface water drainage strategies.

9.1 Sustainable Drainage Systems (SuDS)

Sustainable Drainage Systems (SuDS) are management practices which enable surface water to be drained in a more sustainable manner and to mimic the local natural drainage. The inclusion of SuDS within developments is also an opportunity to enhance ecological and amenity value, and promote blue green infrastructure, incorporating above ground features into the development landscape strategy.

It is essential that developers consider sustainable drainage at an early stage of the development process – ideally at the pre-application or master planning stage. To further inform development proposals at the master planning stage, pre-application submissions are accepted by the Council. This assists with the delivery of well designed, appropriate, and effective SuDS. Applicants are also encouraged to engage with the relevant water company to discuss their surface water proposals, especially where adoption is proposed.

9.2 Sources of SuDS guidance

9.2.1 National standards for SuDS

Previously, SuDS guidance was developed to sit alongside the PPG and provide non-statutory standards as to the expected design and performance for SuDS

As of June 2025, the Defra National standards for sustainable drainage systems (SuDS) (gov.uk) were brought in to comply with principles laid out in Section 9.1. Whilst remaining as a non-statutory specification, these now form a material consideration for LPAs when assessing planning applications. These standards aim to reflect and reinforce good practice and use of SuDS as detailed in Section 9.4, reflecting the four pillars of SuDS design.

The national standards contain two sets of standards. The first type (Standard 1) is known as the hierarchy standard and gives criteria for the prioritisation of final runoff destinations. The other standards (Standards 2-7) detail the minimum requirements of design criteria that surface water drainage systems should satisfy alongside how they are to be appropriately built, maintained, and operated.

9.2.2 C753 CIRIA SuDS Manual (2015)

The C753 CIRIA SuDS Manual (2015) (ciria.sharefile.com) provides guidance on planning, design, construction, and maintenance of SuDS. The manual is divided into five sections ranging from a high-level overview of SuDS, progressing to more detailed guidance with progression through the document.

9.2.3 Design and Construction Guidance (DCG)

The Design and Construction Guidance (DCG) (water.org.uk) contains Codes for Adoption, covering the adoption of new water and wastewater infrastructure by water companies, and contains details on the water sector's approach to the adoption of SuDS.

9.2.4 Local SuDS guidance

GCC defer to the Defra National standards for SuDS as the guidance that should be used for development within Cotswold.

9.3 Roles of the LLFA and LPA

GCC as LLFA are a statutory planning consultee. They provide technical advice on surface water drainage strategies and designs put forward for major development[1] proposals, to confirm that onsite drainage systems are designed in accordance with the current legislation and guidance.

When considering planning applications, the LLFA drainage/flood risk engineering team will provide advice to the LPA on the management of surface water. The LPA should satisfy themselves that the development's proposed minimum standards of operation are appropriate and, using planning conditions or planning obligations, to ensure there are clear arrangements for ongoing maintenance over the lifetime of the development.

In their respective roles as LPA and LLFA, Cotswold District Council and GCC should:

- Promote the use of SuDS for the management of runoff;
- Ensure their policies and decisions on applications support and compliment the building regulations on sustainable rainwater drainage, giving priority to infiltration over discharges into watercourses, and then sewer conveyance;
- Incorporate favourable policies within development plans;
- Adopt policies for incorporating SuDS requirements into the Local Plan; and
- Encourage developers to utilise SuDS whenever practical, if necessary, through the use of appropriate planning conditions.

9.3.1 Schedule 3 of the Flood and Water Management Act (2010)

At the time of writing, the implementation of SuDS is driven through planning policy. Schedule 3 of the FWMA 2010 aims to provide a framework for the approval and adoption of drainage systems, to designate SuDS Approving Bodies (SAB) within unitary and county councils, and to ensure national standards on the design, construction, operation, and

1 The NPPF defines residential major development as development where 10 or more homes will be provided, or the site has an area of 0.5 hectares or more. For non-residential development it means additional floorspace of 1,000m^2 or more, or a site of 1 hectare or more, or as otherwise provided in the Town and Country Planning (Development Management Procedure) (England) Order 2015.

maintenance of SuDS for the lifetime of the development are followed. Timescales for the enactment of Schedule 3 by government are unknown.

9.4 Considerations for SuDS design

9.4.1 Four pillars of SuDS design

SuDS are designed to maximise the opportunities and benefits that can be secured from surface water management practices. SuDS design should consider the four pillars of SuDS (Figure 9-1): water quantity, water quality, amenity, and biodiversity.

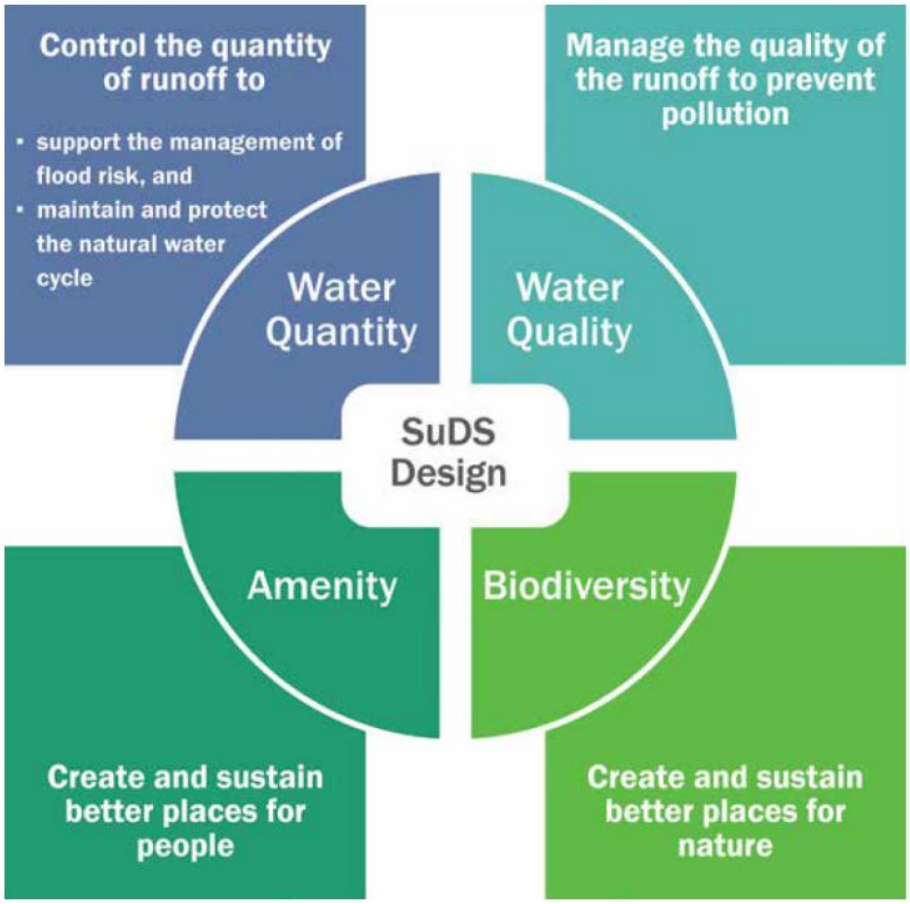

Figure 9-1: Four pillars of SuDS design (The SuDS Manual C753, 2015)

Given the flexible nature of SuDS, they can be used in most situations within new developments as well as being retrofitted into existing developments. SuDS can also be designed to fit into most spaces, for example, permeable paving could be used in parking spaces or rainwater gardens as part of traffic calming measures.

It is a requirement that *'applications which could affect drainage on or around the site should incorporate sustainable drainage systems to control flow rates and reduce volumes of runoff, and which are proportionate to the nature and scale of the proposal. These should provide multifunctional benefits wherever possible, through facilitating improvements in water quality and biodiversity, as well as benefits for amenity'* (NPPF Paragraph 182).

It is important that SuDS are maintained for the lifetime for the development so that features can continue to function as designed. Consideration should be given to enhancing SuDS to achieve Biodiversity Net Gain.

9.4.2 Types of SuDS System

There are many different SuDS techniques that can be implemented in attempts to mimic pre-development drainage conditions. Techniques can include soakaways, infiltration trenches, permeable pavements, grassed swales, green roofs, ponds, and wetlands. Many of which do not necessarily need to take up a lot of space. The suitability of the techniques will be dictated in part by the development proposal and site conditions. Advice on best practice is available from the EA and the Construction Industry Research and Information Association (CIRIA) e.g. the CIRIA SuDS Manual C753 (2015).

9.4.3 SuDS management train

SuDS should not be used individually but as a series of features in an interconnected system designed to capture water at source and convey it to a discharge location. Collectively this concept is described as a SuDS Management Train (see Figure 9-2).

The number of treatment stages required within the Management Train depends primarily on the source of the runoff and the sensitivity of the receiving waterbody or groundwater.

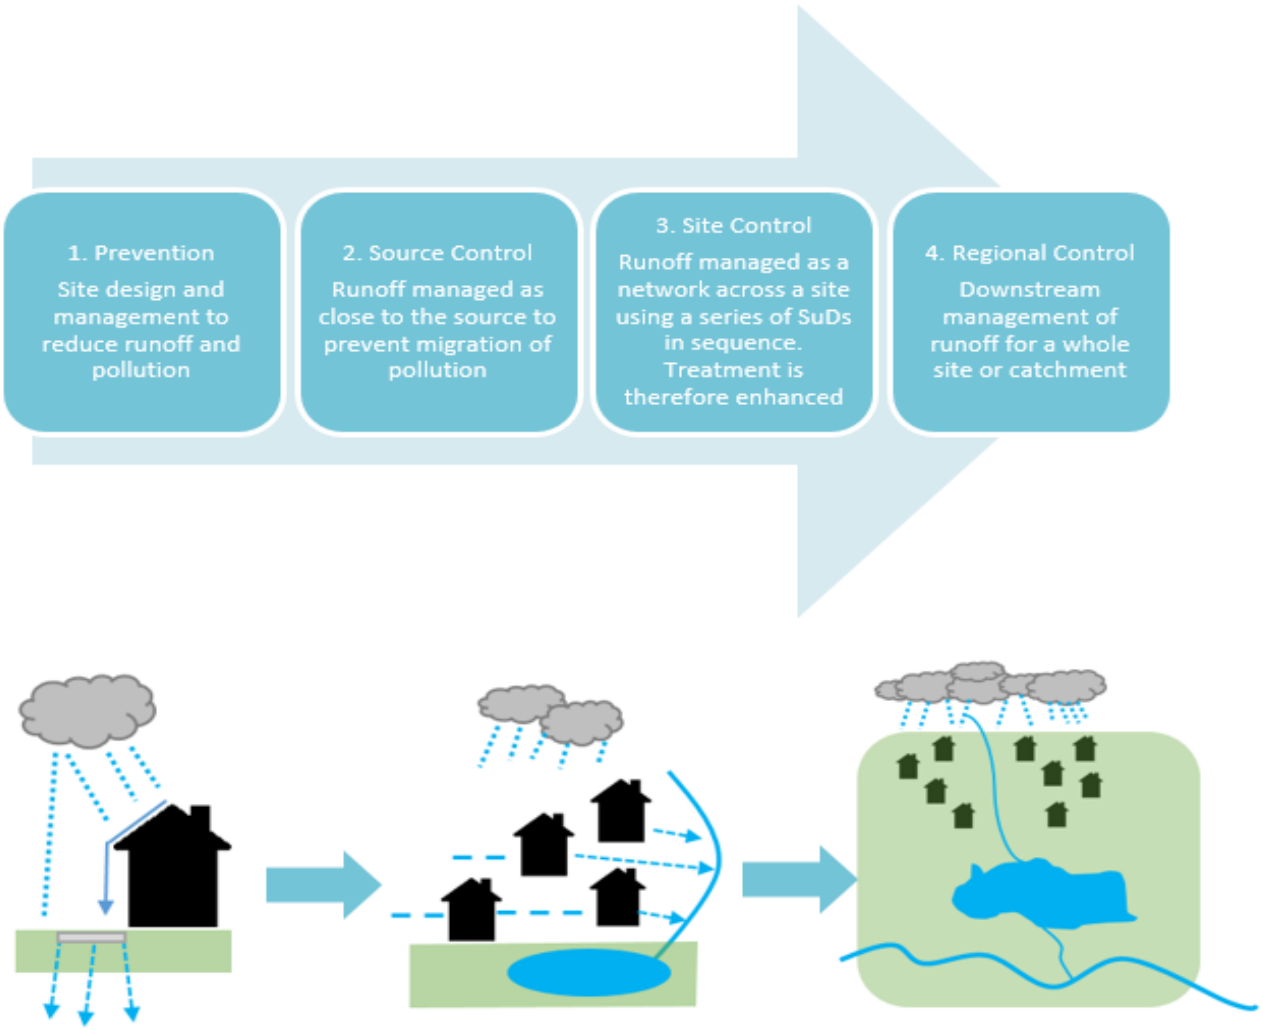

Figure 9-2: SuDS Management Train

9.4.4 SuDS considerations

The design of appropriate SuDS will be influenced by a number of physical and policy constraints. These should be taken into account and reflected upon during the conceptual, outline, and detailed stages of SuDS design. Table 9-1 details some possible constraints and how they may be overcome.

Drainage from new development sites or redeveloped sites should be designed in line with the drainage hierarchy (PPG: Flood Risk and Coastal Change Paragraph: 056) which initially promotes the use of infiltration prior to considering alternative drainage. For SuDS techniques that are designed to encourage infiltration, it is imperative that the water table is low enough to receive surface runoff waters. Most types of SuDS will be suitable in areas with permeable bedrock including features such as soakaways and infiltration basins. In areas with more impermeable geology, offsite discharge in accordance with the drainage hierarchy may be required to discharge surface water runoff from the site. In some cases, above-ground features such as attenuation ponds may be practical with a managed outlet or discharge point. Infiltration SuDS should be considered with caution within areas of possible subsidence or sinkholes.

Site-specific infiltration testing will need to be conducted early on as part of the design of the development in order to determine the impact of groundwater levels on the effectiveness of any drainage system. Groundwater monitoring is also encouraged and may be required in some locations.

Where sites lie within or close to Groundwater Vulnerability Zones (Section 9.5.1), Groundwater Source Protection Zones (GSPZs) (Section 9.5.2) or aquifers (Section 4.2.2), further restrictions may be applicable, and guidance should be sought from the LLFA and the EA.

Table 9-1: Example SuDS design constraints and possible solutions

Constraints	Solution
Land availability	SuDS can be designed to fit into small areas by utilising different systems. For example, features such as permeable paving and green roofs can be used in urban areas where space may be limited.
Contaminated soil or groundwater below site	SuDS can be placed and designed to overcome issues with contaminated groundwater or soil. Shallow surface SuDS can be used to minimise disturbance to the underlying soil. The use of infiltration should also be investigated as it may be possible in some locations within the site. If infiltration is not possible linings can be used with features to prevent infiltration.
High groundwater levels	Non-infiltrating features can be used. Features can be lined with an impermeable line or clay to prevent the egress of water into the feature. Additional, shallow features can be utilised which are above the groundwater table.

Constraints	Solution
Steep slopes	Check dams can be used to slow flows. Additionally, features can form a terraced system with additional SuDS components such as ponds used to slow flows.
Shallow slopes	Use of shallow surface features to allow a sufficient gradient. If the gradient is still too shallow pumped systems can be considered as a last resort.
Ground instability	Geotechnical site investigation should be done to determine the extent of unstable soil and dictate whether infiltration would be suitable or not.
Sites with deep backfill	Infiltration should be avoided unless the soil can be demonstrated to be sufficiently compacted. Some features such as swales are more adaptable to potential surface settlement.
Open space in floodplain zones	Design decisions should be done to take into consideration the likely high groundwater table and possible high flows and water levels. Features should also seek to not reduce the capacity of the floodplain and take into consideration the influence that a watercourse may have on a system. Facts such as siltation after a flood event should also be taken into account during the design phase.
Future adoption and maintenance	The LPA should ensure development proposals, through the use of planning conditions or planning obligations, have clear arrangements for on-going maintenance over the development's lifetime.

9.5 Other surface water considerations

9.5.1 Groundwater Vulnerability Zones

The 2015 EA published groundwater vulnerability maps provide a separate assessment of the vulnerability of groundwater in overlying superficial rocks and those that comprise of the underlying bedrock. The map shows the vulnerability of groundwater at a location based on the hydrological, hydro-ecological, and soil properties within a one-kilometre grid square.

The majority of Cotswold is classified as high groundwater vulnerability.

The groundwater vulnerability maps should be considered when designing SuDS. Depending on the height of the water table at the location of the proposed development site, restrictions may be placed on the types of SuDS appropriate to certain areas. Groundwater vulnerability maps can be found on Defra's interactive mapping (defra.gov.uk).

9.5.2 Groundwater Source Protection Zones (GSPZ)

The EA also defines GSPZs near groundwater abstraction points. These protect areas of groundwater used for drinking water. The GSPZ requires attenuated storage of runoff to prevent infiltration and contamination. GSPZs can be viewed on Defra's interactive mapping (defra.gov.uk). Three main zones are defined as follows:

- Inner protection zone (Zone 1) - areas from where pollution can travel to the groundwater source within 50 days or is at least a 50m radius.
- Outer protection zone (Zone 2) - areas from where pollution can travel to the groundwater source within 400 days or lies within the nearest 25% of the total catchment area (whichever is largest).
- Total catchment (Zone 3) - the total area needed to support removal/discharge of water from the groundwater source.

Online mapping shows there are currently 27 GSPZs which lie, fully or partially within Cotswold, located throughout the district.

Where a site is located in a GSPZ used for public water supply, applicants should engage with the Council to understand any concerns and any necessary mitigation measures to manage the risk of development to public water supply.

9.5.3 Nitrate Vulnerable Zones

Nitrate Vulnerable Zones (NVZs) are areas designated as being at risk from agricultural nitrate pollution. Nitrate levels in waterbodies are affected by surface water runoff from surrounding agricultural land entering receiving waterbodies. The level of nitrate contamination will potentially influence the choice of SuDS and should be assessed as part of the design process. 2025 - 2028 NVZs can be viewed on the EA's interactive mapping (data.gov.uk).

The majority of Cotswold District is designated as an NVS (2025 - 2028).If a site falls within a NVZ, these rules must be followed: Nitrate vulnerable zones (data.gov.uk). Landowners can appeal an NVZ designation once notified if their land (or part of it):

- Does not drain into water that has been identified as polluted
- Drains into water that should not be identified as polluted

9.5.4 Critical Drainage Areas

Local Authorities can choose to designate Critical Drainage Areas (CDAs) within their authority area; There are no CDAs currently designated within the district.

10 Flood warning and emergency planning

This section provides an overview of the requirements for emergency plans, including any local emergency planning arrangements, and an overview of the available flood alerts and warnings from the EA in Cotswold.

10.1 NPPF requirements

The NPPF Flood Risk Vulnerability and Flood Zone "incompatibility" table seeks to avoid inappropriate development in areas at risk from fluvial flooding. It is essential that any development which will be required to remain operational during a flood event is located in the lowest flood risk zones to ensure that, in an emergency, operations are not impacted upon by floodwater, or that such infrastructure is resistant to the effects of flooding such that it remains serviceable/operational during 'central' events for the majority of development types, and 'upper end' events for essential infrastructure, as defined in the Environment Agency's climate change allowances.

The outputs of this Level 1 SFRA should be compared and reviewed against any existing emergency plans and continuity arrangements. This includes any nominated rest and reception centres (and prospective ones), so that evacuees are outside of the high-risk Flood Zones and will be safe during a flood event. The EA's online FMfP should also be consulted to ensure the latest data is being considered.

10.2 Emergency planning

The Civil Contingencies Act 2004 lists local authorities, the EA and emergency services as Category 1 responders, responsible for reducing, controlling, and mitigating the effects of emergencies in both response and recovery phases.

The NPPF (Paragraph 181) requires site-level FRAs to demonstrate that "*any residual risk can be safely managed; and safe access and escape routes are included where appropriate, as part of an agreed emergency plan*."

In accordance with the NPPF, SFRAs and GCC's LFRMS (2014) can be used in the preparation and execution of a flood emergency plan as they can indicate areas that may be at risk of flooding. Emergency plans can be provided as part of a FRA or as a separate document. Decisions regarding whether an emergency plan is required sits with the LPA, with advice from the Council's emergency planning teams, the EA, and the LLFA.

According to the PPG, an emergency plan is needed wherever emergency flood response is an important component of making a development safe; this includes the free movement of people during a 'design flood' and potential evacuation during an extreme flood.

Emergency plans are essential for any site with transient occupancy in areas at risk of flooding, such as holiday accommodation, hotels, caravan, and camping sites (PPG: Flood risk and coastal change paragraph 043).

Emergency plans should consider:

- The type of flood risk present, and the extent to which advance warning can be given in a flood event.
- The number of people that would require evacuation from the area potentially at risk.
- The vulnerability of site occupants.
- The impact of the flooding on essential services e.g., electricity, gas, telecommunications, water supply and sewerage.
- Safe access and escape routes for users and emergency services (Section 10.2.1).

Further information is available from the following documents/websites with hyperlinks provided:

- The National Planning Policy Guidance (gov.uk)
- 2004 Civil Contingencies Act (legislation.gov.uk)
- Defra (2014) National Flood Emergency Framework for England (gov.uk)
- FloodRe (floodre.co.uk)
- The EA and Defra's Standing Advice for FRAs (gov.uk)
- EA's 'How to plan ahead for flooding' (gov.uk)
- Sign up for Flood Warnings with the EA (gov.uk)
- The National Flood Forum (nationalfloodforum.org.uk)
- 'Prepare for flooding' (gov.uk)
- ADEPT Flood Risk Plans for new development (adeptnet.org.uk)
- Environment Agency Community flood plan (2023)
- Environment Agency Personal flood plans (2023).

10.2.1 Safe access and escape routes

Safe access and escape routes need to be available during the design flood event with consideration of climate change. Access requirements are set out in the PPG: Flood Risk and Coastal Change (gov.uk) Paragraph: 047.

As part of an FRA, the developer should review the acceptability of the proposed access in consultation with the LLFA, the EA, and emergency planners. Site and plot specific velocity and depth of flood flows should be assessed against standard flood hazard criteria to ensure safe access and escape routes can be achieved during a flood.

10.3 Local arrangements for managing flood risk

The Gloucestershire Local Resilience Forum works to prepare for, respond to and recover from emergency incidents, including flooding. The LRF is a multi-agency partnership that brings together representatives from the emergency services, local authorities, the NHS, the Environment Agency and others. The LRF provide advice on flooding in their Community Risk Register and on the County Council website.

10.4 Flood alerts and flood warnings

The EA is the lead organisation for providing warnings of river flooding. Flood Warnings are supplied via the Flood Warning System (FWS) service, to homes and business within Flood Zones 2 and 3. The EA Sign up for Flood Warnings (gov.uk) page provides information on how to sign up for these warnings.

There are currently 18 Flood Alert Areas (FAA) and 19 Flood Warning Areas (FWAs) covering the district.

Flood alerts are issued when there is water out of bank for the first time anywhere in the catchment, signalling that 'flooding is possible', and therefore FAAs usually cover the majority of main river reaches.

Flood warnings are issued to designated FWAs (i.e., properties within the extreme flood extent which are at risk of flooding), when the river level hits a certain threshold; this is correlated between the FWA and the gauge, with a lead time to warn that 'flooding is expected'.

The FAAs and FWAs are included on the interactive GeoPDF mapping in Appendix B.

11 Cumulative Impact Assessment

This section details the cumulative impact assessment, which identifies which river catchments are most likely to be sensitive to increased flood risk as a result of future development.

11.1 Introduction

The cumulative impact of development should be considered at both the local plan making stage and the planning application and development design stages.

When allocating land for development, consideration should be given to the potential cumulative impact of the loss of floodplain storage volume from any source, as well as the impact of increased flows on flood risk downstream. Whilst the loss of storage for individual developments may only have a minimal impact on flood risk, the cumulative effect of multiple developments may be more severe. Similarly, the effect of the loss of surface water flow paths/exceedance paths from sewers, surface water ponding and infiltration can also give rise to cumulative effects and potentially exacerbate flood risk. There are also risks of development causing modified flow regimes from sites creating an alignment in peak flows in downstream watercourses and resulting in greater flood risk as a result of the development.

All developments are required to comply with the NPPF and demonstrate they will not increase flood risk elsewhere. Therefore, providing developments comply with the latest guidance and legislation relating to flood risk and sustainable drainage, and appropriate consideration is given to flow paths and storage proposals should normally not increase flood risk downstream.

Local planning policies can also be used to identify areas where the potential for development to increase flood risk is highest and identify opportunities for such new development to positively contribute to decreases in flood risk downstream.

There is currently no national guidance available for assessing the cumulative impacts of development. The cumulative impact assessment (CIA) in this SFRA provides a relative assessment of the catchments within Cotswold and are not comparable across other boroughs/districts. The full methodology for the CIA is set out in Appendix F.

11.2 Results

The CIA has identified the following catchments as high risk:

- Bretforton Bk - source to conf Broadway-Badsey Bk
- Broadway-Badsey Bk - source to conf R Avon
- Churn (Baunton to Cricklade)
- Coln (from Coln Rogers) and Thames (Coln to Leach)
- Evenlode (Source to Four Shires S) and Longborough Stream
- Knee Bk - source to conf Blockley Bk

- Swilgate - source to conf R Avon
- Swill Brook (source to Ashton Keynes)
- Tetbury Avon - unnamed trib to conf Sherston Avon
- Thames (Churn to Coln)
- Thames (Kemble to Waterhay Bridge)
- Thames (Leach to Evenlode)
- Thornhill Ditch and tributaries at Cotswolds Water Park
- Windrush (Slade Barn Stream to Dikler)

Specific recommendations for catchments identified as high risk, alongside broadscale recommendations applicable across the whole District, are set out in Appendix F.

12 Strategic flood risk solutions

This section sets out wider strategic solutions that may offer potential to reduce flood risk across Cotswold, including natural flood management. It also details notable partnership working opportunities within Cotswold.

Section 11 of this report and Appendix F consider the cumulative impacts of development across Cotswold and the catchments which are most sensitive to these impacts, and as such where strategic flood risk solutions may be most beneficial.

Where possible, developments should seek to help reduce flood risk in the wider area. The following sections outline different options which could be considered for strategic flood risk solutions. Any strategic solutions should ensure they are consistent with wider catchment policy and the local policies.

It is important that the ability to deliver strategic solutions in the future is not compromised by the location of proposed development. When assessing the extent and location of proposed development, consideration should be given to the requirement to secure land for flood risk management measures that provide wider benefits.

12.1 Partnership working

Flood risk to an area or development can often be attributed to multiple different sources, including fluvial, surface water and/or groundwater, which can become intertwined. Where complex flood risk issues are highlighted, it is important that all stakeholders are actively encouraged to work together to identify issues and provide suitable solutions.

12.1.1 Catchment Based Approach

The Catchment Based Approach (CaBA) (catchmentbasedapproach.org) was introduced by government to establish catchment partnerships throughout England to jointly deliver improved water quality and reduce flood risk, directly supporting achievement of many of the targets set out within government's 25-year Environment Plan. CaBA partnerships are actively working in all 100+ river catchments across England and cross-border with Wales.

The CaBA partnerships working within Cotswold include:

- Evenlode Catchment Partnership
- Windrush Catchment Partnership
- Upper Thames Catchment Partnership
- Bristol Avon Catchment Partnership
- Severn Vale Catchment Partnership

12.2 Biodiversity Net Gain

Biodiversity Net Gain (BNG) is a strategy to develop land and contribute to the recovery of nature. It is making sure the habitat for wildlife is in a better state than it was before development. BNG has been applicable since November 2023 for developments in the Town and Country Planning Act 1990, unless exempt, and has been applicable to small sites since April 2024. Exempt developments include existing planning applications, below threshold development and small home extensions. Further information is available on the Government BNG webpage (gov.uk). Strategic flood risk solutions can help developments achieve BNG requirements.

12.3 Natural Flood Management

12.3.1 Introduction to NFM

Development can provide opportunities to work with natural processes to help reduce flood and erosion risk, benefit the natural environment and reduce costs of schemes. This is known as Natural Flood Management (NFM) or nature-based solutions, a process whereby action is taken to mitigate flood risk by protecting, restoring and emulating natural processes. This approach aims to reduce flow volumes and delay the arrival of peak flood flow downstream.

Techniques and measures, which could be applied within in Cotswold include:

- Creation of offline storage areas.
- Re-meandering streams (creation of new meandering courses or reconnecting cut-off meanders to slow the flow of the river).
- Targeted woodland planting.
- Reconnection and restoration of functional floodplains (Section 12.4).
- Restoration of rivers and removal of redundant structures, i.e. weirs and sluices no longer used or needed (Section 12.5).
- Installation or retainment of large woody material in river channels.
- Improvements in management of soil and land use.
- Creation of rural and urban SuDS.

To maximise the benefits of NFM, it is important that land which is likely to be needed for NFM is protected by safeguarding land for future flood risk management infrastructure through local plan policy. This is particularly important for infrastructure that reduces the risk of flooding to large areas of existing development, or where options for managing risk in other ways are limited to achieve multiple benefits for flood risk and the environment.

It is important to recognise the value of maintenance or restoration of natural riparian zones, such as grasslands, which protect the soils from erosion and ‘natural’ meadows which can tolerate flood inundation. The use of blue green infrastructure throughout river corridors can also play a vital role in enhancing the river environment as well as safeguarding land from future development, protecting people and buildings from flooding and reducing flood risk downstream.

The Rivers Trust NFM National Map (theriverstrust.hub.arcgis.com) provides further information about completed and ongoing NFM schemes and community works.

12.3.2 Working with natural processes

The EA published their updated evidence base in February 2025 for Working with Natural Processes to reduce flood risk 2024 (gov.uk) to support the implementation of NFM, with maps showing locations with the potential for NFM measures. These maps are intended to be used alongside the evidence directory to help practitioners think about the types of measure that may work in a catchment and the best places in which to locate them.

12.3.3 Gloucestershire NFM Partnership

The Gloucestershire NFM Partnership was established in 2023, which brings together 18 local partners, including GCC, the EA and Natural England. The partnership aims to expand the scale, scope and impact of NFM measures in Gloucestershire. This will be done by creating a pipeline of NFM projects, sourcing funding and creating relationships with local communities and landowners.

12.3.4 Ongoing NFM schemes

12.3.4.1 Churn Waterways and Environment Partnership

The Churn Waterways and Environment Partnership aims to provide benefits to Cirencester's waterways whilst also protecting against drought and flooding through the implementation of nature-based solutions. The partnership is a collection of organisations including the Department for Environment, Food and Rural Affairs, the EA, Thames Water, Severn Trent and the National Trust.

12.3.4.2 Bledington

A collaboration is underway between the EA and GCC and Bledington Flood Group. Funding is provided by the EA through the Water Environment Improvement Fund to support NFM work on the Gawcombe and Idbury tributaries of the Westcote Brook Catchment, delivered by the Evenlode Catchment Partnership.

Further funding has also been obtained for NFM work on the Westcote Brook.

12.3.4.3 Batsford Estate, Moreton-in-Marsh

There are proposed NFM measures to be installed across the Batsford Estate, Moreton-in-Marsh. Phase 1 has been completed, which involved the installation of eight leaky barriers. The next phase involves the potential creation of wetlands with flood storage capacity.

12.3.4.4 Thames Source NFM

There are a number of schemes proposed within Cotswold under the Thames Source NFM project:

- Marsden - floodplain reconnection, in-channel deflectors, leaky dams and wetland creation
- Moor Wood - pond and wetland creation, ditch blocking and reconnecting small watercourses
- Hartleys Farm - leaky dams along two sections of the upper Churn and its tributaries
- Stratton Meadows - partial restoration of the Stratton Water meadow floodplain north of Cirencester

12.3.5 Completed NFM schemes

12.3.5.1 Windrush Floodplain Meadow Restoration

The first stage of this project aimed to restore floodplain meadows along the River Windrush. The initial tasks involved engagement with local landowners and a review of the land management plans developed as part of the Windrush Floodplain Meadow Strategy. In total, 16.75 hectares of land was sown with floodplain meadow seeds and plug planting to maximise establishment success. The second of this project designed NFM measures at three sites, particularly promoting wetland habitat creation, leaky dams and field bunds.

12.4 Catchment and floodplain restoration

Floodplain restoration represents the most sustainable form of strategic flood risk solution, by allowing watercourses to return to a more naturalised state, and by creating space for naturally functioning floodplains working with natural processes.

Although the restoration of floodplain is difficult in previously developed areas where development cannot be rolled back, the following measures should be adopted:

- Promoting existing and future brownfield sites that are adjacent to watercourses to naturalise banks as much as possible. Buffering areas around watercourses to provide an opportunity to restore parts of the floodplain through blue green corridors and helping to deliver BNG.
- Removing redundant structures to reconnect the river and the floodplain.
- Applying the sequential approach to avoid new development within the floodplain.

12.5 Structure removal and/or modification (e.g. weirs)

Structures, both within watercourses and adjacent to them can have significant impacts upon a river's regime, including alterations to the geomorphology and hydraulics of the channel through water impoundment and altering the sediment transfer regime, which over time can significantly impact the channel profile including bed and bank levels, alterations to flow regime and interruption of biological connectivity, including the passage of fish and invertebrates.

Many artificial in-channel structures (such as weirs and culverts) can sometimes be redundant and/or serve little purpose. Opportunities for the removal of such structures

should be investigated where feasible. The need to do this is heightened by climate change, for which restoring natural river processes, habitats and connectivity are vital adaptation measures. However, it also must be recognised that some artificial structures may have important functions or historical/cultural associations, which need to be considered carefully when planning and designing restoration work.

In the case of weirs, whilst weir removal should be investigated in the first instance, in some cases it may be necessary to modify a weir rather than remove it. For example, by lowering the weir crest level or adding a fish pass. This will allow more natural water level variations upstream of the weir and remove a barrier to fish migration.

Developers should investigate the 'opening up' or 'daylighting' of existing culverts where possible and should not construct new culverts on site except for short lengths to allow essential infrastructure crossings for access.

12.6 Riverbank stabilisation

Any practice that may cause riverbank erosion should be avoided. Landowners should be encouraged to avoid using machinery and vehicles close to or within the watercourse unless in the circumstances where machinery and vehicles are required for watercourse maintenance such as desilting, grass cutting, or removal of vegetation. Care should be taken not to destabilise the banks.

There are several techniques that can be employed to restrict the erosion of riverbanks. In an area where bankside erosion is particularly bad and/or vegetation is unable to properly establish, ecologically sensitive bank stabilisation techniques, such as willow spiling, can be particularly effective. Live willow stakes thrive in the moist environment and protect the soils from further erosion allowing other vegetation to establish and protect the soils. Other approaches include the planting of brash or small trees, large wood, large trees and root wads.

12.7 Green infrastructure

Green infrastructure (GI) is a planned and managed network of natural environmental components and green spaces that intersperse and connect the urban centres, suburbs and rural fringe and consist of:

- Open spaces – parks, woodland, nature reserves, lakes.
- Linkages – blue green river corridors and canals, and pathways, cycle routes and greenways.
- Networks of “urban green” – private gardens, street trees, verges and green roofs.

The identification and planning of GI are critical to achieving sustainable growth. It merits forward planning and investment as much as other socio-economic priorities such as health, transport, education and economic development. GI is also central to climate change action and is a recurring theme in planning policy. With regards to flood risk, green spaces can be used to manage storm flows and free up water storage capacity in existing

infrastructure to reduce risk of damage to urban property, particularly in urban centres and vulnerable urban regeneration areas. GI can also improve accessibility to waterways, improve water quality, support regeneration, and improve opportunities for leisure, economic activity, and biodiversity through delivery of BNG.

13 Recommendations and next steps

13.1 Requirements for a Level 2 SFRA

Following the application of the Sequential Test using Appendix D and E of this Level 1 SFRA, where sites cannot be appropriately accommodated in low-risk areas, the Council may need to show that sites proposed for allocation can be safe for their lifetime. Some sites may also require application of the Exception Test. In these circumstances, a Level 2 SFRA is required, to assess in more detail the nature and implications of the flood characteristics in order for the LPA to allocate such sites in the new local plan. However, a Level 2 SFRA does not negate the need for a site-specific FRA at the planning application stage.

As part of this Level 1 SFRA, an initial site screening exercise using the Council's potential development site boundaries and the latest flood risk data has been undertaken to help inform the application of the Sequential Test and the subsequent potential requirement for a Level 2 SFRA.

Appendix E provides a strategic assessment of the suitability, relative to flood risk both now and in the future, of the sites to be considered for allocation in the Council's new Local plan, summarising the outcomes of the sites screening assessment spreadsheet in Appendix D.

SFRA Strategic Recommendation B applies to sites where a Level 2 SFRA may be required in order to allocate. Of the 170 potential development sites screened, Strategic Recommendation B applies to 124 sites. A Level 2 SFRA may not be required for all of these sites, depending on the proportion and spatial variation of risk across each site. The sites where Strategic Recommendation B applies should be reviewed by the Council to identify those where further assessment would be required in order to allocate.

13.2 Recommendations from SFRA findings

The following overarching SFRA recommendations have been developed to guide future development and inform planning decisions across Cotswold in relation to flood risk. These recommendations should be read alongside national and local policies and are intended to support the allocation of sites and planning applications, ensuring that flood risk is appropriately considered at all stages of the planning process.

- New development should be directed to areas with the lowest probability of flooding (Flood Zone 1). Development within Flood Zones 2 and 3 should only be considered if no reasonably alternative sites exist. Development should also be directed away from the climate change flood risk zones.
- There should be no residential development within Flood Zone 3a, the modelled climate change flood outlines, and the Flood Zones plus Climate Change flood risk area. More vulnerable development is required to be subject to and to pass the Exception Test if it is proposed within Flood Zone 3a.

- Where development is proposed within Flood Zone 2, and whilst accounting for climate change, consideration should be given to locating dwellings above ground floor level. Ground floor areas should be limited to less vulnerable uses, such as retail, restaurants, office space, or car parking, where compatible with local policy.
- There should be no development within Flood Zone 3b (functional floodplain). Areas of functional floodplain would ideally remain as or be converted to open greenspace, providing multifunctional ecology, social and amenity benefits, as well as for flood attenuation and storage.
- Consideration should be given to areas that may be needed for future flood risk management features and structures. Areas at high risk from fluvial flooding could be considered as appropriate areas to safeguard for flood storage.
- A site-specific flood risk assessment should accompany planning applications where development is proposed within Flood Zones 2 and 3a, at risk from climate change, at risk from any other flood source, or within Flood Zone 1 and the site area is 1 hectare or greater.
- Built development within 8m of the bank top of a main river, culvert or flood defence should be discouraged. Focus should be for the preservation of the watercourse corridor, wildlife habitat, flood flow conveyance and future watercourse maintenance or improvement, with a focus on achieving BNG.
- For all new development situated within flood risk areas, planning applications should be accompanied by an emergency plan that is proportionate to the risk. This should set out clear procedures for safe evacuation, identify safe access and escape routes and account for the vulnerability of site users during a flood event.
- Space should be provided for the inclusion of SuDS on all allocated sites, outline proposals and full planning applications. SuDS design should demonstrate how constraints have been considered and how the design provides multiple benefits e.g. landscape enhancement, biodiversity, recreation, amenity, leisure, and the enhancement of historical features.
- Where development is located behind a flood defence or within a defended area, consideration should be given to the potential safety of the development, FFLs and for safe access and escape routes in the event of rapid inundation of water due to a defence breach with little warning.
- The cumulative impact assessment recommendations, outlined in Appendix F, should be considered for all development within the district.

13.3 Recommendations for further work

The SFRA process has developed into more than just a planning tool. Sitting alongside the Sustainability Appraisal and Local Flood Risk Management Strategy, it can be used to provide a much broader and inclusive vehicle for integrated, strategic and local flood risk management and delivery.

There are several studies listed in Table 13-1 that may be of benefit to the LPA, in developing the flood risk evidence base to support the delivery of the new Local Plan, or to the LLFA to help fill critical gaps in flood risk information that have become apparent through the preparation of this Level 1 SFRA.

Table 13-1: Potential further works and assessments

Type	Study	Reason
Understanding of local flood risk	Level 1 SFRA update	When there are changes to: the predicted impacts of climate change on flood risk; national flood modelling; detailed flood modelling - such as from the EA or LLFA; the local plan, spatial development strategy or relevant local development documents; local flood management schemes; flood risk management plans; local flood risk management strategies; national planning policy or guidance (2025 reforms of the PPG); or after a significant flood event.
	Level 2 SFRA	Reviewing of EA flood zones in those areas not covered by existing detailed hydraulic models (i.e., the FMfP does not cover every watercourse such as those <3km^2 in catchment area or ordinary watercourses). If a watercourse or drain is present on OS mapping but is not covered by the FMfP, this does not mean there is no potential flood risk. A model or further investigation may therefore be required to ascertain the flood risk, if any, to any nearby sites.
	Level 2 SFRA	Further, more detailed assessment of flood risk to high and medium risk sites both now and in the future as notified by this Level 1 SFRA, following application of the Sequential Test.
	SWMP/ detailed surface water modelling	The LLFA may wish to produce a SWMP for Cotswold based on the most up to date surface water flood risk information and climate change allowances or consider targeted areas of high surface water flood risk.
Residual risk	Level 2 SFRA	Residual risk from flooding as a result of defence breaches and asset blockages should continue be mitigated through sequential testing to steer development to lower risk areas and identifying opportunities for property flood resilience measures for properties at residual risk.
Flood storage and attenuation	Working with Natural Processes	Further assessment of WwNP options in upper catchments to gauge possible areas for Natural Flood Management. Promote creation of floodplain and riparian woodland, floodplain reconnection and runoff attenuation features where the research indicates that it would be beneficial to the authority area.
Water	Water Cycle	To ensure sufficient provision of infrastructure for water supply and wastewater for new development.

Type	Study	Reason
resources	Study	Particularly relevant to intensification of urban development or the development of large strategic sites.
Data collection	Flood incident data	The Council should record flood events including such information as date, location, weather, flood source (if apparent without an investigation), impacts (properties flooded or number of people affected) and response by any RMA. This should be made available in GIS format.
	FRM Asset Register	The LLFA should continue to update and maintain its asset register as per FWMA requirements.
Risk assessment	Asset inspection	The LLFA should carry out condition inspections of critical flood risk management assets (see Section 6.4).
Capacity	SuDS review / guidance	The LLFA and LPA should clearly identify requirements of developers for inclusion of SuDS in new developments. Internal capacity, within the Council should be in place to deal with SuDS applications, set local specifications and set policy for adoption and future maintenance of SuDS.
Partnership	Water companies	The Council should continue to collaborate with water companies on sewer and surface water projects to ensure their assets can remain operational and resilient at all times across the district and that capacity for new development is appropriate.
	EA	The Council should continue to work with the EA on fluvial flood risk management projects. Potential opportunities for joint schemes to tackle flooding from all sources should be identified.
	Community	Continued involvement with the community through existing flood risk partnerships.

Carbon Footprint

The format of this report is optimised for reading digitally in pdf format. Paper consumption produces substantial carbon emissions and other environmental impacts through the extraction, production and transportation of paper. Printing also generates emissions and impacts from the manufacture of printers and inks and from the energy used to power a printer. Please consider the environment before printing.

Accessibility

JBA aims to align with governmental guidelines on accessible documents and WCAG 2.2 AA standards, so that most people can read this document without having to employ special adaptation measures. This document is also optimised for use with assistive technology, such as screen reading software.

1 Key legislation for flood and water management

1.1 Flood and Water Management Act (2010)

The Flood and Water Management Act (2010) (gov.uk) was passed in April 2010 following the recommendations made within the Pitt Review (2009) following the flooding in 2007. It aims to create a simpler and more effective means of managing both flood risk and coastal erosion, establishing the lead role for local authorities, as Lead Local Flood Authorities (LLFAs), designed to manage local flood risk (from surface water, ground water and ordinary watercourses) and to provide a strategic overview role of all flood risk for the Environment Agency (EA).

1.2 Water Framework Directive (2000)

The European Water Framework Directive (WFD) (2000) was transposed into English Law by the Water Environment Regulations (2017) (gov.uk). The WFD aims to deliver improvements across Europe in the management of water quality and water resources. This is enforced through a series of plans called River Basin Management Plans (RBMPs). Cotswold District Council is covered mostly by the Thames RBMP, with the south west of the district being covered by the Severn RBMP.

1.3 Flood Risk Regulations (2009)

The Flood Risk Regulations (FRRs) 2009 translated the European Union (EU) Floods Directive into UK law setting the requirement for Member States to complete an assessment of flood risk, known in England as a Preliminary Flood Risk Assessment (PFRA). This information was then used to identify areas where there is a significant risk of flooding (Flood Risk Areas), where States had to undertake Flood Risk and Hazard Mapping and produce Flood Risk Management Plans (FRMPs). This cycle was repeated on a six-yearly basis.

As of 1 January 2024, the Retained EU Law (Reform and Revocation) Bill automatically repealed any Retained EU Law (REUL) not otherwise preserved or replaced in UK law before the end of 2023, including the FRRs 2009 which transposed the EU Floods Directive into legislation. This is because much of the FRRs duplicated existing domestic legislation, namely the Flood and Water Management Act 2010.

The Government expects to see continued implementation of the Flood Risk Management Plans 2021-2027, with funding for this still in place over the six-year period. The full list of relevant measures for managing flood risk within the Thames and Severn river basin districts can be found on the EA's flood plan explorer.

1.3.1 Flood Risk Areas

The second cycle PFRAs published in 2017 reviewed the 2011 PFRAs and were published as addendums. The 2017 updates used all relevant current flood risk data and information to assess whether any flood events had changed the understanding of significant flood risk in each constituent authority since 2011.

The PFRA methodology, based on the EA's Final PFRA Guidance and DEFRA's Guidance on selecting Flood Risk Areas, did not identify any additional Flood Risk Areas within Gloucestershire. There has been no change to the assessment of risk in the Cotswold District since the first cycle 2011 PFRA and the understanding of past flood risk has not changed. Future flood risk is revised due to the creation of the Annual Implementation Plan in 2014, which is a process for prioritising areas requiring flood alleviation.

1.4 Environmental permitting

The Environmental Permitting Regulations (2018) (gov.uk) set out where developers will need to apply for additional permission (as well as planning permission) to undertake works to an ordinary watercourse or main river. This includes flood risk activities, for example:

- On or within 8 metres of a fluvial main river.
- On or within 8 metres of a non-tidal flood defence structure or culvert.
- Involving quarrying or excavation within 16 metres of any main river, flood defence (including a remote defence) or culvert; and
- In a floodplain more than 8 metres from the riverbank, culvert or flood defence structure and you don't already have Planning Permission.

Environmental permits may also be required from the EA to discharge runoff, trade effluent or sewage into a main river. They may also be required in relation to groundwater activities, where there may be a risk of groundwater contamination.

The Land Drainage Act (1991) (gov.uk) sets out where developers will need to apply for additional permission (as well as planning permission) to undertake works to an ordinary watercourse. The LLFA should also be consulted before undertaking any works on ordinary watercourses.

1.5 Byelaws

Land Drainage Byelaws outline legal obligations and responsibilities when undertaking works on or close to a watercourse, for the purpose of preventing flooding, or mitigating any damage caused by flooding.

The district is covered by the Thames Region Byelaws and Midlands and Severn Byelaws enforced by the EA. These byelaws apply to activities around main rivers, flood defences and floodplains.

1.6 Additional legislation

Additional legislation relevant to development and flood risk in the district include:

- Town and Country Planning Act (1990) (gov.uk), Water Industry Act (1991) (gov.uk), Land Drainage Act (1991) (gov.uk), Environment Act (1995) (gov.uk), which set out the regulations for development on land in England and Wales.
- The Environment Act 2021 (gov.uk) requires developers to provide Biodiversity Net Gain (BNG) and for Local Planning Authorities (LPAs) to develop Local Nature Recovery Strategies (LNRS). Strategic site allocations in Local Plans which present opportunities for BNG or areas for habitat improvement/creation identified by the LNRS could have parallel opportunities to contribute to reduced flood risk from a range of sources.
- Other environmental legislation such as the Habitats Directive (1992) (gov.uk), Environmental Impact Assessment Directive (2014) (gov.uk), and The Environmental Assessment of Plans and Programmes (Amendment) Regulations 2020 (gov.uk) which apply as appropriate to strategic and site-specific developments to guard against environmental damage.
- The Planning and Compulsory Purchase Act (2004) (gov.uk) Section 19(1A) which requires LPAs to include in their Local Plans 'policies designed to secure that the development and use of land in the local planning authority's area contribute to the mitigation of, and adaptation to, climate change.'

2 Key national, regional and local policy documents and strategies

Table 2-1 summarises relevant national, regional, and local flood risk policy and strategy documents and how these apply to development and flood risk. Hyperlinks are provided to external documents. These documents may:

- Provide useful and specific local information to inform Flood Risk Assessments (FRAs) within the local area.
- Set the strategic policy and direction for flood risk management and drainage – they may contain policies and action plans that set out what future flood mitigation and climate change adaptation plans may affect a development site. A developer should seek to contribute in all instances to the strategic vision for flood risk management and drainage in the district.
- Provide guidance and/or standards that inform how a developer should assess flood risk and/or design flood mitigation and sustainable drainage systems (SuDS).

The following sections provide further details on some of these documents and strategies.

Please note that the links to these documents may change over time and any requests for these documents should be directed toward the author.

Table 2-1: National, regional, and local flood risk policy and strategy documents

Local	Gloucestershire Local Flood Risk Management Strategy (2014)	Yes	Yes	Yes	2026

2.1 The National Flood and Coastal Erosion Risk Management Strategy for England

The National Flood and Coastal Erosion Risk Management Strategy for England (gov.uk) provides the overarching framework for future action by all Risk Management Authorities (RMAs) to tackle flooding and coastal erosion in England. The Strategy looks ahead to the year 2100 and the actions needed to address the challenge of climate change.

The Strategy has been split into three high level ambitions:

- Climate resilient places.
- Today's growth and infrastructure resilient in tomorrow's climate.
- A nation ready to respond and adapt to flooding and coastal change.

The Strategy was laid before parliament in July 2020 for formal adoption and published alongside a Policy Statement for Flood and Coastal Erosion Risk Management (gov.uk).

The implementation of the National Strategy leads to the publication of new guidance and practice focused on resilience. It will be important to adjust the content of the SFRA, as and when required, so that changes in approach are captured in the delivery of the Local Plan.

The National Strategy is due to be updated in 2026.

2.2 Catchment Flood Management Plans

Catchment Flood Management Plans (CFMPs) are high-level strategic plans providing an overview of flood risk across each river catchment, published between 2009 and 2012. The EA use CFMPs to work with other key-decision makers to identify and agree long-term policies for sustainable flood risk management. However, the CFMPs have been largely superseded by Flood Risk Management Plans (FRMP).

There are six pre-defined national policies provided in the CFMP guidance, and these are applied to specific locations through the identification of 'Policy Units'. These policies are intended to cover the full range of long-term flood risk management options that can be applied to different locations in the catchment.

Cotswold district is covered by the Thames CFMP, Bristol Avon CFMP and the Severn Tidal Tributaries CFMP. The primary policy option in each of the areas of Cotswold district covered by the three plans is Preferred Policy Option 6: Areas of low to moderate flood risk where we will take action with others to store water or manage runoff in locations that provide overall flood risk reduction or environmental benefits.

2.3 Flood Risk Management Plans

FRMPs set out how organisations, stakeholders and communities will work together to manage flood risk. The FRMP designates specific measures for authorities to manage flood risk within each river basin district. For Cotswold, the key measures include:

- Engage with property owners to improve their understanding of residual risk and measures they can take to prepare for flooding and recovery in locations in

Gloucestershire where the Environment Agency is delivering property flood resilience measures
- Work with communities at risk to raise awareness and increase their preparedness for flooding, including what they can do themselves in Gloucestershire
- Update the Gloucestershire County Council website to improve signposting and accessibility to flood information and facilitate better flood reporting
- Promote natural flood risk management as a complementary element of flood risk management schemes and work with landowners to identify locations for natural flood management measures
- Regularly review Local Flood Risk Management Strategy Implementation Plan, taking into account recent flood events, and produce a prioritised list of capital works
- Work together to create a centralised data base for flood alleviation schemes to effectively co-ordinate where future resources can be targeted

The full list of relevant measures for managing flood risk within the Thames and Severn river basin districts can be found on the EA's flood plan explorer.

2.4 Thames Regional Flood and Coastal Committee

Cotswold District Council (the Council) is a member of the Thames Regional Flood and Coastal Committee (RFCC). The RFCC, established by the EA, brings together relevant members appointed by the LLFAs to:

- Ensure there are coherent plans for identifying, communicating and managing flood and coastal erosion risks across catchments and shorelines,
- Encourage efficient, targeted and risk-based investment in flood and coastal erosion risk management that represents value for money and benefits local communities,
- Provide a link between the EA, LLFA, other RMAs, and other relevant bodies to build understanding of flood and coastal erosion risks in its area.

2.5 Local Flood Risk Management Strategy

Local Flood Risk Management Strategies (LFRMS) set out how the LLFA (Gloucestershire County Council (GCC)) will manage local flood risk i.e. surface water runoff, groundwater, and ordinary watercourses, for which they have a responsibility, and the work that other RMAs are doing to manage flood risk across the district.

The Gloucestershire County Council LFRMS was approved in Summer 2014 and sets out Gloucestershire's strategy for managing local flood risk over a 10-year period. The aim of the Local Strategy is to 'work in partnership with local communities, and organisations responsible for managing flood risk, in order to better understand and reduce local flood risk in Gloucestershire where it is economically, technically, socially, and environmentally feasible to do so'.

The LFRMS provides an overall picture of flood risk across Gloucestershire and outlines how the LLFA will coordinate and manage flood risk along with other RMAs. The strategy sets out the policy direction for flood defence consenting, thresholds for formal flood investigations, formal partnership and management arrangements, details regarding the asset register, and a great deal of general advice and guidance relating to flood mitigation and resilience.

GCC developed the following six strategic objectives to manage and understand flood risk across the county:

- Objective 1 - improve our understanding of flood risk;
- Objective 2 - put in place plans to manage these risks;
- Objective 3 - avoid inappropriate development and ensure new development does not increase flooding elsewhere;
- Objective 4 - increase public awareness of flooding and encourage local communities to take action;
- Objective 5 - ensure close partnership working and co-ordination with other risk management authorities in Gloucestershire; and
- Objective 6 - support response to, and recovery from, flooding incidents.

The LFRMS for Gloucestershire should be updated to align with the National Flood and Coastal Erosion Risk Management Strategy for England, 2020. However, the National Strategy is due to be updated by the EA in 2026.

2.6 Local policy and guidance for SuDS

The National Planning Policy Framework (NPPF) states that: "*Applications which could affect drainage on or around the site should incorporate sustainable drainage systems to control flow rates and reduce volumes of runoff, and which are proportionate to the nature and scale of the proposal*." (Paragraph 182) and "*Development should only be allowed in areas at risk of flooding where… it can be demonstrated that… c) it incorporates sustainable drainage systems, unless there is clear evidence that this would be inappropriate*" (Paragraph 181).

At the time of writing, the following documents and policies are relevant to SuDS and surface water in the district. Hyperlinks are provided to external documents:

- Defra National standards for sustainable drainage systems (gov.uk), 2025.
- SuDS Manual (C753) (ciria.org), published in 2007 and updated in 2015.
- Building Regulations Part H (MHCLG) (gov.uk), 2010.
- Gloucestershire SuDS Design and Maintenance Guide, 2015.
- Cotswold District Green Infrastructure Strategy, 2024

Further information on SuDS requirements and design considerations can be found in the main SFRA report and Water Cycle Study report.

2.7 Water Cycle Studies

Water Cycle Studies (WCSs) assist local authorities to select and develop growth proposals that minimise impacts on the environment, water quality, water resources, infrastructure, and flood risk and help to identify ways of mitigating such impacts.

A Water Cycle Study for the Cotswold District Council Local Plan Partial Update was published in July 2025. However, the WCS is scheduled to be updated in 2026 to support the full new Local Plan for Cotswold District.

2.8 Surface Water Management Plans (SWMPs)

SWMPs outline the preferred surface water management strategy in a given location and establish a long-term action plan to manage surface water in a particular area. They are intended to influence future capital investment, drainage maintenance, public engagement and understanding, land-use planning, emergency planning, and future developments.

At the time of writing, there is no SWMP for Cotswold or within Gloucestershire.

2.9 Water Resource Management Plans (WRMPs)

Under the duties set out in sections 37A to 37D of the Water Industry Act 1991, all water companies across England and Wales must prepare and maintain a WRMP. This must be prepared at least every five years and reviewed annually.

WRMPs should set out how a water company intends to achieve a secure supply of water for their customers and a protected and enhanced environment. The WRMPs that cover the district are:

- Thames Water - Water Resources Management Plan (2024) which covers the period 2025 to 2075
- Severn Trent - Water Resources Management Plan (2024) which covers the period 2025 to 2050
- Wessex Water - Water Resources Management Plan (2024) which covers the period 2025 to 2080
- South West Water - Water Resources Management Plan (2024) which covers the period 2025 to 2050

2.10 Drainage and Wastewater Management Plans (DWMPs)

Water and sewage companies must produce a Drainage and Wastewater Management Plan (DWMP), covering a minimum of 25 years, which looks at current and future capacity, pressures, and risks to their networks such as climate change and population growth. They detail how a company plans to work with RMAs and drainage asset owners to manage future pressures. The DWMPs that cover the district are:

- Thames Water Drainage and Wastewater management plan (2023)
- Severn Trent Drainage and Wastewater management plan (2023)
- Wessex Water Drainage and Wastewater Management Plan (2023)

Updated DWMPs are due to be published in August 2028.

2.11 Local Plans

A Local Plan is a statutory document prepared in consultation with the local community. It is designed to promote and deliver sustainable development. Local Plans must set out a clear vision, be kept up to date and set out a framework for future development of the local area, addressing needs and opportunities in relation to housing, the economy, community facilities and infrastructure as well as safeguarding the environment and adapting to climate change and securing good design.

Local Plans set the context for guiding decisions and development proposals and along with the NPPF, set out a strategic framework for the long-term use of land and buildings, thus providing a framework for local decision making and the reconciliation of competing development and conservation interests.

The NPPF requires that the evidence base for the Local Plan must clearly set out what is intended over the lifetime of the plan, where and when this will occur and how it will be delivered. The NPPF states that Local Plans should be supported by a SFRA and should take account of advice provided by the EA and other flood risk management bodies. Each constituent authority has its own Local Plan and accompanying SFRA. The Local Plan SFRAs are used to ensure that when allocating land or determining planning applications, development is located in areas at lowest risk of flooding. Policies to manage, mitigate and design appropriately for flood risk should be written into the Local Plans, informed by both the SFRA and the Sustainability Appraisal.

The 23 key settlements within Cotswold, as defined in the Local Plan, are:

- Andoversford
- Bledington
- Blockley
- Bourton-on-the-Water
- Chipping Campden
- Cirencester
- Siddington
- Down Ampney
- Evenlode
- Fairford
- Kemble
- Lechlade
- Lower Slaughter
- Mickleton
- Moreton-in-Marsh
- Naunton
- Northleach
- South Cerney

- Stow-on-the-Wold
- Tetbury
- Upper Rissington
- Weston-sub-Edge
- Willersey

2.12 Neighbourhood plans

created by the Localism Act 2011, a neighbourhood plan is a document produced by a local community that sets out planning policies for their area and can be used to:

- Protect local green spaces;
- Encourage better designed places;
- Bring forward housing that meets local needs.

Neighbourhood planning groups can use the information in this SFRA to assess the risk of flooding to sites within their community. 10 areas have been designated as neighbourhood plan areas within Cotswold District:

- Stow-on-the-Wold and the Swells Neighbourhood Plan - following referendum, the plan was made by the Council on 3 October 2024.
- Down Ampney Neighbourhood Plan - following referendum, the plan was made by the Council on 6 March 2024.
- Fairford Neighbourhood Plan - following referendum, the plan was made by the Council on 5 June 2023.
- South Cerney Neighbourhood Plan - following referendum, the plan was made by the Council in May 2021.
- Kemble and Ewen Neighbourhood Plan - following referendum, the plan was made by the Council in May 2021.
- Preston Neighbourhood Plan - following referendum, the plan was made by the Council in May 2021.
- Somerford Keynes and Shorncote Neighbourhood Plan - following referendum, the plan was made by the Council in May 2021.
- Lechlade on Thames Neighbourhood Plan - following referendum, the plan was made by the Council in November 2016.
- Northleach with Eastington Neighbourhood Plan - following referendum, the plan was made by the Council in March 2019.
- Tetbury and Tetbury Upton Neighbourhood Plan - following referendum, the plan was made by the Council in December 2017.

A further 11 areas have been approved to be designated as a neighbourhood and are developing their plans:

- Ampney Crucis
- Andoversford
- Blockley
- Chedworth

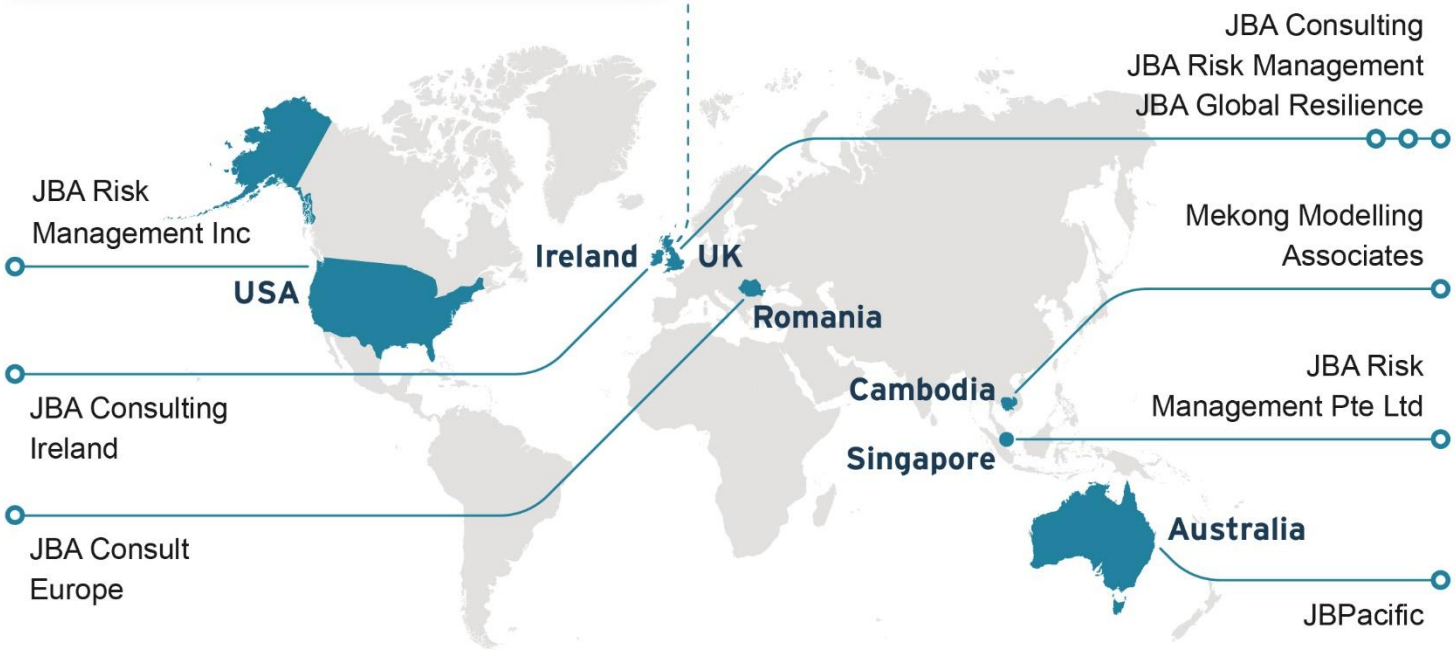
- Chipping Campden
- Cirencester
- Ebrington
- Moreton in Marsh
- Siddington
- Upper Rissington
- Willersey

Further guidance on the neighbourhood planning process within the district can be found on the neighbourhood planning page of the Council's website.

2.13 Additional guidance sections

2.13.1 Supplementary planning documents

Supplementary planning documents (SPDs) are used to add further detail to the policies set out in the Local Plan and to provide guidance for development on specific sites or particular issues.



the Council produced a Cirencester Town Centre SPD (2008) to amplify policies laid out in the Local Plan, particularly in relation to traffic management. GCC is also has a number of SPDs and guides available online.

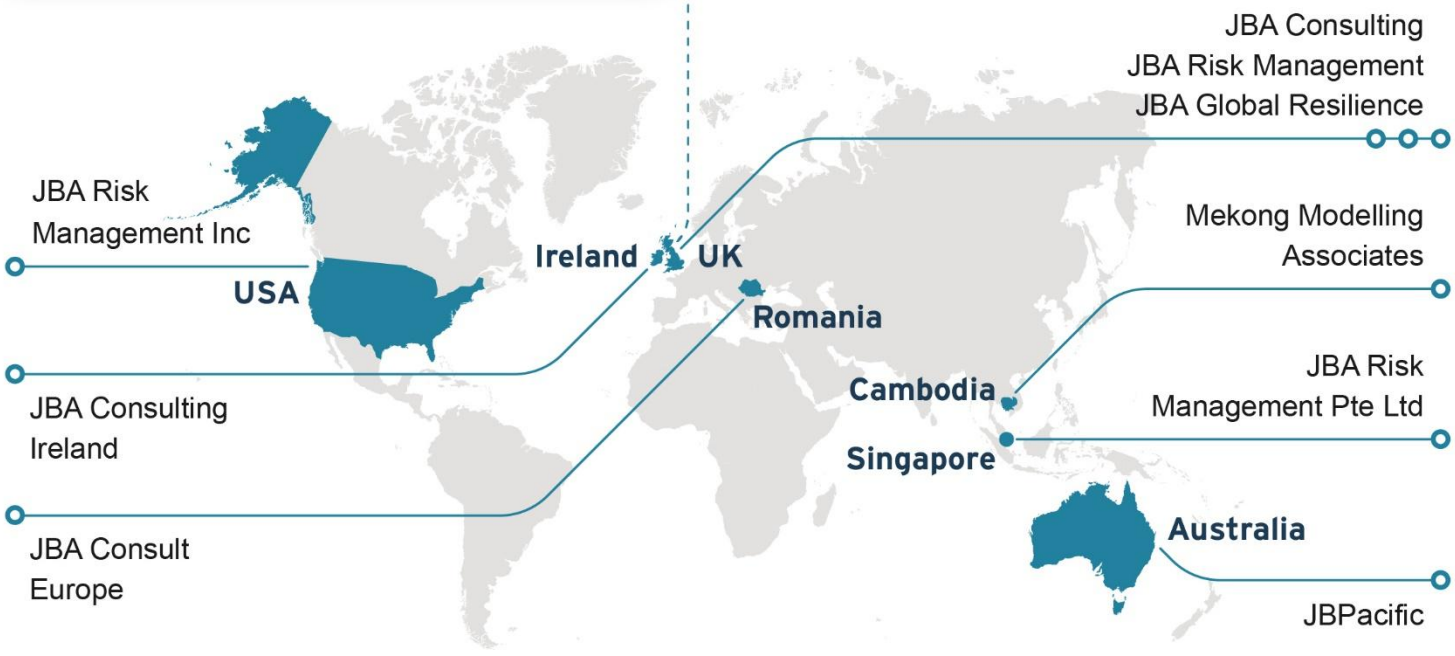
Appendix B: Interactive Mapping - Layers Explanation Note

Prepared for	Date
Cotswold District Council	XXX

COTSWOLD District Council

Layer name	Explanation
Flood Zones	This layer displays Flood Zone 3b (functional floodplain) as delineated through the SFRA, as well as Flood Zone 3a and Flood Zone 2 from the Environment Agency's Flood Map for Planning - Flood Zones dataset.
Flood Zones plus climate change (EA)	This layer displays the Environment Agency's Flood Map for Planning - Flood Zones plus Climate Change dataset.
Fluvial Climate Change	This layer displays the future functional floodplain, as delineated through the SFRA, as well as the modelled flood outlines from the Environment Agency's detailed hydraulic models, where available. The 100-year event plus 30% climate change and 100-year event plus 43% climate change are shown. These correspond with the Central and Higher Central climate change peak river flow allowances for the Cotswolds Management Catchment.
Historic Flooding	This layer displays the Environment Agency's Historic Flood Map and Recorded Flood Outlines datasets. It also displays a layer which aggregates the historic flood incidents records of the Lead Local Flood Authority, Cotswold District Council, Thames Water, Severn Trent Water and Wessex Water to display the number of incidents per ward.
Reservoir Flooding	This layer displays the Environment Agency's Dry Day and Wet Day Reservoir Flood Extents datasets.
Flood Risk Management	This layer displays the Environment Agency's AIMS Spatial Flood Defences (inc. standardised attributes) dataset. The dataset has been filtered to show only raised flood walls and embankments and has been symbolised based on the asset condition score. The Environment Agency's Flood Map for Planning (Rivers and Sea) - Water Storage Areas, Flood Warning Areas and Flood Alert Areas datasets are also shown.
Working with Natural Processes (WwNP)	This layer displays the Environment Agency's Working With Natural Processes (WwNP) layers.
Risk of Flooding from Rivers and Sea (RoFRS)	This layer displays the Environment Agency's Risk of Flooding from Rivers and Sea (RoFRS) dataset.
Risk of Flooding from Surface Water (RoFSW)	This layer displays the Environment Agency's Risk of Flooding from Surface Water (RoFSW) dataset. The low

Layer name	Explanation
	risk flood extent can be used as a proxy for the medium risk plus climate change flood extent.
Groundwater Emergence	This layer displays JBA's Groundwater Emergency Map.
Bledington Brook 2012	This layer displays the modelled flood outlines from the Bledington Brook 2012 model*.
Churn (Baunton to Siddington) 2011	This layer displays the modelled flood outlines from the Churn (Baunton to Siddington) 2011 model*.
Daglingworth Stream FRA 2016	This layer displays the modelled flood outlines from the Daglingworth Stream FRA 2016 model*.
Windrush (Bourton-on-the-Water) 2014	This layer displays the modelled flood outlines from the Windrush (Bourton-on-the-Water) 2014 model*.
Thames (MRL to St Johns) 2014	This layer displays the modelled flood outlines from the Thames (MRL to St Johns) 2014 model*.



* In the legend of the modelled flood outline layers, Q100, Q100 + CC43 etc. refers to the fluvial 100-year and fluvial 100-year plus 43% climate change events. In hydrology, Q used to represent flow, so Q100 means the flow during a 100-year event.

Carbon Footprint

The format of this report is optimised for reading digitally in pdf format. Paper consumption produces substantial carbon emissions and other environmental impacts through the extraction, production and transportation of paper. Printing also generates emissions and impacts from the manufacture of printers and inks and from the energy used to power a printer. Please consider the environment before printing.

Accessibility

JBA aims to align with governmental guidelines on accessible documents and WCAG 2.2 AA standards, so that most people can read this document without having to employ special adaptation measures. This document is also optimised for use with assistive technology, such as screen reading software.

SFRA	Strategic Flood Risk Assessment

1 Introduction

The Flood Risk and Coastal Change Planning Practice Guidance (FRCC-PPG) states that local planning authorities (LPA) should identify and assess, in their Strategic Flood Risk Assessments (SFRA), areas of functional floodplain and its boundaries accordingly, in agreement with the Environment Agency (EA). The functional floodplain (Flood Zone 3b) extent for Cotswold has therefore been updated and delineated as part of this Level 1 SFRA using the most up-to-date data available from the EA. The previous functional floodplain extent, delineated for the 2023 Cotswold Level 1 SFRA, has been superseded by more up-to-date modelled outputs, and new national flood mapping, as updated by the EA as part of the Flood Map for Planning updates. This methodology note explains the delineation process.

Note that the functional floodplain (Flood Zone 3b) is not included in the Flood Map for Planning. Although the EA now publishes the Rivers and Sea 3.3% defended extent, the functional floodplain should also account for other available data indicating land where water has to flow, or which stores water, in times of flooding. This SFRA therefore sub-divides Flood Zone 3 into Flood Zone 3a and Flood Zone 3b (functional floodplain). This distinction is for the use of the LPA and developers in development planning and management. Flood Zone 3a is Flood Zone 3 of the Flood Map for Planning that is not functional floodplain.

The LPA, Lead Local Flood Authority (LLFA) and the EA must all agree on the extent of the functional floodplain outline and the methodology used. The identification of functional floodplain should take account of local circumstances and not be defined solely on rigid probability parameters. The local knowledge of the LPA, LLFA and EA is therefore crucial in defining the functional floodplain as robustly and realistically as possible.

2 Functional floodplain definition

The EA's SFRA guidance (2025) states that the Level 1 SFRA should include the functional floodplain extent on maps with a detailed explanation of how the functional floodplain was defined. This methodology note provides this definition.

The guidance states that functional floodplain should show land that:

"Would flood from rivers or the sea with an annual probability of 1 in 30 (3.3%), with flood risk management features and structures operating effectively

Would normally form the river channel

Is designed to flood (such as flood attenuation schemes), even if it would only flood in more extreme events (such as 0.1% annual probability)"

How to Prepare an SFRA, Environment Agency, 2025

Regarding the impact of defences on the functional floodplain:

"In any modelling used to identify the functional floodplain, include existing defences and other flood risk management features and structures.

You may not need to designate the functional floodplain in locations where evidence shows flooding would be prevented by existing flood defences, flood risk management features or structures, or buildings"

How to Prepare an SFRA, Environment Agency, 2025

Regarding the impact of existing buildings on the functional floodplain:

"The footprints of existing buildings may be removed from functional floodplain extents. However, it may be simpler to include existing buildings and use local policies to control the redevelopment or changes of use that may be acceptable.

Use local policies or guidance to explain the approach you will take when buildings are demolished in functional floodplain. It may be reasonable to assume that sites revert to functional floodplain when buildings have been demolished for more than a year."

How to Prepare an SFRA, Environment Agency, 2025

If there is not enough detailed modelled information available to identify the functional floodplain, this should be made clear on the Level 1 SFRA maps to ensure risk isn't underestimated. In these areas, site-specific flood risk assessments should determine whether a site is affected by functional floodplain through additional modelling. If sites are proposed for development in such areas in the local plan, a Level 2 SFRA will be required to robustly map the functional floodplain extent.

3 Available datasets

3.1 EA detailed flood modelling

Areas within the modelled defended 3.3% Annual Exceedance Probability (AEP) extent should be considered as functional floodplain, which is defined as land having a 3.3% or greater annual probability of flooding with consideration of flood defence infrastructure.

Based on the guidance outlined in Section 2, the modelled flood outlines (MFO) listed in Table 3-1 below were provided by the EA to assist in the update of the 2023 functional floodplain outline. Where possible, direct modelling of the present day 3.3% AEP defended event has been used to delineate the functional floodplain in areas where there are up to date and finalised models. Where the present day 3.3% AEP defended event was not included within a detailed model, the next available defended event was used where available, as agreed with the EA.

The Daglingworth Stream (2016) model was provided, however the EA have advised this has now been superseded by the Flood Map for Planning. Therefore, this watercourse has been represented by the EA Rivers and Sea 3.3% defended flood risk extent in the functional floodplain.

Table 3-1: Available EA detailed models and modelled flood outlines

Model	Year	Annual Exceedance Probability	Defended?
Churn (Baunton to Siddington)	2011	3.3%	Yes
Thames (St Johns to Shifford)	2011	1%	Yes
Bledlington Brook	2012	1%	Yes
Thames (MRL to St Johns)	2014	2%	Yes
Windrush (Bourton-on-the-Water)	2018	2%	Yes
Where no defences exist, it indicates that there are no defences present along the watercourse. The defended event would be used in preference to the undefended event where available.			

3.2 EA Rivers and Sea 3.3% defended flood risk extent

The EA has published the Rivers and Sea 3.3% defended event extent for both present day and accounting for climate change. The defended scenario considers the presence of flood defences and assumes that they operate in the way they were designed to function. This scenario does not include any asset failure or removal scenarios.

The River and Sea 3.3% defended event extent has been used to represent the functional floodplain in areas where no suitable detailed modelling is available, as agreed with the EA.

3.3 Additional datasets

- EA Statutory Main River Map
  - To define areas of the functional floodplain that are designated as main river by the EA.
  - This dataset includes both open channel and culverted watercourses.
  - The dataset has been buffered by 8m either side of the channel line to broadly represent the width of the river across the area. It is recognised that this is an approximation. Policy relating to functional floodplain applies to the actual location of the river and not the buffered channel within the functional floodplain mapping in locations where they may differ.
- EA Flood Map for Planning - Water Storage Areas
  - To define areas of land which store water during a flood event.
  - Water Storage Areas should be consulted on for appropriateness with the EA.
  - The Water Storage Area dataset has been reviewed, and it was found that there is one EA defined Water Storage Area within Cotswold, located in Dowdeswell Nature Reserve.

4 Functional floodplain delineation methodology

4.1 GIS methodology

The below steps summarise the methodology used to delineate the functional floodplain:

- All EA detailed models (Table 3-1) supplied for consideration within this assessment were included within the functional floodplain extent where appropriate outputs were available.
- The EA Rivers and Sea 3.3% defended extent was used to define the functional floodplain in areas not subject to detailed modelling.
- All main river channels, including culverted sections of river, were added to the functional floodplain outline. This is required by the EA SFRA guidance to define areas that would normally form the river channel and where water has to flow in times of flooding. At a local scale, this may lead to some inaccuracies, especially in hydrologically complex areas where there are man-made interactions or interactions with other bodies of water such as reservoirs or canals.
- Recognising this, functional floodplain policy relates to the river and not the mapping where they are different. For main rivers, the functional floodplain should include for an 8m buffer either side of the channel to allow for access to the channel for maintenance and to avoid the requirement for environmental permits.
- Each polygon within the functional floodplain GIS outline has been attributed with the source dataset so it is possible to easily ascertain which dataset each polygon within the outline is based on.
- Checks on the geometry of the functional floodplain outline were carried out to ensure geometric correctness in GIS.

4.2 Methodology hierarchy

The hierarchy of methods used to define the functional floodplain is outlined below:

1. Use of the 3.3% AEP defended event (or next available defended event) MFO's where available in detailed local models
2. Use of the or next available defended event MFO's where available in detailed local models
3. Use of the EA Rivers and Sea 3.3% defended flood risk extent (downloaded December 2025)
4. Use of the EA Water Storage areas dataset
5. Use of the buffered EA Statutory Main River Map (8 metres either side of the channel).

Table 4-1 provides a description of each source attribute within the functional floodplain dataset.

Table 4-1: Functional floodplain source attribute definitions

Source attribute	Description
Churn (Baunton to Siddington) 2011 3.3% AEP Defended Extent	Detailed model output from the Churn (Baunton to Siddington) 2011 model.
Thames (St Johns to Shifford) 2011 1% AEP Defended Extent	Detailed model output from the Thames (St Johns to Shifford) 2011 model.
Bledlington Brook 2012 1% AEP Defended Extent	Detailed model output from the Bledlington Brook 2012 model.
Thames (MRL to St Johns) 2014 2% AEP Defended Extent	Detailed model output from the Thames (MRL to St Johns) 2014 model.
Windrush (Bourton-on-the-Water) 2018 2% AEP Defended Extent	Detailed model output from the Windrush (Bourton-on-the-Water) 2018 model.
EA Rivers and Sea 3.3% AEP Defended Extent	Areas of the functional floodplain defined by the EA's Rivers and Sea 3.3% defended flood risk extent dataset. This has only been used in areas where suitable detailed modelling is unavailable.
EA Flood Storage Areas	Areas of the functional floodplain defined by the EA Water Storage Area dataset.
EA Main River	8m buffered polygon of the Statutory Main River map indicating areas of fluvial river channel.

4.3 Culverted rivers

The EA Statutory Main River Map includes a high-level and approximate representation of culverted sections of watercourses. These sections are subject to a higher degree of uncertainty as it is more challenging to identify and verify below ground alignments. Within culverted sections, functional floodplain policy relates to the actual confirmed alignment of culverted sections, as identified through site investigation, rather than the alignment shown in the functional floodplain where it differs. The EA or LLFA may be able to advise on the culverted sections in the functional floodplain for main rivers and ordinary watercourses respectively.

It is recommended that investigations of onsite culverted watercourses to establish their full route, condition and capacity are carried out through a site-specific flood risk assessment and incorporated into the surface water sustainable drainage strategy, as required.

4.4 Waterbodies

The EA Statutory Main River Map contains open river channels and culverted sections of channel only and do not include other types of waterbody such as reservoirs, canals, lakes or ponds. Waterbodies are only included in the delineated functional floodplain where they are present within the EA Rivers and Sea 3.3% defended extent or detailed model outputs. There is no reliable dataset to identify waterbodies that can be used to delineate the functional floodplain.

4.5 Unmodelled watercourses

The functional floodplain extent does not map the flood risk from unmodelled watercourses. Watercourses have only been included in the functional floodplain extent where they have been designated as main river by the EA. Functional floodplain policy applies to all watercourses within the Cotswold authority area. Site-specific FRA's could consider modelling the 3.3% AEP event to define the functional floodplain for sites situated within the vicinity of an unmodelled watercourse. As a conservative proxy, the 1% AEP surface water event could be considered as functional floodplain in the absence of suitable detailed modelling.

4.6 Buildings and infrastructure

Buildings and infrastructure within the functional floodplain have been retained within the outline, i.e. they have not been removed on the assumption that floodwater ingress may occur. The EA's SFRA guidance states that you do not need to designate functional floodplain in locations where evidence shows flooding would be prevented by existing buildings, however it is considered simpler to include existing buildings and use local policies to control the redevelopment or changes of use that may be acceptable. Such policies could include no increase in development footprint for buildings within the functional floodplain, converting disused buildings to greenspace or the installation of resilience measures.

4.7 Dry islands

Areas of higher land shown as 'dry islands' within the functional floodplain should also be considered undevelopable, where safe access and escape routes are unachievable. The only exception to this is for water compatible or essential infrastructure uses. It has been assumed that any 'dry islands' within the functional floodplain outlines should be considered as functional floodplain where these areas are located within Flood Zone 3 of the EA's Flood Map for Planning.

5 Future functional floodplain

In addition to the present day functional floodplain outline, a future functional floodplain outline, as advised in EA guidance, has been delineated. Table 5-1outlines the available climate change model outputs that have been used to delineate the future functional floodplain.

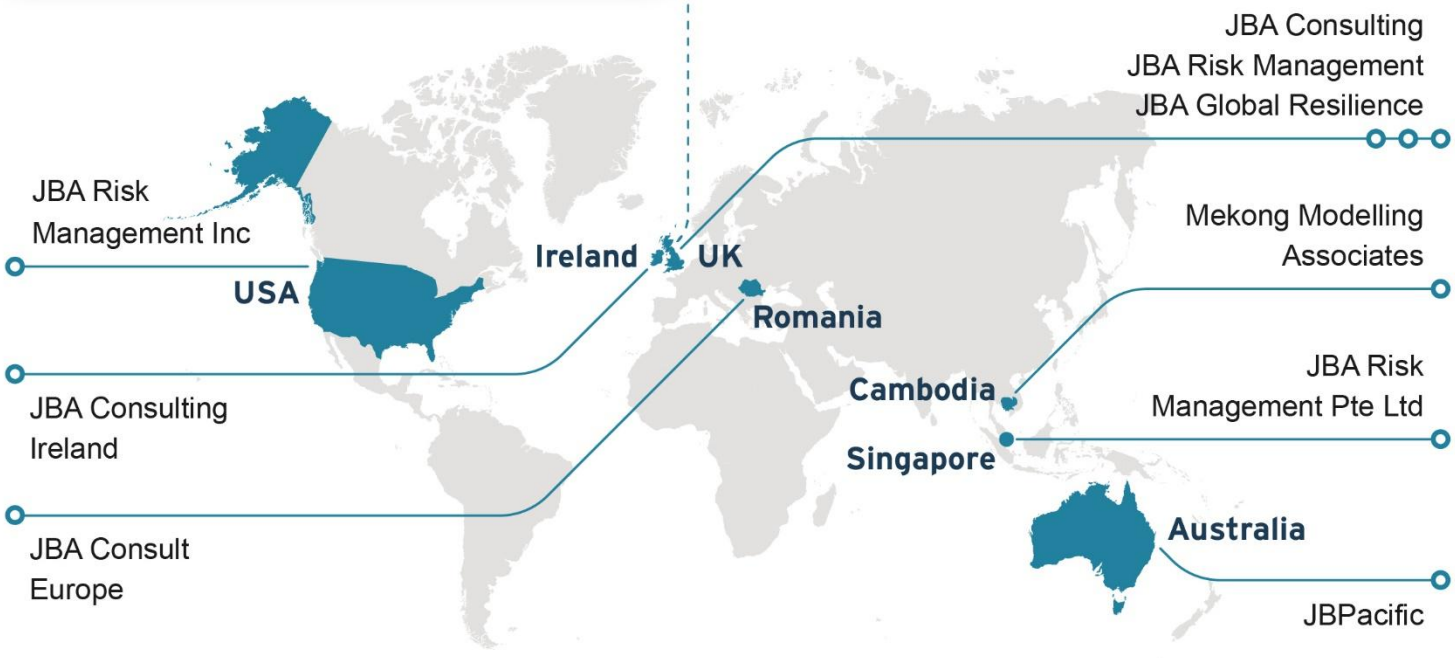
Table 5-1: EA detailed model climate change allowances

Model	Year	Annual Exceedance Probability	Climate change allowance
Churn (Baunton to Siddington)	2011	3.3%	30%
Thames (MRL to St Johns)	2014	2%	30%

Suitable outputs were only available for two models. No suitable 3.3% AEP defended event climate change modelling was available within the other supplied EA detailed models, therefore the Rivers and Sea 3.3% defended event plus climate change extent has been used to represent the future functional floodplain in all other areas. The climate change allowances used to produce this dataset are based on the latest UK Climate Projections (UKCP18) from the Met Office, using the Representative Concentration Pathway (RCP) 8.5.

The future functional floodplain indicates areas likely to be within the functional floodplain in the future. The future functional floodplain extent should not be included in the functional floodplain designation and is not included in any policy for planning decisions.

6 Conclusions



The draft functional floodplain outline should be assessed and agreed upon by the LPA, LLFA and the EA. The extent of both the present day and future functional floodplain outlines produced from this Level 1 SFRA should always be assessed in greater detail where any more detailed study such as a Level 2 SFRA or site-specific FRA are undertaken. The future functional floodplain extent should not be included in the functional floodplain designation as it is not included in national policy.

Key

Flood Zone 3a
Flood Zone 3a / Functional Floodplain plus climate change / Flood Zone 3a plus climate
Flood Zone 2
Flood Zone 2 & Surface Water
Flood Zone 1

The colour coding shows the highest risk element of the flood zone that is present on site and is not in itself an indication of whether the site should or shouldn't be developed for flooding reason

Main Table

Site Reference	Site Name	Proposed Use	Area (ha)	Fluvial Flood Zone Coverage: Flood Zone 1 Area (ha)	%	Flood Zone 2 Area (ha)	%	Flood Zone 3a Area (ha)	%	Flood Zone 3b Area (ha)	%	Risk of Flooding from Surface Water: Very Low Risk (less than 1 in 1000 year) Area (ha)	%	Low Risk (1 in 1000 year outline) Area (ha)	%	Medium Risk (1 in 100 year outline) Area (ha)	%	High Risk (1 in 30 year outline) Area (ha)	%	Risk of Flooding from Fluvial Climate Change: Flood Zones + climate change (additional risk) Area (ha)	%	Modelled undefended 1% AEP + central climate change allowance (additional risk) Area (ha)	%	Functional floodplain + climate change (additional risk) Area (ha)	%	Risk of Flooding from Surface Water Climate Change: Medium Risk plus Climate Change (using Low Risk as a proxy) Area (ha)	%	Reservoir Flooding: Reservoir Flood Maps Dry Day Extent Area (ha)	%	Unmodelled watercourses within 15m of site in Flood Zone 1?	Risk of groundwater emergence (JBA Groundwater Map)	Flood Risk Vulnerability Classification (NPPF)	Level 1 Strategic Recommendation (see SFRA Report)	Development Considerations	Recommended Next Steps	Council Decision on Site for Local Plan	JBA Comments on Council Review
15/00306/FUL	Land north of Cirencester Road, GL8 8RA	Allocation	3.060	3.060	100.000	0.000	0.000	0.000	0.000	0.000	0.000	1.430	74.576	0.325	14.141	0.040	1.979	0.071	1.493	0.000	0.000	0.000	0.000	0.000	0.000	0.325	18.111	0.000	0.000	No	There is a risk of emergence to subsurface assets but surface manifestation of groundwater is unlikely.	More Vulnerable	Strategic Recommendation B				
15/01567/OUT	Land at Broadway Farm	Housing	3.349	3.349	100.000	0.000	0.000	0.000	0.000	0.000	0.000	3.260	97.342	0.045	1.182	0.010	0.291	0.040	1.185	0.000	0.000	0.000	0.000	0.000	0.000	0.045	1.182	0.000	0.000	No	There is a risk of groundwater emergence to both surface and subsurface assets. There is the possibility of groundwater emergence at the surface locally.	More Vulnerable	Strategic Recommendation B	Level 2 SFRA required due to high and/or medium risk from surface water sources. Site is at risk of groundwater emergence.	Carry out Level 2 SFRA to further assess risk. However, for sites with only a small area at risk, depending on the spatial variability of risk, it may be possible to address risk through policy wording.	If a site allocation was pursued, a Level 2 SFRA would be undertaken to confirm surface water flood risk. If this site was allocated in the Local Plan, the site allocation policy would specify that built development can avoid the risk area.	Risk at this site is nominal. I'd suggest this site does not require a L2 assessment and simple policy wording that development can avoid the risk area and that a drainage strategy at the FRA stage should confirm risk and design.
16/00054/OUT	The Steadings	Housing	120.383	120.383	100.000	0.000	0.000	0.000	0.000	0.000	0.000	117.413	97.538	1.246	1.038	0.281	0.217	1.361	1.146	0.000	0.000	0.000	0.000	0.000	0.000	1.246	1.038	0.000	0.000	No	There is a risk of groundwater emergence to both surface and subsurface assets. Flood Zone 1 + Surface Water
Flood Zone 1

The colour coding shows the highest risk element of the flood zone that is present on site and is not in itself an indication of whether the site should or shouldn't be developed for flooding reason

Main Table

				Fluvial Flood Zone Coverage								Risk of Flooding from Surface Water						Risk of Flooding from Fluvial Climate Change						Risk of Flooding from Surface Water Climate Change		Reservoir Flooding		Unmodelled watercourses within 10bn of site in Flood Zone 1?	Risk of groundwater emergence (JBA Groundwater Map)	Flood Risk Vulnerability Classification (NPPF)	Level 1 Strategic Recommendation (see SFRA Report)	Development Considerations	Recommended Next Steps	Council Decision on Site for Local Plan	JBA Comments on Council Review
				Flood Zone 1		Flood Zone 2		Flood Zone 3a		Flood Zone 3b		Very Low Risk (less than 1 in 1000 year)		Low Risk (1 in 1000 year outline)		Medium Risk (1 in 100 year outline)		High Risk (1 in 30 year outline)		Flood Zones + climate change (additional risk)		Modelled undefended 1% AEP + central climate change allowance (additional risk)		Functional floodplain + climate change (additional risk)		Medium Risk plus Climate Change (using Low Risk as a proxy)		Reservoir Flood Maps Dry Day Extent									
Site Reference	Site Name	Proposed Use	Area (ha)	Area (ha)	%	Area (ha)	%	Area (ha)	%	Area (ha)	%	Area (ha)	%	Area (ha)	%	Area (ha)	%	Area (ha)	%	Area (ha)	%	Area (ha)	%	Area (ha)	%	Area (ha)	%	Area (ha)	%								
DA5	Land at Rookhow Farm	Housing	4.926	4.926	100.000	0.000	0.000	0.000	0.000	0.000	0.000	4.720	95.804	0.085	1.698	0.045	0.815	0.083	1.683	0.000	0.000	0.000	0.000	0.000	0.000	0.000	0.000	0.083	1.698	0.000	0.000	No	There is a risk of groundwater emergence to both surface and subsurface assets. There is the possibility of groundwater emergence at the surface locally.	More Vulnerable	Strategic Recommendation B	Level 2 SFRA required due to high and/or medium risk from surface water sources. Site is at risk of groundwater emergence.	Carry out Level 2 SFRA to further assess risk. However, for sites with only a small area at risk, depending on the spatial variability of risk, it may be possible to address risk through policy wording.	If a site allocation was pursued, a Level 2 SFRA would be undertaken to confirm surface water flood risk. If this site was allocated in the Local Plan, the site allocation policy would specify that built development can avoid the risk area.	Risk at this site is nominal. I'd suggest this site does not require a L2 assessment and simple policy wording that development can avoid the risk area and that a drainage strategy at the FRA stage should confirm risk and design.

The unmodelled watercourse maybe quantified through a site-specific FRA.	Agreed. An unmodelled watercourse must be modelled and risk quantified at the FRA stage
SK1A	Land west of Cotswold Business Village, south of London Road	Housing	10.599	10.159	96.209	0.254	4.309	0.254	4.309	0.361	3.055	10.531	99.342	0.041	0.442	0.006	0.054	0.015	0.144	0.000	0.000	0.000	0.000	0.000	0.000	0.041	0.442	0.000	0.000	N/A	There is a risk of groundwater emergence to both surface and subsurface assets. Groundwater may emerge at significant rates and has the capacity to flow overland and/or pond within any topographic low spots.	More Vulnerable	Strategic Recommendation A	Recommend for withdrawal if built development cannot avoid Flood Zone 3b. Site is at risk of groundwater emergence.	Development not permitted in Flood Zone 3b. Check whether site boundary can be redrawn or whether it may be possible to incorporate functional floodplain into site layout and design as open greenspace. This may be possible for sites where percentage area of functional floodplain is lower. Site should be withdrawn if these criteria cannot be met. A Level 2 SFRA may be required to inform this process.	Noted. If a site allocation was pursued, a Level 2 SFRA would be required to inform this process. Withdraw if recommended criteria can not be met.	Risk is nominal and isolated to one floodplain. I'd suggest this site does not require a L2 assessment and simple policy wording that development can avoid the risk area and that a FRA will be required to confirm risk and design.

More Vulnerable	Strategic Recommendation D	Development could be allocated on flood risk grounds based on the evidence of this Level 1 SFRA.	LPA to make decision on allocation.	Does not require a SFRA Level 2 or a specific requirement for a Flood Risk Assessment in the Local Plan.	Agreed.
RH08	Land adjacent Fall Foster, Ashbocking Road	Housing	0.599	0.599	100.000	0.000	0.000	0.000	0.000	0.000	0.000	0.589	98.375	0.008	1.338	0.002	0.326	0.000	0.000	0.000	0.000	0.000	0.000	0.000	0.000	0.008	1.338	0.000	0.000	No	Groundwater emergence is not likely.	More Vulnerable	Strategic Recommendation B	Level 2 SFRA required due to high and/or medium risk from surface water sources.			
SC11A	Land south of Soho View	Housing	4.752	4.752	99.917	0.004	0.088	0.000	0.000	0.000	0.000	4.745	99.839	0.025	0.539	0.012	0.253	0.000	0.000	0.000	0.000	0.000	0.000	0.000	0.000	0.025	0.539	0.000	0.000	N/A	There is a risk of groundwater emergence to both surface and subsurface assets. Groundwater may emerge at significant rates and has the capacity to flow overland and/or pond within any topographic low spots.	More Vulnerable	Strategic Recommendation B	Level 2 SFRA required due to future high risk from fluvial sources, based on Environment Agency detailed modelling. Exception test required. Site is at risk of groundwater emergence.	Carry out Level 2 SFRA to further assess risk and the likelihood of the site passing the exception test. However, for sites with only a small area at risk, depending on the spatial variability of risk, it may be possible to address risk through policy wording.	If a site allocation was pursued, a Level 2 SFRA would be undertaken to further assess risk. As development is not permitted in Flood Zone 3b, Check whether site boundary can be redrawn or sphere of influence. Through Level 2 SFRA, if this site was allocated in the Local Plan, the site allocation policy would specify that built development can avoid the risk area.	Risk is nominal and isolated to one floodplain. I'd suggest this site does not require a L2 assessment and simple policy wording that development can avoid the risk area and that a FRA will be required to confirm risk and design.
RH10	Land south of Soho View	Housing	5.252	5.252	96.407	0.027	0.514	0.000	0.000	0.000	0.000	5.211	99.240	0.041	0.781	0.000	0.000	0.000	0.000	0.000	0.000	0.000	0.000	0.000	0.000	0.041	0.781	0.000	0.000	N/A	There is a risk of groundwater emergence to both surface and subsurface assets. Groundwater may emerge at significant rates and has the capacity to flow overland and/or pond within any topographic low spots.	More Vulnerable	Strategic Recommendation B	Recommend for withdrawal if built development cannot avoid Flood Zone 3b. Site is at risk of groundwater emergence.	Carry out Level 2 SFRA to further assess risk. However, for sites with only a small area at risk, depending on the spatial variability of risk, it may be possible to address risk through policy wording.	If a site allocation was pursued, a Level 2 SFRA would be undertaken to confirm surface water flood risk. If this site was allocated in the Local Plan, the site allocation policy would specify that built development can avoid the risk area. The unmodelled watercourse maybe quantified through a site-specific FRA.	Due to nominal risk isolated to one floodplain I'd suggest this site does not require a L2 assessment and simple policy wording that development can avoid the risk area and that a FRA will be required to confirm risk and design. Noted. If a site allocation was pursued, a Level 2 SFRA would be required to inform this decision. Unless evidence of unmodelled criteria can be met. A Level 2 SFRA may be required to inform this decision.

Flood Zone 3b
Flood Zone 3a / Functional Floodplain + climate change
Flood Zone 3a climate change
Flood Zone 3a
Flood Zone 2
Flood Zone 1 + Surface Water
Flood Zone 1

The colour coding shows the highest risk element of the flood zone that is present on site and is not in itself an indication of whether the site should or shouldn't be developed for flooding reason

Main Table

				Fluvial Flood Zone Coverage								Risk of Flooding from Surface Water								Risk of Flooding from Fluvial Climate Change								Risk of Flooding from Surface Water: Climate Change		Reservoir Flooding					
				Flood Zone 1		Flood Zone 2		Flood Zone 3a		Flood Zone 3b		Very Low Risk (less than 1 in 1000 year)		Low Risk (1 in 1000 year outline)		Medium Risk (1 in 100 year outline)		High Risk (1 in 30 year outline)		Flood Zones + climate change (additional risk)		Modelled undefended 1% AEP + central climate change allowance (additional risk)		Functional floodplain + climate change (additional risk)		Medium Risk plus Climate Change (using Low Risk as a proxy)		Reservoir Flood Maps Dry Day Extent		Unmodelled watercourses within 10m of site in Flood Zone 1?	Risk of groundwater emergence (JBA Groundwater Map)	Flood Risk Vulnerability Classification (NPPF)	Level 1 Strategic Recommendation (see SFRA Report)	Development Considerations	Recommended Next Steps	Council Decision on Site for Local Plan	JBA Comments on Council Review
Site Reference	Site Name	Proposed Use	Area (ha)	Area (ha)	%	Area (ha)	%	Area (ha)	%	Area (ha)	%	Area (ha)	%	Area (ha)	%	Area (ha)	%	Area (ha)	%	Area (ha)	%	Area (ha)	%	Area (ha)	%	Area (ha)	%	Area (ha)	%	Area (ha)	%								
MK21	Land east of Broad Marston Road (north of Glass House Road)	Housing	10.739	10.739	100.000	0.000	0.000	0.000	0.000	0.000	0.000	6.889	63.792	1.618	14.918	0.999	9.046	1.432	13.262	0.000	0.000	0.000	0.000	0.000	0.000	0.000	0.000	1.610	14.910	0.000	0.000	Yes	No risk.	More Vulnerable	Strategic Recommendation B	Level 2 SFRA required due to high and/or medium risk from surface water sources. Unmodelled watercourse should be investigated.	Carry out Level 2 SFRA to further assess risk. However, for sites with only a small area at risk, depending on the spatial variability of risk, it may be possible to address risk through policy wording.	If a site allocation was pursued, a Level 2 SFRA would be undertaken to confirm surface water flood risk. If this site was allocated in the Local Plan, the site allocation policy would specify that built development can avoid the risk area. The unmodelled watercourse maybe quantified through a site specific FRA.	Future risk at this site could be significant. I'd suggest this site may require a L2 assessment to assess risk in further detail. Agree unmodelled watercourse should be assessed at FRA stage.
MK22	Land west of Stratford Road (opposite allotments)	Housing	7.997	7.997	100.000	0.000	0.000	0.000	0.000	0.000	0.000	6.934	87.146	0.821	10.312	0.072	0.905	0.130	1.639	0.000	0.000	0.000	0.000	0.000	0.000	0.000	0.000	0.821	10.312	0.000	0.000	Yes	No risk. There is the possibility of groundwater emergence at the surface locally.	More Vulnerable	Strategic Recommendation B	Level 2 SFRA required due to future surface water risk (using the low risk surface water extent as a proxy for the medium risk plus climate change extent). Site is at risk of groundwater emergence.	Carry out Level 2 SFRA to further assess risk. However, for sites with only a small area at risk, depending on the spatial variability of risk, it may be possible to address risk through policy wording.	If a site allocation was pursued, a Level 2 SFRA would be undertaken to confirm surface water flood risk. If this site was allocated in the Local Plan, the site allocation policy would specify that built development can avoid the risk area.	Risk at this site is minimal. I'd suggest this site does not require a L2 assessment and simple policy wording that development can avoid the risk area and that a drainage strategy at the FRA stage should confirm risk and design.
Other	Force Farm	Employment	129.743	129.743	99.264	0.230	0.177	0.000	0.000	0.518	0.400	124.126	95.670	2.522	1.927	0.730	0.558	2.277	1.755	0.273	0.207	0.000	0.000	0.000	0.000	0.000	0.000	2.522	1.927	0.000	0.000	N/A	There is a risk of groundwater emergence to both surface and subsurface assets. Groundwater may emerge at significant rates and has the capacity to flow overland and/or pond within any topographic low points.	Less Vulnerable	Strategic Recommendation A	Development not permitted in Flood Zone 3b. Check whether site boundary can be redrawn or modified it may be possible to incorporate functional floodplain into site layout and design as open greenspace. This may be possible for sites where percentage area of functional floodplain is low. Site should be withdrawn if those criteria cannot be met. A Level 2 SFRA may be required to confirm risk and design.	Recommend for withdrawal if built development cannot avoid Flood Zone 3b. Site is at risk of groundwater emergence.	Noted. If a site allocation was pursued, a more detailed investigation through a Level 2 SFRA would be undertaken to inform this process. Withdraw if recommendation criteria can not be met.	Risk is nominal and isolated to one floodplain. I'd suggest this site does not require a L2 assessment and simple policy wording that development can avoid the risk area and that a drainage strategy at the FRA stage should confirm risk and design.

Carbon Footprint

The format of this report is optimised for reading digitally in pdf format. Paper consumption produces substantial carbon emissions and other environmental impacts through the extraction, production and transportation of paper. Printing also generates emissions and impacts from the manufacture of printers and inks and from the energy used to power a printer. Please consider the environment before printing.

Accessibility

JBA aims to align with governmental guidelines on accessible documents and WCAG 2.2 AA standards, so that most people can read this document without having to employ special adaptation measures. This document is also optimised for use with assistive technology, such as screen reading software.

1 Local Plan Sites Assessment

Appendix E provides a strategic assessment of the suitability, relative to flood risk, of the sites to be considered for allocation in Cotswold District Council's (the Council) new Local Plan, summarising the outcomes of the screening assessment presented in Appendix E.

The information and guidance provided in this Appendix can be used by the Local Planning Authority (LPA) to inform the application of the Sequential Test in the allocation of sites in the new Local Plan, and the development management process.

The LPA must use the spreadsheet in Appendix D to record their decisions on how to take each site forward for allocation or whether to withdraw a site from allocation, based on the evidence and strategic recommendations provided. Recording decisions in the Sites Assessment Spreadsheet demonstrates that a sequential, sustainable approach to development and flood risk has been adopted.

The Council provided a GIS layer containing 173 potential development sites. In order to inform the Sequential Test for the allocation of development through the new Local Plan, this assessment entails a high-level GIS screening exercise overlaying the potential development sites against present day risk Flood Zones 1, 2, 3a and 3b (the functional floodplain), calculating the area of each site at risk. Flood Zones 1, 2 and 3 are sourced from the Environment Agency's (EA) latest version of the Flood Map for Planning, downloaded in December 2025 for this Level 1 SFRA. Flood Zone 3 is split into Flood Zone 3a and Flood Zone 3b (functional floodplain) as part of this Level 1 SFRA, as required by the National Planning Policy Framework (NPPF), 2025.

The impacts of climate change on fluvial risk have also been included in the sites screening process using the delineated future functional floodplain extent and available EA detailed modelling. Following consultation with the EA, it was agreed that the NaFRA2 Flood Map for Planning Flood Zones plus Climate Change would be used to represent fluvial climate change for watercourses with no suitable detailed climate change modelling. See Section 1.1.2 for details.

Surface water risk to assessed sites is analysed by way of the EA’s latest version of the national scale Risk of Flooding from Surface Water (RoFSW) dataset, downloaded in December 2025, developed as part of the NaFRA2 project. The EA states that this dataset is generally not suitable for property level assessment, instead it provides an estimate of flood risk to an area of land. The modelling method used does not provide information relating to when floodwater may be deep enough to start causing damage or disruption to homes, roads or other infrastructure.

The updated EA RoFSW climate change extents represent the 2050s central allowance. EA SFRA guidance states *'Check your long term flood risk includes a climate change scenario for surface water flooding (note the time horizon and climate change scenario for surface water fall short of what’s needed for planning so additional assessment will be needed)'*. At this Level 1 SFRA stage, the 0.1% AEP present day surface water flood event has been

considered as a proxy for the 1% AEP plus climate change surface water flood event, as consulted on with the EA. It is recommended that if the RoFSW map was updated to make the recommended climate change allowances available (see main report), that this site screening assessment is updated to reflect that.

It is important to consider that each individual site will require further investigation, following this assessment, as local circumstances may dictate the outcome of the strategic recommendation. Such local circumstances are discussed in Section 1.1. The outcomes of the site assessments are presented in the Sites Assessment Spreadsheet in Appendix D.

1.1 Screening of potential sites

This section of the report draws together the screening results included in Appendix D. The LPA should use the spreadsheet to assist them in carrying out the Sequential Test. If sites cannot be directed to areas of low flood risk, or where wider strategic objectives require development in areas identified through this Level 1 SFRA to be at medium or high risk from flooding now or in the future, then the LPA should consider the Flood Risk Vulnerability Classifications and Flood Zones in the NPPF. The LPA must consider whether a more detailed Level 2 SFRA (including for application of the Exception Test where applicable) will be required before finalising sites for allocation in the new Local Plan. Strategic recommendations are based on Tables 1 and 2 of the Flood Risk and Coastal Change Planning Practice Guidance (FRCC-PPG) (Paragraphs 077 - 079), and Annex 3 of the NPPF.

The decision-making process on site suitability should be transparent and information from this Level 1 SFRA should be used to justify decisions to allocate land in areas shown to be at high or medium risk of flooding, from any source, now or in the future.

The Sites Assessment Spreadsheet provides a breakdown of each site and the area (in hectares) and percentage coverage of fluvial and surface water flood zones. Fluvial Flood Zones 3b, 3a, 2 and 1 are considered in isolation. Any area of a site within the higher risk Flood Zone 3b that is also within Flood Zone 3a is excluded from Flood Zone 3a and any area within Flood Zone 3a is excluded from Flood Zone 2. This allows for the sequential assessment of risk at each site by addressing those sites at higher risk first. The effects of climate change on fluvial flood risk have been assessed additionally to existing risk. Table 1-1 and Table 1-2 show the proposed use of the sites and the number of sites within each fluvial flood zone and each surface water flood zone respectively.

Table 1-1: Number of sites at risk from fluvial flooding

Proposed use	Number of sites within each flood zone						
	Flood Zone 1*	**Flood Zone 2**	**Flood Zone 3a**	**Flood Zone 3b**	**FMfP Flood Zones plus Climate Change**	**Modelled undefended 1% AEP + central climate change**	**Future functional floodplain**
Housing	125	35	27	26	36	10	27
Employment	4	2	2	2	2	0	2
Mixed Use	4	1	0	0	1	0	0
Education	1	0	0	0	0	0	0
Car Park	0	1	1	1	1	0	1
Total	**134**	**39**	**30**	**29**	**40**	**10**	**30**

*Sites with 100% area within Flood Zone 1

Note: sites may be in more than one flood zone. In reality, a site in Flood Zone 3a will also be within Flood Zone 2.

Table 1-2: Number of sites at risk from surface water flooding

Proposed use	Number of sites within each surface water flood zone				
	Very low risk zone (less than 0.1% AEP)*	**Low risk zone (0.1% AEP)**	**Medium risk zone (1% AEP)**	**High risk zone (3.3% AEP)**	**Medium risk plus climate change zone (0.1% AEP as proxy)**
Housing	20	139	121	107	139
Employment	0	6	6	6	6
Mixed Use	0	5	5	5	5
Education	0	1	1	0	1
Car Park	0	1	1	1	1
Total	**20**	**152**	**134**	**119**	**152**

*Sites with 100% area within the very low risk zone

Note: sites may be in more than one surface water risk category. In reality, a site in the high risk category will also be in the medium and low risk categories.

1.1.1 Strategic recommendations

The strategic recommendations are intended to assist the LPA in carrying out the Sequential Test and to highlight those sites at greatest flood risk. They do not account for local circumstances, only that part of a site area falls within a flood risk area.

Table 1-3 shows the number of sites each strategic recommendation applies to:

- Strategic Recommendation A - recommend for withdrawal if built development cannot avoid Flood Zone 3b;
- Strategic Recommendation B - Level 2 SFRA required due to high and/or medium risk now or in the future. Exception Test required if site is at high and/or medium fluvial risk now or in the future, and categorised as more vulnerable or essential infrastructure;
- Strategic Recommendation C - progress to developer-led Flood Risk Assessment (FRA); and
- Strategic Recommendation D - development could be allocated on flood risk grounds based on the evidence of this Level 1 SFRA. LPA to make decision on allocation.

Table 1-3: Number of sites per strategic recommendation

Proposed use	Number of sites assigned to each strategic recommendation			
	A	**B**	**C**	**D**
Housing	26	116	13	5
Employment	2	4	0	0
Mixed Use	0	5	0	0
Education	0	1	0	0
Car Park	1	0	0	0
Total	**29**	**126**	**13**	**5**

It is important to note that each individual site will require further investigation before development is allocated, as local circumstances may dictate the outcome of the strategic recommendation. Such local circumstances may include the following:

- Flood depths, velocities, hazards will differ locally to each at risk site therefore modelled depth, hazard and velocity data should be assessed for the relevant flood event through a Level 2 SFRA;
- The RoFSW map is national scale and is not considered suitable for robustly identifying risk at the property level. For sites identified to be at medium or high risk from surface water based on the RoFSW, a proportionately more detailed assessment of surface water may reveal higher or lower risk to the site. The Lead Local Flood Authority (LLFA) should be consulted when considering development at such sites. The RoFSW map does not map flooding less than 0.075m (7.5cm)

in depth. Therefore, where the map may show no flooding, there may be shallow flooding up to a depth of 0.075m;

- Current surface water drainage infrastructure and sustainable drainage system (SuDS) suitability are likely to differ at each site considered to be at risk from surface water flooding. Further investigation may therefore be required for any site at high/medium surface water flood risk. The LLFA should require that planning applications must be accompanied by a drainage strategy appropriate to the level of risk, independent of the requirement for a site-specific FRA;
- If sites have planning permission but construction has not started, the SFRA will only be able to influence the design of the development e.g. finished floor levels;
- It may be possible at some sites to develop around the flood risk. Planners are best placed to make this judgement i.e. will the site still be deliverable if part of it needs to be retained to make space for floodwater? Yields may be impacted;
- Surrounding existing infrastructure may influence scope for layout redesign/removal of site footprints from risk;
- Some sites not currently shown to be at flood risk may be at residual risk through the failure of defences during a flood event or through blockage/failure of drainage assets such as culverts. Assessment may be required through a Level 2 SFRA;
- Safe and dry access and escape routes must exist at all times during a flood event for emergency response and evacuation. Emergency planners should be consulted and appropriate emergency plans put in place;
- Current land use. A number of sites included in the assessment are likely to be brownfield containing existing development structures, thus the existing development structure and footprint should be considered insofar that additional development should not lead to increased flood risk; and
- Existing planning permissions may exist on some sites where the EA may have already passed comment and/or agreed to appropriate remedial works concerning flood risk. Previous flood risk investigations/FRAs may already have been carried out at some sites. The LPA should be consulted.

1.1.1.1 Strategic Recommendation A - recommend for withdrawal if built development cannot avoid Flood Zone 3b

Strategic Recommendation A applies to any site where the following criteria is true:

- Any proportion of the site area is within the functional floodplain. The FRCC-PPG flood risk vulnerability and flood zone 'incompatibility' table (Table 2) states that only water compatible uses and essential infrastructure could be permitted in the functional floodplain, though any essential infrastructure must pass the Exception Test and water compatible uses must be designed and constructed to remain operational and safe for users in times of flood; must result in no net loss of floodplain storage; and must not impede water flows and not increase flood risk elsewhere. Development should not be permitted for any proportion of sites within the highly, more, or less vulnerable categories that fall within the functional floodplain.

It is important to state that it may still be possible to deliver a site that has been recommended for withdrawal from allocation upon more detailed investigation through a Level 2 SFRA and subsequent updates of the Flood Zone 3b outline through more detailed modelling, if applicable.

Depending on local circumstances, if it is not possible to remove the developable area from Flood Zone 3b to a lower risk zone then the site should not be allocated or permitted.

29 of the 173 potential development sites have been recommended for withdrawal if built development cannot avoid the functional floodplain.

Any area within Flood Zone 3b should be left as or converted to open green space. For smaller sites, this approach may be challenging to achieve compared to larger sites or strategic sites where there may be enough space to limit the impact through effective flood storage or blue green infrastructure. If this is not possible, the site should be withdrawn.

1.1.1.2 Strategic Recommendation B - Level 2 SFRA required due to high and/or medium risk now or in the future. The Exception Test may be required.

Strategic Recommendation B applies to any site where the following criteria is true:

- Any part of a site is within Flood Zone 3a (high risk)
- Any part of a site is within Flood Zone 2 (medium risk)
- Any part of a site is at future fluvial risk (based on the future functional floodplain extent, modelled undefended 1% AEP + 35% CC extent or the EA Flood Map for Planning Flood Zones plus Climate Change Extent)
- Any part of a site is within the high or medium risk surface water flood zones
- Any part of a site is within the medium risk surface water plus climate change extent (using the low risk surface water extent as a conservative proxy)

NOTE: the Exception Test only applies to sites at fluvial flood risk, depending on the vulnerability of the site use (see Table 2 of the FRCC-PPG). Less vulnerable uses of land do not require the Exception Test but may still require a Level 2 SFRA to show whether they can be safe for the lifetime of development.

According to diagrams 1, 2 and 3 and Table 2 of the FRCC-PPG, any site at high or medium flood risk now and in the future should be assessed in more detail through a Level 2 SFRA. Strategic Recommendation B applies to sites where a Level 2 SFRA is required, unless the LPA can state in local plan policy that built development can avoid the risk area. This may be applicable where the proportion of a site at risk is small or where the risk area is spatially isolated to specific areas of a site. A Level 2 SFRA Scoping Assessment will assist in identifying a final list of sites requiring a Level 2 assessment.

Sites included within Strategic Recommendation B may be subject to application of the Exception Test through a Level 2 SFRA i.e. more vulnerable sites in Flood Zone 3a. However, the Sequential Test should have been passed first, using this Level 1 SFRA, before the Exception Test is applied. The LPA should always attempt to avoid risk areas where possible.

Strategic Recommendation B applies to 126 of the 173 potential development sites assessed. 110 of these sites require a Level 2 SFRA to further inform on surface water flood risk only. A Level 2 Scoping Assessment will be required to confirm sites required for Level 2 assessment.

1.1.1.3 Strategic Recommendation C - allocate and progress to developer-led FRA

Strategic Recommendation C applies to any site where the following criteria is true:

- 100% within Flood Zone 1 (low risk) but with unmodelled watercourses on or within 10 metres of the site boundary
- 100% within Flood Zone 1 (low risk) and not shown to be at risk from high or medium surface water flooding, but is greater than 1 hectare in area
- 100% within Flood Zone 1 (low risk) and shown to be at low risk from surface water flooding, but is greater than 1 hectare in area
- 100% within Flood Zone 1 (low risk) and not shown to be at additional risk from climate change, but is greater than 1 hectare in area
- 100% within Flood Zone 1 (low risk) and shown to be at risk from other sources, i.e. groundwater emergence or reservoir flooding

Strategic Recommendation C applies to 13 of the 173 potential development sites assessed.

1.1.1.4 Strategic Recommendation D - development could be allocated on flood risk grounds based on the evidence of this Level 1 SFRA. LPA to make decision on allocation

Strategic Recommendation D applies to any site where the following criteria is true:

- 100% within Flood Zone 1 and not at high, medium or low risk from surface water flooding or at risk from other sources, and less than 1 hectare in area
- Site not shown to be at additional risk from climate change

Strategic Recommendation D applies to five of the 173 potential development sites assessed. Further investigation (i.e. FRA) may be required by the developer at the planning application stage if any further or new information becomes available since the publication of this Level 1 SFRA.

1.1.2 Assessment of climate change

The Site Assessment Spreadsheet highlights the potential additional risk to sites, where applicable, as a result of climate change. To represent the increased flood risk resulting from climate change in fluvially dominated scenarios, a future functional floodplain, as delineated in this Level 1 SFRA, detailed EA modelled fluvial climate change outputs and the EA Flood Map for Planning Flood Zones plus Climate Change Extents have been used.

The Spreadsheet highlights the **additional** risk to the potential development sites from climate change, i.e. areas at risk in the future that are not at risk in the present day. The Risk of Flooding from Fluvial Climate Change columns indicate the area of each site that intersects with each flood extent. This is based on the NaFRA2 climate change modelling

and available EA detailed model outlines. No additional modelling has been carried out for this Level 1 SFRA, as agreed with the EA.

The fluvial climate change scenarios assessed were:

- 3.3% AEP defended event + central climate change allowance (future functional floodplain)
- 1% AEP undefended event + central climate change allowance (EA detailed model flood outlines)
- Combined 1% AEP and 0.1% AEP undefended events + central climate change allowance (Flood Map for Planning - Flood Zones plus Climate Change Extent)

For representation of surface water climate change in this Level 1 SFRA, the low risk RoFSW extent is considered as a conservative proxy for the medium risk plus climate change extent. This approach has been widely accepted by the EA in the absence of suitable modelling.

1.1.3 Assessment of groundwater emergence risk

The Site Assessment Spreadsheet contains a flag for potential groundwater emergence risks within each site, informed by the JBA Groundwater Map. This flags the highest risk category present within the site, not the category that covers the largest area. This is to help to understand where there may be groundwater issues within the site that may require further investigation at the FRA stage.

The JBA Groundwater Map does potentially enable a risk-based approach to be taken as it depicts different levels of risk. However, this is based on the risk of emergence of groundwater and not the risk of flooding due to groundwater. It should be noted that the location of highest risk of emergence might not be coincident with the location at highest risk of flooding.

Therefore, it is recommended that groundwater flood risk is not considered in the Sequential Test on the basis that the JBA Groundwater Map does not provide the confidence or certainty required to undertake the Sequential Test. As the available mapping does not provide competent evidence on the relative risk of flooding, it could potentially result in inappropriate allocations if used without understanding the limitations of the data. Appendix H addresses the use of flood risk information in the application of the Sequential Test.

1.1.4 Assessment of reservoir risk

The EA's Reservoir Flood Map (RFM) (2021) shows where water may go in the unlikely event of a reservoir or dam failure. A 'dry day' scenario assumes that the water level in the reservoir is the same as the spillway level or the underside of the roof for a service reservoir and the watercourses upstream and downstream of the reservoir are at a normal level.

The RFM dry day extents have been considered within the Site Assessment Spreadsheet. This is a flag as to whether the site is at potential residual risk from a reservoir breach. The mapping does not describe a risk-based scenario as it does not provide the probability of a

dam failure but is intended to describe a 'worst credible case' in the unlikely scenario of a dam failure. Therefore, it is recommended that the RFM is not included in the Sequential Test as the available data is inappropriate to be used alongside risk mapping from other sources. Appendix H addresses the use of flood risk information in the application of the Sequential Test.

A more detailed assessment in a Level 2 SFRA would identify locations where proposed development could result in a change to the risk designation of a reservoir. If proposed sites are located in a zone at reservoir risk, it will be necessary to understand the extent to which the flooding could be made worse and to report on the implications with respect to allocating the land for development. On that basis such an approach is recommended. If proposed development is located in a high hazard zone in the vicinity of an existing dam structure the implications should be considered in a Level 2 SFRA or site-specific FRA and where appropriate an assessment made of whether alternative sites should be considered in accordance with the Sequential Test.

1.1.5 Assessment of unmodelled watercourses

The presence of nearby or onsite fluvial watercourses that have not been modelled through either EA detailed modelling or national scale modelling have been documented within the Site Assessment Spreadsheet. This indicates sites in Flood Zone 1 where there may be some fluvial risk present that hasn't been modelled or mapped by the EA. Where the watercourse is present within the RoFSW map, it may be appropriate to consider this as a proxy for the fluvial risk posed by smaller, unmodelled watercourses. For sites potentially impacted by unmodelled watercourses, it is recommended that the risk from the currently unmodelled watercourses is quantified through a site-specific FRA.

1.2 Summary of site assessment outcomes

There are several consequential development considerations which could come out of the site assessment Sequential Testing process. Each outcome is discussed below. The LPA should refer to Section 1.1 and Appendix D for details on the site assessments carried out for this Level 1 SFRA.

1.2.1 Rejection of site

A site which fails to pass the Sequential Test and/or the Exception Test should be rejected and development not permitted. Rejection would also apply to any built development within the functional floodplain (unless water compatible or essential infrastructure informed by a FRA). However, if the developer can avoid built development within the functional floodplain, part of the site could still be delivered.

In terms of surface water flood risk, if risk is considered significant (i.e. large, sporadic areas at medium or high risk now or in the future with major flow paths) or where the size of the site does not allow for onsite storage or application or appropriate SuDS then such sites could be rejected. The LLFA will be best placed to advise on site-specific surface water flood risk and whether sites can be taken forward or not.

1.2.2 Exception Test required

Applies to those sites that, according to diagrams 1, 2 and 3, and Table 2 of the FRCC-PPG, would require the Exception Test. Only less vulnerable land uses would not require application of the Exception Test in Flood Zone 3a. More vulnerable uses are only permitted if both parts of the Exception Test are passed. Passing the Exception Test at the plan making stage does not negate the requirement for a FRA at the planning application stage. A Level 2 SFRA will inform the application of the Exception Test and the likelihood of passing part b of the test. Where any new or updated flood risk data to become available at the planning application stage, then the Exception Test should be reapplied using the new data.

1.2.3 Consideration of site layout and design

Site layout and design are important to consider early on in the site planning stage where flood risk exists. The site area would have to be large enough to enable any alteration of the developable area of the site to remove development from a risk area, or to leave space for onsite storage of floodwater. Careful layout and design at the site planning stage may apply to such sites where it is considered viable based on the level of risk. Surface water risk and opportunities for SuDS should also be assessed during the planning stage. Blue green corridors can be used as multifunctional spaces providing mitigation for flood risk management, ecology, biodiversity net gain (BNG), and amenity and social benefits.

Any development within 8 metres of any flood defence structure or culvert on a non-tidal main river is likely to be a regulated flood risk activity under Schedule 25 of the Environment Permitting (England and Wales) Regulations 2016. Any site redesign, where Flood Zone 3a is included within the site footprint, should allow water to flow naturally or be stored in times of flood. Similarly, any change or alteration to an ordinary watercourse within a site would need consent from the LLFA under the Land Drainage Act 1991.

1.2.4 Site-specific Flood Risk Assessment

A site-specific FRA should assess whether a potential development site is likely to be affected by current or future flooding from any source. This should include referencing this Level 1 SFRA to help to establish sources of flooding. Further analysis should be performed to improve the understanding of flood risk including agreement with the LPA and the EA on areas of functional floodplain that may not have been robustly defined within this SFRA due to the absence of appropriate information from the EA. The LLFA should be consulted on risk from surface water and from ordinary watercourses.

For further detail regarding the requirements of a site-specific FRA, refer to Chapter 7 of the main report. Together with the information in the FRCC-PPG, there is further detail and support provided for the LPAs and developers online via:

- National flood risk standing advice for local planning authorities
- Preparing a flood risk assessment: standing advice
- Flood risk assessments: Applying for planning permission

- Flood risk assessment: Flood Zones 1, 2, 3 and 3b

1.2.5 Sites passing the Sequential and Exception Tests

Development sites can be allocated or granted planning permission through a suitable site-specific FRA, approved and signed off by the LPA, where the Sequential Test and the Exception Test (if required) are passed and agreement is reached between the LPA/LLFA, the EA, the water companies and any ancillary stakeholders. In addition, a site is likely to be allocated without the need to assess flood risk where the indicative use is for open space. Assuming the site is not to include any development or land raising / regrading works and is to be left open in its original state then the allocation is likely to be acceptable from a flood risk point of view. However, for sites where there is potential for flood storage, options should be explored as part of a FRA.

In terms of opportunities for reducing flood risk overall as a requirement of the Exception Test, the FRCC-PPG states:

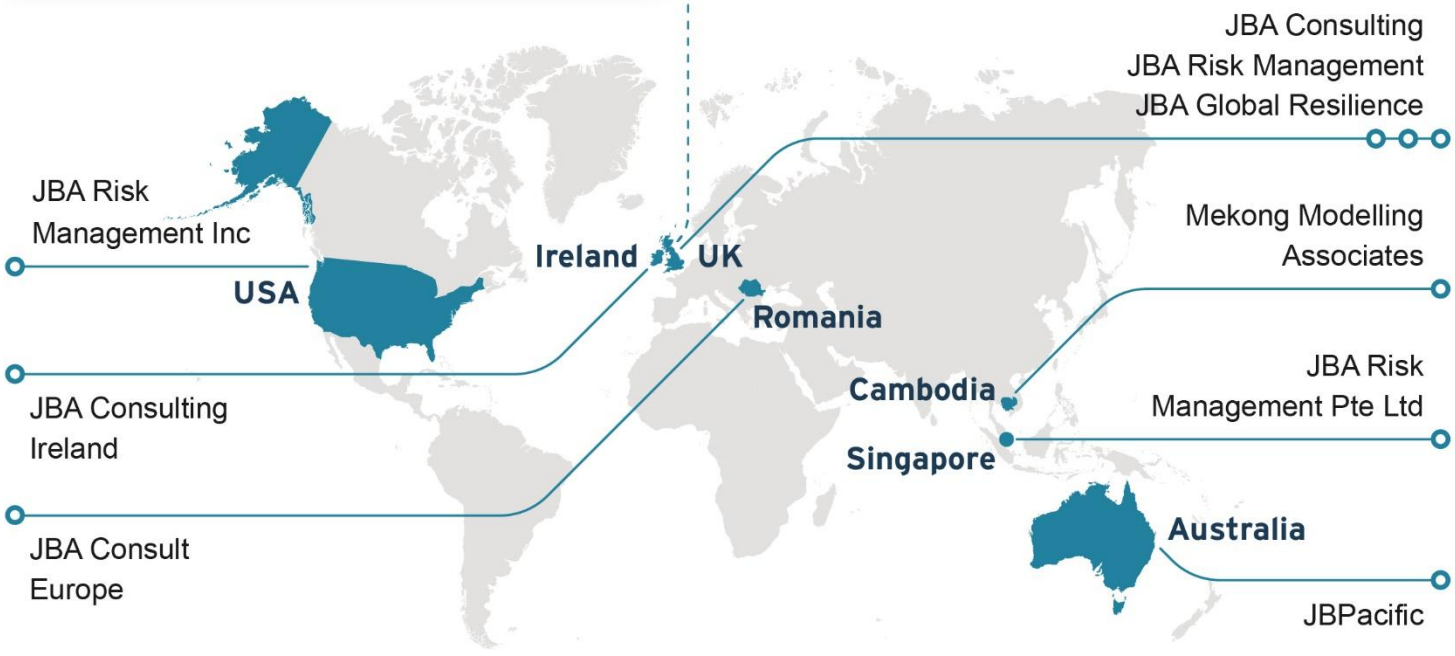
"Developers should refer to the Strategic Flood Risk Assessments and site-specific Flood Risk Assessments to identify opportunities to reduce flood risk overall and to demonstrate that the measures go beyond just managing the flood risk resulting from the development. Reductions could be achieved, for example by:

- *Incorporating green infrastructure within the layout and form of development to make additional space for the flow and storage of flood water;*
- *Providing Sustainable Drainage Systems, that manage flood risk beyond the proposed site and above the usual standard, such as by removing surface water from existing combined sewers;*
- *Providing or making contributions to flood risk management infrastructure that will provide additional benefits to existing communities and/or by safeguarding the land that would be needed to deliver it." (Paragraph 37).*

1.2.6 Surface water flood risk to assessed sites

For sites at surface water flood risk, the following should be considered, proportionate to the risk shown by the RoFSW:

- More detailed surface water assessment or modelling may reveal increased risk or less risk to a site compared to what is shown by the national RoFSW. The LLFA should be consulted when considering development viability at such sites;
- The RoFSW map does not map flooding less than 0.075m (7.5cm) in depth. Therefore, where the map may show no flooding, there may be shallow flooding up to a depth of 0.075m;
- Outline drainage strategy to ascertain natural flow paths and topographic depressions, particularly for the larger sites which may influence development at sites elsewhere;
- A detailed site-specific FRA incorporating surface water flood risk management;



- Full drainage strategy encompassing detailed surface water modelling of proposed site layouts, attenuation areas, diversion of flow routes, SuDS;
- Ensuring future maintenance of surface water and SuDS assets through s106 agreements;
- The size of development and the possibility of increased surface water flood risk caused by development on current greenfield land (where applicable) and cumulative impacts of this within specific areas;
- Management and re-use of surface water onsite, assuming the site is large enough to facilitate this and achieve effective mitigation. Effective surface water management should ensure risks on and off site are controlled;
- Larger sites could leave surface water flood-prone areas as open greenspace, incorporating social and environmental benefits;
- SuDS must be used where possible for all developments of more than one property. Appropriate SuDS may offer opportunities to control runoff to greenfield rates or better. Restrictions on surface water runoff from new development should be incorporated into the development planning stage. For brownfield sites, where current infrastructure may be staying in place, then runoff should attempt to mimic that of greenfield rates, unless it can be demonstrated that this is unachievable or hydraulically impractical. Developers should refer to the 'National standards for sustainable drainage systems (SuDS)', updated July 2025, relevant Local Plan policies and other guidance documents cited in the main report. Note that SuDS should not be sited in locations of fluvial flood risk unless they are designed to mitigate for both sources of risk;
- Runoff up to and including the 1% Annual Exceedance Probability (AEP) should be managed onsite where possible, including for climate change;
- Measures of source control should be required for all development sites;
- Developers should be required to set part of their site aside for surface water management, to contribute to flood risk management in the wider area and supplement blue green infrastructure networks;
- Developers should be required to maximise permeable surfaces;
- Flow routes on new development where the sewerage system surcharges as a consequence of exceedance of the 3.3% AEP design event should be retained;
- It may be beneficial to carry out a local Surface Water Management Plan (SWMP) or wider drainage strategy for targeted locations with any known critical drainage problems. Investigation into the capacity of existing sewer systems would be required in order to identify critical parts of the system i.e. pinch points. Drainage model outputs could be obtained from the water company to confirm the critical parts of the drainage network and subsequent recommendations could then be made for future development i.e. strategic SuDS sites, parts of the drainage system where any new connections should be avoided, and parts of the system that may have any additional capacity and recommended runoff rates. A Water Cycle Study would help to inform this.

Carbon Footprint

The format of this report is optimised for reading digitally in pdf format. Paper consumption produces substantial carbon emissions and other environmental impacts through the extraction, production and transportation of paper. Printing also generates emissions and impacts from the manufacture of printers and inks and from the energy used to power a printer. Please consider the environment before printing.

Accessibility

JBA aims to align with governmental guidelines on accessible documents and WCAG 2.2 AA standards, so that most people can read this document without having to employ special adaptation measures. This document is also optimised for use with assistive technology, such as screen reading software.

1 Introduction

Cumulative impacts are defined as the effects of past, current and future activities on the environment. The below assessment is a catchment based approach, which indicates potential cumulative impacts on the Cotswold District Council (the Council) authority area. These cumulative impacts may be negative, such as development leading to an increase in the existing level of flood risk within a catchment. They may also be positive, such as effective surface water management within a development site helping to alleviate existing flooding issues within a catchment.

The cumulative impact of development should be considered at both the Local Plan making stage and the planning application and development design stages. Paragraph 171 of the National Planning Policy Framework (NPPF, 2025) states:

'Strategic policies should be informed by a strategic flood risk assessment and should manage flood risk from all sources. They should consider cumulative impacts in, or affecting, local areas susceptible to flooding, and take account of advice from the Environment Agency and other relevant flood risk management authorities, such as lead local flood authorities and internal drainage boards.'

To understand the impact of future development on flood risk in the Council area, flood risk data has been compared with potential changes in developed area within each river catchment defined within the Water Framework Directive (WFD). This identifies the catchments where development may have the greatest impact on flood risk, and therefore where further assessment would be required within a site-specific Flood Risk Assessment (FRA).

Where catchments have been identified as sensitive to the cumulative impact of development, the assessment concludes with potential strategic planning policy suggestions to manage the risk.

2 Cumulative Impact Assessment Methodology

2.1 Cumulative impact of development and flood risk

2.1.1 Introduction

The cumulative impact of development is assessed in two parts. These comprise an evaluation of future development pressures within each WFD river waterbody catchment and an assessment of historical and predicted future flood risk. The approach to understanding the catchments most influenced by the cumulative impact of development is conceptualised in Figure 2-1.

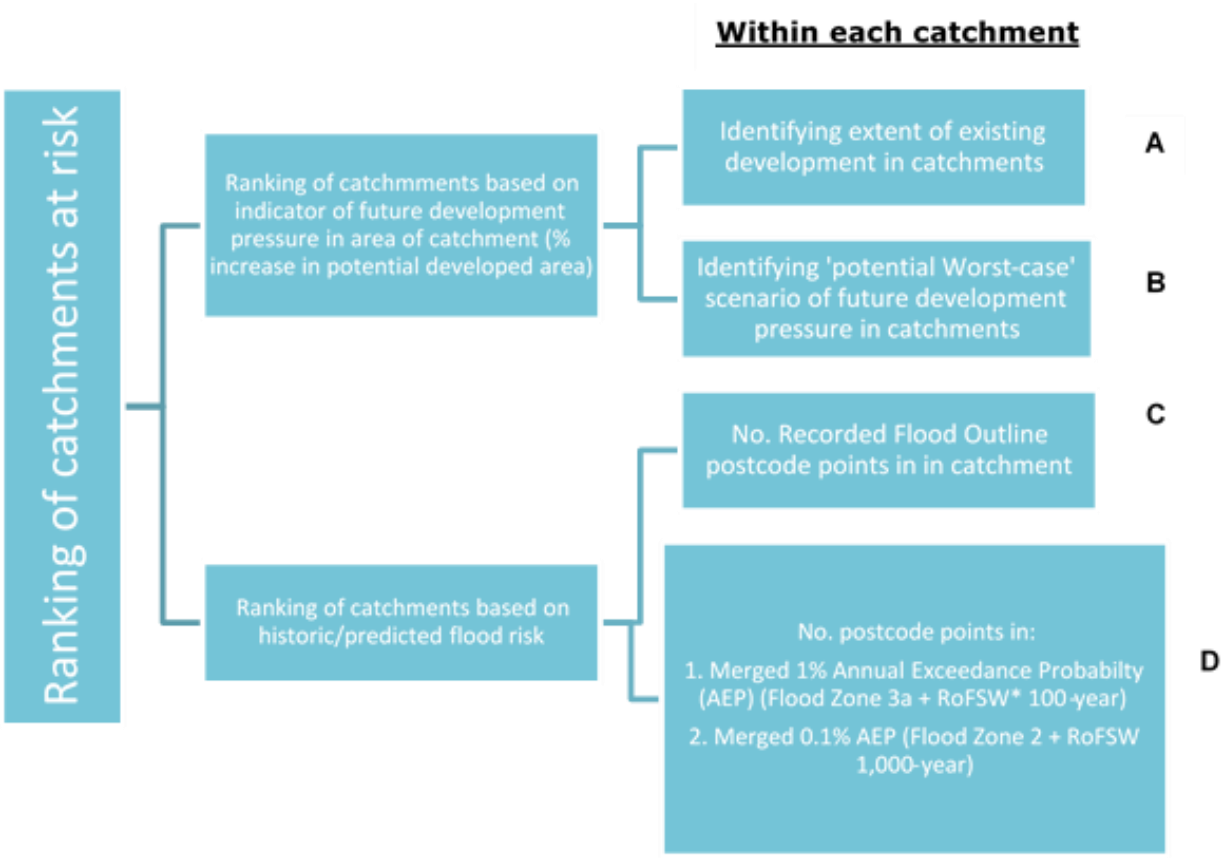

Figure 2-1: Overview of the method used in the cumulative impact assessment

**Risk of Flooding from Surface Water (RoFSW)*

2.1.2 Assessing existing and future development scenarios

To ensure that the strategic policies of the Local Plan Update (LPU) consider the impact of any future development on areas susceptible to flooding, the potential development pressures during the LPU period need to be considered. The impact of development is assessed by establishing a growth scenario of development already committed to prior to the preparation of the LPU, as well as the potential future development pressures during the active Local Plan period.

The assessment is undertaken on a river catchment scale, using catchments defined by the WFD. Several of the WFD river waterbody catchments assessed within the cumulative impact assessment cross administrative boundaries into neighbouring districts. To account for this in the study, all councils that share a WFD river waterbody catchment with Cotswold were contacted to provide information of future development within their administrative area. These councils are:

- Cheltenham Borough Council
- South Gloucestershire Council
- South Oxfordshire District Council
- Stratford-on-Avon District Council
- Stroud District Council
- Swindon Borough Council
- Tewkesbury Borough Council
- West Oxfordshire District Council
- Wiltshire Council
- Wychavon District Council
- Vale of White Horse District Council

The site allocation information provided by these neighbouring authorities was combined with that of the Council's to understand the risk to each WFD river waterbody catchment, based upon potential future growth.

It should be noted that the inclusion of potential future development pressures in neighbouring authorities makes the scoring method sensitive to future change, should any larger sites be removed, or additional sites come forward. However, it provides the best possible indication of development pressure across the Council area and catchments that feed into it. Potential future development information for the following neighbouring authorities, as either no allocation was provided or data was not provided in a spatial format suitable for consideration:

- Cheltenham Borough Council
- Stratford-on-Avon District Council
- Swindon Borough Council
- Tewkesbury Borough Council
- West Oxfordshire District Council
- Wychavon District Council

2.1.2.1 Existing development scenario (Part A - Figure 2-1)

To understand the level of existing development within the study area, the Ordnance Survey (OS) Open Codepoint dataset covering the Council area and neighbouring authority areas was used to establish the baseline growth scenario. This dataset provides postcode locations for Great Britain.

2.1.2.2 Indicator of development pressure (Part B - Figure 2-1)

To understand which catchments within the Council area are likely to experience the greatest pressure of future growth, all potential development sites within Cotswold, as well as the sites provided by the neighbouring authorities, were analysed. This analysis serves as an indicator of areas likely to be subject to the greatest development pressure in the future. At the time of preparing the assessment, this is the only spatial data indicator available, as definitive development areas have not yet been allocated within all the Local Plans of the neighbouring authorities.

This data allows calculation of the overall area of sites within each catchment that are either proposed or submitted to the relevant Local Planning Authority (LPA) for consideration to allocate within their Local Plans, illustrating the relative pressures on the catchments. The percentage total proposed area of development is calculated and ranked, with the catchment with the highest proportion of growth ranked as '1'.

2.1.3 Datasets used to assess future development pressures

Table 2-1 provides an overview of the datasets considered within the future development section of the cumulative impact assessment.

Table 2-1: Data considered within the development assessment and their purpose

Dataset	Coverage	Source of data	Purpose
Catchment boundaries	Cotswold District Council authority area	WFD river waterbody catchments (Environment Agency)	To identify and map catchments that will determine the study area extent
Existing development data	Catchments covering the Cotswold District Council authority area	Open Codepoint (Ordnance Survey)	To provide the existing development scenario
Local Plan potential future development sites	Catchments covering the Cotswold District Council authority area	Neighbouring authorities to Cotswold District	To provide an indicator of relative future development pressures within the study area

2.1.4 Assessing the sensitivity to flood risk

In addition to the assessment of future development pressures, a composite flood risk score is derived for each catchment. This is calculated by taking an average ranking of both recorded flood risk (historic incidents) and modelled (predicted) fluvial and surface water risk. To understand the relative flood risk within each catchment, a ranking system is adopted, with the worst-case flood risk numbered as '1'.

2.1.4.1 Historic flood risk (Part C - Figure 2-1)

To understand the impact to property from historic flood incidents, the EA Recorded Flood Outline (RFO) dataset was considered. This was intersected with the Codepoints within each catchment to provide a count for the number of historically impacted properties per catchment.

2.1.4.2 Sensitivity to increases in flood flows (Part D - Figure 2-1)

To understand the sensitivity of each catchment to increases in flood flows, an assessment of both fluvial and surface water flood risk was undertaken. This assessment provides an indication of where local topography makes an area more sensitive to increases in flood risk. This may be due to any number of reasons, including climate change, new development etc. It is not an absolute figure or prediction of the impact that new development will have on flood risk. Not all sources of flood risk have been considered in this assessment. This is because the available datasets for other sources of flooding are not based on a risk-based scenario, therefore they do not provide the probability of flooding in a given year.

The present day flood risk scenario is based on the 1 in 100-year (1% Annual Exceedance Probability (AEP)) event, using a combination of the EA Flood Zone 3 and medium risk RoFSW mapping. The future flood risk scenario is based on the 1 in 1000-year (0.1% AEP) event and is determined using a combination of the EA Flood Zone 2 and low risk RoFSW mapping. The fluvial and surface water flood extents are merged to prevent double counting of properties at risk where fluvial and surface water flood risks overlap.

The present and future flood risk scenarios have been separately intersected with the Codepoint dataset to approximate the number of properties at risk within each scenario. The difference between the number of properties within the present and future flood risk scenarios has been calculated and given as a percentage of the total number of Codepoints within the catchment. This gives an indication of which catchments are most sensitive to increases in surface water runoff upstream.

2.1.4.3 Datasets used to assess the sensitivity to flood risk

Table 2-2 provides an overview of the datasets considered within the flood risk section of the cumulative impact assessment.

Table 2-2: Data considered within the flood risk assessment and their purpose

Dataset	Coverage	Source of data	Purpose
Catchment boundaries	Cotswold District Council authority area	WFD river waterbody catchments (Environment Agency)	To identify and map catchments that will determine the study area extent
Property point data	Catchments covering the Cotswold District Council authority area	Open Codepoint (Ordnance Survey)	To provide an indication of the number of properties at risk
Historic flood incidents	Catchments covering the Cotswold District Council authority area	Recorded Flood Outlines (Environment Agency)	To understand which areas have been impacted by historic flooding
Fluvial flood zones	Catchments covering the Cotswold District Council authority area	Flood Map for Planning Flood Zones 2 and 3 (Environment Agency)	To understand the present day and potential future impacts of fluvial flooding
Surface water flood zones	Catchments covering the Cotswold District Council authority area	Risk of Flooding from Surface Water - low and medium risk (Environment Agency)	To understand the present day and potential future impacts of surface water flooding

3 Results

3.1 Introduction

The results are ranked for each of the above assessments from 1 to 59. For example, the catchment with the highest percentage of property points within the recorded flood outline dataset would be ranked as '1'. The individual historic flooding, flood risk sensitivity and future development pressure ranks are summed to give an overall ranking for each catchment. The catchment with the lowest combined rank is the most sensitive to the cumulative impact of development.

3.2 Cumulative impact assessment results

A Red Amber Green (RAG) rating is applied to the catchments, with red being high sensitivity, amber being medium sensitivity and green being low sensitivity. It should be noted that this assessment provides a relative assessment of sensitivity increases in flood risk and development between catchments within the study area. Catchments with an overall rank of less than 15 have been determined as high sensitivity catchments. Catchments with an overall rank of between 15 and 30 have been determined as medium sensitivity catchments. All other catchments have been identified as low sensitivity.

The following catchments have been identified as highly sensitive to the cumulative impacts of development:

- Bretforton Bk - source to conf Broadway-Badsey Bk
- Broadway-Badsey Bk - source to conf R Avon
- Churn (Baunton to Cricklade)
- Coln (from Coln Rogers) and Thames (Coln to Leach)
- Evenlode (Source to Four Shires S) and Longborough Stream
- Knee Bk - source to conf Blockley Bk
- Swilgate - source to conf R Avon
- Swill Brook (source to Ashton Keynes)
- Tetbury Avon - unnamed trib to conf Sherston Avon
- Thames (Churn to Coln)
- Thames (Kemble to Waterhay Bridge)
- Thames (Leach to Evenlode)
- Thornhill Ditch and tributaries at Cotswolds Water Park
- Windrush (Slade Barn Stream to Dikler)

The results of the cumulative impact are shown in Figure 3-1 and Table 3-1.

4 Assumptions and limitations

Table 4-1 sets out the assumptions and limitations of the cumulative impact assessment.

Table 4-1: Assumptions and limitations of the assessment

Assessment aspect	Assumption made	Details of limitation in method	Justification
Development pressure	Assumption of housing density and impermeable areas	Where potential development densities were not known for the sites, it is assumed that 70% of the site area would contribute surface water runoff to the wider catchment. This takes into account a 30% allowance for landscaping and requirements for sustainable drainage systems (SuDS) within sites, which lessens the impacts of new development	With housing densities and proportions of undeveloped areas not known, the approach aims to provide a more realistic indication of site development in the growth scenario
Development pressure	Current site use assumed to be greenfield (undeveloped)	The current use of the sites (e.g. greenfield/brownfield) is often undefined. Brownfield sites are likely to have a less significant impact on flood risk as they have previously been developed. Therefore, in absence of this information, a 'worst case' assessment is produced, which assumes that all sites are greenfield (undeveloped) and may overestimate the risk within each catchment	The assessment considers the 'worst case' development scenario, that all sites were greenfield (undeveloped) prior to growth. With the former land uses for each site not known, the approach overestimates the potential impact, but this is a precautionary approach
Development pressure	Potential development site area not provided for all neighbouring authorities	Potential development sites were available for consideration for the South Oxfordshire, South Gloucestershire, Stroud, Wiltshire and Vale of White Horse authority areas.	Potential development pressure was not taken into account for the WFD catchments shared between Cheltenham, Stratford-on-Avon, Swindon, Tewkesbury, West Oxfordshire and Wychavon. Cumulative

Assessment aspect	Assumption made	Details of limitation in method	Justification
			impacts were assessed through flood risk only. It is recommended that this assessment is updated should this information be made available.
Flood risk	Overlap between fluvial and surface water extents	The Risk of Flooding from Surface Water mapping identifies the lowest points in the landscape, and therefore low-lying river floodplains are also classified as being at surface water risk. This can lead to 'double counting' of flood risk.	To prevent double counting, the Flood Zone and Risk of Flooding from Surface Water datasets are merged, to create a composite flood risk layer, with any overlapping areas dissolved.
Flood risk	Conservative assumption of using the 1 in 1000-year event to represent the future 1 in 100-year event	The 1 in 1000-year has been used as a conservative proxy to represent the likely influence of climate change on a fluvial 1 in 100-year flood event to inform on the sensitivity of catchments to increases in flooding.	This approach has been taken to ensure a consistent approach between the consideration of fluvial and surface water flooding. There is no suitable surface water climate change information currently available from the EA at the time of writing.
Flood risk	Use of OS Code Point Open postcode point data to represent properties affected by historic/predicted flood risk	As postcode points represent the average location of all properties within a postcode area, there may be properties at the edges of a catchment or the study area which are counted within the neighbouring area or not picked up at all. The dataset is based on full postcodes.	The postcode points are an available open source dataset. Postcode area sizes are also relative to the density of properties in a location, providing better data coverage in areas where a greater number of properties were likely to be affected.

5 Planning policy considerations

5.1 Introduction

Catchment-specific planning policy considerations have been identified for the catchments where cumulative development is likely to have the greatest impact on flood risk to communities.

In addition to assessment at this Level 1 SFRA level, it is recommended that site-specific FRAs are required to include consideration of the cumulative effects of the proposed development. It should be demonstrated that flood risk downstream will not be made worse by the combination of effects from more than one development allocation.

Specific policy considerations are provided for each sensitivity category and are set out in Sections 5.2 to 5.4 below.

5.2 Considerations for all new development in Cotswold

The following planning policy considerations apply to development within all catchments:

- Developments should seek betterment of existing flood risks both within the site and in surrounding areas. As a minimum, developments must meet national and local standards for FRAs and surface water drainage strategies. By looking at flood risks beyond the site boundary, developers should be encouraged to implement sustainable solutions which manage flood risk.
- Major developments[1] should be accompanied by an overall surface water drainage strategy. This should cover:
    - How the cumulative impacts of potential peak rates and volumes of surface water runoff from development sites would impact on the peak flows, duration of flooding and timing of flood peaks on receiving watercourses. This should be used to develop and implement appropriate drainage sub-catchments for the management of surface water, as well as specific runoff rate and volume requirements for each phase of the development.
    - The risk of flooding from all sources, including for rainfall events greater than the design standard of the surface water drainage system should be taken into account. This is to ensure there is no flood risk to new properties, and that exceedance flows in extreme events are safely routed around those properties.
    - The consideration of how SuDS, natural flood management techniques, green infrastructure and green-blue corridors can be designed into the development

1 As defined in the NPPF as residential developments comprising 10 or more homes, or greater than 0.5 hectares in area, and for non-residential developments, additional floorspace of 1,000m^2 or more, or a site of 1 hectare or more, or as otherwise provided in the Town and Country Planning (Development Management Procedure) (England) Order 2015.

master plan to facilitate drainage flood risk management. As well as managing the quantity of water, they should also ensure the wider benefits of biodiversity, amenity, water quality and recreation are realised.
    - Based on the above, a drainage phasing plan aligned with the SuDS management train method should be developed. Firstly, it should consider how water can be infiltrated / stored at a plot level, then conveyed through the site. It should also identify any wider storage needs at a settlement level.
    - The provision of drainage shall be based on the drainage phasing plan, to ensure adequate drainage is provided and implemented throughout the lifetime of the development. This includes provision of adequate drainage during the construction phase, to manage the risk of flooding, erosion and pollution during construction.
    - The Council (as LPA), Gloucestershire County Council (GCC) (as Lead Local Flood Authority (LLFA)) and the EA should be consulted during the development of the surface water drainage strategy, subject to EA resource availability.
- In rural areas of the catchments, Natural Flood Management (NFM) techniques, such as woodland planting and earth bunds, can be used to slow down and store flood waters upstream of settlements.
- In urban and suburban locations, SuDS should be integrated into the site design, to manage the existing surface water flow paths on the site and to help mitigate the flood risks to downstream communities.
- Successive minor developments have the potential to significantly impact on existing surface water and flood risk issues, particularly as the LLFA is not currently consulted on such applications. Therefore, planning policy for minor developments should support existing LPA guidance on the reduction of existing runoff rates, through the use of SuDS.
- Any development within the fluvial floodplain (i.e. Flood Zones 3b, 3a and 2) should provide suitable flood compensation storage, in consultation with the EA, to avoid a net loss in floodplain storage.
- The LLFA and other Risk Management Authorities (RMAs) should use the information in the SFRA to inform a long term pipeline of flood alleviation studies and schemes to determine where further developer contributions on / off site would be beneficial.

5.3 Considerations for medium sensitivity catchments

The following planning policy considerations apply to development within those catchments identified as being at medium sensitivity. All new developments (other than minor extensions) in these catchments should:

- Incorporate SuDS and provide details of adoption, ongoing maintenance, and management, in line with the Gloucestershire SuDS Design and Maintenance Guide and the National Standards for SuDS. Preference will be given to above

ground, vegetated SuDS, which contribute to the conservation and enhancement of biodiversity and green infrastructure in the study area.

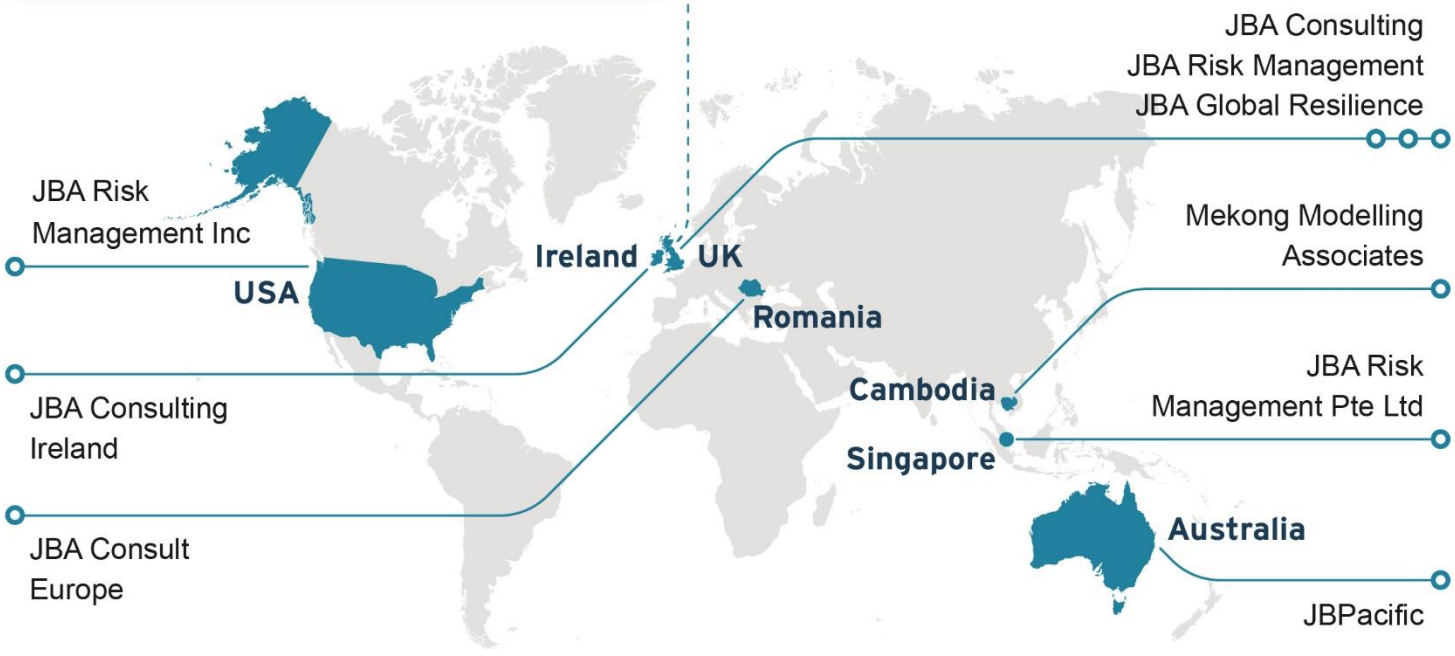
- Be incentivised to provide wider betterment by being requested to demonstrate in site-specific FRAs and surface water drainage strategies what measures can be put in place to contribute to a reduction in flood risk downstream. This may either be through provision of additional storage on site e.g. through oversized SuDS, natural flood management techniques, green infrastructure and green-blue corridors and/or by providing a Partnership Funding contribution towards a wider community scheme.
- Ensure both greenfield and brownfield developments are to aim to achieve greenfield runoff rates and volumes in their post-development state.
- Ensure Surface Water Management Plans are developed as required.

5.4 Considerations for higher sensitivity catchments

The following planning policy considerations apply to development within those catchments identified as being at higher sensitivity. For all new developments (other than minor extensions) in these catchments, consider:

- National and local flood risk planning policy must be stringently applied within these areas, with flood risk from all sources given the appropriate priority, particularly when applying the sequential and exception tests.
- Both greenfield and brownfield developments to achieve 20% betterment over pre-development greenfield runoff peak flows[2] and volumes[3] in their post-development state, to counter cumulative impacts of development within the catchment.
- A surface water drainage strategy should be required for all developments in these catchments, regardless of development size. This would mean that a site-specific FRA would be required for all developments, regardless of their size.
- The EA may designate higher sensitivity catchments as Areas with Critical Drainage Problems (ACDPs) as required. If an area with critical drainage is identified, the LPA (supported by the LLFA) should draft a policy within their Local Plan to manage flood risk from local sources in these catchments with critical drainage problems.
- For larger sites and strategic developments (e.g. new settlements and urban extensions):
    - The LLFA, EA and LPA should be consulted at pre-application stage.
    - The FRA should examine the cumulative impacts of proposed peak surface water runoff rates and volumes from across the site on the peak flows, duration of flooding and timing of flood peaks in receiving watercourses. This

2 For the 1 in 1 year rainfall event and the 1 in 100 year rainfall event
3 For the 1 in 100 year, 6 hour rainfall event



should include the impact of other developments within the WFD catchment, if appropriate, as advised by the LPA/LLFA.
    - A surface water drainage strategy should be developed and implement appropriate drainage sub-catchments for the management of surface water, with specific runoff rate and volume requirements set for each sub-catchment, in line with the SuDS management train.
- Particular attention should be given to limiting runoff volumes to greenfield volume, with long-term storage to be provided where required. The timing of runoff released from the development site will need to be assessed against peak flow timings on the receiving watercourse, to ensure that discharges do not have a detrimental impact on downstream flood risk.
    - The timing of flows released from the development site will need to be assessed in the context of peak flows on the receiving watercourse.
    - Every opportunity should be taken to infiltrate and/or store water at a plot level.
    - Longer-term measures for managing flood risk should be considered, including river restoration and contributions to pipeline flood alleviation schemes.
- Where development sites receive runoff from, or drain towards, neighbouring authorities, the LPA should work closely with neighbouring LPAs and the LLFA to develop complementary local plan policies on cumulative flood risk and sustainable drainage.

Appendix H: Guide for using available flood risk data in applying the Sequential Test

1 Introduction

The aim of this appendix is to discuss the availability and limitations of data for assessing the risk from different sources of flooding both now and in the future within the Sequential Test, including a user guide for the Council to use the data supplied in the SFRA through the application of the Sequential Test for different sources of risk.

1.1 Policy requirements

The need to apply the Sequential Test is set out within the National Planning Policy Framework (NPPF) which was last updated in February 2025 and the Planning Practice Guidance - Flood Risk and Coastal Change (PPG) which was last updated in September 2025.

Paragraph 172 of the NPPF states that *"All plans should apply a sequential, risk-based approach to the location of development – taking into account **all sources of flood risk** and the **current and future impacts of climate change** – so as to avoid, where possible, flood risk to people and property"*

Paragraph 174 states that *"the aim of the sequential test is to steer new development to areas with the lowest risk of **flooding from any source**.[…] The strategic flood risk assessment will provide the basis for applying this test."*

Finally, paragraph 175 of the NPPF states that *"the sequential test should be used in areas known to be at risk now or in the future from any form of flooding, except in situations where a site-specific flood risk assessment demonstrates that no built development within the site boundary, including access or escape routes, land raising or other potentially vulnerable elements, would be located on an area that would be at risk of flooding from any source, now and in the future (having regard to potential changes in flood risk)"*

Therefore, in summary the NPPF sets out the requirement for considering all sources of flood risk, now and in the future when applying the Sequential Test. It also identifies certain circumstances where the Sequential Test would not be required where vulnerable elements are shown (through a site-specific Flood Risk Assessment) to be outside of areas at risk of flooding from any source.

Paragraph 017 of the PPG states that *"Where the Strategic Flood Risk Assessment, or other available flood risk maps or information, indicates that part or parts of a neighbourhood plan area may be at risk of flooding, the qualifying body should have regard to the National Planning Policy Framework's policies on flood risk. Where they are*

considering proposing development, they will need to show that this would be consistent with the local planning authority's application of the Sequential Test".

Paragraph 023 of the PPG states that *"The approach is designed to ensure that areas at little or no risk of flooding from* ***any source*** *are developed in preference to areas at higher risk. This means avoiding, so far as possible, development in* ***current and future medium and high flood risk areas*** *considering* ***all sources of flooding including areas at risk of surface water flooding****.[…] Other forms of flooding need to be treated consistently with river and tidal flooding in mapping probability and assessing vulnerability, so that the sequential approach can be applied across all areas of flood risk."*

Paragraph 024 of the PPG states *"Where it is not possible to locate development in low-risk areas, the Sequential Test should go on to compare reasonably available sites within medium risk areas; and then, only where there are no reasonably available sites in low and medium risk areas, within high-risk areas. […] Initially, the presence of existing flood risk management infrastructure should be ignored, as the long-term funding, maintenance and renewal of this infrastructure is uncertain."*

Paragraph 027 states that *"In applying paragraph 175 a proportionate approach should be taken. Where a site-specific flood risk assessment demonstrates clearly that the proposed layout, design, and mitigation measures would ensure that occupiers and users would remain safe from current and future surface water flood risk for the lifetime of the development (therefore addressing the risks identified e.g. by Environment Agency flood risk mapping), without increasing flood risk elsewhere, then the sequential test need not be applied."*

Therefore, in summary the PPG requires all sources of flooding to be considered within the Sequential Test, now and in the future. In cases where a site-specific Flood Risk Assessment shows a development at risk of surface water flooding can be made safe for its lifetime without increasing flood risk elsewhere then the surface water flood risk would not need to be considered within the Sequential Test. Therefore, reference within this document to application of the Sequential Test for surface water flooding is predominantly concerned with the application of this as part of the Local Plan where site-specific Flood Risk Assessments have not been prepared.

The PPG also makes clear that sources of flood risk other than river flooding need to be treated consistently with river (fluvial) flooding, in terms of mapping probability and vulnerability.

In addition, the PPG also notes that where Neighbourhood Plans are considering proposing development, they should address how this would be consistent with the local planning authority's application of the Sequential Test and if necessary, the Exception Test. If not, these tests will need to be re-visited on a local authority-wide basis.

1.2 Requirements for the Sequential Test

A basic requirement for the Sequential Test to be performed is that appropriate, competent mapping can be prepared to enable logical comparison of the flood risk from different sources at alternative locations, both now and in the future, as this is fundamental to establishing a logical “risk sequence”.

Section 2 describes the implications of including different sources of flooding both now and in the future in the Sequential Test. It also highlights matters to be considered and identifies a preferred approach. Table 4-1 and Table 4-2 provide a user guide for the Council to use to apply the Sequential Test for each source of flood risk and signposts to relevant sections of the SFRA.

1.3 The Exception Test

In circumstances where the Sequential Test has been performed and it is not possible for development to be located in areas with a lower risk of flooding, the Exception Test may be required. The Exception Test is a two-part process that requires preparation of evidence to demonstrate that development proposals at risk of flooding deliver wider sustainability benefits and can be made safe for the intended lifespan (thus it is a requirement to demonstrate that proposed development will be safe under climate change conditions).

Table 2 of the PPG sets out the requirements for the Exception Test but does not reflect the need to avoid flood risk from sources other than rivers. There is no guidance on how to consider other sources of flood risk. The Exception Test should only be applied, following the application of the Sequential Test, in the following instances:

- 'Essential infrastructure' in Flood Zone 3a or 3b
- 'Highly vulnerable' development in Flood Zone 2 (this is NOT permitted in Flood Zone 3a or 3b)
- 'More vulnerable' development in Flood Zone 3a (this is NOT permitted in Flood Zone 3b)

While the Exception Test is not explicitly required for sites at risk from other sources of flooding, the Local Planning Authority should follow a similar principle where sites are proposed that are at risk from other sources of flooding, carefully weighing up the wider benefits of development against the risk, ensuring that site users can be kept safe through the lifetime of the development and ensuring residual risk can be safely managed.

2 Sources of flooding in the Sequential Test

2.1 River (fluvial) risk

2.1.1 Recommendations for using river flood risk in the Sequential Test

The Environment Agency Flood Map for Planning and any available detailed local hydraulic models should be used to consider river flood risk in the Sequential Test.

It is recommended that the Sequential Test considers river (fluvial) flood risk as follows:

- The Sequential Test can be carried out using the river (fluvial) Flood Zones for present day low (Flood Zone 1), medium (Flood Zone 2) and high risk (Flood Zone 3a).
- Where detailed models are available and are more up to date, the 1% AEP and 0.1% AEP events should be assessed alongside the Flood Zones.
- In considering the impact of climate change:
    - The 1% AEP and 0.1% AEP events should be used with appropriate allowances for climate change.
    - Where detailed modelling is available and not included within the 'Flood Map for Planning - Flood Zones plus Climate Change' dataset, these should be used.
    - Elsewhere, the 'Rivers and Sea defended and undefended flood risk extents - climate change' dataset should be used. For river (fluvial) flooding, the dataset uses the 2080s epoch (2070-2125) Central allowance. These are provided for the 1% AEP, and 0.1% AEP events which are suitable for considering future flood risk to all development types other than essential infrastructure.

2.2 Surface water flood risk

2.2.1 Available data to assess surface water flood risk

The Environment Agency's Flood Map for Planning surface water flood risk (also known as the Risk of Flooding from Surface Water) mapping is available to assess surface water flood risk. The following points should be considered when using this mapping:

- The mapping based on a generalised modelling methodology. It is generally suitable for showing surface water flow routes at different probability flood events (3.3% AEP, 1% AEP and 0.1% AEP), although the uncertainty associated with the predicted outlines for the respective probabilities is high.
- It does not always include allowance for drainage features such as culverts and can over or underestimate flooding where there are linear features such as embankments.
- Unlike the Zone maps for river flooding the surface water mapping makes an allowance for the assumed performance of a local drainage system.

The nature of surface water flooding differs from that of river flooding:

- Normal profile of extent and shape of surface water flooding is a “dendritic” pattern that follows low lying topography and is not an extensive blanket, as is most often the case for river flooding.
- Surface water flood risk is normally more likely to be relatively short lived and much more localised than would be the case for river flooding (most likely being caused by local high intensity short duration rainfall events).

It is likely that in many circumstances surface water flood risk zones based on the surface water mapping could affect a relatively small proportion of a proposed allocation site, but in practical terms this might not in itself be a factor that demonstrates that the principle of development could not be supported.

2.2.2 Recommendations for using zone maps for surface water flooding

Note, changes to the PPG in September 2025 mean that the surface water does not need to be considered within the Sequential Test where a site-specific Flood Risk Assessment demonstrates clearly that the proposed layout, design, and mitigation measures would ensure that occupiers and users would remain safe from current and future surface water flood risk for the lifetime of the development. It is anticipated that as part of the Local Plan allocation, the application of the Sequential Test for surface water flood risk would still be required as the majority of sites will not have a site-specific Flood Risk Assessment at this stage.

It is recommended that the Sequential Test considers surface water flood risk as follows:

- The Sequential Test can be carried out using the Flood Map for Planning surface water flood risk (also known as the Risk of Flooding from Surface Water) data for present day low (between 0.1 AEP% and 1% AEP events), medium (between 1% AEP and 3.3% AEP events) and high risk (greater than 3.3% AEP event) areas.
- Flood Map for Planning surface water flood risk (also known as the Risk of Flooding from Surface Water) dataset does not currently include climate change outputs for an appropriate epoch or allowance for planning purposes. As such, the low risk 0.1% AEP (1 in 1000-year) surface water extent should be used as a proxy for climate change. Once suitable climate change outputs are available, these should be used.

The use of these surface water events should be done with caution due to the highlighted uncertainties in the surface water modelling and mapping.

Surface Water mapping does not strictly describe the same conceptual risk zone as defined for river flooding (even though it is associated with the same probability) as the mapping is based on different assumptions and is filtered to remove shallow depths of water. However, it does create a product that can accommodate sequential testing, as it would facilitate strategic decisions that directed development to land in lower risk areas.

2.3 Groundwater flood risk

2.3.1 Available data to assess groundwater flood risk

The following source of groundwater mapping will be made available for use within this SFRA:

- JBA Groundwater Flood Emergence Map

The following points should be considered when using this dataset:

- The JBA Groundwater Flood Emergence Map does potentially enable a risk-based approach to be taken as it depicts different levels of risk. However, this is based on the risk of emergence of groundwater and not surface flooding due to groundwater and it should be noted that the location of highest risk of emergence might not be coincident with the location at highest risk of flooding. The analyses performed to prepare the mapping are all for a 1% AEP event and so provide a risk of groundwater emergence to the surface as they are based on predicted difference between groundwater level and the ground surface. Five zones are defined to describe the risk of groundwater being: at or very near ground surface; between 0.025m and 0.5m below the ground surface; between 0.5m and 5m below the ground surface; at least 5m below the ground surface; and negligible risk of groundwater flooding.
- The underlying challenge with this dataset is that there are uncertainties within the data and therefore it should not be used with confidence unless supported by more detailed local studies. The mapping provides an indication of where risk of elevated groundwater levels might be higher, but it would not be easy to defend.
- There is no climate change mapping available for groundwater and in view of the uncertainty in the present-day data it is unlikely that such mapping will be available in the near future.

2.3.2 Recommendations for using zone maps for groundwater flooding

It is recommended that groundwater flood risk is not considered in the Sequential Test on the basis that the JBA groundwater flood emergence map does not provide the confidence or certainty required to undertake the Sequential Test. As the available mapping does not provide competent evidence on the relative risk of flooding across the study area, it could potentially result in inappropriate allocations if used without understanding the limitations of the data.

JBA groundwater emergence mapping should therefore be used in conjunction with other relevant sources of flooding such as historical records so that areas can be identified that are unlikely to be affected by groundwater flooding (low potential) and also areas where groundwater flooding is potentially a material consideration can be identified (high potential). At the Level 2 SFRA stage (or for a site-specific Flood Risk Assessment), a site-specific assessment should be performed where the potential for groundwater flooding is high.

2.4 Sewer flood risk

2.4.1 Available data to assess sewer flood risk

The following data was available for use within this SFRA to assess sewer flood risk:

- Thames Water historic flooding incidences
- Thames Water Drainage and Wastewater Management Plan (DWMP)

The historic flooding incidences are only available at postcode level and thus mapping does not define the spatial extent or location of sewer flooding.

Mapping within the DWMP does not enable execution of risk based sequence.

2.4.2 Recommendations for using zone maps for sewer flooding

It is recommended that the sewer flood risk is not considered in the Sequential Test on the basis that the available information is not of an appropriate resolution or format to support spatial comparison of risk.

The data resolution provided in the DWMP is catchment scale and not applicable across the entire district. Consequently, it is not possible to take a risk-based approach using this data and it is not considered to be comparable to the river flooding information.

Where possible the historic flooding incidences and DWMP information should be used to inform the scope of site specific FRAs.

2.5 Reservoir flood risk

2.5.1 Available data to assess reservoir flood risk

The following data was available for use within this SFRA to assess reservoir flood risk:

- Environment Agency "Wet day" and "Dry day" reservoir inundation extents

The “wet day” mapping shows the predicted extent of a reservoir breach at the same time as a 0.1% AEP river flood (as this is a likely time when a reservoir might fail) and the "dry day" shows the failure just from the water retained by the dam. The fluvial contribution shows where the impact of "wet day" reservoir flooding affects the fluvial flood extent.

Neither set of mapping describes a risk-based scenario as they do not provide the probability of a dam failure but are intended to describe a “worst credible case”.

More detailed information on flood velocities and depths has been prepared as part of the modelling and mapping study, but this is not publicly available and can only be viewed by those with appropriate security classifications. The flood extents are publicly available.

The mapping does not provide climate change information on future flood risk and provision of such mapping is unlikely based on the existing methodology.

2.5.2 Recommendations for using zone maps for reservoir flooding

It is recommended that the available reservoir flood mapping is not included in the Sequential Test as the available data is inappropriate to be used alongside risk mapping from other sources when performing the Sequential Test.

An assessment of those sites identified to be at risk of inundation during dry day and wet day breach events should be included in the Level 2 SFRA.

The available information is not conceptually similar to the risks pertaining to river flooding as it shows the worst credible case and not the risk of flooding and so does not support a logical spatial comparison of risk that can be substantiated by appropriate evidence.

More detailed assessment in the Level 2 SFRA will identify locations where proposed development could result in a change to the risk designation of a reservoir. If proposed sites are located in a zone at reservoir risk, it will be necessary to understand the extent to which the flooding could be made worse and to report on the implications with respect to allocating the land for development. On that basis such an approach is recommended. If proposed development is located in a high hazard zone in the vicinity of an existing dam structure the implications should be considered in a Level 2 SFRA or site-specific FRA and where appropriate an assessment made of whether alternative sites should be considered in accordance with the Sequential Test.

3 Sequential approach at a site level

The Environment Agency's Flood Risk Assessment guidance was updated in October 2025. The guidance states that "*you may not need a sequential test if development can be laid out so that only elements such as public open space, biodiversity and amenity areas are located in areas at risk of any source of current or future flooding*." The premise of this was subsequently included within Paragraph 175 of the NPPF which was updated in February 2025.

Therefore, in cases where the proportion of the site at flood risk is small, a sequential approach at the site level would be appropriate and enable development to be located in areas of low risk of flooding (by avoiding high risk areas that might exist at a particular site). This involves incorporating the less vulnerable aspects of the development (such as public open space, biodiversity and amenity areas) in the areas at risk of flooding. The more vulnerable aspects would be incorporated within areas at lower risk, and a Sequential Test would not be required.

As this is a strategic assessment, the area required for public open space, biodiversity and amenity areas at each of the sites is not known. It is therefore appropriate to assume that a "small" proportion of the sites will be set aside for these purposes. As such, if a "small" proportion of the site is at risk, the Sequential and Exception Tests would not be required. The definition of "small" will be agreed with the Council, based on any open space policies within the Local Plan.

4 Summary of the Sequential Test methodology

Table 4-1: Summary of the Sequential Test methodology for fluvial and surface water flooding

Source of Flooding	High Risk	Medium Risk	Low Risk	Present Day Data	Future Risk Data	Relevant sections of the SFRA
Fluvial	Greater than 1% AEP (1 in 100 year) (FZ3)	Between 1% and 0.1% AEP (1 in 100 and 1 in 1000 year) (FZ2)	Less than 0.1% AEP (1 in 1000 year) (FZ1)	EA's Flood Zones 1, 2 and 3 use a risk-based approach. Where detailed models are available and more up to date the 1% AEP and 0.1% AEP events should be assessed alongside the Flood Zones.	Use the Rivers and Sea undefended flood risk extents - climate change dataset for the 1% AEP (1 in 100-year) and 0.1% AEP (1 in 1,000-year) events. The Central Allowance should be used for the 2080s (2070-2121) epoch for all development other than Essential Infrastructure. Detailed modelling should be used where it is available and not included within the 'Rivers and Sea undefended flood risk extents - climate change' dataset.	4.4 – Fluvial Flood Risk 5.2 – Peak river flow allowances Appendix B – SFRA Mapping Appendix G - Data sources used in this SFRA
Surface Water	Greater than 3.3% AEP (1 in 30-year)	Between 3.3% AEP (1 in 30-year) and 1% AEP (1	Less than 1% AEP (1 in 100-year)	Environment Agency's Flood Map for Planning surface water flood risk (also known as the Risk of Flooding from Surface Water) mapping, 3.3% (1 in 30-year) and 1% AEPs (1 in	Appropriate climate change modelling is currently note available. Use 0.1% AEP (1 in 1,000-year) as a proxy for climate change Once suitable climate change datasets are available these	4.5 – Surface water flood risk 5.3 – Peak rainfall intensities

	year)	in 100-year)		100-year). Different assumptions are used to derive surface water risk than is the case for fluvial flood zones. Care should be taken using this dataset as in some areas it potentially does not provide the confidence or certainty required (for example where there is a risk of linear features impacting on flood extents).	should be used.	Appendix B – SFRA Mapping Appendix G - Data sources used in this SFRA

Table 4-2: Summary of the Sequential Test methodology for other sources of flooding

Source of Flooding	Assessing Risk	Present Day Data	Future Risk Data	Relevant sections of the SFRA
Groundwater	Screening to be undertaken to assess the potential susceptibility of all sites to groundwater emergence. Additional information may be required via a Level 2 SFRA or site-specific FRA where susceptibility is considered to be high.	Datasets potentially do not have the confidence or certainty required to provide mapping that enables a comparative assessment to be made of the risk of flooding of land from groundwater. Therefore, a precautionary approach should be taken, and all sites where groundwater emergence potential is identified to be high should be identified and assessed in a Level 2 SFRA or site-specific Flood Risk Assessment. The implications for sequential selection of alternative locations should be considered at that stage.	(not available)	4.7 – Groundwater flood risk 5.4 - (Impacts of climate change) Groundwater Appendix B – SFRA Mapping Appendix G - Data sources used in this SFRA
Sewer	Assessment of potential susceptibility of sites to sewer flooding to be undertaken via a Level 2 SFRA or site-specific FRA utilising available data from historic flood records and DWMP.	Datasets potentially do not have the confidence or certainty required to provide mapping that enables a comparative assessment to be made of the risk of flooding of land from sewers. Therefore, further assessment will be undertaken at a Level 2 SFRA where significant risk from sewers is noted. This may be through historical sewer flood records and additional information from water companies. The implications for sequential selection of alternative locations should be considered at	(not available)	4.6 – Sewer flood risk Appendix B – SFRA Mapping Appendix G - Data sources used in this SFRA

Source of Flooding	Assessing Risk	Present Day Data	Future Risk Data	Relevant sections of the SFRA
		that stage.		
Reservoir	Screening to be undertaken to identify sites where development is proposed in a high hazard zone. Additional information may be required via a Level 2 SFRA or site-specific FRA where susceptibility is considered to be high.	Datasets potentially do not have the confidence or certainty required to provide mapping that enables a comparative assessment to be made of the risk of flooding of land from reservoirs. In addition, the reservoir flood map identifies the consequence of a reservoir breach rather than risk, so applying high, medium and low 'risk' is not possible using this dataset. Therefore, a precautionary approach should be taken and sites where development is proposed in a high hazard zone will be identified and assessed in a Level 2 SFRA or site specific FRA. The implications for sequential selection of alternative locations should be considered at that stage.	(not available)	4.8.1 – Reservoir flood risk Appendix B – SFRA Mapping Appendix G - Data sources used in this SFRA

Appendix 4 – Memoranda of Understanding 13

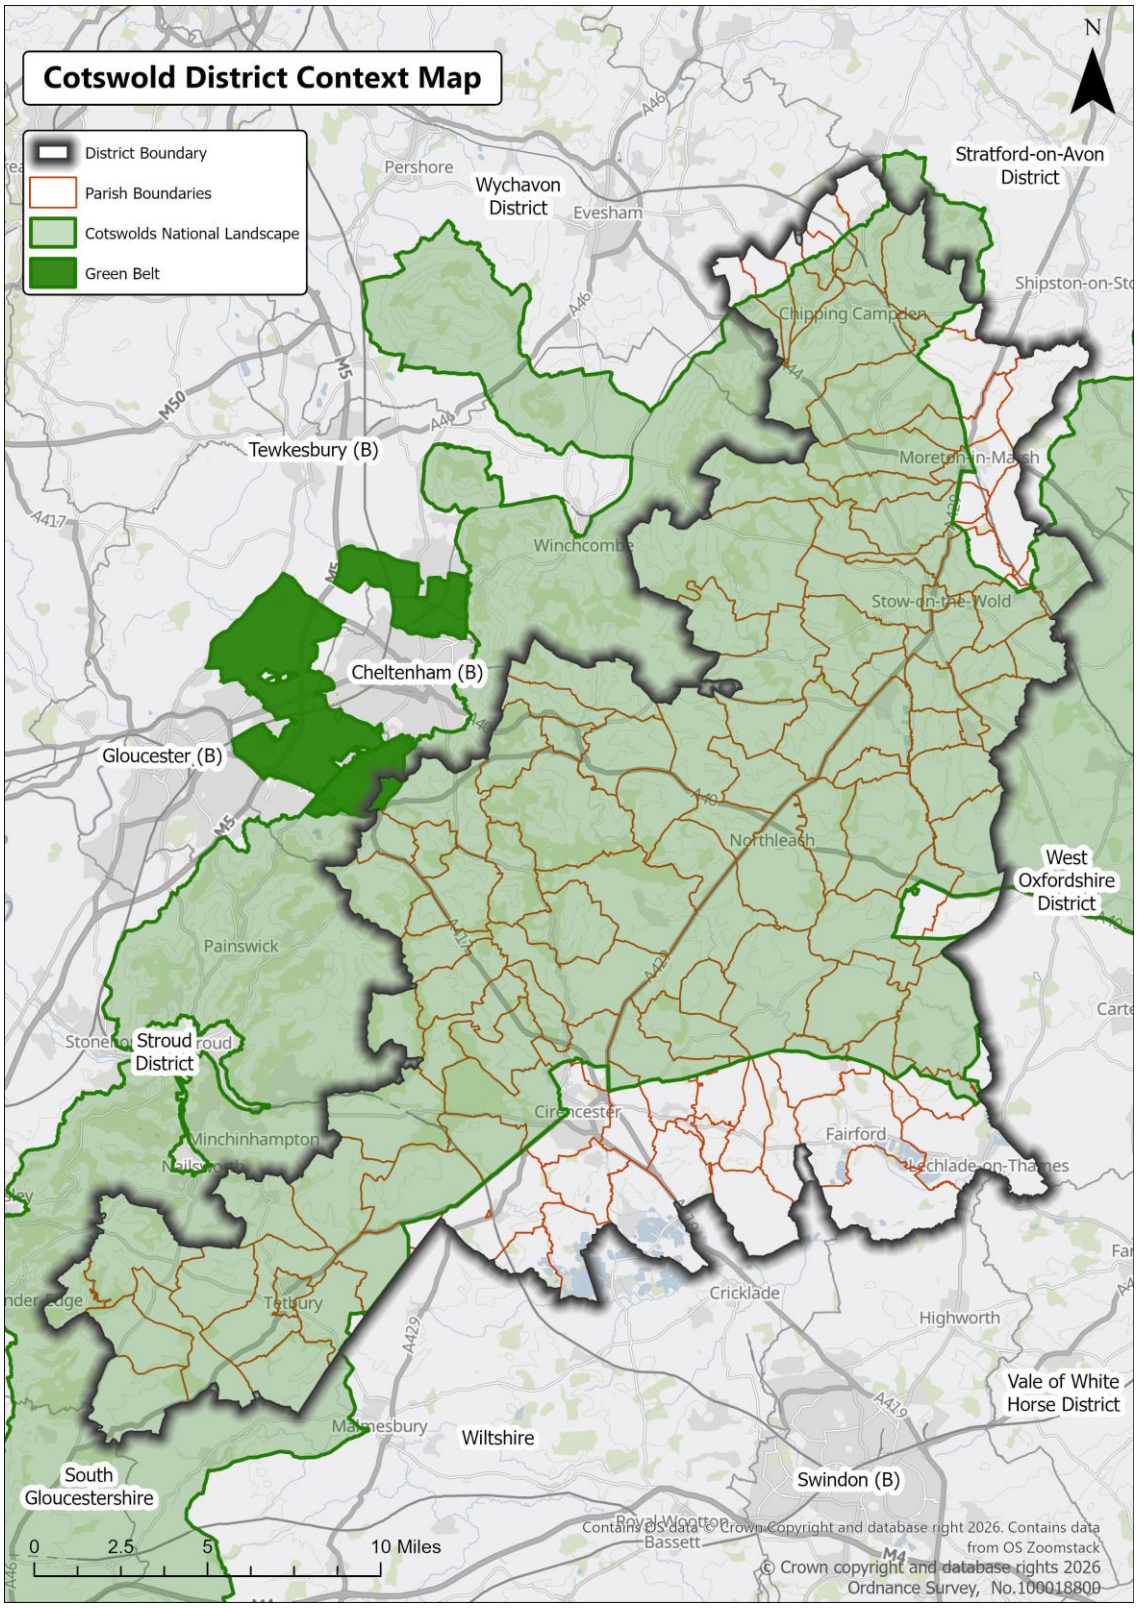
1. Introduction

Cotswold Context

1.1 Cotswold District Council is producing a new Local Plan for the plan period 2026-2043, which will replace the existing Adopted Local Plan 2011-2031. This statement on effective cooperation is published alongside the Local Plan Regulation 19.

1.2 Three Regulation 18 stages of consultation were undertaken in 2022, 2024 and 2025. The outcomes of these consultations have fed into the preparation of the Regulation 19 Publication Version of the Local Plan in addition to the updated evidence base.

1.3 The statutory Duty to Cooperate was removed in March 2026. However, the requirement to demonstrate effective cooperation on strategic matters remains through national policy and the examination of plan soundness.



1.4 This statement provides a summary of how the Council has engaged constructively, actively and on an ongoing basis with relevant authorities and organisations in preparing the Local Plan.

1.5 It is supported by detailed evidence, including Statements of Common Ground (SoCGs) which demonstrate that cooperation has been effectively undertaken, that strategic cross-boundary matters have been appropriately considered and agreement, or any areas of disagreement, are adequately documented (see **Appendix 2**). The evidence also includes Memoranda of Understanding (MoUs) which demonstrate collaborative working with landowners and developers in particular on the delivery of strategic site allocations (see **Appendix 4**).

1.6 The Council has engaged with the relevant authorities and organisations in the preparation of the draft Local Plan through formal joint working, commissioning shared evidence, various types of meetings, and engaging in other partnership working.

1.7 Cotswold District Council forms the easternmost part of the County of Gloucestershire.

Figure 1: Context map showing Cotswold District and neighbouring authorities

1.8 Within Gloucestershire, we work closely with our neighbours in Tewkesbury, Stroud and Cheltenham. Cheltenham Borough Council, Gloucester City Council and Tewkesbury Borough Council are working together on a joint Strategic and Local Plan (SLP).

1.9 We also share physical boundaries with the authorities of Stratford-on-Avon, Wychavon, West Oxfordshire, Vale of White Horse, Swindon, Wiltshire, and South Gloucestershire.

Change to the Duty to Cooperate from legal requirement to policy compliance

1.10 The Duty to Cooperate was revoked in March 2026 following the coming force of new plan-making regulations under the Levelling-up and Regeneration Act 2023.

1.11 The Duty is therefore no longer a legal requirement and does not form part of the statutory tests at examination. This applies both to plans prepared under the new plan-making system and those continuing under the existing Local Plan Regulations.

1.12 However, the removal of the Duty does not remove the requirement for local planning authorities to engage constructively, actively and on an ongoing basis on strategic cross-boundary matters.

1.13 The NPPF sets out a continued requirement for authorities to maintain effective cooperation on strategic matters. These matters are examined through the tests of soundness, in particular whether the plan is:

- Positively prepared, including in relation to unmet need; and
- Effective, including whether it is deliverable over the plan period and based on effective joint working.

1.14 In this context, this statement demonstrates how effective cooperation has been undertaken throughout the preparation of the Local Plan. It details the engagement activity to date with detailed evidence contained within the SoCGs and Memoranda of Understanding.

1.15 The approach set out in this statement reflects current national policy and guidance on plan-making following the removal of the statutory Duty.

Who do we cooperate with?

1.16 The neighbouring Councils include*:*

- Tewkesbury Borough Council
- Stroud District Council
- Cheltenham Borough Council
- Stratford-on-Avon District Council (Warwickshire County)
- Wychavon District Council (Worcestershire County)
- West Oxfordshire District Council (Oxfordshire County)
- Vale of White Horse District Council (Oxfordshire County)
- Swindon Borough Council (Swindon)
- Wiltshire Council (Wiltshire)
- South Gloucestershire Council
- Gloucestershire County Council
- Oxfordshire County Council
- Worcestershire County Council
- Warwickshire County Council

1.17 Other relevant organisations engaged on strategic matters include:

- The Environment Agency
- Historic England
- Natural England
- Sport England
- Water providers (Thames Water, Wessex Water, Severn Trent Water)
- Gloucestershire Integrated Care Board
- National Highways
- Network Rail
- Defence Infrastructure Organisation

What are strategic planning matters?

1.18 Strategic matters are things that relate to sustainable development, use of land or infrastructure that has, or would have a significant impact on at least two planning areas.

1.19 The strategic planning matters are not prescribed, and authorities will have specific strategic planning matters relative to their issues in their area.

1.20 The key strategic matters considered through this process include housing and employment provision, infrastructure (including transport, water and wastewater), and health and social infrastructure.

1.21 Further detail on how these matters have been addressed, including areas of agreement and any outstanding issues, is provided within the relevant SoCGs (see **Appendix 2**).

1.22 Cotswold District is a highly constrained region with around 80% of the area designated as National Landscape. Despite these constraints, the Council's evidence indicates that the Local Plan meets its identified housing need over the plan period and does not give rise to unmet need requiring accommodation from neighbouring areas. In the event that a modest level of unmet housing need were to be identified, it is assumed that the forthcoming Spatial Development Strategy that will include Gloucestershire, and/or new Local Plans to be prepared by the new unitary authority, or authorities in Gloucestershire, will provide a more effective mechanism to plan for this.

1.23 For that reason, even though the Council is seeking to avoid identifying any unmet housing need, the Council does not anticipate needing to ask any neighbouring authorities to assist with planning for unmet housing need, should any be identified through the remaining process.

1.24 The Council's evidence also indicates that the Local Plan meets its identified employment needs in full and will not require any unmet need to be accommodated in neighbouring authorities.

1.25 The Local Plan includes ten proposed strategic allocations that will support the delivery of sustainable development and infrastructure delivery, including strong sustainable transport connectivity, and provision for education, including two new secondary schools, along with extensive green infrastructure and the achievement of high environmental standards.

1.26 The specific strategic matters engaged on with each neighbour or relevant organisation are described in the relevant SoCG.

What are Statements of Common Ground

1.27 To demonstrate effective and ongoing joint working, we are preparing and maintaining SoCGs with relevant authorities and organisations in line with the requirements detailed in current plan-making guidance (see **Appendix 2**).

1.28 Each SoCG details the specific strategic matters that have been engaged on and any agreements relating to the issues discussed. They also detail any specific engagement that has taken place between ourselves and the relevant organisation or neighbour.

1.29 Our SoCGs are at an advanced stage of preparation. We are aiming to have as many SoCGs completed and signed by the time of this publication, even where in some cases this may indicate agreement that further discussions will take place after Regulation 19. This reflects the iterative nature of plan-making with committed ongoing engagement.

1.30 All SoCGs will be finalised and updated as necessary throughout the remaining process.

1.31 The table in Appendix 1 provides a summary table of the SoCGs, with full document SoCGs included in Appendix 2.

1.32 Alongside SoCGs, the Council are also preparing Memoranda of Understanding (MoUs) with landowners and developers, in particular in relation to the delivery of proposed strategic allocations. These will be used to assist in demonstrating that proposed sites can deliver the necessary infrastructure requirements, and that the Council have worked constructivel and on an ongoing basis with developers and landowners throughout the process of allocating sites and masterplanning the design features.

1.33 The table in Appendix 3 provides a summary table of the MoUs, with full document MoUs included in Appendix 4.

2. Engagement

2.1 Engagement has been ongoing through the plan-making process including at Regulation 18 Issues and Options consultation (2022), Regulation 18 Draft Plan consultation (2024 and 2025), and engagement in preparation ahead of Regulation 19 consultation (2026).

2.2 This has included joint and coordinated evidence base work where appropriate, including studies prepared at the Gloucestershire-wide level and ongoing collaboration with Gloucestershire County Council and neighbouring authorities on infrastructure, transport and other strategic planning matters.

2.3 The SoCGs detail the specific engagement with neighbours and bodies throughout the plan-making process including detailed comments and discussion points (see **Appendix 2**)

2.4 Taken together, this demonstrates that the Local Plan has been prepared through effective, proportionate and ongoing joint working on strategic matters, in accordance with national policy.

Appendix 1 – Statements of Common Ground Summary Table

Organisation / Neighbouring Authority	Overview of strategic matters
Wiltshire Council	CDC housing need; Request for continued and ongoing engagement; Strategically important cross-boundary routes; Potential landscape and environmental impacts; Request for ongoing coordination on shared mitigation principles; Economic links across north Wiltshire/south-west Cotswolds
Swindon Borough Council	CDC housing need; Strength of strategic relationships; Density assumptions; Site-specific impacts; School capacity; Build-out rates and phasing; Cumulative impacts on strategic road network; Mitigation measures and HRA evidence; Ongoing joint working through Recreational Mitigation Strategy and Steering Group; Sharing data on Water Cycle studies; Potential impacts of growth on wastewater infrastructure and treatment capacity
West Oxfordshire District Council	CDC housing need; CDC economic needs
SLP authorities (Tewkesbury Borough Council, Cheltenham Borough Council)	CDC housing need
South Gloucestershire Council	Engagement with West England Combined Authority; Focus on non-National Landscape land
Stroud District Council	CDC housing need; HRA matters; No significant impacts relating to cross-boundary infrastructure
Oxfordshire County Council	CDC housing need; Impact of scale of growth at Moreton-in-Marsh on cross-boundary infrastructure provision and traffic impacts; Flood risk assessment
Worcestershire County Council	CDC housing need; School capacity in Worcestershire; Ongoing review of transport impacts with GCC
Warwickshire County Council	Strategic transport routes; Proposed transport hub delivery; Impact of development on from National Landscape in Warwickshire; Flood risk
Wychavon District Council	CDC housing need; Some engagement ongoing; Strategic transport routes; Impact on National Landscape; Employment land provision; Green infrastructure and potential increased visitor pressure
Vale of White Horse District Council	CDC housing and employment need; Protection of River Thames Corridor; Employment commuting patterns
Stratford-on-Avon District Council	Biodiversity near shared boundary; Protection of the River Thames corridor; Flood Resilience; Engagement on Housing and Employment capacity evidence; CDC housing need; Cross-boundary employment patterns
Network Rail	Development Impact on Level Crossings; Impacts to Moreton in Marsh and Kemble Station; New bridge across the railway at Moreton-in-Marsh
Gloucestershire ICB	Impacts on health infrastructure are determined through the Infrastructure Delivery Plan; requirements will be reflected in the new Local Plan policies

Organisation / Neighbouring Authority	Overview of strategic matters
Defence Infrastructure Organisation	Implications of emerging LP for operational defence establishments; Effect of proposed strategic and non-strategic allocations on military aviation safety, operational capability of defence sites, MOD estate interests
Sport England	Continue stage E of the Sport England Playing Pitch Strategy Guidance; masterplans will show areas to locate sports fields and pitches which will be of sufficient size to meet the need identified in the evidence
Severn Trent Water	Adequate water and wastewater infrastructure to serve all new developments is required; scale and location of upgrades needed is identified through the Water Cycle Study (WCS) and the Infrastructure Delivery Plan (IDP)
Thames Water	Adequate water and wastewater infrastructure to serve all new developments is required; scale and location of upgrades needed is identified through the Water Cycle Study (WCS) and the Infrastructure Delivery Plan (IDP)
Wessex Water	Based on this modest level of growth in the area served by Wessex Water, no issues have been identified other than standard matters which will be considered at the application stage.
Gloucestershire County Council	Several informal inputs have been provided to inform the Strategic Transport Assessment, including for mitigations following regular and ongoing engagement with GCC. A detailed issue log has been prepared by the Council's transport consultants which is being worked through, albeit some matters will be updated to inform the SOCG for Plan submission.
Environment Agency	Main strategic issues are planning for 'all' sources of flood risks and mitigation measures identified to address flood (through SFRA), strategic water planning (through WCS), green and blue infrastructure and contaminated land
Historic England	Setting and archaeological assessment are required to inform specific site selections; appropriate appraisals including the consideration of 'setting' issues so the character and appearance of significant historic settlements can be safeguarded; anonymous suburban estate type car-dependant sprawl that is at odds with the district's identity and special character should be avoided
Natural England	A full and comprehensive Habitat Regulations Assessment and Air Quality Assessment are required to support the Local Plan
National Highways	Informal inputs have been provided to inform the Strategic Transport Assessment, including for mitigations affecting the Strategic Road Network following regular engagement with NH. There are limited impacts on the Strategic Road Network and these are under review. The issues log prepared by the Council's transport consultants are being worked through, but some matters may be updated to inform the SOCG for Plan submission.

7. Stage 4: Selecting the draft allocations 177

1. Introduction to the Site Selection Topic Paper

1.1 This Topic Paper summarises Cotswold District Council's approach to selecting sites proposed for allocation within the Regulation 19 version of the emerging Cotswold District Local Plan.

1.2 Cotswold District Council has prepared a new Local Plan to replace the adopted Cotswold Local Plan. The emerging Cotswold District Local Plan puts forward the spatial vision and strategic objectives for achieving sustainable development across the district for a period of 17 years from 2026-2043.

1.3 The emerging Cotswold District Local Plan is planning to deliver 18,812 homes and 68.5 ha employment land across the district during the plan period. The Council has planned for an approximate 5% headroom above the Local Housing Need (17,918 homes) in the interest of providing for flexibility and contingency. After discounting saved allocations, known commitments, and anticipated windfall for housing, this equates to 12,835 new homes and 32.7 ha of new employment land.

1.4 In terms of the distribution of growth, 11,284 homes and the full residual employment land requirements are to be delivered across ten strategic site allocations for mixed-used development. Additionally, a total of 1,551 homes will be delivered across 32 non-strategic site allocations.

1.5 These sites have been selected following an evidence-led and proportionate site selection process in line with national policy and guidance. This Topic Paper explains the process Cotswold District Council has taken for identifying, assessing and shortlisting sites, prior to selecting the proposed allocations within the emerging Cotswold District Local Plan.

1.6 This Topic Paper should be read in conjunction with a series of complementary topic papers and evidence studies published alongside the Regulation 19 Cotswold District Local Plan (2026-43) (the Regulation 19 Local Plan). These include:

- Employment Land Review (July 2026)
- Heritage Impact Assessments (various) (July 2026)
- Housing and Economic Land Availability Assessment (and appendices) (July 2026)
- Housing Density and Optimising Housing Delivery Technical Paper (July 2026)
- Housing Land Supply Topic Paper, including Housing Trajectory (July 2026)
- Infrastructure Delivery Plan (July 2026)
- Integrated Impact Assessment (July 2026)

- Strategic Flood Risk Assessments (Level 1 and 2) (various) (July 2026); and
- Study of Land Surrounding Settlements (and appendices) (July 2026).

1.7 The rest of this Topic Paper consists of the following sections:

- **Section 2:** Policy Context provides an overview of the key national policies and guidance on the selection of sites for a local plan allocation.
- **Section 3:** Site Selection Methodology explains the Council's approach to identifying, assessing and selecting site options for a local plan allocation.
- **Section 4:** Confirming draft allocations outlines the strategic site options, non-strategic site options, and employment site options selected for a local plan allocation.

2. Policy Context

National Planning Policy Framework (NPPF)

2.1 The NPPF (December 2024) sets out the government's planning policies for England and how they are expected to be applied. It provides a framework within which locally prepared plans can provide for sufficient housing and other development in a sustainable manner. The policies of relevance to site selection process are set out below, but the emerging Local Plan has regard to all other aspects of relevant national policy, where appropriate.

2.2 At its heart the NPPF requires all plans and decisions to apply a presumption in favour of sustainable development. For plan-making, this means that:

'All plans should promote a sustainable pattern of development that seeks to: meet the development needs of their area; align growth and infrastructure; improve the environment; mitigate climate change (including by making effective use of land in urban areas) and adapt to its effects;

'Strategic policies should, as a minimum, provide for objectively assessed needs for housing and other uses…' [paragraph 11]

2.3 The NPPF further expands on the role of local planning authorities in planning and allocating sufficient sites to deliver the strategic priorities of the area and meet objectively assessed needs over the Plan period through strategic policies:

'Broad locations for development should be indicated on a key diagram, and land use designations and allocations identified on a policies map. Strategic policies should provide a clear strategy for bringing sufficient land forward, and at a sufficient rate, to address objectively assessed needs over the plan period, in line with the presumption in favour of sustainable development. This should include planning for and allocating sufficient sites to deliver the strategic priorities of the area (except insofar as these needs can be demonstrated to be met more appropriately through other mechanisms, such as brownfield registers or non- strategic policies)' [paragraph 23]

'Strategic policy-making authorities should have a clear understanding of the land available in their area through the preparation of a strategic housing land availability assessment. From this, planning policies should identify a sufficient supply and mix of sites, taking into account their availability, suitability and likely economic viability' [paragraph 72]

2.4 The NPPF also sets out, at a high level, key considerations which should be taken into account when identifying and selecting suitable locations for development in varying contexts. These considerations have been included as part of the Site Selection Methodology, as detailed in **Section 3** of this Topic Paper. The key considerations are described below.

Planning for larger scale development

2.5 The supply of large numbers of new homes can often be best achieved through planning for larger scale development, such as new settlements or significant extensions to existing villages and towns, provided they are well located and designed, and supported by the necessary infrastructure and facilities (including a genuine choice of transport modes). Working with the support of their communities, and with other authorities if appropriate, strategic policy-making authorities should identify suitable locations for such development where this can help to meet identified needs in a sustainable way. In doing so, they should:

'a) consider the opportunities presented by existing or planned investment in infrastructure, the area's economic potential and the scope for net environmental gains;

'b) ensure that their size and location will support a sustainable community, with sufficient access to services and employment opportunities within the development itself (without expecting an unrealistic level of self-containment), or in larger towns to which there is good access;

'c) set clear expectations for the quality of the places to be created and how this can be maintained (such as by following Garden City principles); and ensure that appropriate tools such as masterplans and design guides or codes are used to secure a variety of well-designed homes to meet the needs of different groups in the community;

'd) make a realistic assessment of likely rates of delivery, given the lead-in times for large scale sites, and identify opportunities for supporting rapid implementation (such as through joint ventures or locally-led development corporations); and

'e) consider whether it is appropriate to establish Green Belt around or adjoining new developments of significant size' [paragraph 77]

2.6 In considering the scale of development capable of meeting the objectives of paragraph 77 of the NPPF, regard has also been given to the Garden Communities Prospectus (2018), which identifies garden villages as typically comprising between 1,500 and 10,000 dwellings [paragraph 5], recognising that developments of this size are generally capable of supporting the infrastructure, services, facilities, employment opportunities and stewardship arrangements necessary to create sustainable communities. This therefore provides a useful benchmark when considering the scale at which a new settlement is likely to be capable of functioning as a sustainable community.

Rural areas

2.7 To promote sustainable development in rural areas:

'Housing should be located where it will enhance or maintain the vitality of rural communities. Planning policies should identify opportunities for villages to grow and thrive, especially where this will support local services. Where there are groups of smaller settlements, development in one village may support services in a village nearby' [paragraph 83]

Site assessment

2.8 In assessing sites that may be allocated for development in plans, or specific applications for development, it should be ensured that:

'a) sustainable transport modes are prioritised taking account of the vision for the site, the type of development and its location;

'b) safe and suitable access to the site can be achieved for all users;

'c) the design of streets, parking areas, other transport elements and the content of associated standards reflects current national guidance, including the National Design Guide and the National Model Design Code; and

'd) any significant impacts from the development on the transport network (in terms of capacity and congestion), or on highway safety, can be cost effectively mitigated to an acceptable degree through a vision-led approach' [paragraph 115]

2.9 The NPPF stresses that Local Plans should be informed throughout their preparation by a Sustainability Appraisal (SA) that meets the relevant legal requirements [paragraph 33]. This should demonstrate how a plan has addressed relevant economic, social and environmental objectives. The Integrated Impact Assessment (incorporating SA) has been integral to the site selection process and should be read alongside the Site Selection Topic Paper.

Planning Practice Guidance (PPG)

2.10 Planning Practice Guidance (PPG) provides complementary guidance on key policy themes included within the NPPF. Of relevance to the site selection process, the 'Housing and Economic Land Availability Assessment' (HELAA) chapter sets out the method for assessing housing and economic land availability and guides local authorities in identifying appropriate land to meet development needs.

2.11 The PPG states that an assessment of land availability is required to identify the future supply of land that is suitable, available and achievable for housing and economic development uses over the Plan period. The assessment is an

important source of evidence to inform plan-making and decision-taking, and the identification of a 5-year supply of housing land [paragraph 001].

2.12 The PPG clarifies that the assessment does not in itself determine whether a site should be allocated for development. It is the role of the assessment to provide information on the range of sites which are available to meet the local authority's requirements, but it is for the development plan itself, to determine which of those sites are the most suitable to meet those requirements. Plan-making authorities may carry out land availability assessments for housing and economic development as part of the same exercise, in order that sites may be identified for the use(s) which is most appropriate.

2.13 An assessment should:

- identify sites and broad locations with potential for development.
- assess their development potential.
- assess their suitability for development; and
- the likelihood of development coming forward (the availability and achievability).

2.14 The PPG notes that plan-making bodies should consider constraints when assessing the suitability, availability and achievability of sites and broad locations. For example, assessments should reflect Footnote 7 of the NPPF, which sets out the areas where the Framework would provide strong reasons for restricting the overall scale, type or distribution of development in the Local Plan area. Footnote 7 considerations include:

- habitat sites (and those sites listed in paragraph 181) and/or designated as Sites of Special Scientific Interest;
- land designated as Green Belt,
- Local Green Space,
- a National Landscape,
- a National Park or defined as Heritage Coast,
- irreplaceable habitats;
- designated heritage assets (and other heritage assets or archaeological interest referred to in Footnote 68); and
- areas at risk of flooding or coastal change.

2.15 The PPG emphasises the importance of taking a proactive approach when identifying as wide a range of sites and broad locations for development as possible (including those existing sites that could be improved, intensified or

changed). It is important that plan-makers do not simply rely on sites that they have been informed about but actively identify sites through the desktop review process that may assist in meeting development needs.

2.16 The assessment of land availability for the emerging Cotswold Local Plan is prepared through the HELAA for the emerging Cotswold District Local Plan in accordance with national policy and guidance. It has considered key suitability constraints noted in Footnote 7 of the NPPF. The HELAA effectively forms the first stage of the Council's site selection process and provides the initial long list of sites for more detailed consideration through the plan making process.

3. Site Selection Methodology

Overview of key stages

3.1 The site selection methodology undertaken follows a robust and proportionate four-stage assessment process, comprising:

- **Stage 1:** Identification and initial assessment of sites through the HELAA. The HELAA provides a 'long-list' of sites which have potential to demonstrate suitability, availability and achievability for more detailed consideration from Stage 2 onwards. A total of 891 sites were assessed at Stage 1 with 328 identified as 'deliverable / developable' or 'potentially deliverable / developable' for further consideration at Stage 2. The HELAA for the emerging Cotswold District Local Plan is published separately and should be read in conjunction with this Topic Paper.
- **Stage 2:** An initial sift of sites which discounts sites based on a set of criteria informed by national policy and guidance (i.e., NPPF and Footnote 7 constraints) and the broad spatial strategy for the emerging Local Plan. The broad spatial strategy is to focus growth at Principal Settlements and Non-Principal Settlements and explore opportunities to deliver strategic growth via sustainable urban extensions or new settlements. The sifting criteria are presented by site category: strategic site options; non-strategic site options; and employment site options. This stage helps to 'filter' the 'long-list' assessed at Stage 1 and creates a 'shorter long-list' for further consideration.
- **Stage 3:** Detailed but proportionate assessment of the constraints and opportunities for the sites taken forward for Stage 3, based on the available technical evidence base. Reflecting the assessment findings, sites are classified into one of three categories reflecting their potential suitability for a Local Plan allocation, as follows: Clear Preferred Site Option; Marginal Omission Site Option; or Clear Omission Site Option.
- **Stage 4:** Outlines the strategic site options, non-strategic site options, and employment site options which have been proposed for allocation in the emerging Cotswold District Local Plan.

4. Stage 1: HELAA

4.1 The first stage of site selection process was to identify all potential housing and economic development sites in the district and undertake a high-level assessment of suitability, availability and achievability through the HELAA (July 2026).

4.2 Cotswold District Council have undertaken 'call for sites' exercises during the earlier stages of plan making, requesting site submissions for a variety of uses including housing and employment. During the most recent Regulation 18 'Preferred Options' Consultation in November 2025, landowners were also invited to submit sites for potential strategic growth within any of the 29 'broad locations' of the district outside of the Cotswolds National Landscape.

4.3 A total of 891 sites have been considered within the HELAA, with 328 sites identified as 'deliverable / developable' or 'potentially deliverable / developable' for further consideration at Stage 2. Sites within the HELAA which have no potential for housing and employment development within the plan period (and have therefore been 'discounted' at Stage 1) include:

- Sites which would not meet minimum thresholds for development. Specifically, sites that do not have the capacity to deliver five or more homes (or 0.2 hectare or above) or 500 sqm or more economic floorspace (or 0.25 hectares).
- Sites that the HELAA defines as not deliverable or developable during the plan period, including sites which are unable or unlikely to address physical constraints, or are unable or unlikely to address achievability issues.
- Sites which, since the close of the 'call for sites' exercises, have been confirmed as being 'unavailable' for development during the plan period (i.e., primarily via correspondence between Cotswold District Council and landowners / site promoters).

4.4 Full details of the HELAA assessment methodology and outcomes, including the long list of detailed assessment criteria of suitability, availability and achievability, are provided in the HELAA Report and accompanying appendices for the emerging Cotswold District Local Plan.

5. Stage 2: Site Sifting

5.1 The long list of sites identified at Stage 1 was subject to a high-level assessment to establish which sites could be reasonably taken forward to Stage 3 for a detailed assessment of constraints and opportunities.

5.2 A set of criteria informed by national policy and guidance (as discussed in Section 2 of this Topic Paper) informed the sift. The criteria for the strategic sites, non-strategic sites, and employment sites are described below.

Strategic site options

5.3 The initial sift focused on identifying:

- Sites (or clusters of adjacent sites) which could deliver a minimum of 350 homes for a 'sustainable urban extension', reflecting the Council's definition of strategic scale growth for the emerging Cotswold Local Plan.
- Sites (or clusters of adjacent sites) which could deliver a minimum of 1,500 homes for a 'new settlement', aligning with the NPPF position statement on 'garden communities', either during the plan period up to 2043 or extending beyond the plan period.
- Sites which are outside of the Cotswolds National Landscape given that major development is not supported within protected landscapes other than in exceptional circumstances. Specifically:
    - Paragraph 189 of the NPPF (December 2024) confirms that National Landscapes (formerly Areas of Outstanding Natural Beauty) must be given the highest status of protection, with a duty to conserve and enhance landscape and scenic beauty.
    - Paragraph 190 states that major development in National Landscapes should be refused except in exceptional circumstances and where it is demonstrably in the public interest.
    - The Cotswolds National Landscape Management Plan (2025-2030), specifically Outcome 11 - Development and Infrastructure, states that development should be avoided in prominent or sensitive locations where it would harm landscape character or the setting of settlements.
- Sites which would align with the broad spatial strategy for the emerging Cotswold Local Plan. Specifically:
    - Sites (or clusters of adjacent sites) which are adjacent to Principal Settlements or Non-Principal Settlements which could deliver sustainable urban extensions; and

- Opportunity sites for any new settlements outside of the Cotswold National Landscape, informed by the findings of the Broad Location Study and an understanding of site availability.

Non-strategic site options

5.4 The initial sift focused on identifying:

- Sites which would deliver a minimum threshold of five homes and up to 349 homes.
- Sites which are within or adjacent to Principal Settlements and Non-Principal Settlements across the district which are identified as the most sustainable locations for delivering growth during the plan period.
- Site suitability as informed by the HELAA findings in Stage 1. Specifically, excluding sites identified as 'not deliverable or developable' during the plan period. For example, if they wholly overlap with any Footnote 7 constraints, or whereby any residual net developable area would unlikely be able to accommodate a minimum threshold of at least five homes.
- Sites within the Cotswolds National Landscape which are comparatively less sensitive to growth. This has been informed by the findings of the Council's Study of Land Surrounding Settlements (July 2026) which has been published separately and should be read in conjunction with this Topic Paper. For example, consideration is given to whether any non-strategic site options have received a 'high' or 'medium / high' sensitivity rating[1] within the Study, as these sites are those where the thresholds for change are low.

Employment site options

5.5 The initial sift focused on identifying:

- Sites which would deliver a 500 sqm (or 0.25 hectares) or more economic floorspace.
- Site suitability as informed by the HELAA findings in Stage 1. Specifically, excluding sites identified as 'not deliverable or developable' during the plan period. For example, if they wholly overlap with any Footnote 7 constraints, or whereby any residual net developable area would unlikely be able to accommodate a minimum threshold of 500 sqm (or 0.25 hectares) or more economic floorspace.

[1] The assessment identifies 'High Sensitivity Indicators' which closely align with the Special Qualities of the Cotswolds National Landscape, reflecting the area's sensitivity to change in relation to its scenic beauty, settlement form, and cultural heritage.

- Sites which were classified as 'green' or 'amber' with respect to their suitability, delivery and market attractiveness for employment development within the Employment Land Review Topic Paper (July 2026)[2].

[2] The ELR considers a variety of factors to determine the suitability, delivery, and market attractiveness of a site. This includes (but is not limited to): physical constraints; strategic road access; public transport accessibility; surrounding uses; potential use classes; and infrastructure requirements. Further detail is provided in the Appendices accompanying the ELR.

6. Stage 3: Detailed assessment of constraints and opportunities

Assessment methodology

6.1 Stage 3 focused on a more detailed assessment of constraints and opportunities associated with each of the 'shorter long list' of sites identified at Stage 2. This helped to establish the sites suitability for a potential Local Plan allocation, consistent with the broad spatial strategy and wider objectives to deliver sustainable development. The site assessment findings were informed by the available technical evidence base which is published alongside the Regulation 19 version of the Cotswold District Local Plan.

6.2 An overall 'traffic light' rating is provided to indicate whether a site would be an appropriate candidate for a potential Local Plan allocation.

6.3 The descriptions of the ratings are as follows:

Overall Rating	Description
Clear Preferred Site Option (++)	The site or site cluster is in a sustainable location for growth, consistent with the objectives and broad spatial strategy of the Plan. The assessment may have identified potential constraints, however there is a reasonable prospect for the identified constraints to be mitigated successfully.
Marginal Omission Site Option (-)	The site or site cluster is subject to one or multiple, and more significant development constraints and aligns to a more marginal extent with the objectives and spatial strategy of the Plan.
Clear Omission Site Option (- -)	The site or site cluster is subject to one or multiple, and more significant development constraints that are unlikely to be overcome through potential mitigation strategies and does not meet the objectives and broad spatial strategy of the Plan.

6.4 A degree of planning balance and professional judgement has been applied in relation to the rating of the site options considered at Stage 3 of the site selection process. It is important to recognise that this stage does not attempt to assess all the potential effects a development may have, but aims to identify, following a robust but proportionate approach, key constraints and opportunities critical to delivering the broad spatial strategy of the emerging Cotswold District Local Plan and/or 'showstoppers' to development.

6.5 The assessment findings for the strategic site options, non-strategic site options, and employment site options which have been taken forward to Stage 3 of the site selection process are organised as follows:

- **Cirencester:** The Main Settlement in the district with the greatest variety of services and facilities.
- **Ampney Crucis and Driffield:** There are large areas of land in locations outside of the National Landscape which could accommodate strategic scale growth during the plan period but are not within or adjacent to a Principal or Non-Principal Settlement. This primarily includes locations which are within proximity to the Main Settlement of Cirencester (i.e., the largest settlement in the district). In particular, locations surrounding the villages of Ampney Crucis (approximately 2.5km to the east) and Driffield (approximately 4km to the south east).
- **Principal Settlements:** Andoversford, Blockley, Bourton-on-the-Water, Chipping Campden, Fairford, Kemble, Lechlade-on-Thames, Mickleton, Moreton-in-Marsh, Northleach, Siddington, South Cerney, Stow-on-the-Wold, Tetbury, Upper Rissington.
- **Non-Principal Settlements:** Avening, Bibury, Bledington, Bourton-on-the-Hill, Broadwell, Chedworth, Didmarton, Down Ampney, Kempsford, Longborough, Meysey Hampton, North Cerney, Poulton, Preston, Sapperton, Swell, Willersey, and the village cluster of Coln St Aldwyns, Hatherop, and Quenington.

6.6 Other than M78 and R614 (HELAA site references), all of the sites which have been considered at Stage 3 for a potential employment allocation overlap with sites which have been proposed for residential development, either as part of a sustainable urban extension or non-strategic site option. On this basis, commentary on the employment suitability for the relevant sites is provided within the settlement discussions and assessment tables, drawing on the findings of the Employment Land Review (2026).

Main Settlement: Cirencester

6.7 Land to the north of the A429, which bisects the central section of the market town, is within the Cotswolds National Landscape. The Town Centre, framed by the A429 ring road, is a designated Conservation Area which contains several Scheduled Monuments and Grade I Listed Buildings. There is a Special Landscape Area to the north east and to the south west of the town, and Cirencester Park Historic Park and Garden extends to the west of the town (north of the A419).

6.8 Land to the south east of the town is comparatively less constrained, with key constraints including areas of Flood Zone 2 and Flood Zone 3 (associated with the River Churn and the Thames and Severn Canal), Conservation Areas in the villages of Driffield, Harnhill, and Preston, and Groundwater Source Protection Zones. On this basis, the following sites (or clusters of sites) have been taken forward to Stage 3 of the site selection process for a potential sustainable urban extension:

- 'Land east of Kingshill Lane, Cirencester' (C164A).
- 'Steadings southern extension, Cirencester' (C190).
- 'The Whiteway, Cirencester' (C132).

6.9 Within the HELAA, of the sites which are classified as 'potentially deliverable / developable' or 'deliverable / developable' for non-strategic scale development at Cirencester:

- Two of these sites have planning permission, specifically C39 and C80.
- Two of these sites are lower than the threshold of five homes reflecting their indicative capacities or are not within or adjacent to Cirencester and therefore represent an unsustainable location for growth, specifically C168 and C172D.
- C178 is within the Cotswold National Landscape and has a 'high' sensitivity. The indicative capacity for the site is close to the threshold for a sustainable urban extension, which would constitute major development within the National Landscape.

6.10 Reflecting the above, the following non-strategic site options have been considered in detail through Stage 3 of the site selection process, specifically: C52, C57, C70, C71, C79A, C81B, C97, C101A, C101B, C106B, C111, C149A, C149B; and R614 (for employment). The assessment findings are presented in the table below and accompanying map.

Site ref.	Site name	Site assessment findings	Site rating
C132 (Sustainable Urban Extension)	The Whiteway, Cirencester	The site comprises greenfield land to the north-east of Cirencester and is located within the North Cirencester Special Landscape Area. The site comprises Grade 3 agricultural land and is affected by areas of groundwater flood susceptibility. The site also lies within the Fairford and Kemble Airfield Safeguard Areas. An existing agricultural access is available from The Whiteway, although further investigation would be required to determine whether it is suitable for residential intensification. The site forms part of the open rural setting of Cirencester and contributes positively to the character of the North Cirencester Special Landscape Area. The rolling farmland, strong hedgerow boundaries and visual relationship with the surrounding countryside create an important transition between the urban edge and wider landscape. The site is prominent in views from The Whiteway and contributes to the undeveloped northern skyline of the town. It has been assessed as having Medium-High landscape sensitivity, reflecting its role in maintaining the open and rural character of this part of the Special Landscape Area. Development would extend built form into open countryside in an uncharacteristic manner, resulting in an incongruous finger of development that would erode the existing pattern of settlement containment and adversely affect the landscape setting of Cirencester. Overall, the site is considered a **Clear Omission Site Option (--)**, as development would result in significant harm to the North Cirencester Special Landscape Area and the rural setting of Cirencester	**--**

Site ref.	Site name	Site assessment findings	Site rating
		and would represent an inappropriate extension of the settlement into the open countryside.	
C164A (Sustainable Urban Extension)	Land east of Kingshill Lane, Cirencester	The site comprises greenfield land on the eastern edge of Cirencester and is wholly within Grade 3 agricultural land. The site lies within the airfield safeguarding areas associated with Fairford, Kemble and South Cerney and is affected by areas of groundwater flood susceptibility. The site is located adjacent to the A419, which may give rise to noise impacts requiring mitigation. An existing agricultural access is present from Kingshill Lane, although further investigation would be required to confirm its suitability for residential development. The Employment Land Review (2026) identifies the site as having good access to the Strategic Road Network and Cirencester, with strong market attractiveness for B2 and B8 uses. The site is well placed to provide employment development, particularly within the northern part of the site where accessibility is strongest. Overall, the site is considered a **Clear Preferred Site Option (++)**, as it is located on the edge of Cirencester and the identified constraints are generally capable of mitigation. New development areas should seek to accommodate a local centre with day-to-day services, green infrastructure enhancements, and opportunities to improve active travel links between the site and Cirencester town centre.	**++**

Site ref.	Site name	Site assessment findings	Site rating
C190 (Sustainable Urban Extension)	Steadings southern extension	The site comprises greenfield land to the south-west of Cirencester and is affected by airfield safeguarding areas associated with Fairford and Kemble, with part of the site also falling within the South Cerney safeguarding area. The site contains areas of Grade 3 agricultural land and is affected by groundwater flood susceptibility. Part of the site lies within the Kemble and Ewen Special Landscape Area, indicating landscape sensitivities that would require careful consideration. A Scheduled Monument and its setting affect part of the site, requiring appropriate mitigation of potential heritage impacts. Several existing agricultural accesses are present, although further investigation would be required to determine their suitability for residential development. The Employment Land Review (2026) identifies the site as a potential long-term opportunity for employment provision, recommending around 1-2 ha of employment land as part of a wider mixed-use development. Whilst landscape and heritage constraints will require careful consideration, the site offers an opportunity to support economic growth alongside future mixed-use development. Overall, the site is considered a **Clear Preferred Site Option (++)**, as the identified landscape, heritage and environmental constraints are considered capable of mitigation. New development areas should seek to accommodate a local centre with day-to-day services, green infrastructure enhancements, and opportunities to improve active travel links between the site and Cirencester town centre.	**++**

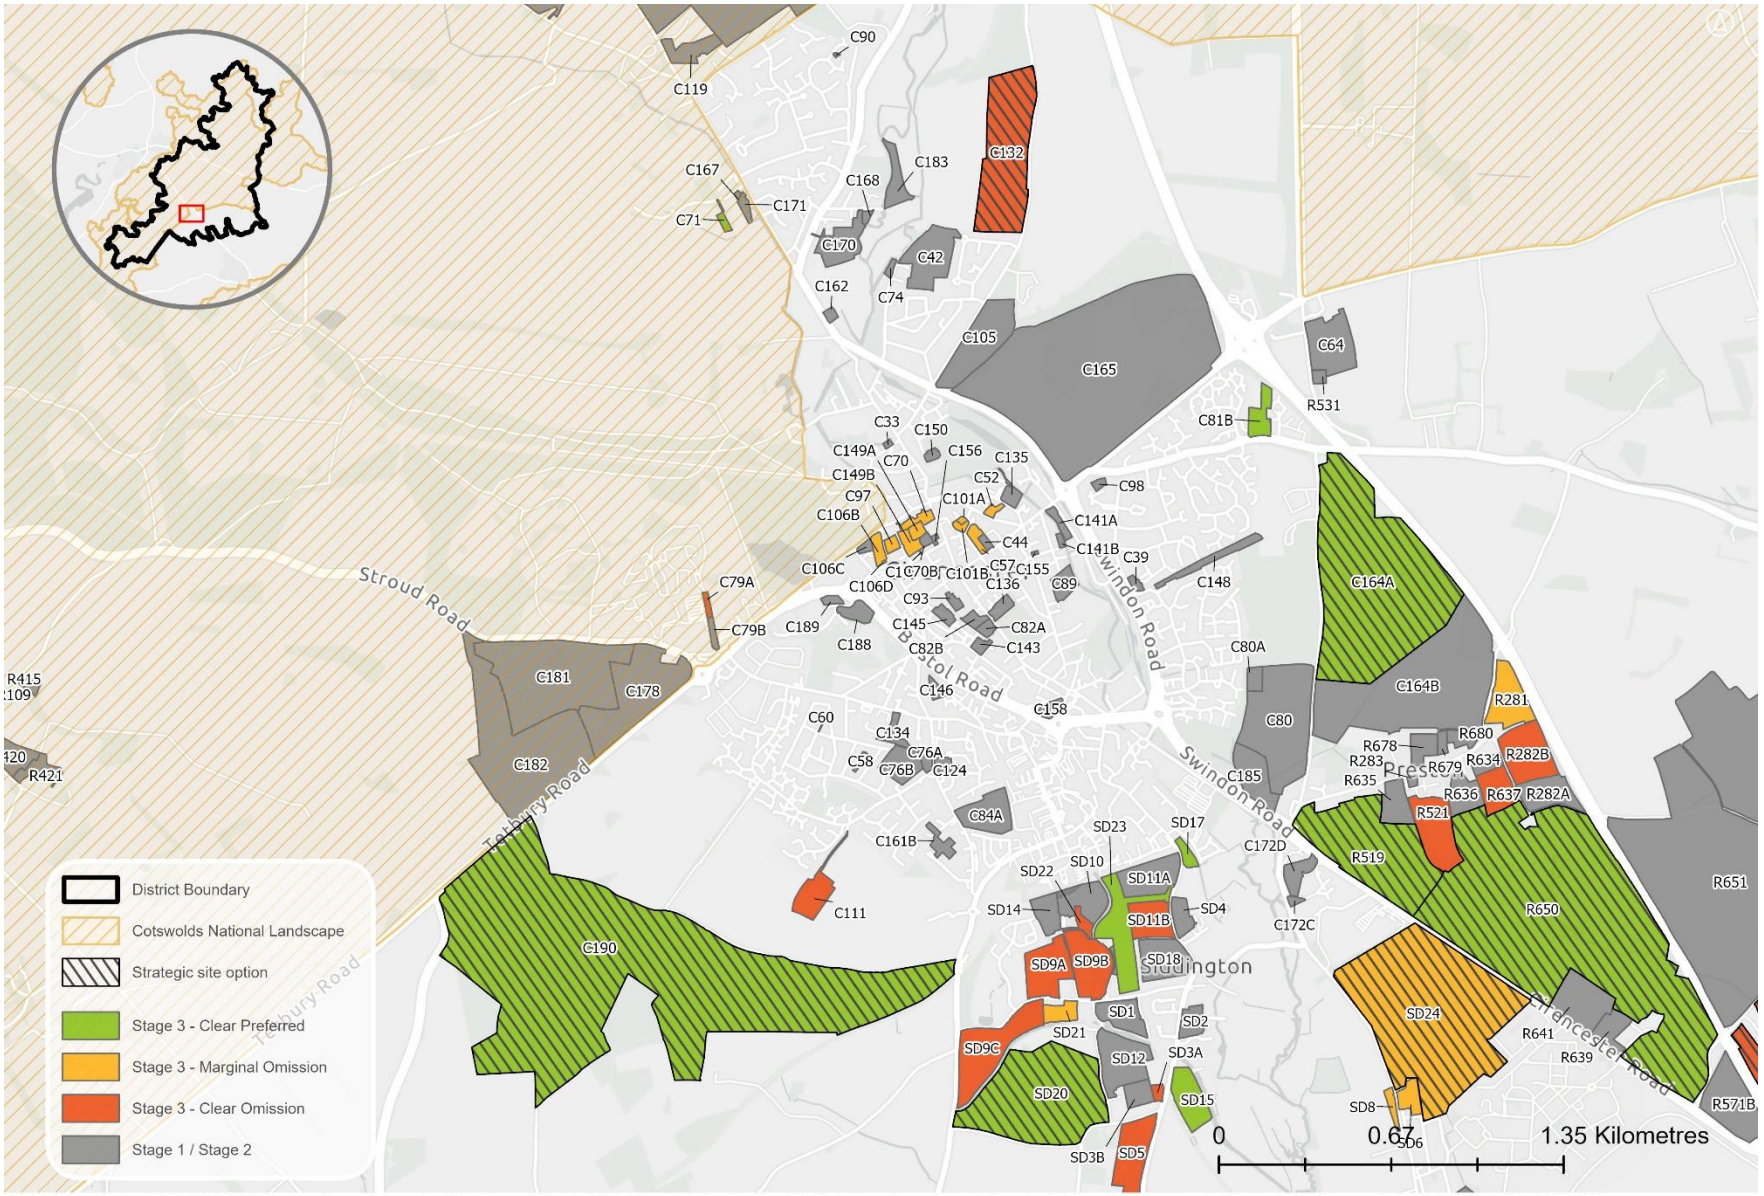
Site ref.	Site name	Site assessment findings	Site rating
C52	27/27A Dyer Street	The site comprises a brownfield site within Cirencester town centre containing a mix of commercial and residential uses. The site lies within the Conservation Area and is affected by the Fairford, Kemble and South Cerney Airfield Safeguard Areas and areas of groundwater flood susceptibility. A significant part of the site falls within the Scheduled Monument of the Roman town of Corinium and the site is also within the setting of nearby listed buildings. Existing access is available from The Waterloo, although further investigation may be required to determine whether it is suitable for the intended use. The site is located within the Cirencester development boundary, town centre boundary and Primary Shopping Area and occupies a highly sustainable location. Redevelopment presents an opportunity to improve the environmental quality and townscape of this part of the town centre. However, any redevelopment would need to carefully consider archaeological remains, the character and appearance of the Conservation Area, and the setting of nearby heritage assets. Overall, the site is considered a **Marginal Omission Site Option (-)**, as significant archaeological and heritage constraints, together with identified viability concerns, reduce the certainty that the site can be successfully redeveloped. However, subject to a comprehensive master planned approach, redevelopment may be achievable and could deliver benefits to the town centre.	**-**
C57, C101A, C101B	Forum Car Park, Magistrates	The site comprises a collection of brownfield parcels within Cirencester town centre, including The Forum Car Park, the former Magistrates Court and Cirencester Police Station. The site lies wholly within the Cirencester Town Centre	**-**

Site ref.	Site name	Site assessment findings	Site rating
	Court, Police Station	Conservation Area and is affected by the Fairford, Kemble and South Cerney Airfield Safeguard Areas and areas of groundwater flood susceptibility. A substantial proportion of the Forum Car Park lies within the Scheduled Monument of the Roman town of Corinium and the wider site is sensitive in archaeological terms. Existing access arrangements are available from South Way and The Waterloo, although improvements may be required as part of any comprehensive redevelopment proposal. The site occupies a sustainable town centre location and presents opportunities to improve the environmental quality, townscape and public realm of this part of Cirencester. Redevelopment could support a mix of town centre uses and residential development in accordance with the Town Centre Masterplan. However, the site performs an important role in the town's parking provision, and redevelopment would need to be coordinated with alternative parking arrangements or parking retention within the scheme. The site is also subject to significant archaeological and heritage constraints, being partly located within a Scheduled Monument, within the Conservation Area and within the setting of several listed buildings. The archaeological significance of the site may affect both development capacity and viability. Overall, the site is considered a **Marginal Omission Site Option (-)**, as significant archaeological, heritage and viability constraints, together with the need to address the loss of an important town centre parking facility, reduce the certainty that redevelopment can be delivered successfully. Whilst the site offers	

Site ref.	Site name	Site assessment findings	Site rating
		clear regeneration benefits in principle, its complexity reduces its suitability. However, subject to a comprehensive master planned approach, redevelopment may be achievable and could deliver benefits to the town centre.	
C70	Brewery Car Park and surrounding land	The site comprises a brownfield site within Cirencester town centre containing predominantly commercial uses. The site lies within the Conservation Area and is affected by the Fairford, Kemble and South Cerney Airfield Safeguard Areas and areas of groundwater flood susceptibility. Part of the site falls within the Scheduled Monument of the Roman town of Corinium and the site is also adjacent to a Grade II listed building. Existing access is available via the adjoining car park to the south, although further investigation may be required to determine whether it is suitable for the proposed use. The site occupies a sustainable location within the settlement boundary and presents an opportunity for the redevelopment of previously developed land. Any redevelopment would need to be informed by appropriate archaeological and heritage assessment given the site's location within the Conservation Area and partial overlap with the Scheduled Monument. The site also benefits from an extant planning permission for a mixed-use cinema scheme (ref. 14/01529/FUL), indicating that redevelopment has previously been considered acceptable in principle. The delivery of a cinema or other town centre leisure use could provide a valuable community facility and contribute positively to the vitality and viability of Cirencester town centre.	**-**

Site ref.	Site name	Site assessment findings	Site rating
		Overall, the site is considered a **Marginal Omission Site Option (-)**, as whilst redevelopment may be achievable in principle, the site is currently identified for a town centre leisure-led scheme which has the potential to deliver wider community and economic benefits. Archaeological sensitivities and the need to carefully address heritage considerations would also need to be taken into account in bringing the site forward. However, subject to a comprehensive master planned approach, redevelopment may be achievable and could deliver benefits to the town centre.	
C71	Land adjacent 'Donside', off Barn Way	The site is wholly located within the Cotswolds National Landscape but is adjacent to existing residential development. The site is predominantly Grade 3 agricultural land and lies within the airfield safeguarding areas associated with Fairford and Kemble. Areas of groundwater flood susceptibility affect the site, while small areas also fall within Flood Zones 2 and 3, which may require flood mitigation measures. Although there is no existing access, it is anticipated that suitable access can be established. Overall, the site is considered a **Clear Preferred Site Option (+)**, as it is well related to the existing settlement and the identified landscape, access and flood risk constraints are considered capable of mitigation.	**++**
C79A	Northern part of former Highways Depot, Stroud Road	The site comprises a brownfield site to the west of Cirencester and is located within the Cotswolds National Landscape. The site is affected by the Fairford and Kemble Airfield Safeguard Areas and areas of groundwater flood susceptibility. The site lies adjacent to Cirencester College and has previously benefited from	**--**

Site ref.	Site name	Site assessment findings	Site rating
		planning permission for educational development. Existing access is available from Druids Walk, although further investigation may be required to determine whether it is suitable for a more intensive form of development. Overall, the site is considered a **Clear Omission Site Option (--)**, as the site is no longer being promoted for residential development and is therefore not considered available for allocation. This significantly reduces its suitability and deliverability relative to available and deliverable alternatives.	
C81B	Land west of Gardner Way	The site comprises greenfield land in the north-east of Cirencester and is wholly within Grade 3 agricultural land. The site lies within the airfield safeguarding areas associated with Fairford, Kemble and South Cerney and is affected by areas of groundwater flood susceptibility. The site is adjacent to existing residential development, providing a logical opportunity for growth in relation to the existing urban area. There is currently no existing access onto the site, although access could potentially be provided from Gardner Way, subject to further investigation. Overall, the site is considered a **Clear Preferred Site Option (++)**, as it is well related to the existing built-up area and there are no significant environmental, heritage or infrastructure constraints that would be likely to preclude development, with the identified constraints considered capable of mitigation.	**++**
C97	Sheep Street Car Park (Old	The site comprises a brownfield car park site within Cirencester town centre and lies wholly within the Conservation Area. The site is affected by the Fairford, Kemble and South Cerney Airfield Safeguard Areas and areas of groundwater	**-**



Site ref.	Site name	Site assessment findings	Site rating
	Memorial Hospital)	flood susceptibility. A significant proportion of the site falls within the Scheduled Monument of the Roman town of Corinium and any redevelopment would need to be informed by detailed archaeological assessment and appropriate mitigation. Existing access is available, although further investigation may be required to determine whether it is suitable for a more intensive form of development. The site performs an important town centre parking function and its redevelopment would need to be considered as part of the wider town centre masterplanning process. The site contains the former air raid shelter, which is a non-designated heritage asset and an important community facility, and this should be retained and incorporated into any redevelopment proposals. In addition, 23 Sheep Street makes a positive contribution to the character and appearance of the Conservation Area and its retention and conversion would be preferable to demolition. Whilst the site is subject to significant archaeological and heritage constraints, the evidence indicates that sensitively designed residential or commercial development may be achievable. Overall, the site is considered a **Marginal Omission Site Option (-)**, as redevelopment would need to overcome significant archaeological, heritage and parking-related constraints, reducing its suitability. However, subject to a comprehensive master planned approach, redevelopment may be achievable and could deliver benefits to the town centre.	

Site ref.	Site name	Site assessment findings	Site rating
C106B	Sheep Street Island	The site comprises a brownfield site within Cirencester town centre that is currently used primarily for car parking. The site lies within the Cirencester Town Centre Conservation Area and contains the Grade II listed former railway station and Apsley Hall. The site is affected by the Fairford, Kemble and South Cerney Airfield Safeguard Areas and areas of groundwater flood susceptibility. Existing access is available from Tetbury Road. The site occupies a sustainable location within the town centre and presents an opportunity to enhance the character and appearance of this part of Cirencester. Redevelopment could facilitate the reintroduction of active frontages and improve the visual relationship between buildings and existing parking areas. Any proposals would need to carefully consider the significance of the listed buildings and the Conservation Area, whilst ensuring appropriate parking provision is retained. Parts of the wider site, including Oakley House and the garages in the south-east corner, have been identified as unavailable for redevelopment and are not proposed to form part of any future allocation. Overall, the site is considered a **Marginal Omission Site Option (-)**, as whilst it represents a sustainable brownfield redevelopment opportunity within Cirencester town centre, the partial unavailability of the wider site, the need to retain or reconfigure parking provision, and heritage considerations reduce its deliverability and suitability relative to less constrained alternatives.	**-**
C111	The Cranhams, Cranhams Lane	The site comprises greenfield land on the south-western edge of Cirencester and contains a Grade II listed building. The site lies within the airfield safeguarding	**--**

Site ref.	Site name	Site assessment findings	Site rating
		areas associated with Fairford, Kemble and South Cerney and contains a mix of Grade 2 and Grade 3 agricultural land. Development would need to carefully consider and mitigate potential impacts on the listed building and its setting. The site also contains a number of individual and area Tree Preservation Orders, which may constrain the developable area and influence the layout of any future development. Existing access is available from Cranhams Lane, although further investigation would be required to determine whether it can be satisfactorily upgraded to accommodate residential development. Overall, the site is considered a **Clear Omission Site Option (--)**, as development could result in significant and detrimental impacts on the Grade II listed building, its setting and the wider landscape, whilst the presence of protected trees and potential access constraints further limit its suitability.	
C149A	Brewery Car Park (north-east part)	The site comprises a brownfield car park within Cirencester town centre and lies wholly within the Cirencester Town Centre Conservation Area. Approximately 37% of the site overlaps with the Scheduled Monument of the Roman town of Corinium and any redevelopment would need to carefully address archaeological and heritage considerations. Existing access is available from C149B. The site performs an important town centre parking function, and redevelopment would need to address the loss of existing parking provision. It is recognised that the impacts to the Scheduled Monument have previously been identified as being addressed through redevelopment. However, the site is considered a **Marginal Omission Site Option (-)**, as the loss of an important town centre car	**-**

Site ref.	Site name	Site assessment findings	Site rating
		park, together with archaeological and heritage constraints, reduces its suitability. However, subject to a comprehensive master planned approach, redevelopment may be achievable and could deliver benefits to the town centre.	
C149B	Brewery Car Park (south-west part)	The site comprises a brownfield site within Cirencester town centre consisting of a disused grocery store and associated car park. The site lies wholly within the Cirencester Town Centre Conservation Area and partially overlaps with the Scheduled Monument of the Roman town of Corinium. Existing access is available from Cripps Road, although further investigation may be required to determine whether it is suitable for residential intensification. Redevelopment would need to carefully address archaeological and heritage considerations and would also result in the loss of existing town centre parking provision. It is recognised that the impacts to the Scheduled Monument have previously been identified as being addressed through redevelopment. Overall, the site is considered a **Marginal Omission Site Option (-)**, as the loss of existing parking facilities, together with archaeological and heritage constraints, reduces its suitability. However, subject to a comprehensive master planned approach, redevelopment may be achievable and could deliver benefits to the town centre.	**-**
R614 (Employment)	Land north of Welsh Way	The site comprises a partly developed employment area and adjoining greenfield land within the Cotswolds National Landscape. The site is affected by the Kemble Airfield Safeguard Area and areas of groundwater flood susceptibility. Existing	**-**

Site ref.	Site name	Site assessment findings	Site rating
		access is available and may be suitable for intensification, subject to further investigation. The Employment Land Review (2026) identifies the site as a potential extension to the existing Tall Trees Estate and notes that it benefits from strong accessibility to the A417. However, despite these locational advantages, the site is situated in a rural location outside any settlement and would represent a further expansion of employment development into the countryside. Overall, the site is considered a **Marginal Omission Site Option (-)**, as whilst it could function as an extension to the existing employment estate and benefits from good access to the strategic road network, its location within the Cotswolds National Landscape and detached rural setting reduce its suitability relative to employment sites that are better aligned with the spatial distribution of development.

Ampney Crucis and Driffield

6.11 Within the HELAA, of the sites which are classified as 'potentially deliverable / developable' or 'deliverable / developable' for a potential new settlement, 'Land to the north of Ampney Crucis' (R583A) and 'Land north west of Harnhill, Driffield' (R691), are strategic-scale site options that have indicative capacities which fall short of the 1,500-home threshold for a 'new settlement'. The sites are not adjacent to an existing settlement and therefore cannot be considered as sustainable urban extensions.

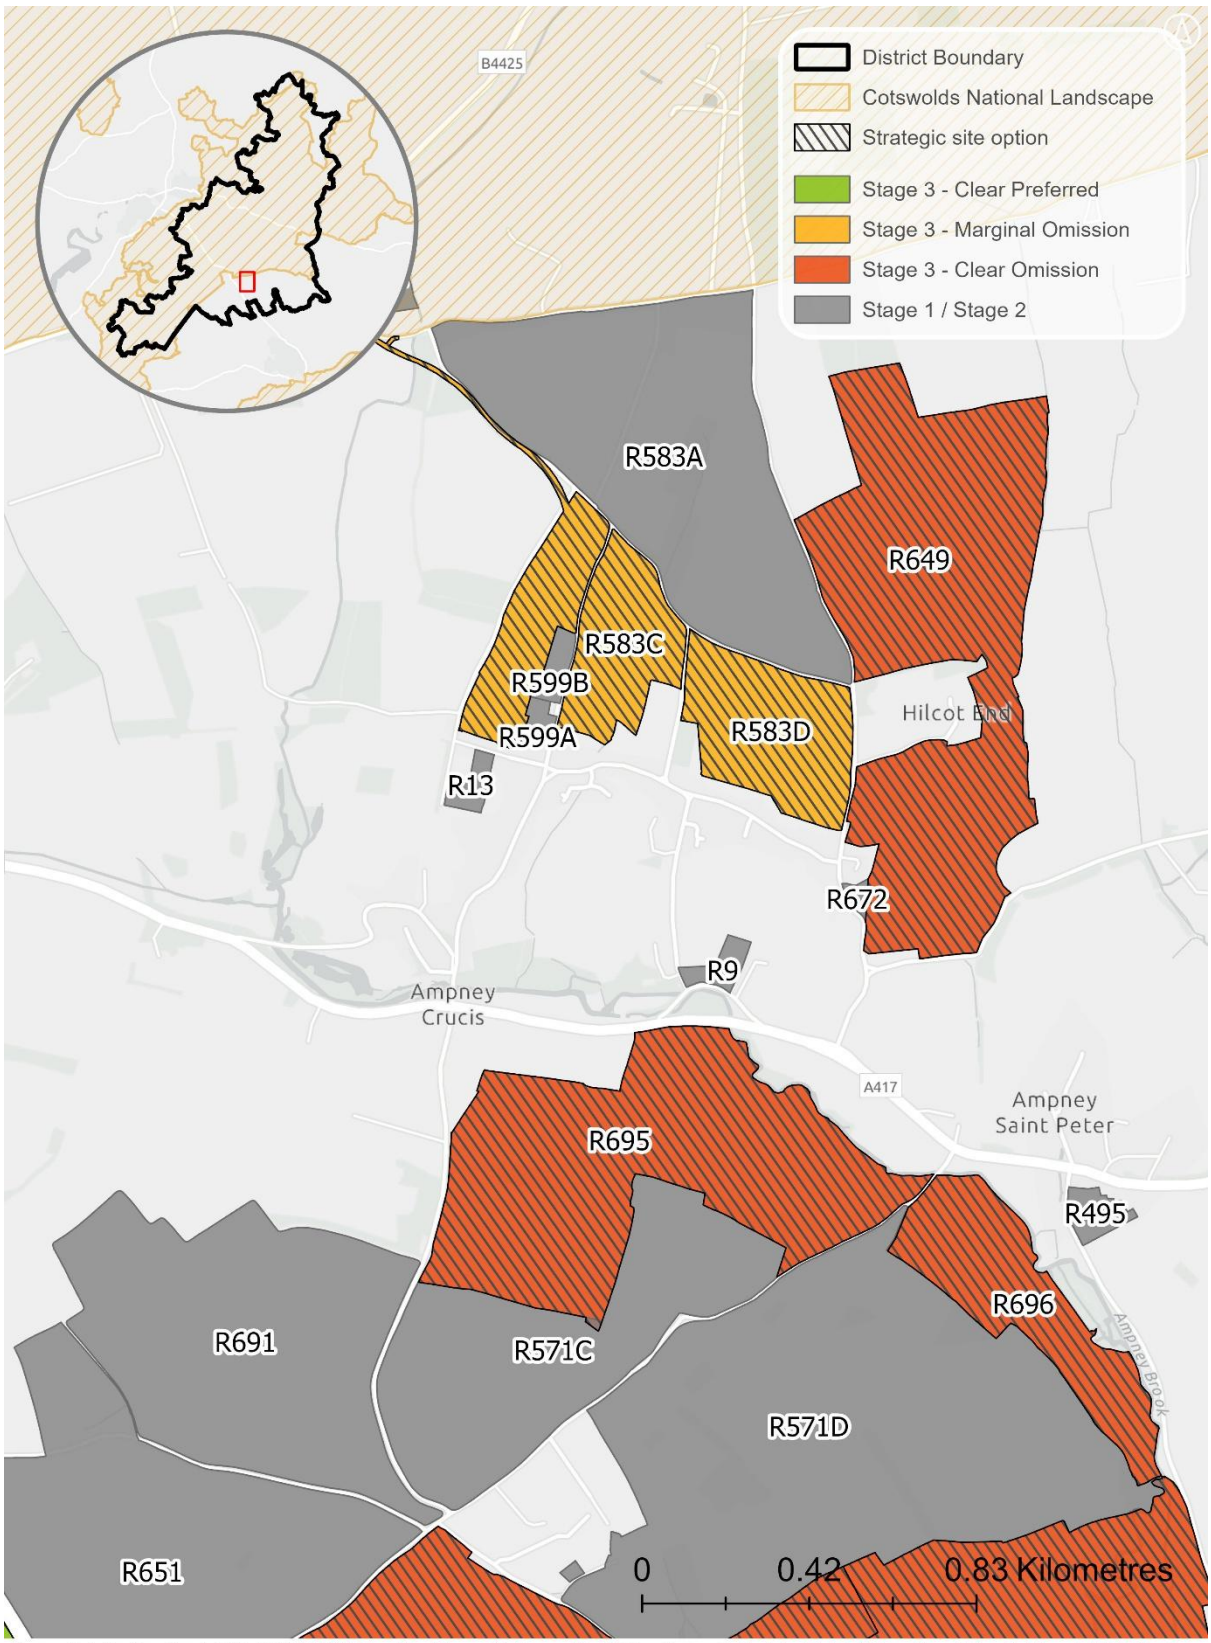
6.12 Reflecting the above, the following sites (or clusters of sites) have been taken forward to Stage 3 of the site selection process for a potential 'new settlement' (with their HELAA reference noted in brackets):

- 'Land to the south of Ampney Crucis' (R695, R696).
- 'Land east of Driffield' (R656, R689, R692).
- 'Land south of Driffield' (R644, R657, R658).
- 'Land west of Driffield' (R571A).

6.13 The following sites (or clusters of sites) have been taken forward to Stage 3 of the site selection process for a potential sustainable urban extension:

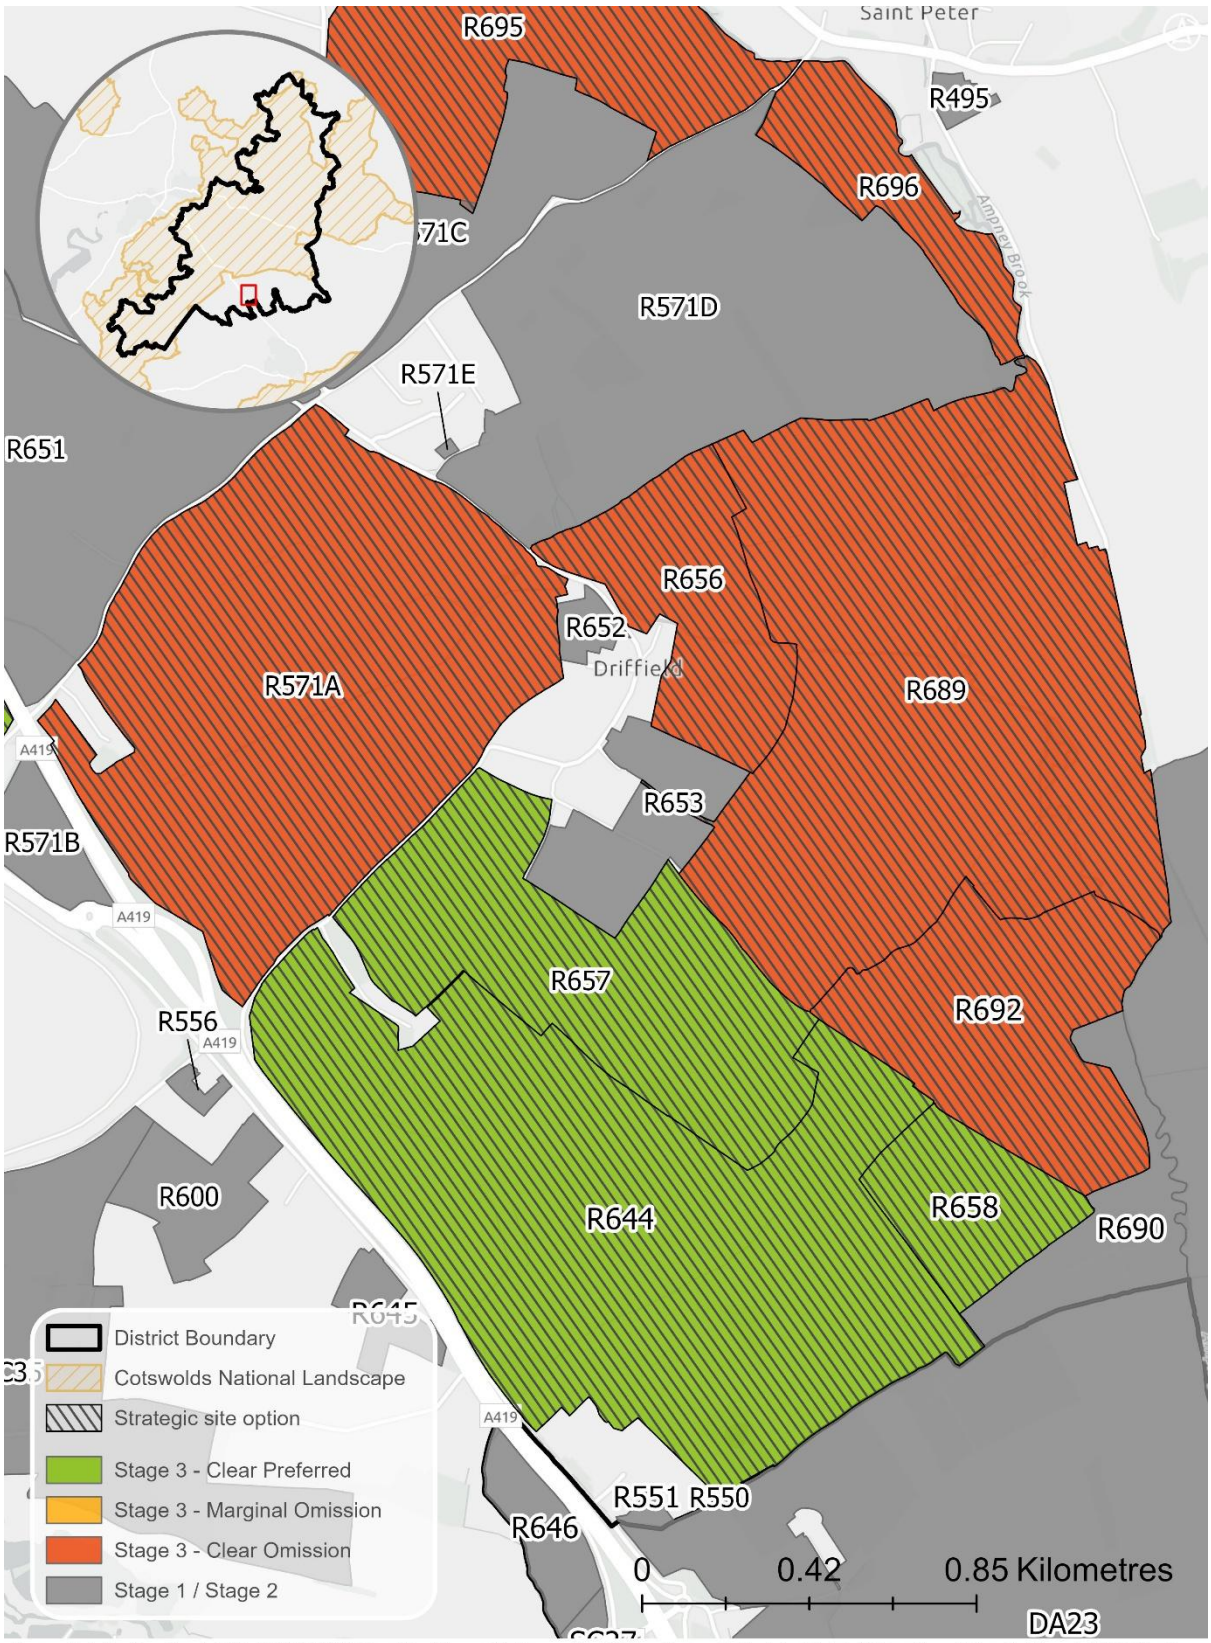
- 'Land north of Ampney Crucis' (R583B, R583C, R583D).
- 'Land east of Ampney Crucis' (R649).

6.14 The assessment findings are presented in the table below and accompanying maps.



Site ref.	Site name	Site assessment findings	Site rating
R571A	Land west of Driffield	The site comprises greenfield land affected by the Fairford, Kemble and South Cerney Airfield Safeguard Areas and areas of groundwater flood susceptibility. The site comprises Grade 3 agricultural land and is affected in part by the Cirencester/Dukes Brake Gas Pipeline Buffer. A small area of deciduous woodland is also present within the site. The site benefits from multiple existing access points, although further investigation would be required to determine whether these are suitable for residential intensification. Overall, the site is considered a **Clear Omission Site Option (--)**, as the site has since been confirmed as being unavailable for development and is therefore not deliverable during the plan period.	**--**
R583B, R583C, R583D,	Land north of Ampney Crucis	The site comprises a series of greenfield parcels to the north of Ampney Crucis and is affected by the Fairford, Kemble and South Cerney Airfield Safeguard Areas and areas of groundwater flood susceptibility. The site comprises predominantly Grade 3 agricultural land, with some areas subject to additional constraints including woodland, Conservation Area designation and utility infrastructure. Access arrangements vary across the parcels and would require further investigation. The combined site has been assessed as having High landscape sensitivity. The land forms the immediate rural backdrop to the northern edge of Ampney Crucis and makes an important contribution to the setting of the Conservation Area and nearby listed buildings, including Cobbler Cottage and Ridge Cottage. The rising landform, presence of Public Rights of Way and strong visual relationship with the surrounding countryside increase the sensitivity of the site to development. Development would	**-**

Site ref.	Site name	Site assessment findings	Site rating
		extend the settlement northwards in a manner that does not reflect its established linear form and would erode the important visual and spatial relationship between the village and the surrounding landscape. The Heritage Impact Assessment for this site also raised some significant concerns about the impact on the setting of the Conservation Area and listed buildings, as well the impact on the setting of the settlement itself. Overall, the site is considered a **Marginal Omission Site Option (-),** as its high landscape sensitivity, contribution to the setting of heritage assets and role as the rural backdrop to Ampney Crucis reduce its suitability.	
R644, R657, R658	Land south of Driffield	The site comprises predominantly Grade 3 agricultural land and lies within the airfield safeguarding areas associated with Fairford, Kemble and South Cerney. The site is affected by areas of groundwater flood susceptibility and infrastructure constraints associated with gas and oil pipeline buffers. A small area of deciduous woodland and a Grade II listed garden wall are present within the site. Public Rights of Way cross the site and may reduce the developable area, while existing access is available but would require further investigation to confirm its suitability for residential development. Parts of the site would also constitute major development for the purposes of national planning policy. The Employment Land Review (2026) identifies R644 as a suitable location for employment development as part of a wider mixed-use scheme, with potential for approximately 10ha of employment land. The site would provide an opportunity to	**++**



Site ref.	Site name	Site assessment findings	Site rating
		extend the existing Agricultural Centre and benefits from strong accessibility to the Strategic Road Network. Overall, the site is considered a **Clear Preferred Site Option (++)**, as it has relatively few constraints to development and could deliver a new settlement within proximity to the main settlement of Cirencester and key transport routes (primarily the A419). In this respect, there are opportunities to establish effective cycling, walking and wheeling connections to Cirencester with improved public transport.	
R649	Land east of Ampney Crucis	The site comprises greenfield land adjacent to Ampney Crucis and is affected by the Fairford Airfield Safeguard Area, with parts of the site also falling within the Kemble and South Cerney Airfield Safeguard Areas. The site comprises Grade 3 agricultural land and benefits from an existing access associated with the current land use, although further investigation would be required to determine whether this is suitable for residential intensification. The site has been assessed as having High landscape sensitivity, reflecting its large scale, open rural character and strong relationship with the historic environment. The site forms part of the eastern rural setting of Ampney Crucis and contributes to the setting of the Conservation Area and nearby listed buildings, including Hilcot End House and Dudley Barn. The falling landform increases visibility from both the village and Public Rights of Way crossing the site. Development would extend built form into open countryside in a manner that does not reflect the established linear settlement pattern of Ampney Crucis and would erode the strong rural backdrop which currently defines this edge of the village.	--

Site ref.	Site name	Site assessment findings	Site rating
		Overall, the site is considered a **Clear Omission Site Option (--)**, as its high landscape sensitivity, contribution to the setting of heritage assets and importance to the rural character and setting of Ampney Crucis would result in significant adverse impacts. Development would represent an incongruous extension of the village into the surrounding countryside.	
R656, R689, R692	Land to the east of Driffield	The site comprises a large area of predominantly greenfield land affected by the Fairford, Kemble and South Cerney Airfield Safeguard Areas. The site contains predominantly Grade 3 agricultural land and is affected by areas of groundwater flood susceptibility. Parts of the site are also affected by Flood Zones 2 and 3, an oil pipeline buffer, deciduous woodland and the setting of a Grade II listed structure. Existing access opportunities are present across the site, although further investigation would be required to determine whether they are suitable for residential intensification. A number of Public Rights of Way cross the site and would constrain the developable area and influence the layout of any development proposals. The site has been assessed as having Medium-High to High landscape sensitivity, with large parts of the allocation making an important contribution to the rural setting of the area. The site is affected by multiple landscape and environmental constraints, including extensive Public Rights of Way, areas of flood risk, woodland, and pipeline safeguarding requirements. Development would result in a substantial extension of built form into the countryside and would adversely affect the character, openness and visual quality of the surrounding landscape.	**--**

Site ref.	Site name	Site assessment findings	Site rating
		Overall, the site is considered a **Clear Omission Site Option (--)**, as its high landscape sensitivity, extensive flood risk constraints, Public Rights of Way network and other environmental constraints significantly reduce its suitability for development. The scale of development proposed would result in a substantial encroachment into the surrounding countryside.	
R695, R696	Land to the south of Ampney Crucis	The site comprises greenfield land to the south of Ampney Crucis and is affected by the Fairford, Kemble and South Cerney Airfield Safeguard Areas and areas of groundwater flood susceptibility. The site comprises Grade 3 agricultural land and development would result in the loss of agricultural land. Parts of the site fall within Flood Zones 2 and 3 and are associated with Ampney Brook, whilst a small part of the site is also affected by an oil pipeline buffer. The site benefits from an existing agricultural access from the south-east, although further investigation would be required to determine whether it is suitable for residential intensification. The site is located away from the main settlement and would appear isolated if developed independently. The site forms part of the characteristic agricultural landscape south of the A417 and is highly visible from surrounding roads and Public Rights of Way. Development would result in a prominent encroachment into the countryside and adversely affect the existing field pattern and rural character of the area. Significant areas of flood risk, together with concerns regarding access and the local highway network, further constrain development potential. Overall, the site is considered a **Clear Omission Site Option (--)** due to its isolated location, high landscape sensitivity, flood risk constraints and access limitations.	**--**

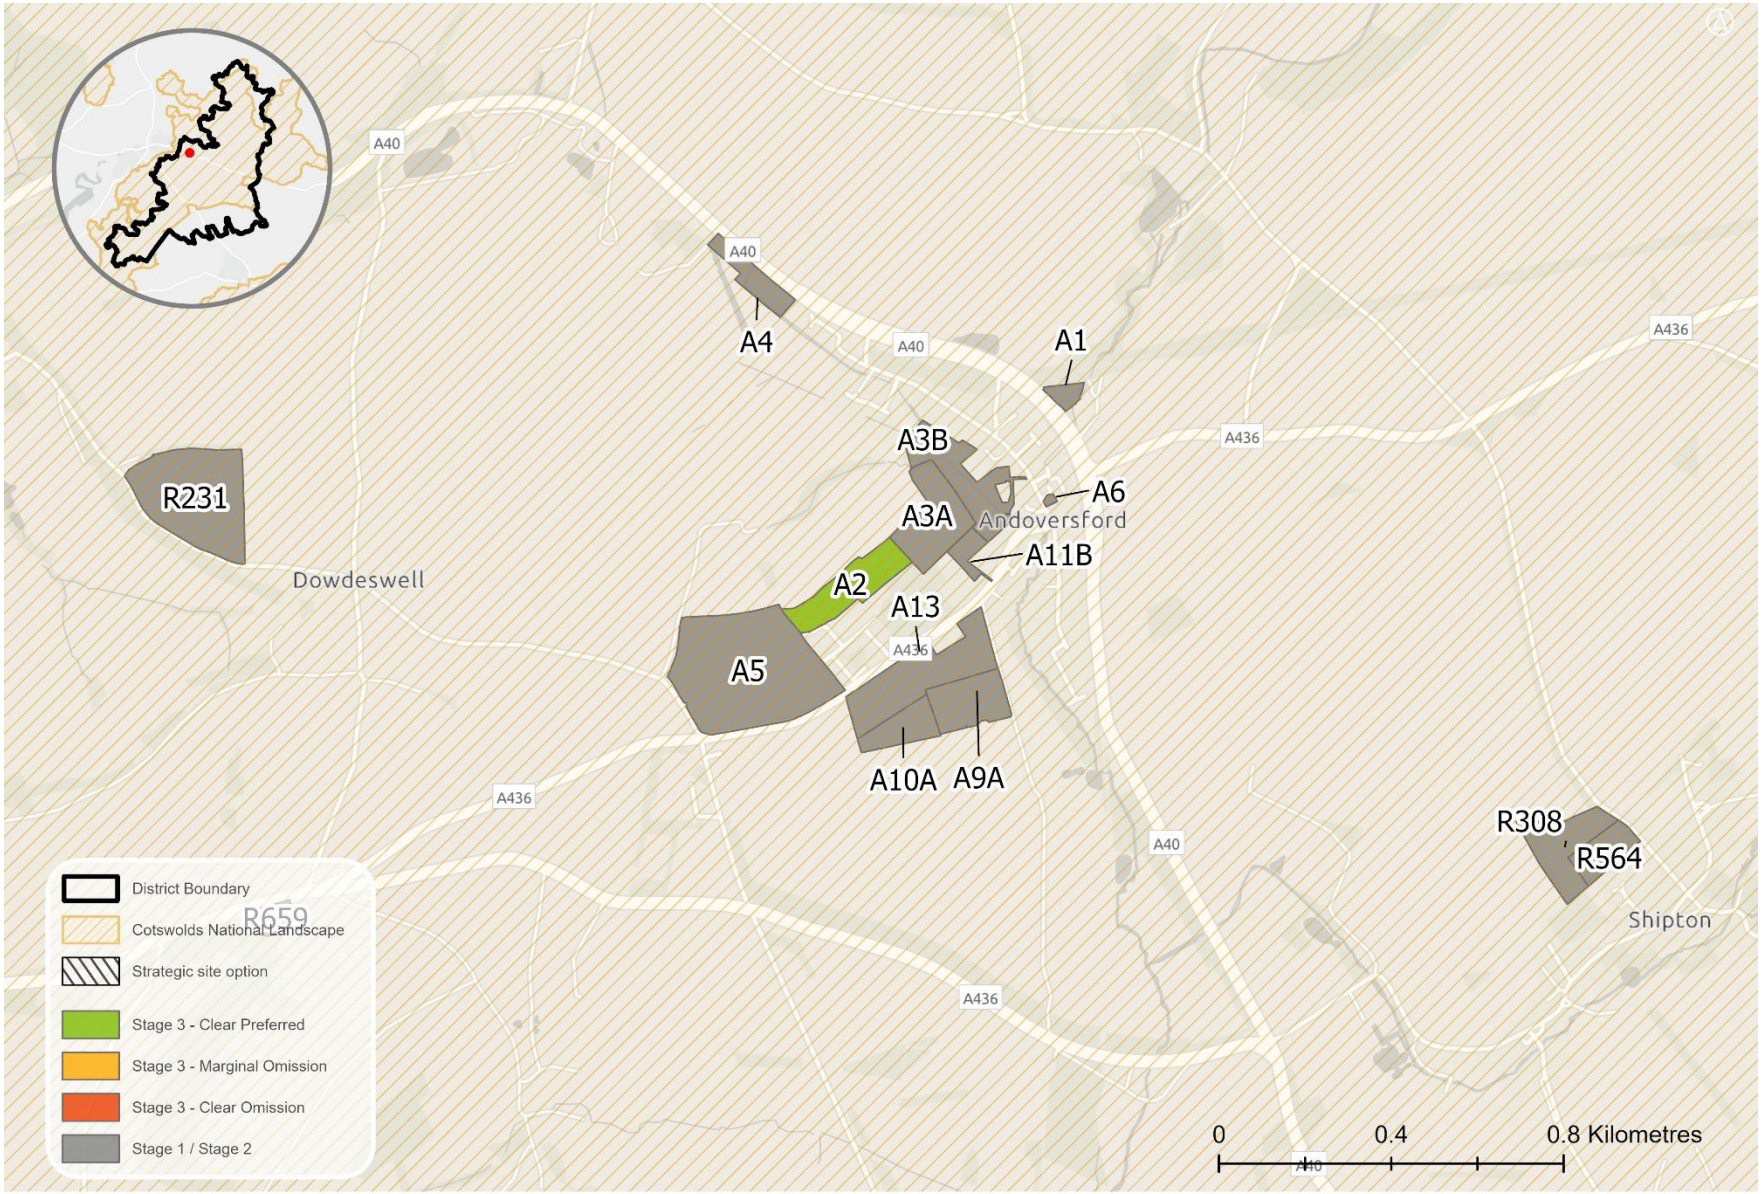
Principal Settlements

Andoversford



6.15 The village is wholly located within the Cotswolds National Landscape. Land to the north west of the village is a Scheduled Monument (Roman small town at Wycomb), which overlaps with an area of Deciduous Woodland Priority Habitat. There are corridors of Flood Zone 2 and Flood Zone 3 passing through the village, associated with the River Coln (and its tributaries).

6.16 Within the HELAA, of the sites which are classified as 'potentially deliverable / developable' or 'deliverable / developable' for non-strategic scale development at Andoversford, R231 is not located adjacent to the settlement. An allocation at this location would result in isolated development, approximately 1.5km to the west of the village, contrary to the broad spatial strategy for the emerging Local Plan.

6.17 Reflecting the above, only one non-strategic site option has been considered in detail through Stage 3 of the site selection process, specifically: A2.

6.18 The assessment findings are presented in the table below and accompanying map.

Site ref.	Site name	Site assessment findings	Site rating
A2	Land to the rear of Templefields and Crossfields	The site comprises greenfield land adjacent to Andoversford and is wholly located within the Cotswolds National Landscape. The site is predominantly Grade 3 agricultural land and is affected by areas of groundwater flood susceptibility. The Study of Land Surrounding Key Settlements (2026) identifies the site as having medium landscape sensitivity. Several trees protected by Tree Preservation Orders are located within the site and along its boundaries, and development would need to be carefully designed to protect these features. Any development would also need to mitigate potential impacts on views of the nearby listed building. Access could be provided via Templefields, which has been identified as having capacity to accommodate development. Overall, the site is considered a **Clear Preferred Site Option (+)**, as it is well related to the existing settlement and the identified landscape, heritage and environmental constraints are considered capable of mitigation, although its location within the Cotswolds National Landscape will need to be carefully considered through the design of any new development areas.	**++**

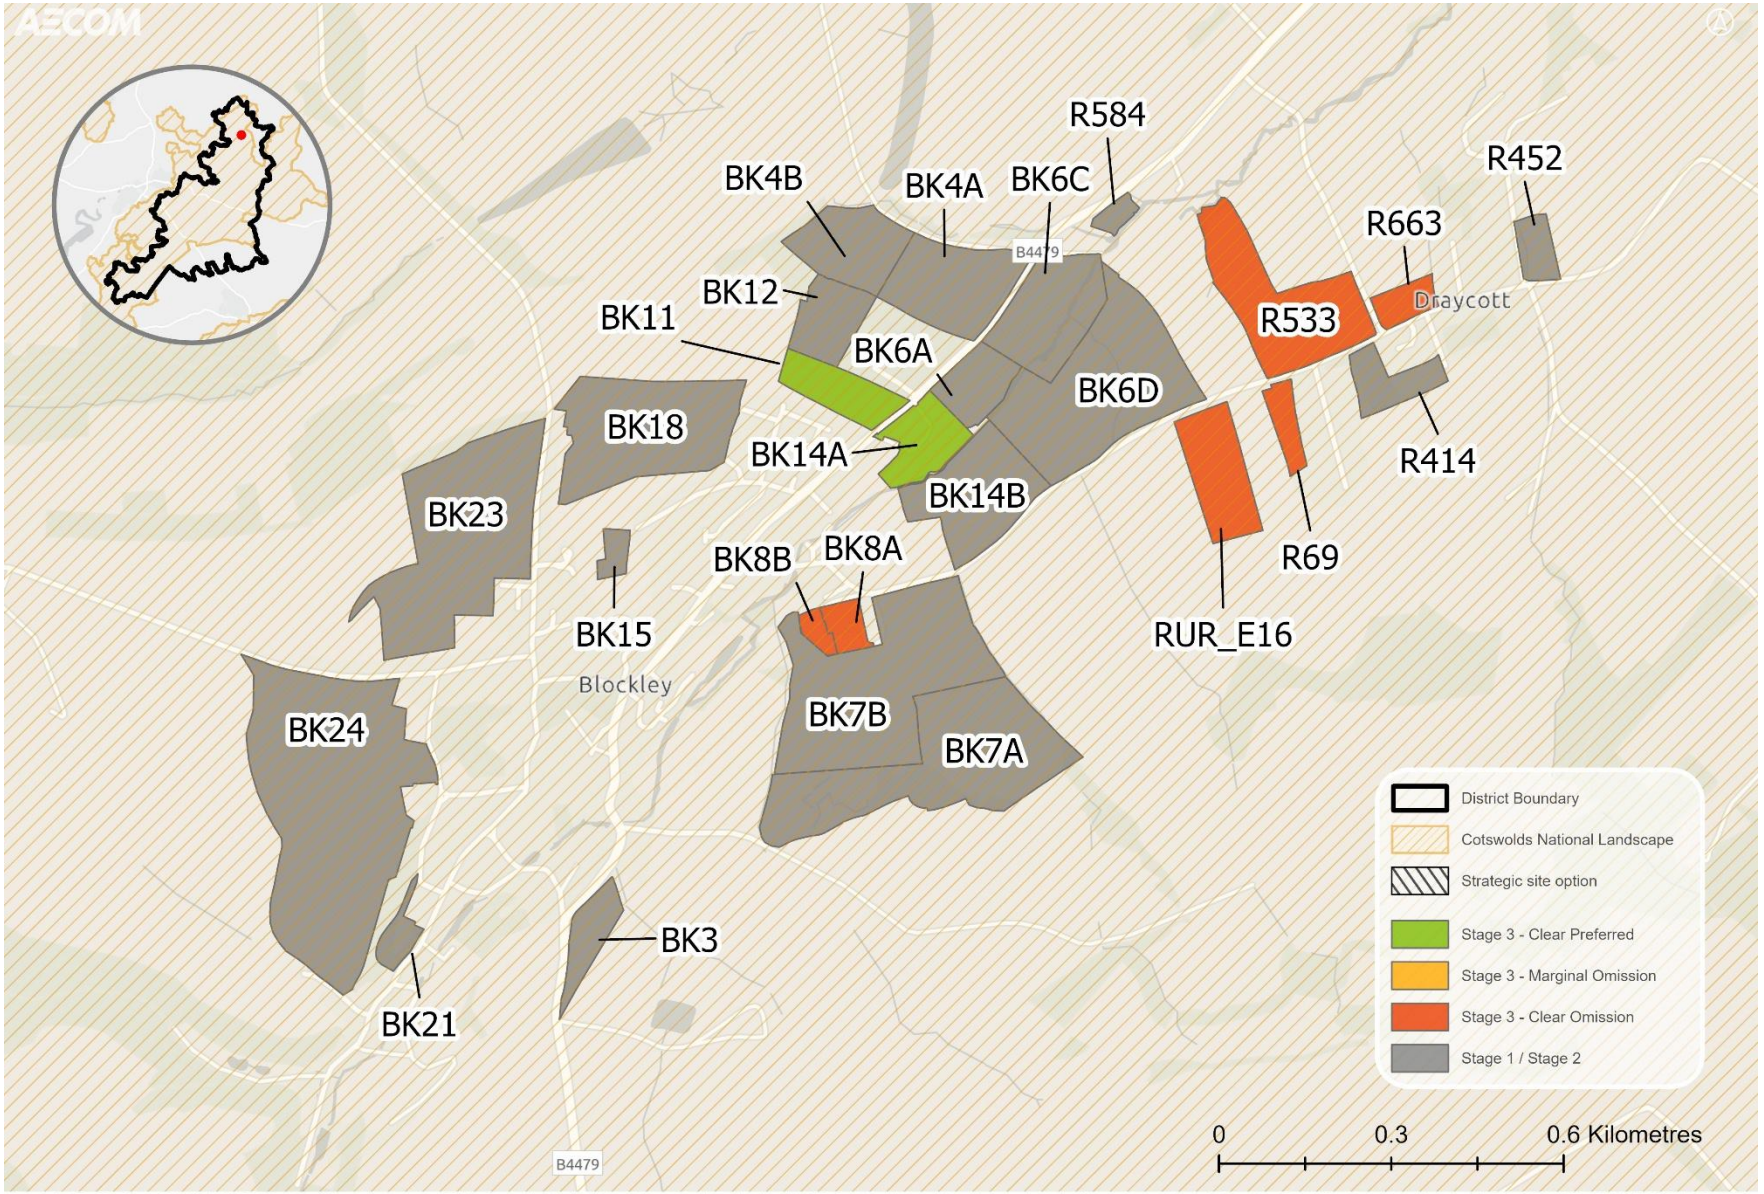
Blockley

6.19 The village is wholly located within the Cotswolds National Landscape. Most of the village itself is a designated Conservation Area (with associated Grade II and Grade II* Listed Buildings). An area of land to the north east of the village is within Flood Zone 3, which connects to Blockley Brook.

6.20 Within the HELAA, of the sites which are classified as 'potentially deliverable / developable' or 'deliverable / developable' for non-strategic scale development at Blockley:

- R33A, R33B, and R501 are not located adjacent to the settlement and allocating these locations would result in isolated development, approximately 3km to the east of the village, contrary to the broad spatial strategy for the emerging Local Plan. R33B and R501 are adjacent sites, outside but within the setting of the Cotswolds National Landscape. All three sites are within a Special Landscape Area.
- R585 is approximately 1km to the north of the village within an industrial centre. Whilst the site is primarily brownfield land, development at this location would be isolated from the village, contrary to the broad spatial strategy for the emerging Local Plan. Additionally, approximately 30% of the site contains deciduous woodland priority habitat, and 'Sedgecombe Wood' is an ancient, replanted woodland directly to the north of the site.
- R610 and R688 are located approximately 2km to the north east of the village. Allocating these locations would result in isolated development outside of the village boundaries, contrary to the broad spatial strategy for the emerging Local Plan. R610 is within the Cotswold National Landscape, with R688 adjacent to, and within the setting of the National Landscape. R688 is within a Special Landscape Area.

6.21 Reflecting the above, the following non-strategic site options have been considered in detail through Stage 3 of the site selection process, specifically: BK8A, BK8B, BK11, BK14A, R533, R663, R69, and RUR_E16. The assessment findings are presented in the table below and accompanying map.



Site ref.	Site name	Site assessment findings	Site rating
BK8A	Sheaf House Farm Buildings	The site comprises land at Sheaf House Farm Buildings adjacent to the existing settlement and is wholly located within the Cotswolds National Landscape. The site comprises Grade 3 agricultural land and is affected by areas of groundwater flood susceptibility. The site has been assessed as having low-medium landscape sensitivity, indicating that landscape impacts may be capable of being accommodated through appropriate design and mitigation measures. The site benefits from an existing access from Draycott Road, although further investigation may be required to determine whether the access is suitable for residential intensification. Overall, the site is considered a **Clear Omission Site Option (--)**, as it is well related to the existing settlement and the identified landscape, access and environmental constraints are generally capable of mitigation. However, given its location within the Cotswolds National Landscape and the potential loss of the existing uses on the site if redeveloped, this reduces its suitability.	**--**
BK8B	Land west of Sheaf House Farm Buildings	The site comprises predominantly undeveloped land within the Cotswolds National Landscape and is affected by areas of groundwater flood susceptibility. The site benefits from existing access from Draycott Road, although further investigation may be required to determine whether this is suitable for residential intensification. The site contains an existing gym, which is a community facility. The site has been assessed as having low-medium landscape sensitivity, although it is more sensitive to development than adjoining land due to its predominantly undeveloped character and less clearly defined boundaries. The site also contributes	**--**

Site ref.	Site name	Site assessment findings	Site rating
		to the green infrastructure network and lies adjacent to priority habitat woodland, whilst opportunities for biodiversity enhancement would need to be explored. Overall, the site is considered a **Clear Omission Site Option (--)**, as its location within the Cotswolds National Landscape, the presence of an existing community facility and its contribution to green infrastructure reduce its suitability.	
BK11	Former Station Road Allotments	The site comprises previously developed land adjacent to the existing settlement and is wholly located within the Cotswolds National Landscape. The site is predominantly Grade 3 agricultural land and is affected by areas of groundwater flood susceptibility across much of the site. The site is identified as having medium landscape sensitivity and, whilst allotments were formerly located on the site, these have been relocated elsewhere. The site benefits from an existing access from Station Road, although further investigation may be required to determine whether this is suitable for residential development. Overall, the site is considered a **Clear Preferred Site Option (++)**, as it is well related to the existing settlement and benefits from the reuse of previously developed land, while the identified landscape, access and flood risk constraints are considered capable of mitigation.	++
BK14A	The Limes, Station Road	The site comprises greenfield land adjacent to the existing settlement and is wholly located within the Cotswolds National Landscape. The site is predominantly Grade 3 agricultural land and is affected by areas of groundwater flood susceptibility, with small areas also falling within Flood Zones 2 and 3. The site is identified as having low landscape sensitivity within the National Landscape. Six Tree Preservation	++

Site ref.	Site name	Site assessment findings	Site rating
		Orders are present within the site and would need to be retained and incorporated within any development proposals. The site benefits from existing access from Station Road, although further investigation may be required to determine whether the access is suitable for residential intensification. Overall, the site is considered a **Clear Preferred Site Option (+)**, as it is well related to the existing settlement and the identified landscape, arboricultural and flood risk constraints are considered capable of mitigation.	
R533	Timber Yard, Draycott Road	The site comprises greenfield land within the Cotswolds National Landscape and is affected by areas of groundwater flood susceptibility. The site comprises Grade 3 agricultural land and is crossed by a Public Right of Way along its northern part. Development would need to be carefully designed to conserve the character and appearance of the National Landscape and to avoid adverse impacts on the Public Right of Way. The site benefits from an existing access from Draycott Road, although further investigation may be required to determine whether it is suitable for residential intensification. Overall, the site is considered a **Clear Omission Site Option (--)**, as its relatively detached relationship to the main built form of Blockley and location within the Cotswolds National Landscape reduce its suitability, contrary to the broad spatial strategy for the emerging Local Plan.	**--**
R663	Land north of Draycott Road	The site comprises greenfield land within the Cotswolds National Landscape and is affected by areas of groundwater flood susceptibility. The site comprises Grade 3 agricultural land and is currently in agricultural use. The site benefits from an	**--**

Site ref.	Site name	Site assessment findings	Site rating
	and Northcot Lane	existing access from Northcot Lane, although further investigation may be required to determine whether it is suitable for residential intensification. Development would need to be carefully designed to conserve the character and appearance of the Cotswolds National Landscape. Overall, the site is considered a **Clear Omission Site Option (--)**, as its relatively detached relationship to the main built form of Blockley and its location within the Cotswolds National Landscape reduce its suitability, contrary to the broad spatial strategy for the emerging Local Plan.	
R69	Land adjacent to Draycott Industrial Estate, Blockley Road	The site comprises an existing industrial brownfield site within the Cotswolds National Landscape and is affected by areas of groundwater flood susceptibility. The site comprises Grade 3 agricultural land and benefits from existing accesses from the B4479, although further investigation may be required to determine whether these are suitable for residential intensification. Development would need to be carefully designed to conserve the character and appearance of the Cotswolds National Landscape. Overall, the site is considered a **Clear Omission Site Option (--)**, as despite its brownfield status, the site is relatively detached from the main built form of Blockley and would not represent as sustainable or well-related an extension to the settlement as alternative development opportunities. Its location within the Cotswolds National Landscape further reduces its suitability.	**--**

Site ref.	Site name	Site assessment findings	Site rating
RUR_E16	Land at Tanzie Field	The site comprises greenfield land adjacent to the existing built form of Blockley and is wholly located within the Cotswolds National Landscape. The site comprises Grade 3 agricultural land and is affected by areas of groundwater flood susceptibility. Two Public Rights of Way cross the site and would need to be carefully integrated into any development proposals. The site benefits from existing access opportunities from Draycott Road, although further investigation may be required to determine whether these are suitable for residential intensification. Development would need to be carefully designed to conserve the character and appearance of the Cotswolds National Landscape. Overall, the site is considered a **Clear Omission Site Option (--)**, as although it is adjacent to the existing settlement, development would not reflect the linear settlement pattern of Blockley and would extend uncharacteristically into the open countryside. The presence of two Public Rights of Way and the site's location within the Cotswolds National Landscape further reduce its suitability.	**--**

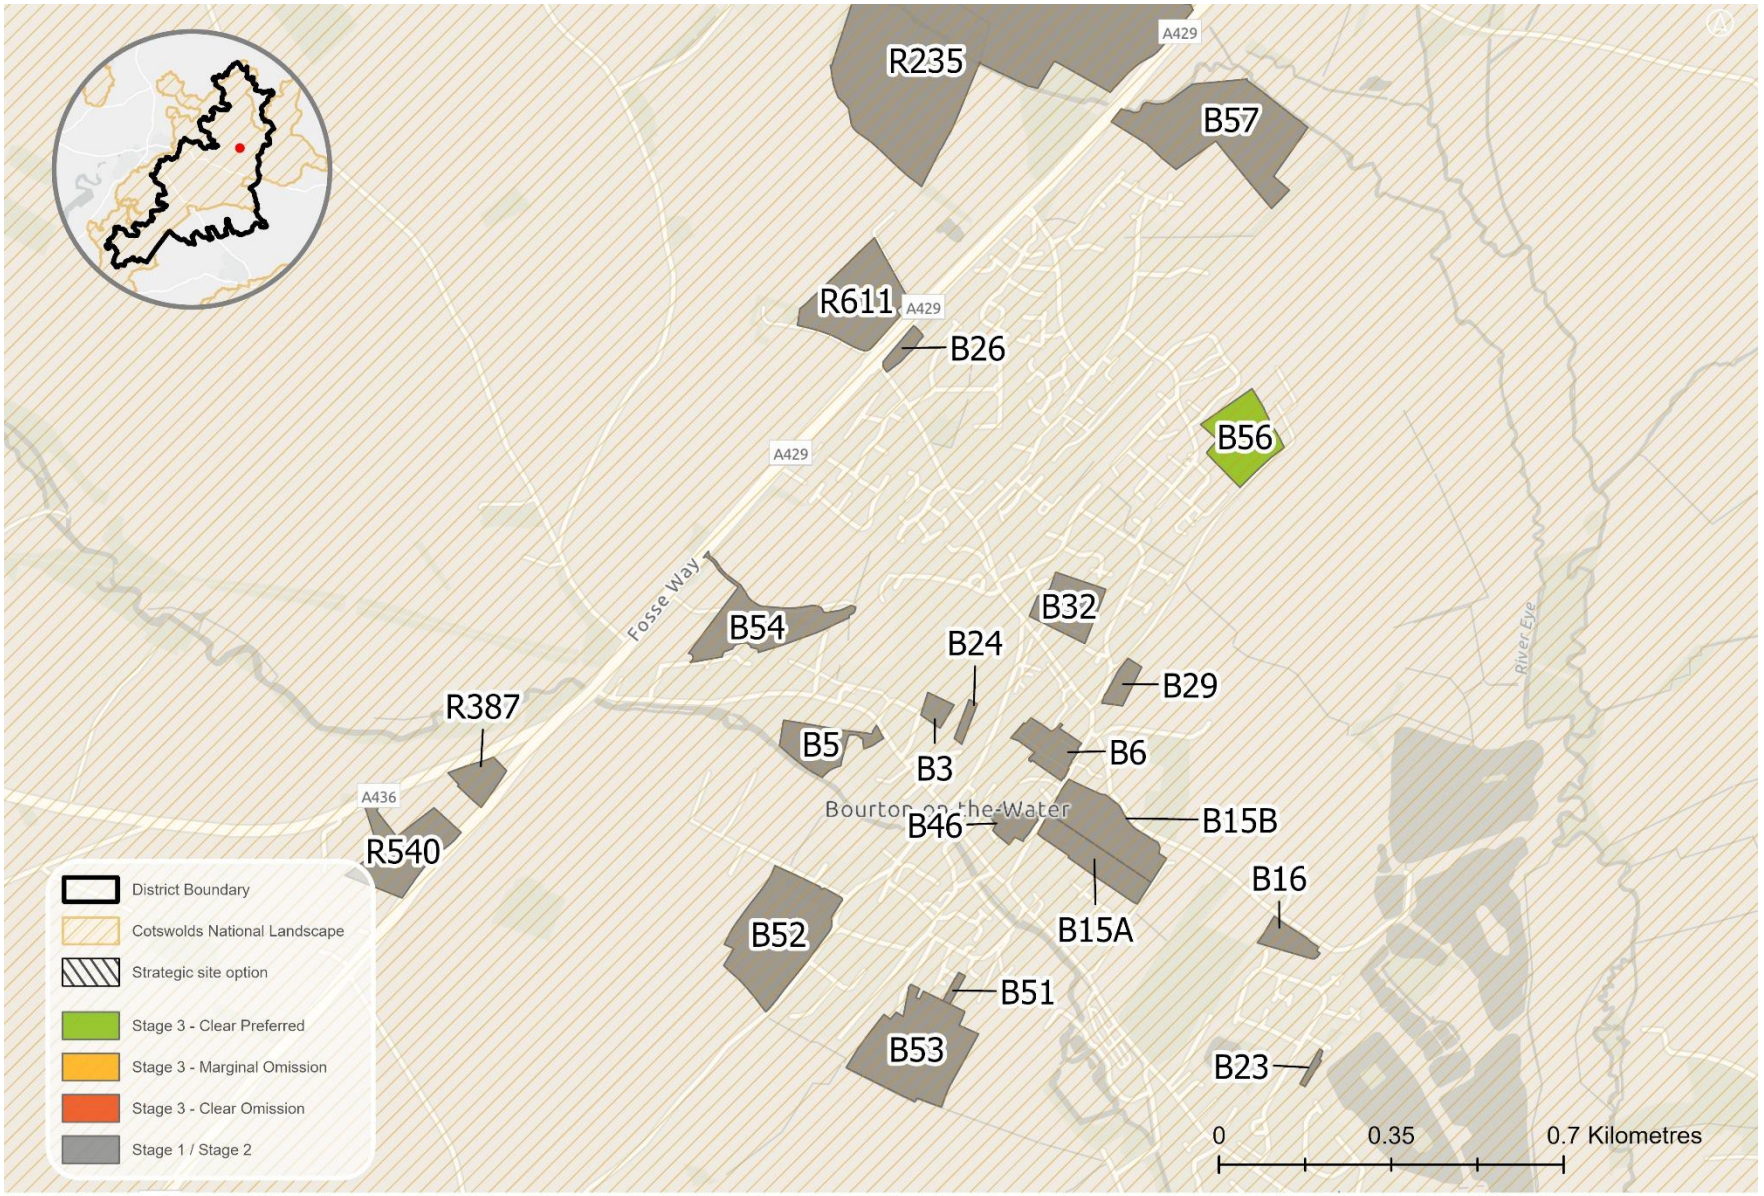
Bourton-on-the-Water



6.22 The village is wholly located within the Cotswolds National Landscape and is often referred to as "the Venice of the Cotswolds". Much of the southern section of the village is a designated Conservation Area, which borders two Scheduled Monuments to the east and west. The Scheduled Monument to the east overlaps with Greystones Farm Nature Reserve, which connects to Salmonsbury Meadows Site of Special Scientific Interest (SSSI). Most of the land to the east of the village, and land passing through the southern section of the village (from the west), is within Flood Zone 3. The areas broadly follow the corridor of the River Windrush (and its tributaries), and the lakes to the north of Nethercote. Several established footpaths pass through the village from the surrounding countryside, including Windrush Way. Macmillan Way, and the Heart of England Way.

6.23 Within the HELAA, of the sites which are classified as 'potentially deliverable / developable' or 'deliverable / developable' for non-strategic scale development at Bourton-on-the-Water:

- B32 has planning permission for phased redevelopment of residential and retirement housing but is not yet built out. The site is considered deliverable during the first five years of the plan period.
- B57 is entirely covered by Priority Habitat and is subject to extensive flood risk constraints, with the majority of the site located within Flood Zone 3. Whilst the site adjoins an existing employment area, the extent of environmental constraints would make development difficult to accommodate without unacceptable impacts.

6.24 Reflecting the above, only one non-strategic site option has been considered in detail through Stage 3 of the site selection process, specifically: B56. The assessment findings are presented in the table below and accompanying map.

Site ref.	Site name	Site assessment findings	Site rating
B56	Land off Mallard Crescent	The site comprises greenfield land adjacent to the existing settlement and is wholly located within the Cotswolds National Landscape. The site comprises Grade 2 agricultural land and lies within the airfield safeguarding areas associated with Little Rissington and Oxford Kidlington. The site is affected by areas of groundwater flood susceptibility and is located adjacent to Priority Habitat, requiring careful consideration of potential environmental impacts. The site is identified in the Study of Land Surrounding Settlements (2026) as having Medium/Low landscape sensitivity. The site also lies close to a Scheduled Monument, although existing vegetation provides a degree of screening. The site benefits from existing access from Mallard Crescent. Overall, the site is considered a **Clear Preferred Site Option (++)**, as it is well related to the existing settlement and the identified landscape, environmental and flood risk constraints are considered capable of mitigation.	**++**

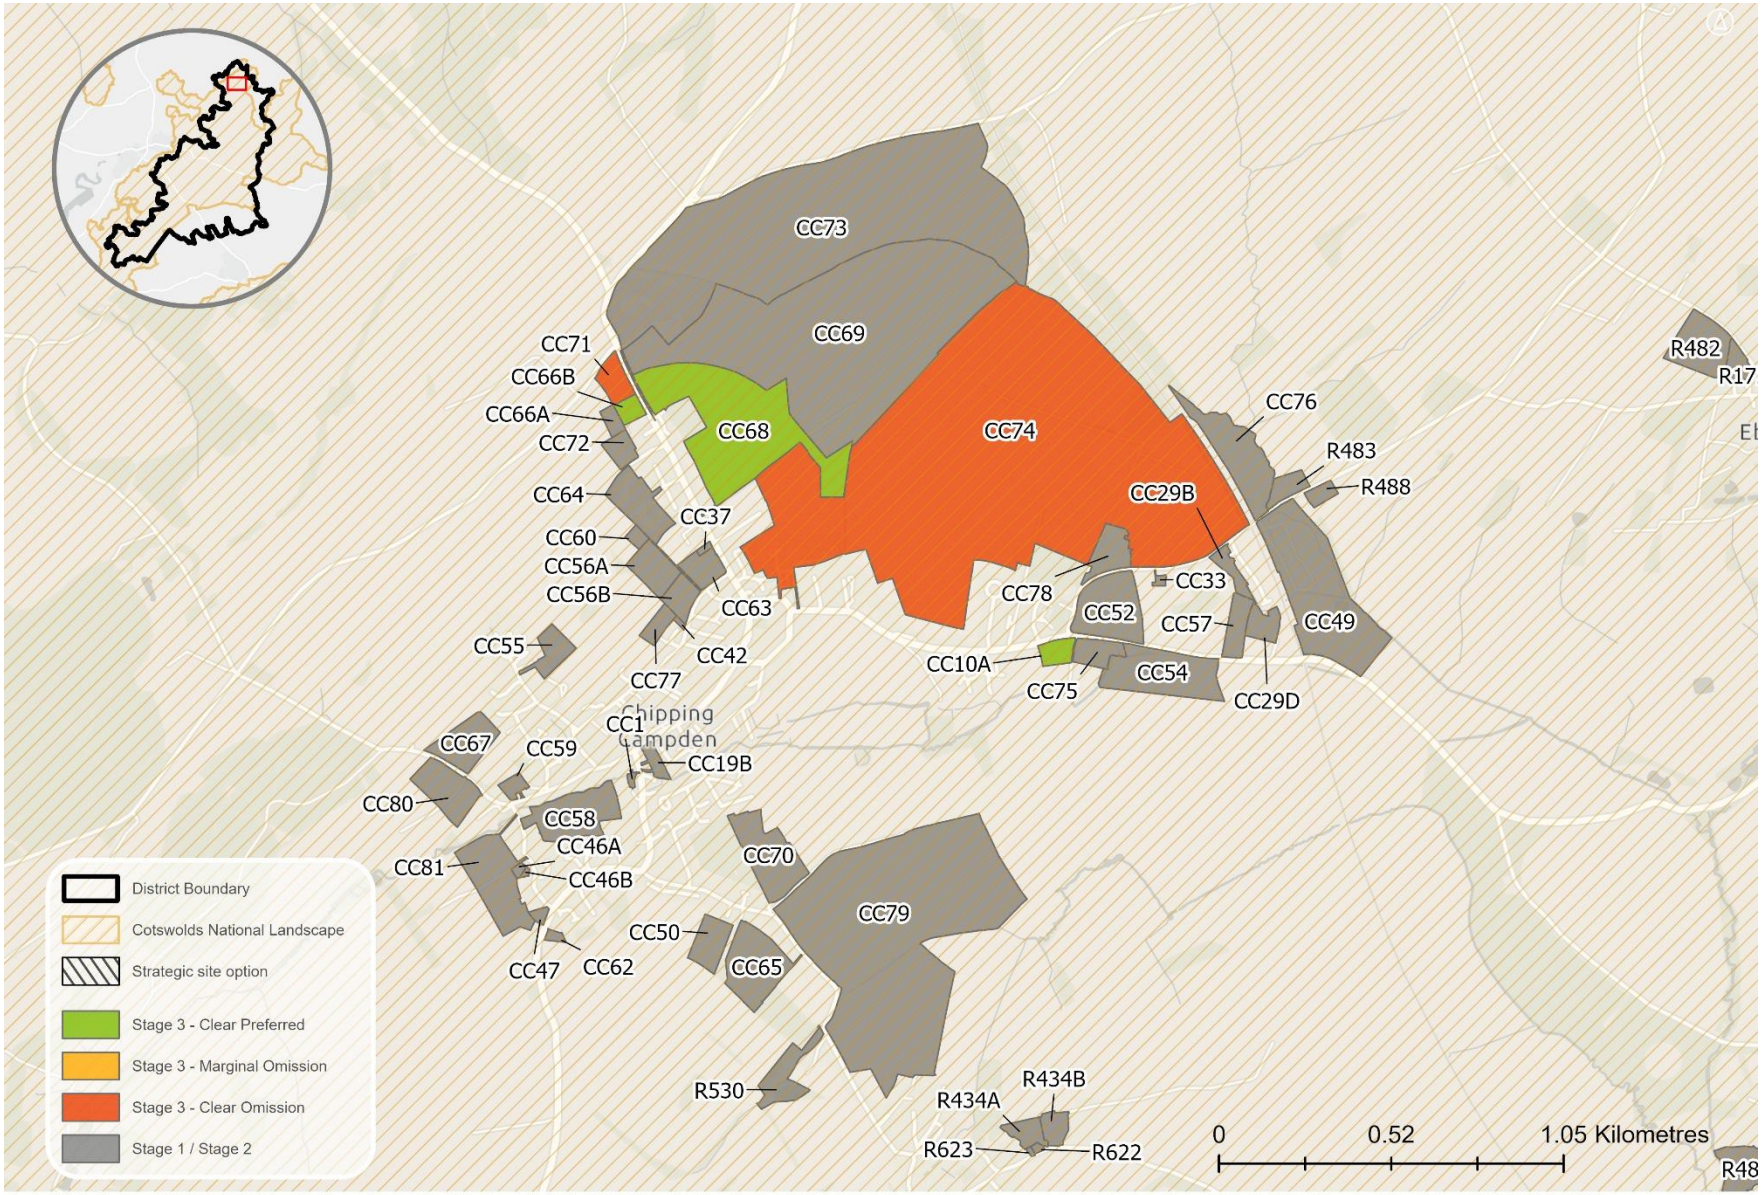
Chipping Campden

6.25 The village is wholly located within the Cotswolds National Landscape and often referred to as the "jewel in the crown" of the Cotswolds. Most of the central section of the village is a designated Conservation Area, which includes the High Street where almost all of the buildings are either Grade II, Grade II*, or Grade I Listed. Land to the east of the Conservation Area comprises Campden House Historic Park and Garden. Most of the undeveloped land to the north, east, and south east of the village comprises Grade I or Grade 2 Agricultural Land, which is some of the best and most versatile agricultural land within the country. Several established footpaths pass through the market town and connect to the surrounding countryside, including Cotswold Way, Monarch's Wat, and the Heart of England Way.

6.26 Within the HELAA, of the sites which are classified as 'potentially deliverable / developable' or 'deliverable / developable' for non-strategic scale development at Chipping Campden, CC59 has planning permission for five dwellings but is not yet built out. The site is considered deliverable during the first five years of the plan period.



6.27 Reflecting the above, the following non-strategic site options have been considered in detail through Stage 3 of the site selection process, specifically: CC10A, CC66B, CC68, CC71, and CC74 (western section of the site).

6.28 The assessment findings are presented in the table below and accompanying map.

Site ref.	Site name	Site assessment findings	Site rating
CC10A	Land south of Station Road and east of Chandlers	The site comprises greenfield land in the east of Chipping Campden and is wholly located within the Cotswolds National Landscape. The site comprises Grade 1 agricultural land and is affected by areas of groundwater flood susceptibility. The site has been assessed as having Medium-Low landscape sensitivity in the Study of Land Surrounding Key Settlements (2026). Parts of the site fall within Flood Zones 2 and 3, requiring careful consideration of flood risk and appropriate mitigation measures. There is currently no existing access to the site, although access may be achievable from Station Road, subject to further investigation. Overall, the site is considered a **Clear Preferred Site Option (++)**, as the identified landscape, flood risk and access constraints are considered capable of mitigation.	**++**
CC66B	Land north-west of Aston Road	The site comprises greenfield land to the north-west of Chipping Campden and is wholly located within the Cotswolds National Landscape. The site comprises Grade 1 agricultural land and is identified in the Study of Land Surrounding Key Settlements (2026) as having medium landscape sensitivity. Existing vegetation along the eastern edge provides a degree of screening, although development would extend the settlement northwards along Aston Road. The site benefits from an existing access point, although further investigation would be required to determine whether it is suitable for residential intensification. Overall, the site is considered a **Clear Preferred Site Option (++)**, as it is adjacent to the existing settlement and the identified landscape and access constraints are considered capable of mitigation.	**++**
CC68	Land north-east of Aston Road	The site comprises greenfield land to the north of Chipping Campden and is wholly located within the Cotswolds National Landscape. The site comprises predominantly	**++**

		Grade 1 agricultural land and is affected by areas of groundwater flood susceptibility across part of the site. The Study of Land Surrounding Key Settlements (2026) identifies the site as having high landscape sensitivity, meaning development would need to be carefully designed to minimise impacts on landscape character and scenic beauty. The site benefits from an existing access track and is located in a sustainable location in relation to the settlement. Previous planning activity on the site, including a lapsed permission and a recent EIA screening opinion, demonstrates that the site has been actively considered for development. Overall, the site is considered a **Clear Preferred Site Option (+)**, as although the site is located within the Cotswolds National Landscape and has high landscape sensitivity, it occupies a sustainable location and has the potential to deliver significant community benefits, including healthcare and education-related infrastructure. These wider benefits may contribute towards the exceptional circumstances required to justify development at this scale within the National Landscape. The overall public benefits are considered to outweigh the potential landscape harm through delivering major development within the Cotswolds National Landscape and is an exceptional circumstance for allocating this site (i.e. it accords with the NPPF in this regard).	
CC71	South of Kingcombe Lane	The site comprises greenfield land to the north of Chipping Campden and lies wholly within the Cotswolds National Landscape. The site comprises Grade 1 agricultural land and benefits from an existing access from Aston Road, although further investigation would be required to determine whether it is suitable for residential intensification. The site has been assessed as having Medium-High landscape sensitivity and forms part of the open countryside and rural setting to the north of	**--**

		Chipping Campden. Whilst well enclosed by vegetation, development would extend ribbon development northwards along Aston Road and would represent a noticeable encroachment into the countryside. The site contributes to the settlement containment, scenic quality and tranquillity of the Cotswolds National Landscape. Overall, the site is considered a **Clear Omission Site Option (--)**, as it is poorly related to the main built form of Chipping Campden and would result in an unsustainable extension of ribbon development into the Cotswolds National Landscape. The site's Medium-High landscape sensitivity, role in maintaining the rural setting of the settlement and the loss of Grade 1 agricultural land significantly reduce its suitability for development.	
CC74	Land east of Chipping Campden	The site comprises greenfield land adjacent to the existing settlement and is wholly located within the Cotswolds National Landscape. The site comprises Grade 3 agricultural land and is affected by areas of groundwater flood susceptibility. The site benefits from existing access from Draycott Road, although further investigation may be required to determine whether this is suitable for residential intensification. The site has been assessed as having low-medium landscape sensitivity and the western part of the site is relatively well related to the existing built form. However, development would extend built form into open countryside and would not reflect the traditional linear pattern of development within this part of the settlement. Overall, the site is considered a **Clear Omission Site Option (--)**, as its location within the Cotswolds National Landscape and the extent to which development would alter the existing settlement pattern reduce its suitability.	**--**

Sources: Esri, TomTom, Garmin, FAO, NOAA, USGS, © OpenStreetMap contributors, and the GIS User Community, Contains OS data © Crown Copyright and database right 2026 Contains public sector information licensed under the Open Government License v3.0. Contains OS data © Crown copyright and database right 2025. © AC0000815979.

Fairford

6.29 Most of the northern half of the town is a designated Conservation area, containing Grade I, Grade II, and Grade II* Listed Buildings. Land to the north of the town is within a Special Landscape Area, encompassing Fairford Park estate. The River Coln (and areas of Flood Zone 2 and Flood Zone 3) passes through the Special Landscape Area and the town, continuing to the south east where it forms the southern border of the Whelford Meadows SSSI and Cotswold Water Park SSSI. The SSSIs comprise a series of lakes which extend northward from the River Coln to the A417. Land to the south of the town is also within the boundary of the Cotswold Water Park SSSI, which extends to RAF Fairford. The south of the town also comprises areas of Grade 2 and Grade 3a 'best and most versatile' agricultural land. The town is not within the Cotswolds National Landscape.

6.30 Additionally, Land to the north east and to the west of Fairford is comparatively less constrained, with key constraints including the setting of the Special Landscape Area, SSSI Impact Risk Zones, and Groundwater Source Protection Zones.

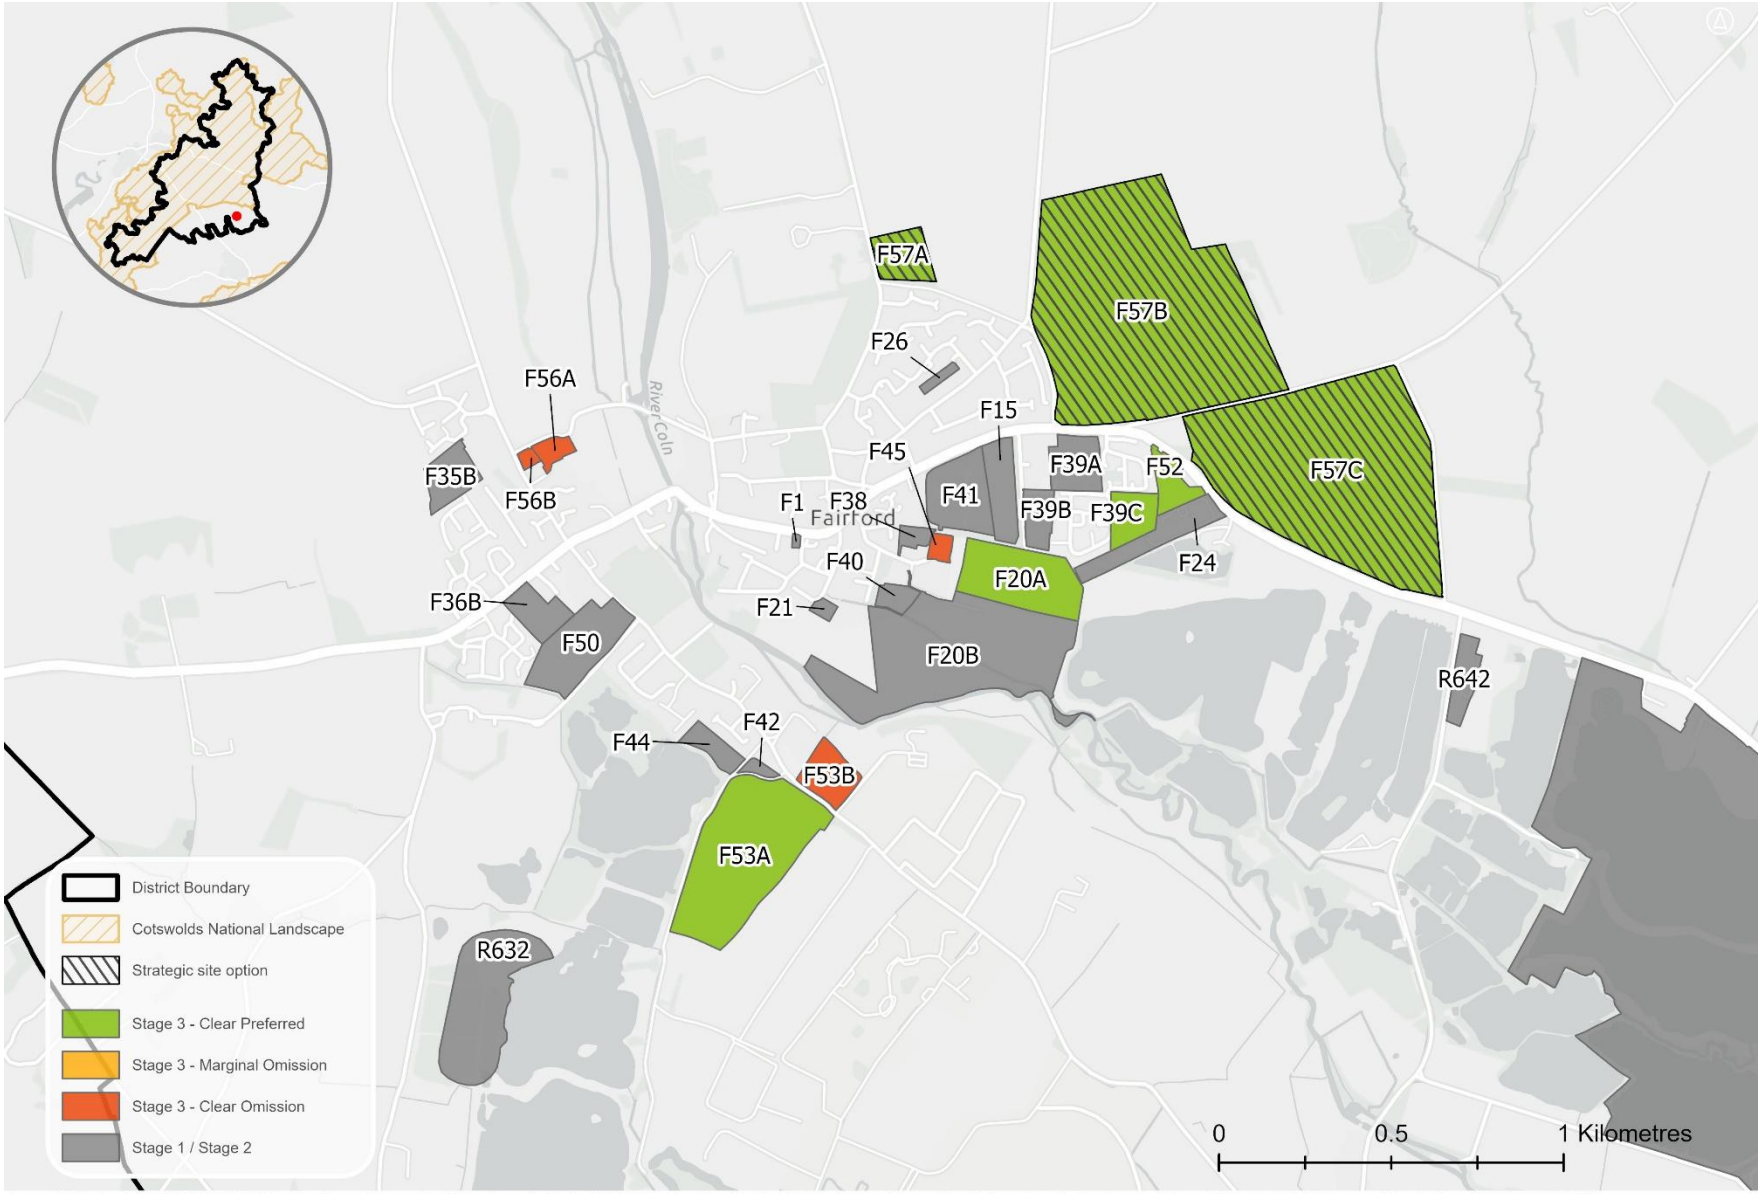
6.31 Reflecting the above, the following sites (or clusters of sites) have been taken forward to Stage 3 of the site selection process for a potential sustainable urban extension: 'Land north east of Fairford' (F57A, F57B, F57C).

6.32 Within the HELAA, of the sites classified as 'potentially deliverable / developable' or 'deliverable / developable' for a sustainable urban extension, 'Land to the south west of Fairford (F53A and F53B)' could deliver up to 420 homes reflecting the indicative site capacities within the HELAA. An outline planning application of 74 homes has come forward on Site F53A. Constraints to development across Site F53B limit further opportunities for expansion, given the adjacent SSSI and its associated Impact Risk Zones. On this basis, the sites are considered separately for potential non-strategic development during the plan period.

6.33 Within the HELAA, the following 'potentially deliverable / developable' or 'deliverable / developable' for non-strategic scale development at Fairford have been considered in detail through Stage 3 of the site selection process, specifically: F20A, F39C, F45, F52, F53A, F53B, F56A, and F56B.

6.34 The assessment findings are presented in the table below and accompanying map.

Site ref.	Site name	Site assessment findings	Site rating
F57A, F57B, F57C (Sustainable Urban Extension)	Land north east of Fairford	The site comprises predominantly greenfield land to the north and east of Fairford and is largely Grade 3 agricultural land, with a small proportion of Grade 2 agricultural land. The site lies within the airfield safeguarding areas associated with Fairford and Brize Norton and is affected by areas of groundwater flood susceptibility. Development may result in the loss of agricultural land and part of the site lies adjacent to a Site of Special Scientific Interest, requiring careful consideration of potential environmental impacts. Access arrangements vary across the site, with some parcels benefitting from existing agricultural access points while others would require the creation of new access and further investigation to establish their suitability for residential development. The site is located adjacent to existing residential development and local services, providing a relatively sustainable location for growth. Overall, the site is considered a **Clear Preferred Site Option (++)**, as it is well related to the existing settlement and the identified environmental, infrastructure and flood risk constraints are generally capable of mitigation. New development areas should incorporate green infrastructure buffers to protect the integrity of the adjacent SSSI and ensure that access considerations are appropriately addressed to reduce potential traffic impacts through the centre of the settlement.	++
F20A	Land south east of Fairford	The site comprises greenfield land to the south-east of Fairford and is affected by the Fairford and Brize Norton Airfield Safeguard Areas and areas of groundwater flood susceptibility. The site contains predominantly Grade 2 and Grade 3 agricultural land and development would result in the loss of best and most versatile	++



Site ref.	Site name	Site assessment findings	Site rating
		agricultural land. The site lies adjacent to the Fairford Conservation Area and the Cotswold Water Park SSSI and contributes to the rural setting of the settlement. Suitable access arrangements have not yet been identified, and further work would be required to establish whether a safe and deliverable access solution can be achieved. The site has been assessed as having Medium-High landscape sensitivity, reflecting its contribution to the transition between Fairford and the surrounding countryside. However, the site adjoins existing development and may be viewed as a logical rounding-off of the south-eastern edge of the town. Development would need to carefully address impacts on the Conservation Area setting, Public Rights of Way and the adjacent Cotswold Water Park landscape. Overall, the site is considered a **Clear Preferred Site Option (+)**, as it is reasonably well related to the existing built form of Fairford and may provide an opportunity for sustainable growth at the edge of the settlement. However, access, landscape, heritage and environmental considerations would need to be carefully addressed through the design and masterplanning of any future development.	
F39C, F52	Land west of Terminus Cottage and Station Cottage	The site comprises greenfield land to the east of Fairford and is wholly affected by the airfield safeguarding areas associated with Fairford and Brize Norton. The site is affected by areas of groundwater flood susceptibility and comprises Grade 2 agricultural land. Access opportunities vary across the site, with some existing access arrangements present, while other areas would require the creation of new access and further investigation to determine suitability for residential development.	++

Site ref.	Site name	Site assessment findings	Site rating
		A planning application for residential development is currently under consideration on part of the site. Overall, the site is considered a **Clear Preferred Site Option (++)**, as it is well related to the existing settlement and there are no significant environmental, heritage or infrastructure constraints that would be likely to preclude development. The identified constraints are limited in extent and are considered capable of mitigation through the development process. The Employment Land Review (2026) notes that F52 could form an extension to the existing employment area to the south. However, the site is closely bounded by existing and proposed residential development, which would significantly constrain the scale and type of employment uses that could be accommodated and limit the site's attractiveness for employment purposes. Development within F52 would also result in the loss of a green buffer and could adversely affect the setting of Horcott Lake and the transition between Fairford and the surrounding countryside. Whilst development may be achievable in principle, landscape considerations, agricultural land loss and infrastructure constraints reduce its suitability relative to less constrained alternatives. On this basis, whilst F52 is part of the proposed allocation, it is not envisaged that built development would be included in this part of the site.	
F45	Land to the rear of the Bull Pens	The site comprises greenfield land to the east of Fairford and is affected by the Fairford and Brize Norton Airfield Safeguard Areas and areas of groundwater flood susceptibility. The site comprises Grade 2 agricultural land and development would result in the loss of best and most versatile agricultural land. The site consists of	--

Site ref.	Site name	Site assessment findings	Site rating
		agricultural land and farm-related development and lies adjacent to the Fairford Conservation Area, forming an important part of its setting. The site is also within the setting of Morgan Hall, a Grade II listed building, and any development would need to carefully consider and mitigate potential heritage impacts. The site benefits from an existing access from the south-west, although further investigation would be required to determine whether it is suitable for residential intensification. Overall, the site is considered a **Clear Omission Site Option (--)**, as heritage impacts on the setting of Morgan Hall and the Fairford Conservation Area, together with significant access constraints, substantially reduce the site's suitability.	
F53A	Land at Totterdown Hill, Horcott	The site comprises greenfield land to the south of Fairford and is affected by the airfield safeguarding areas associated with Fairford and Brize Norton. The site is affected by areas of groundwater flood susceptibility and includes a small area of Grade 2 agricultural land. The site is located adjacent to a Site of Special Scientific Interest, requiring careful consideration of potential ecological impacts and appropriate mitigation. A planning application for residential development is currently pending determination on the site. There is currently no existing vehicular access, although access may be achievable from Horcott Road, subject to further investigation. The Employment Land Review (2026) identifies that, given the proximity of the established Horcott Industrial Estate, there is limited justification for the creation of a further standalone employment area in this location. Development would also	++

Site ref.	Site name	Site assessment findings	Site rating
		represent a significant encroachment into open countryside and is less well related to the existing employment hierarchy. Overall, the site is considered a **Clear Preferred Site Option (+)** for residential development, as the identified ecological, access and flood risk constraints are considered capable of mitigation, and the site is reasonably well related to Fairford.	
F53B	Land south west of Sewage Works	The site comprises greenfield land to the south of Fairford and is affected by the airfield safeguarding areas associated with Fairford and Brize Norton. The site is affected by areas of groundwater flood susceptibility and contains predominantly Grade 3 agricultural land, with a small proportion of Grade 2 agricultural land. The site is located adjacent to a Site of Special Scientific Interest, requiring careful consideration of potential ecological impacts and appropriate mitigation. There is currently no existing vehicular access, although access may be achievable from Horcott Road, subject to further investigation. The site forms an important visual and landscape buffer between Fairford and RAF Fairford, contributing to the character of the area and helping to maintain the distinction between the settlement and airbase development. The site also contributes to the setting of Horcott Farm and the transition between the built-up area and surrounding land. Development could erode this visual separation and alter the existing character of the area, while concerns have also been raised regarding the site's relationship with the adjacent airbase. Overall, the site is considered a **Clear Omission Site Option (--)**, as development would result in the loss of an important visual and landscape buffer between	--

Site ref.	Site name	Site assessment findings	Site rating
		Fairford and RAF Fairford and could adversely affect the character and setting of the area.	
F56A, F56B	Waiten Hill Yard, Milton End	The site comprises a mix of existing residential properties, farm buildings and agricultural land on the edge of Fairford. The site is affected by the Fairford and Brize Norton Airfield Safeguard Areas and areas of groundwater flood susceptibility, with a small part of the site lying within the Coln Valley north of Fairford Special Landscape Area. Existing access is available from Mill Lane, although further investigation would be required to determine whether it is suitable for residential intensification. The western part of the site contains existing dwellings which form part of the established development pattern along Coronation Street, characterised by properties set back behind generous front gardens. Additional development in this area would erode the existing settlement pattern and result in the loss of garden land. The eastern part of the site contains an active farm complex, including Waiten Hill Farm House, a Non-Designated Heritage Asset. These buildings provide an attractive rural backdrop to Fairford and contribute positively to the character of the area. The wider site also contributes to the setting of the adjacent Special Landscape Area. Overall, the site is considered a **Clear Omission Site Option (--)**, as development would harm the established settlement pattern, affect the setting of a Non-Designated Heritage Asset and erode the rural character of this edge of Fairford. The site's existing uses and contribution to the landscape reduce its suitability for development.	--

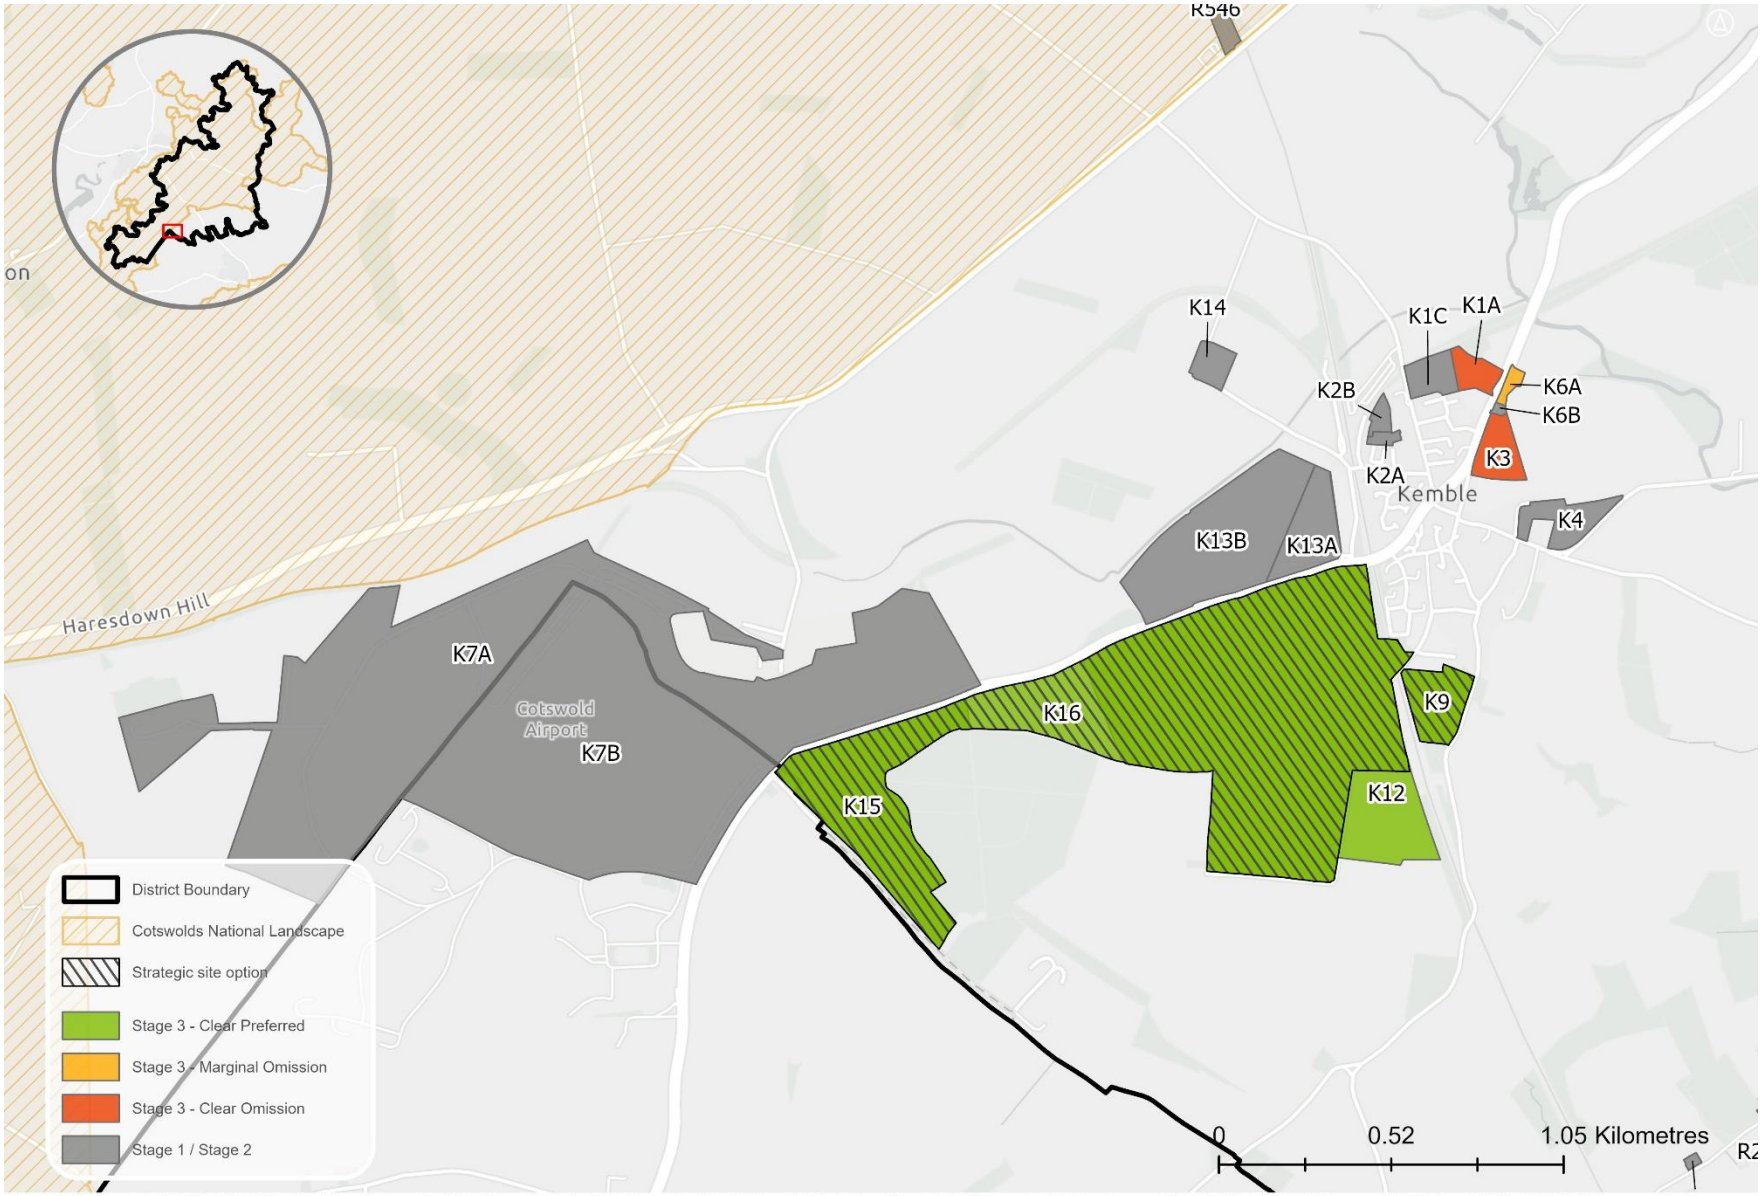
Kemble

6.35 A Special Landscape Area encompasses the town and the surrounding land to the north, east, south east, and north west. Most of the town is a designated Conservation Area. There are areas of Flood Zone 2 and Flood Zone 3 to the north east and north west, following the corridor of the River Thames (and its tributaries). The Kemble Railway Cuttings SSSI is also located to the north west of the town, with areas of Deciduous Woodland Priority Habitat to the north east of the town surrounding the dismantled railway. Kemble Railway Station is at the north western extent of the town, and Cotswold Airport is approximately 1.5km to the west of the town (via the A429). The town is not within the Cotswolds National Landscape.

6.36 Land to the south west of the town is comparatively less constrained, albeit located within the setting of the Special Landscape Area. There are isolated areas of Deciduous Woodland Priority Habitat (including Kemble Wood), SSSI Impact Risk Zones associated with Kemble Railway Cuttings, and areas within Groundwater Source Protection Zones.

6.37 Within the HELAA, of the sites classified as 'potentially deliverable / developable' or 'deliverable / developable' for a sustainable urban extension, Cotswold Airport (K7A and K7B) currently accommodates around 620 employees, alongside a substantial volume of visitors and customers, with aspirations for further growth. However, the site has since been confirmed as being unavailable for a local plan allocation. The following sites (or clusters of sites) have been taken forward to Stage 3 of the site selection process for a potential sustainable urban extension: 'Land south west of Kemble' (K9, K12, K15, K16).

6.38 Within the HELAA, of the sites which are classified as 'potentially deliverable / developable' or 'deliverable / developable' for non-strategic scale development at Kemble, R542 is located approximately 1km to the east of the town. Allocating this site would result in isolated development outside of the town, contrary to the broad spatial strategy for the emerging Local Plan.



6.39 Reflecting the above, the following non-strategic site options have been considered in detail through Stage 3 of the site selection process, specifically: K1A, K3, and K6A. The assessment findings are presented in the table below and accompanying map.

Site ref.	Site name	Site assessment findings	Site rating
K9, K12, K15, and K16 (Sustainable Urban Extension)	Land south west of Kemble	The site comprises predominantly greenfield land associated with Kemble and is largely Grade 3 agricultural land. The site lies within the airfield safeguarding areas associated with Fairford and Kemble, is affected by areas of groundwater flood susceptibility, and is partially located within the Kemble and Ewen Special Landscape Area. The site is adjacent to Kemble Wood Ancient Woodland, requiring an appropriate buffer which may reduce the developable area. Parts of the site are located close to Kemble Airport and the railway line, meaning noise and visual impacts may require mitigation. Access arrangements would require further investigation, with some existing agricultural access points present but potential upgrades or new access provision likely to be necessary. The Employment Land Review (2026) identifies K12 and K15 as capable of accommodating a small-scale employment element as part of a wider mixed-use development. However, the location is less attractive for employment uses due to its distance from Cirencester and the Strategic Road Network, reducing its market attractiveness compared with alternative employment locations. For K15, reference is made to the relatively limited demand generated by existing airport-related uses in the area. Employment uses on adjacent land are generally lower value in nature and are unlikely to support viable speculative industrial development. The Study of Land Surrounding Settlements (July 2026) identifies the site as having a medium-high landscape sensitivity. K9 has been excluded from the strategic site due to the Heritage Impact Assessment identify a high degree of harm to the Conservation Area and Listed Buildings.	**++**

Site ref.	Site name	Site assessment findings	Site rating
		The site benefits from its proximity to Kemble village and Kemble railway station, providing access to local services and sustainable transport connections. Overall, the site is considered a **Clear Preferred Site Option (++)**, as it occupies a relatively sustainable location and the identified landscape, environmental, infrastructure and amenity constraints are generally capable of mitigation, although these considerations reduce its suitability relative to the most sustainable site options. Growth will be delivered in proximity to an established employment site at Cotswold Airport, which currently accommodates around 620 employees alongside visitors and customers, with aspirations for further growth.	
K1A	Land south of Clayfurlong Farm	The site comprises greenfield land to the north of Kemble and is wholly located within the Kemble and Ewen Special Landscape Area. The site comprises Grade 3 agricultural land and is affected by areas of groundwater flood susceptibility. The site lies within the airfield safeguarding areas associated with Fairford and Kemble and is within the setting of listed buildings, requiring careful consideration of potential heritage impacts. The site has been identified as having medium-high landscape sensitivity and is therefore sensitive to development, despite benefiting from screening provided by mature vegetation along the A429. There is currently no existing access to the site, although access may potentially be achievable from the A429, subject to further investigation. Overall, the site is considered a **Clear Omission Site Option (-)**, as the combination of landscape sensitivity, its location within the Kemble and Ewen Special Landscape	**--**

Site ref.	Site name	Site assessment findings	Site rating
		Area, potential impacts on the setting of listed buildings and access constraints reduce its suitability.	
K3		The site comprises greenfield land to the east of Kemble and is wholly located within the Kemble and Ewen Special Landscape Area. The site comprises Grade 3 agricultural land and is affected by areas of groundwater flood susceptibility. The site lies within the airfield safeguarding areas associated with Fairford and Kemble and is adjacent to the Kemble Conservation Area, requiring careful consideration of potential heritage impacts. The site also contains a Tree Preservation Order within its centre, which may constrain the developable area and influence the layout of any future development. Existing access is available from the south-west, although further investigation would be required to determine whether it is suitable for residential intensification. The site has been identified as having High/Medium landscape sensitivity, indicating a relatively strong sensitivity to development. Overall, the site is considered a **Clear Omission Site Option (-)**, as the combination of its location within the Kemble and Ewen Special Landscape Area, High/Medium landscape sensitivity, proximity to the Kemble Conservation Area and the presence of protected trees reduces its suitability.	**--**
K6A		The site comprises a brownfield site to the north-east of Kemble and is wholly located within the Kemble and Ewen Special Landscape Area. The site comprises Grade 3 agricultural land and is affected by areas of groundwater flood susceptibility. The site lies within the airfield safeguarding areas associated with Fairford and Kemble. Area Tree Preservation Orders are present along the western	**-**

Site ref.	Site name	Site assessment findings	Site rating
		and southern parts of the site and would need to be retained and incorporated into any development proposals. The site is accessed via an existing agricultural access from the A429 to the south. A previous application for the conversion of the barns to residential accommodation was refused, although subsequent residential development in the surrounding area has increased the site's relationship with the existing settlement. The site has been identified as having high landscape sensitivity, indicating a strong sensitivity to change. Overall, the site is considered a **Marginal Omission Site Option (-)**, as its location within the Kemble and Ewen Special Landscape Area, combined with its high landscape sensitivity and the presence of protected trees, reduces its suitability relative to less constrained alternatives. Nonetheless, the site is an area of brownfield land within proximity to existing development and may benefit from a sensitive regeneration which respects its landscape setting.

Lechlade-on-Thames

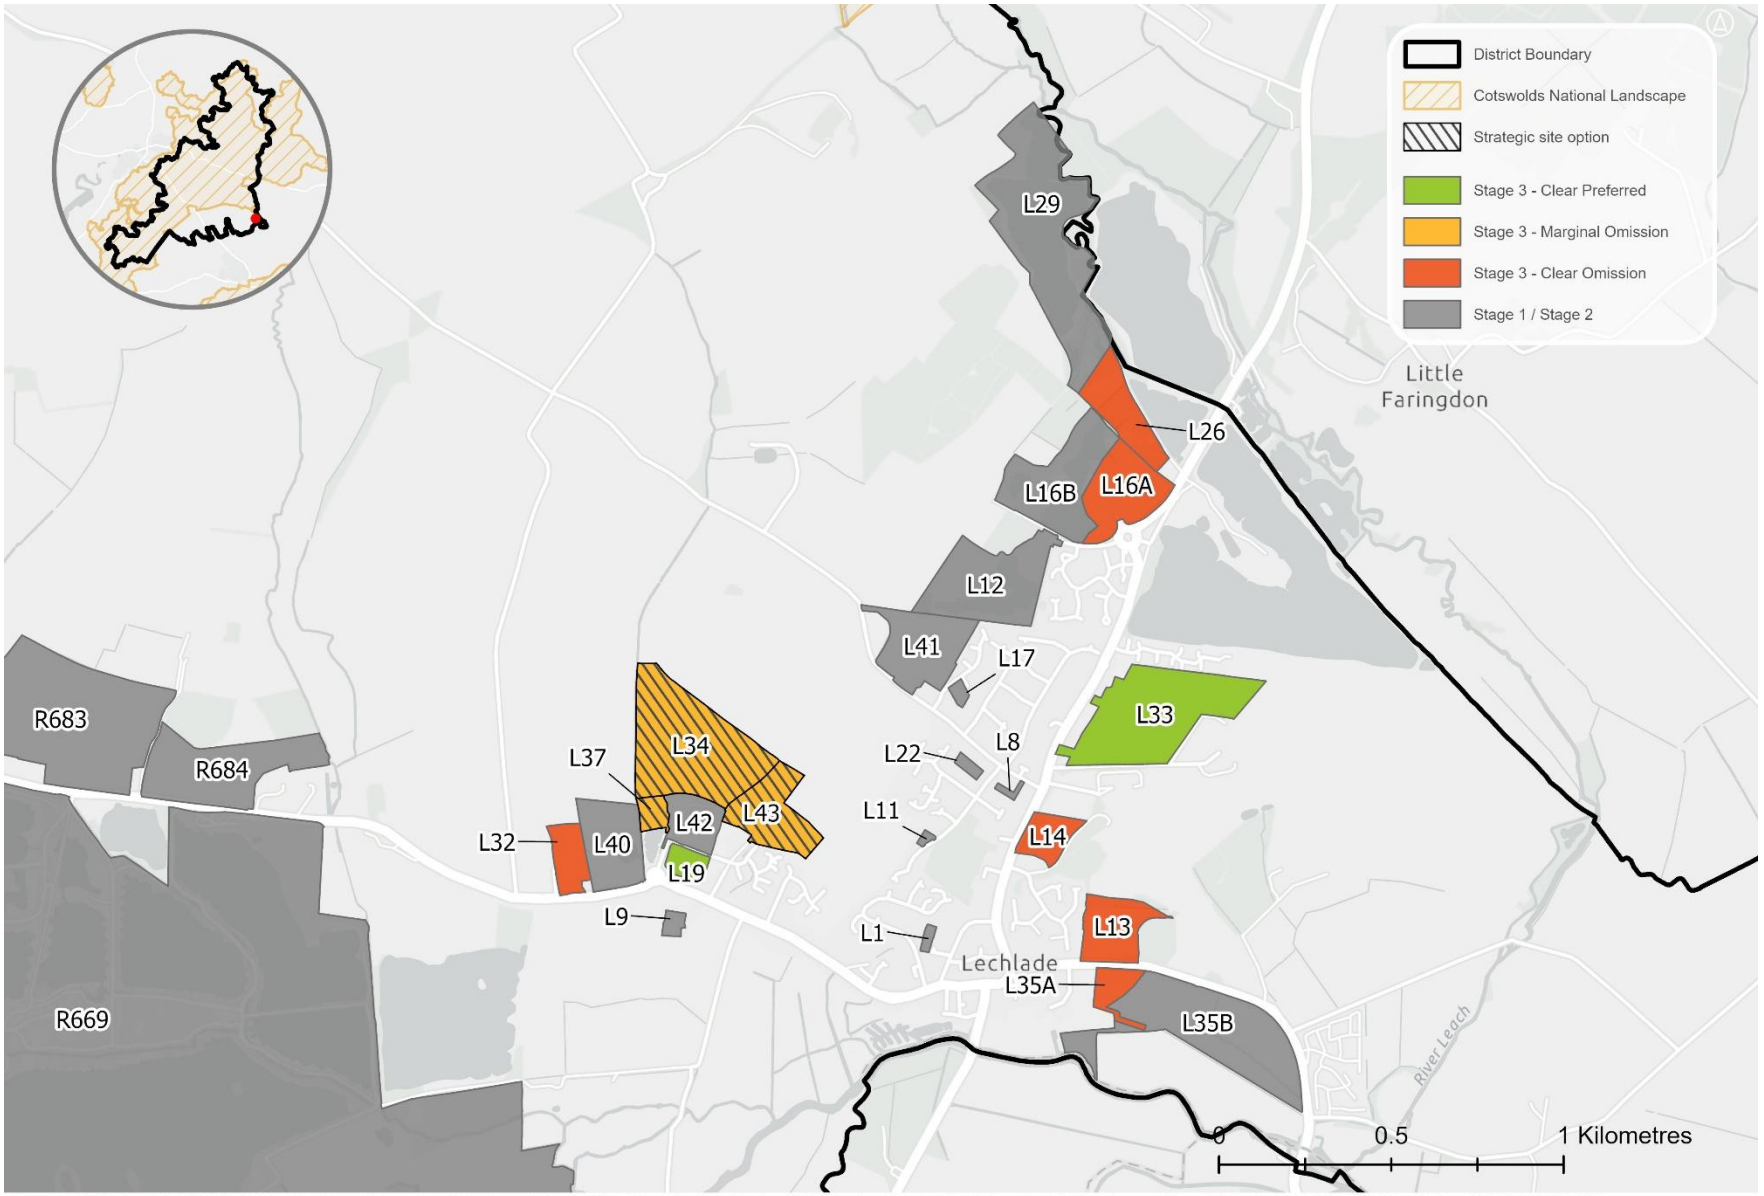
6.40 Located toward the south eastern boundary of the district, Lechlade borders the neighbouring authorities of West Oxfordshire, Swindon, and the Vale of White Horse. The River Thames passes along the southern boundary of the town, with areas of Flood Zone 2 and Flood Zone 3 encompassing most of the undeveloped areas to the east, south east, and south west of the town. These areas are also underlain by Grade 2 agricultural land, which is some of the best and most versatile agricultural land within the country. Cotswold Water Park SSSI extends to the north of the town, and the 'Multi-period settlement, cemetery, and ceremonial complex west of Lechlade' Scheduled Monument is located to the north west of the town. The southern section of the town is a designated Conservation Area, containing all of the town's Grade I and Grade II Listed Buildings. The town is not within the Cotswolds National Landscape.

6.41 In terms of strategic opportunities, R683 and R684 are located approximately 1km to the west of the town. The combined capacities of these sites would not exceed the minimum threshold of 1,500 homes required to constitute as a 'new settlement'. Reflecting the above, the following sites (or clusters of sites) have been taken forward to Stage 3 of the site selection process for a potential sustainable urban extension: 'Cluster of sites to the west of Lechlade, within proximity to Lechlade Garden Centre' (L34, L37, L43).

6.42 Within the HELAA, the following sites classified as 'potentially deliverable / developable' or 'deliverable / developable' for non-strategic scale development at Lechlade have been considered in detail through Stage 3 of the site selection process, specifically: L13, L14, L16A, L26, L32, L33, and L35A.

6.43 The assessment findings are presented in the table below and accompanying map.

Site ref.	Site name	Site assessment findings	Site rating
L34, L37, L43 (Sustainable Urban Extension)	Cluster of sites to the west of Lechlade, within proximity to Lechlade Garden Centre	The site comprises greenfield land to the west of Lechlade and is affected by the Fairford, Brize Norton and Oxford Kidlington Airfield Safeguard Areas and areas of groundwater flood susceptibility. The site contains a mix of Grade 2 and Grade 3 agricultural land, and development would result in the loss of agricultural land, including best and most versatile agricultural land. Parts of the site fall within Flood Zones 2 and 3 and would require appropriate flood mitigation measures. Existing access opportunities are limited and would require further investigation. The site is also within the setting of a Scheduled Monument and nearby listed buildings. Parts of the site have been assessed as having High landscape sensitivity and contribute to the rural setting of Lechlade and the character of the western approach to the town. Development would extend built form into open countryside and affect the setting of nearby heritage assets. Overall, the site is considered a **Marginal Omission Site Option (-)**, as its landscape, heritage, flood risk and access constraints reduce its suitability.	**-**
L13	Land west of Lechlade Cricket Club	The site comprises greenfield land adjacent to Lechlade and is affected by the airfield safeguarding areas associated with Fairford, Brize Norton and Oxford Kidlington. The site comprises Grade 3 agricultural land and is affected by areas of groundwater flood susceptibility. A small part of the site falls within Flood Zone 2, while approximately a quarter of the site comprises coastal and floodplain grazing marsh habitat, requiring careful consideration of potential ecological impacts and mitigation measures. The site benefits from an existing access via the adjacent	**--**



Site ref.	Site name	Site assessment findings	Site rating
		cricket club car park, although further investigation would be required to determine whether this is suitable for residential intensification. The site is well screened along its southern boundary and contains an area Tree Preservation Order and a number of individual Tree Preservation Orders which may influence the developable area and layout of any future development. Overall, the site is considered a **Clear Omission Site Option (--)**, as the presence of priority habitat and protected trees would constrain development and require significant mitigation, reducing the site's suitability.	
L14	Land at Lechlade Manor, adjacent to Oak Street.	The site comprises greenfield land adjacent to Lechlade and is located within the Lechlade Conservation Area. The site comprises Grade 3 agricultural land and is affected by areas of groundwater flood susceptibility. The site also lies within the airfield safeguarding areas associated with Fairford, Brize Norton and Oxford Kidlington. A substantial proportion of the site comprises deciduous woodland and other habitat features, requiring careful consideration of ecological impacts and significantly constraining the developable area. The site benefits from an existing access track along its eastern boundary, although further investigation would be required to determine whether this is suitable for residential intensification. The western edge of the site is well screened, which may help to reduce visual impacts. Overall, the site is considered a **Clear Omission Site Option (--)**, as the extensive habitat coverage across the site, together with its location within the Conservation Area, would significantly constrain development potential.	**--**

Site ref.	Site name	Site assessment findings	Site rating
L16A	Land north of Lechlade	The site comprises greenfield land adjacent to Lechlade and is affected by the airfield safeguarding areas associated with Fairford, Brize Norton and Oxford Kidlington, together with areas of groundwater flood susceptibility. The site comprises Grade 3 agricultural land and lies adjacent to the Cotswold Water Park SSSI. Existing access is available from the nearby roundabout, although further investigation would be required to determine whether this is suitable for residential intensification. Development would need to carefully consider and mitigate potential impacts on the adjacent ecological designation and the wider environmental network associated with the Cotswold Water Park. The site occupies a low-lying landscape on the edge of Lechlade and forms part of the wider mosaic of habitats associated with the Cotswold Water Park. Whilst the site has limited visual prominence and is relatively contained, it contributes to local ecological connectivity and the character of the surrounding wetland landscape, including links with nearby nature conservation areas. The site has been assessed as having medium landscape sensitivity, reflecting its contribution to landscape character and biodiversity, notwithstanding the influence of its former industrial use and contained nature. Overall, the site is considered a **Clear Omission Site Option (-)**, as its ecological context and relationship with the Cotswold Water Park landscape reduce its suitability.	**--**
L19	Land south of Butler's Court	The site comprises greenfield land adjacent to the settlement of Lechlade and is affected by the airfield safeguarding areas associated with Fairford and Brize	**++**

Site ref.	Site name	Site assessment findings	Site rating
		Norton. The site comprises Grade 2 agricultural land and is affected by areas of groundwater flood susceptibility. Parts of the site fall within Flood Zones 2 and 3, requiring appropriate flood risk mitigation measures. There is currently no existing vehicular access to the site and further investigation would be required to determine whether a suitable access can be provided. The site is allocated for residential development in the 2011-2031 Local Plan. Overall, the site is considered a **Clear Preferred Site Option (++)**, as it is well related to the existing settlement and there are no significant landscape, heritage or environmental constraints that would be likely to preclude development. The identified flood risk and access constraints are considered capable of mitigation through the development process.	
L26	Land adjacent Bushyleaze Lake and Smyrell Farm	The site comprises greenfield land to the north of Lechlade and is affected by the airfield safeguarding areas associated with Fairford, Brize Norton and Oxford Kidlington. The site comprises Grade 3 agricultural land and is affected by areas of groundwater flood susceptibility. Approximately 35% of the site comprises deciduous woodland and the site is adjacent to the Cotswold Water Park SSSI, requiring careful consideration of potential ecological impacts and appropriate mitigation measures. Access is currently provided via an unmade track from the south-east, although further investigation would be required to determine whether this could be suitably upgraded for residential development. Overall, the site is considered a **Clear Omission Site Option (-)**, as the substantial proportion of deciduous woodland and the site's adjacency to the Cotswold Water	**--**

Site ref.	Site name	Site assessment findings	Site rating
		Park SSSI would significantly constrain development and require careful ecological mitigation, reducing its suitability.	
L32	Lechlade Garden Centre	The site comprises predominantly brownfield land associated with an existing garden centre to the west of Lechlade and is affected by the airfield safeguarding areas associated with Fairford and Brize Norton. The site is affected by areas of groundwater flood susceptibility and contains a significant proportion of Grade 2 agricultural land. A small part of the site falls within Flood Zone 2 and would require appropriate flood risk mitigation measures. An individual Tree Preservation Order is located at the site entrance and would need to be retained and incorporated into any development proposals. The site benefits from an existing access from the south, which is likely to be suitable for intensification. Redevelopment of the site for residential use would result in the loss of an existing garden centre and associated community facility. Overall, the site is considered a **Clear Omission Site Option (--)**, as development would result in the loss of an established community asset, and this harm is considered to outweigh the benefits of redevelopment for housing despite the site's generally limited physical constraints.	**--**
L33	Land south of Ferrers Park	The site comprises greenfield land to the east of Lechlade and is affected by the airfield safeguarding areas associated with Fairford, Brize Norton and Oxford Kidlington. The site comprises Grade 3 agricultural land and is affected by areas of groundwater flood susceptibility. Development would result in the loss of agricultural land and there is currently no existing vehicular access to the site.	**++**

Site ref.	Site name	Site assessment findings	Site rating
		Further investigation would be required to determine whether a suitable access could be provided from Station Road or from the land to the south. Overall, the site is considered a **Clear Preferred Site Option (++)**, as it is well related to the existing settlement and there are no significant landscape, heritage or environmental constraints that would be likely to preclude development. The identified access and flood risk constraints are considered capable of mitigation through the development process.	
L35A	Land south of A417, east of Lechlade	The site comprises greenfield land to the east of Lechlade and is affected by the airfield safeguarding areas associated with Fairford, Brize Norton and Oxford Kidlington. The site is affected by areas of groundwater flood susceptibility and contains areas of Flood Zones 2 and 3, requiring appropriate flood risk mitigation measures. Approximately a quarter of the site comprises coastal and floodplain grazing marsh habitat, requiring careful consideration of potential ecological impacts and mitigation measures. The site benefits from an existing agricultural access from the north-west, although further investigation would be required to determine whether this is suitable for residential intensification. Existing vegetation along the northern boundary provides a degree of natural screening. Overall, the site is considered a **Clear Omission Site Option (-)**, as the presence of priority habitat and areas of flood risk are likely to constrain development potential.	**--**

Mickleton

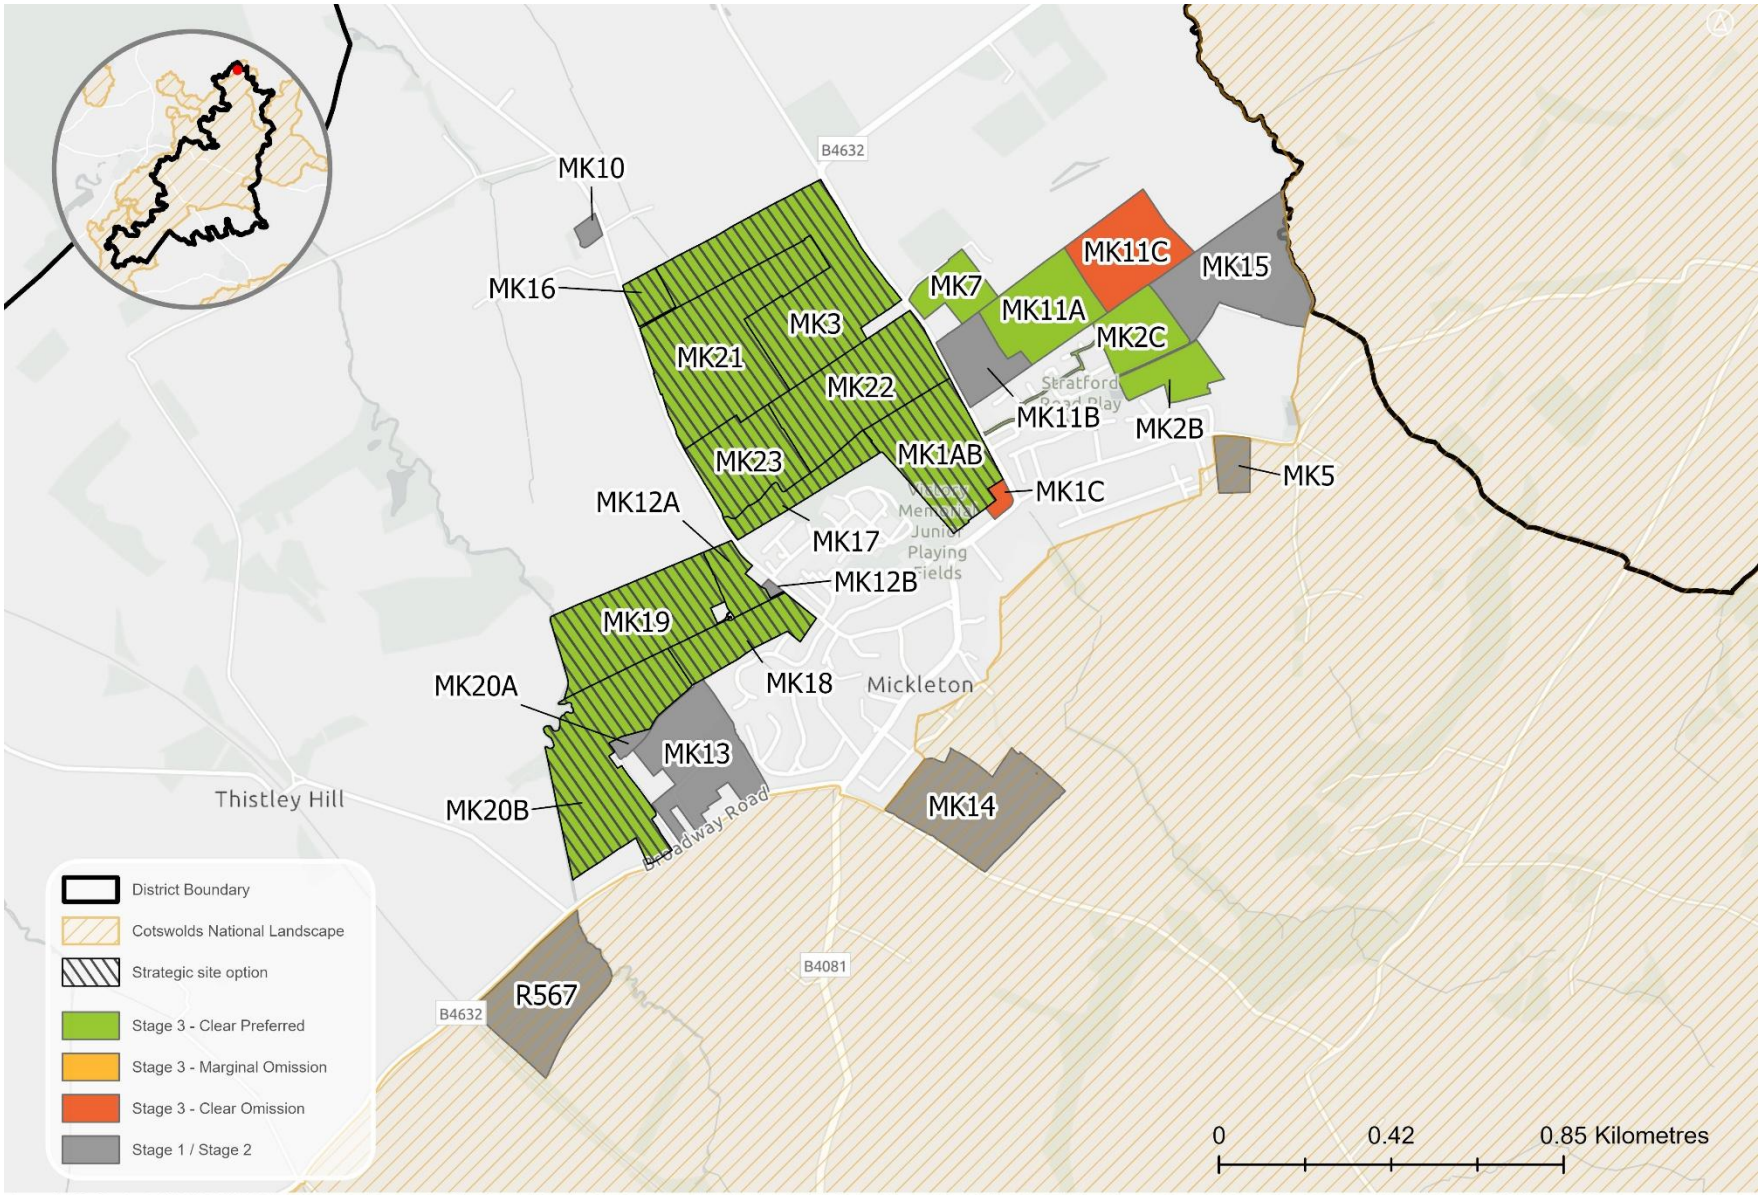
6.44 Land to the east, south east, south, and south west of the village is within the Cotswolds National Landscape. The central and southern section of the village is a designated Conservation Area, with the Grade II Listed 'Kiftsgate Court' Historic Park and Garden also to the south east. Land to the north of the village is relatively unconstrainted, although it is classified as Grade 2 (very good quality) 'best and most versatile' land for agricultural uses. To the west, areas of Flood Zone 2 and Flood Zone 3 broadly follow the corridor of Norton Brook, with a Special Landscape Area covering land to the west of the Brook (including Thistley Hill). The Heart of England Way passes through the village.

6.45 Reflecting the above, the following sites (or clusters of sites) have been taken forward to Stage 3 of the site selection process for a potential sustainable urban extension: 'Land to the north and west of Mickleton' (MK1AB, MK3, MK16, MK17, MK21, MK22, MK23, MK12A, MK18, MK19, MK20B).

6.46 Within the HELAA, of the sites which are classified as 'potentially deliverable / developable' or 'deliverable / developable' for non-strategic scale development at Mickleton, MK12B has received planning permission for a residential development and is not yet built out. The site is considered deliverable within the first five years of the plan period.

6.47 Reflecting the above, the following non-strategic site options have been considered in detail through Stage 3 of the site selection process, specifically: MK1C, MK2B, MK2C, MK7, MK11A and MK11C.

6.48 The assessment findings are presented in the table below and accompanying map.



Site ref.	Site name	Site assessment findings	Site rating
MK1AB, MK3, MK16, MK17, MK21, MK22, MK23, MK12A, MK18, MK19, MK20B (Sustainable Urban Extension)	Land north and west of Mickleton	The site comprises a series of predominantly greenfield parcels located to the north and west of Mickleton. The site is largely Grade 2 and Grade 3 agricultural land and is affected by areas of groundwater flood susceptibility throughout. Development would result in the loss of best and most versatile agricultural land across much of the site. Several Public Rights of Way cross parts of the site, while some parcels are affected by limited areas of Flood Zones 2 and 3, requiring consideration of flood mitigation measures. The site also includes land adjacent to the Mickleton Conservation Area, where heritage impacts would need to be carefully managed. Access arrangements vary across the site, with some parcels benefiting from existing agricultural accesses capable of upgrade, while others would require the creation of new access points and further investigation of feasibility. The site benefits from being adjacent to the existing settlement in several locations, with some parcels offering opportunities to consolidate the existing pattern of development and benefiting from existing landscape screening. However, other parcels are more detached from the settlement, have greater landscape sensitivity, and would represent a less sustainable extension into the surrounding countryside. The Employment Land Review (2026) identifies the northern cluster of sites (MK3, MK16, MK17, MK21, MK22, and MK23) as being capable of accommodating a small-scale employment element as part of a wider mixed-use allocation, Employment provision would support the creation of a mixed-use community and provide local employment alongside residential development.	**++**

Site ref.	Site name	Site assessment findings	Site rating
		Overall, the site is considered a **Clear Preferred Site Option (++)**, as much of the site is capable of forming logical extensions to the existing settlement and the identified constraints are generally capable of mitigation. New development would benefit from reasonable access to employment opportunities both within and outside the district, including Chipping Campden (which functions as an important service and visitor destination) and the employment areas at Meon Vale to the north. The settlement also lies in proximity to Honeybourne railway station, as Mickleton is the closest settlement to a railway station in the district outside of the two settlements which benefit from rail connectivity (Kemble and Moreton-in-Marsh).	
MK1C	Field north-east of Granbrook Lane / Stratford Road Mini-Roundabout	The site comprises greenfield land to the north of Mickleton and is affected by areas of groundwater flood susceptibility. The site comprises Grade 2 agricultural land and lies within the Mickleton Conservation Area, meaning development would need to carefully consider and mitigate potential impacts on the character and appearance of this designated heritage asset. Development would also result in the loss of best and most versatile agricultural land. The site benefits from an existing access serving a dwelling on the western part of the site, although further investigation would be required to determine whether a suitable access arrangement can be achieved for residential development. Overall, the site is considered a **Clear Omission Site Option (--)**, as development within the Conservation Area has the potential to adversely affect its character and appearance, and the heritage sensitivity of the site reduces its suitability.	**--**

Site ref.	Site name	Site assessment findings	Site rating
MK2B, MK2C	Land north east of Mickleton (east of former Meon Hill Nurseries)	The site comprises greenfield land to the north-east of Mickleton and is affected by areas of groundwater flood susceptibility. The site is predominantly Grade 2 agricultural land, with only a small proportion of Grade 3 agricultural land. Development would result in the loss of agricultural land and would need to take account of Public Rights of Way and Tree Preservation Orders located along parts of the site boundaries. The site benefits from potential access opportunities from the surrounding road network, although further investigation would be required to establish access arrangements and address any constraints associated with land ownership or ransom strips. The site is generally flat and has relatively low landscape sensitivity. Overall, the site is considered a **Clear Preferred Site Option (++)**, as it is well related to the existing settlement and there are no significant landscape, heritage, ecological or infrastructure constraints that would be likely to preclude development.	**++**
MK7	Land between Summerville Road and Stratford Road	The site comprises greenfield land to the north-east of Mickleton and is affected by areas of groundwater flood susceptibility. The site contains predominantly Grade 2 agricultural land, with a smaller proportion of Grade 3 agricultural land. Development would result in the loss of agricultural land and the site is currently separated from the main built-up area of Mickleton by the existing allotments. There is currently no existing access onto the site, although access may be achievable from Stratford Road, subject to further investigation and the potential removal of mature vegetation. The site also has limited pedestrian connectivity, with no footway along Stratford Road, resulting in a greater reliance on private vehicle travel.	**++**

Site ref.	Site name	Site assessment findings	Site rating
		Overall, the site is considered a **Clear Preferred Site Option (++)**, as it could form part of a logical extension to Mickleton when considered alongside adjoining development opportunities. Access and connectivity considerations will need to be appropriately addressed through the design of any new development areas.	
MK11A	Land east of Stratford Road	The site comprises greenfield land to the east of the existing allotments at Mickleton and is affected by areas of groundwater flood susceptibility. The site contains a mix of Grade 2 and Grade 3 agricultural land, and development would result in the loss of agricultural land, including a substantial proportion of best and most versatile agricultural land. The site is adjacent to existing development and would represent a logical extension of the settlement. Access is currently available via an agricultural track along the southern boundary, although further investigation would be required to determine whether a suitable access can be achieved and whether any impacts on the adjacent allotments can be avoided or mitigated. Overall, the site is considered a **Clear Preferred Site Option (++)**, as it is well related to the existing settlement and there are no significant landscape, heritage, ecological or infrastructure constraints that would be likely to preclude development. The identified access and environmental constraints are considered capable of mitigation through the development process.	**++**
MK11C	Land east of Stratford Road	The site comprises greenfield land to the north-east of Mickleton and is affected by areas of groundwater flood susceptibility. The site comprises predominantly Grade 3 agricultural land, with a small proportion of Grade 2 agricultural land, and development would result in the loss of agricultural land including some best and most versatile	**--**

Site ref.	Site name	Site assessment findings	Site rating
		agricultural land. The site is currently accessed via an agricultural track along the southern boundary, although upgrades would be required and may necessitate the loss of land from the adjacent allotments. Further investigation would be required to determine whether a suitable access arrangement could be achieved. The site is not adjacent to existing development and would not relate well to the established settlement pattern of Mickleton. Development in isolation would represent a detached extension into the open countryside and would be likely to have an adverse effect on the landscape setting of the settlement. The site forms part of the open rural landscape beyond the village and contributes to the transition between the built form of Mickleton and the surrounding countryside. Overall, the site is considered a **Clear Omission Site Option (--)**, as it is poorly related to the existing built form of Mickleton and would result in development that does not reflect the established settlement pattern. The landscape impacts, access constraints and loss of agricultural land reduce its suitability.

Moreton-in-Marsh

6.49 The Cotswolds National Landscape encompasses land to the south west, west, and north west of the town. Land to the north and to the south of the town is within a Special Landscape Area, with these areas also including the 'Roman small town at Dorn' Scheduled Monument (to the north) and Grade 2 Agricultural Land (to the south). The western section of the town, west of Moreton-in-Marsh Railway Station and including the built-up areas surrounding the A429 and A44, is a designated Conservation Area. The Conservation Area contains the majority of the town's Grade II and Grade II* Listed Buildings, with the 'Batsford Camp (adjacent to Queen Victoria's Garden)' Scheduled Monument marking the Conservation Area's northern extent. Corridors of Flood Zone 2 and Flood Zone 3 follow the River Evenlode (and its tributaries) to the south of the town.

6.50 Land to the east of the town is comparatively unconstrained, although it is within the setting of the Special Landscape Areas to the north and to the south. There is also an interconnected network of Deciduous Woodland Priority Habitat surrounding the Fire Service College (north of the A44 and south of Todenham Road).

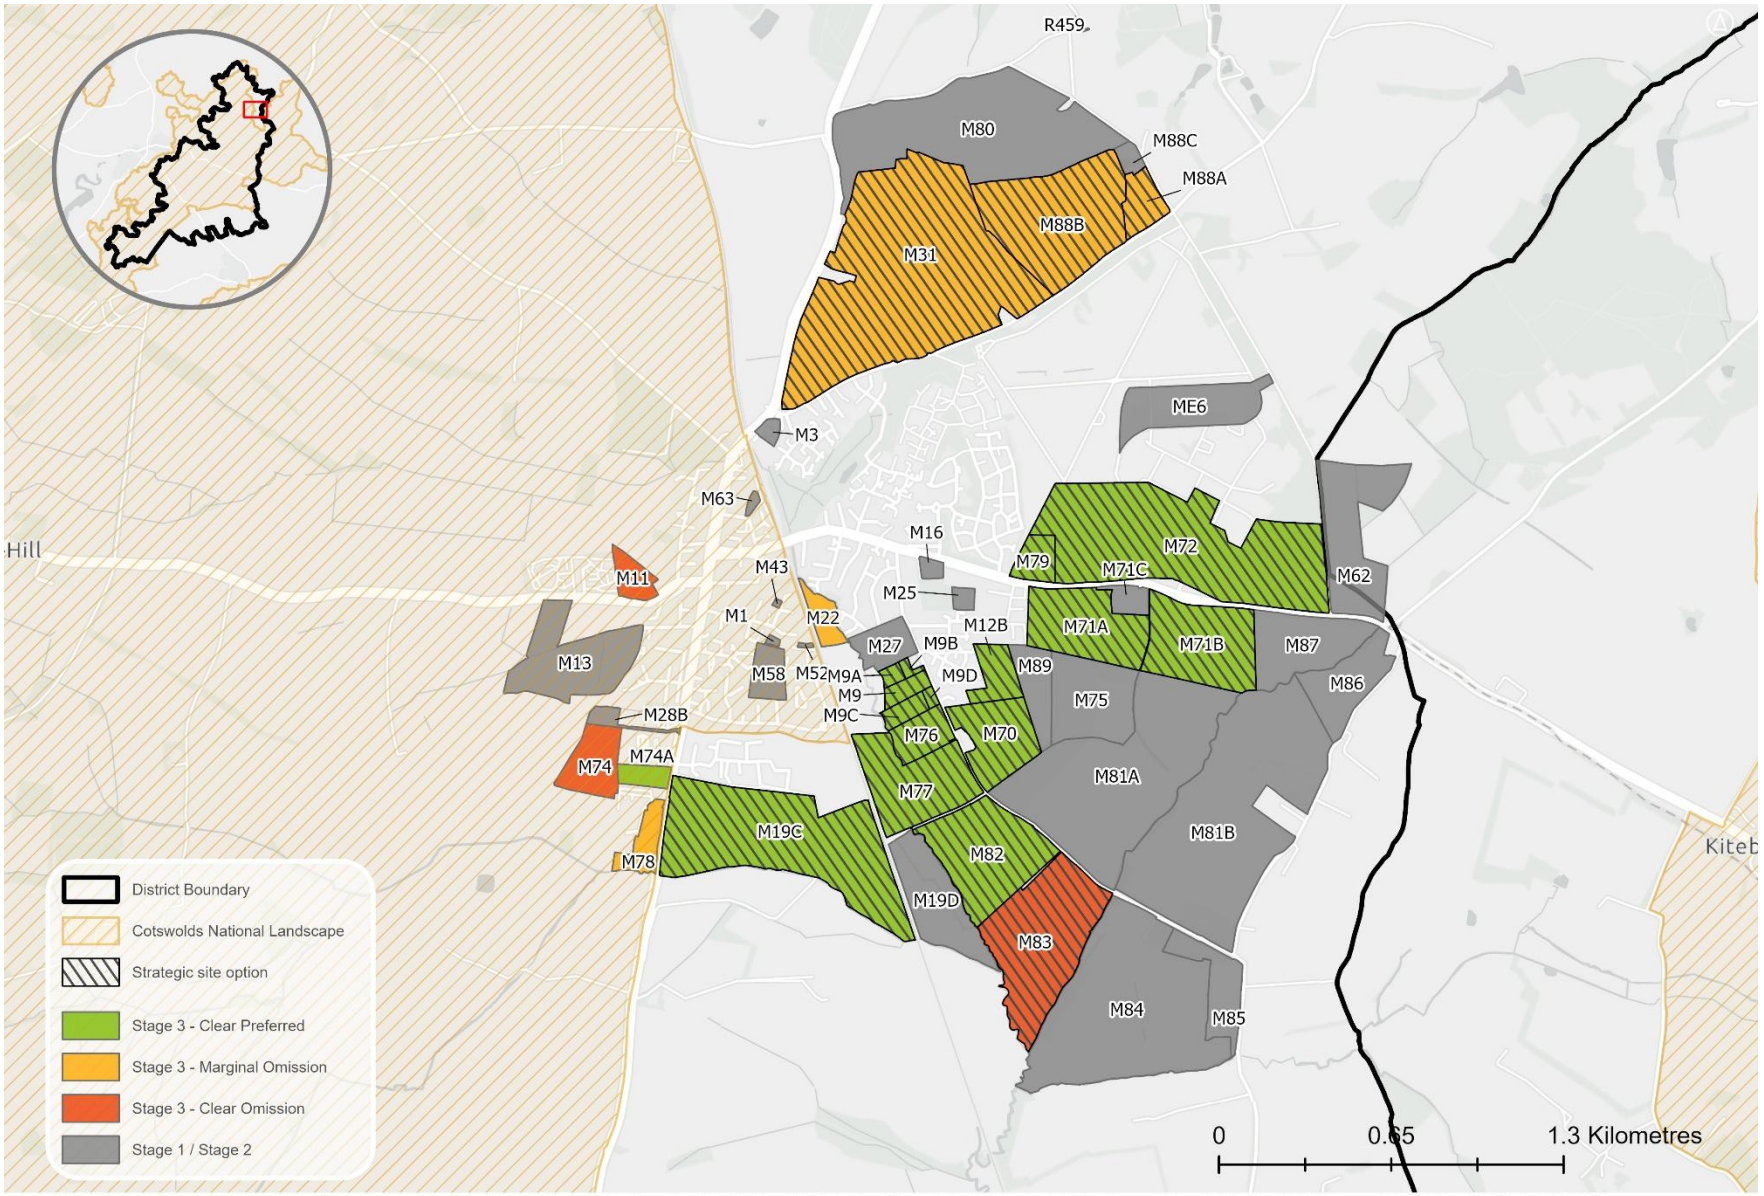
6.51 Within the HELAA, of the sites classified as 'potentially deliverable / developable' or 'deliverable / developable' for a sustainable urban extension, 'Land to the north, east and south of Moreton-in-Marsh' and 'Land to the south and east of Moreton-in-Marsh are assessed as a potential sustainable urban extension. To the south east of these potential sustainable urban extensions, 'Land at Coldicote Farm' (M83) also has an indicative capacity which exceed 350 homes. As the site is not immediately adjacent to the town, development at this location would fall into the 'new settlement' category based on the site selection methodology. However, as the site would adjoin the sustainable urban extension at Moreton-in-Marsh if either 'Land to the north, east, and south of Moreton-in-Marsh' or 'Land to the south and east of Moreton-in-Marsh' is taken forward as an allocation, it has been tested within the sustainable urban extension category for completeness.

6.52 Within the HELAA, of the sites which are classified as 'potentially deliverable / developable' or 'deliverable / developable' for non-strategic scale development at Moreton-in-Marsh, M71A and M28B have received planning permission for residential development but are not yet fully built out. The sites are considered deliverable within the first five years of the plan period. Additionally, M70 is subject to a pending application for residential development (ref. 25/04041/OUT) and is therefore not available for employment development. It is anticipated that M70 and M71A will form part of the land to the south and east of Moreton-in-Marsh if this sustainable urban extension is taken forward as a Local Plan allocation.

6.53 Reflecting the above, the following non-strategic site options have been considered in detail through Stage 3 of the site selection process, specifically: M11, M22, M74A (eastern section of M74 considered through HELAA), and M78 (for employment). The assessment findings are presented in the table below and accompanying map.

Site ref.	Site name	Site assessment findings	Site rating
M9, M9A, M9B, M9C, M9D, M12B, M19C, M31, M70, M71B, M72, M76, M77, M79, M82, M88A, M88B (Sustainable Urban Extension)	Land north, east, and south of Moreton-in-Marsh	The site comprises a large area of predominantly greenfield land located around the north, east and south of Moreton-in-Marsh. Much of the site lies within the Moreton-in-Marsh Surrounds Special Landscape Area and is affected by areas of groundwater flood susceptibility. Parts of the site are also affected by Flood Zones 2 and 3, requiring consideration of flood risk and appropriate mitigation measures. The site contains a mix of Grade 2 and Grade 3 agricultural land and includes a range of additional constraints, including Public Rights of Way, deciduous woodland, traditional orchards, airfield safeguarding constraints, Tree Preservation Orders and proximity to existing infrastructure such as a sewage treatment works. Access opportunities exist across much of the site, although some parcels would require upgrades, new access arrangements or wider infrastructure improvements. The site includes land adjoining existing development and benefits from proximity to services, facilities and public transport, including Moreton-in-Marsh railway station. Several parcels have planning permissions, pending applications or are located adjacent to recently developed areas, demonstrating development potential and opportunities to consolidate the existing settlement pattern. However, development would result in expansion into sensitive landscape areas and, in some locations, further into the surrounding countryside. A small number of parcels have also been identified as unsuitable through the HELAA due to landscape sensitivity, remoteness from the settlement or dependency on strategic infrastructure. The Employment Land Review (2026) identifies several site parcels within the proposed strategic allocation as being potentially capable of accommodating an	-

Site ref.	Site name	Site assessment findings	Site rating
		element of employment development as part of a wider mixed-use scheme, specifically: M9, M9C, M9D, M31, M71B, M72, M76, M77, Overall, the site is considered a **Marginal Omission Site Option (+)**, as it comprises a number of potentially suitable development opportunities in sustainable locations around Moreton-in-Marsh and many of the identified constraints are capable of mitigation. However, landscape sensitivities associated with the Special Landscape Area, together with flood risk, infrastructure and countryside encroachment considerations, reduce its suitability. The delivery of a full link road around the northern, eastern, and southern sections of the site is less likely to be achievable during the emerging plan period due to concerns over the thresholds of development required to make this strategic transport intervention a viable option.	
M9, M9A, M9B, M9C, M9D, M12B, M19C, M70, M71A, M71B, M76, M77, M82 (Sustainable Urban Extension	Land to the south and east of Moreton-in-Marsh	The site comprises a large area of predominantly greenfield land located around the north, east and south of Moreton-in-Marsh. Much of the site lies within the Moreton-in-Marsh Surrounds Special Landscape Area and is affected by areas of groundwater flood susceptibility. Parts of the site are also affected by Flood Zones 2 and 3, requiring consideration of flood risk and appropriate mitigation measures. The site contains a mix of Grade 2 and Grade 3 agricultural land and includes a range of additional constraints, including Public Rights of Way, deciduous woodland, traditional orchards, airfield safeguarding constraints, Tree Preservation Orders and proximity to existing infrastructure such as a sewage treatment works. Access opportunities exist across much of the site, although some parcels would require upgrades, new access arrangements or wider infrastructure improvements.	**++**



Site ref.	Site name	Site assessment findings	Site rating
		The site includes land adjoining existing development and benefits from proximity to services, facilities and public transport, including Moreton-in-Marsh railway station. Several parcels have planning permissions, pending applications or are located adjacent to recently developed areas, demonstrating development potential and opportunities to consolidate the existing settlement pattern. However, development would result in expansion into sensitive landscape areas and, in some locations, further into the surrounding countryside. A small number of parcels have also been identified as unsuitable through the HELAA due to landscape sensitivity, remoteness from the settlement or dependency on strategic infrastructure. The Employment Land Review (2026) identifies several site parcels within the proposed strategic allocation as being potentially capable of accommodating an element of employment development as part of a wider mixed-use scheme, specifically: M9, M9C, M9D, M31, M71B, M76, M77, Overall, the site is considered a **Clear Preferred Site Option (++)** as many of the identified constraints are capable of mitigation. The site would deliver strategic growth within a key settlement in the district, one of only two with direct access to a railway station. The delivery of the southern and eastern section of the link road during the plan period is considered achievable alongside the level of growth proposed. It is anticipated that the land to the north of the sites will be safeguarded for future expansion of the link road.	
M83 (Sustainable	Land at Coldicote	The site comprises greenfield land to the south of Moreton-in-Marsh and is affected by the Little Rissington and Oxford Kidlington Airfield Safeguard Areas, areas of	**--**

Site ref.	Site name	Site assessment findings	Site rating
Urban Extension)	Farm, Moreton-in-Marsh	groundwater flood susceptibility and the Moreton-in-Marsh Surrounds Special Landscape Area. The site comprises predominantly Grade 3 agricultural land, and parts of the site fall within Flood Zones 2 and 3, requiring careful consideration of flood risk and appropriate mitigation measures. The site benefits from an existing access from Evenlode Road, although further investigation would be required to determine whether it is suitable for residential intensification. The site lies within the Moreton-in-Marsh Surrounds Special Landscape Area and has been assessed as having High landscape sensitivity. The site forms an important part of the rural setting of Moreton-in-Marsh, contributing to the scenic quality, tranquillity and openness of the surrounding countryside. Existing grassland, hedgerows, mature trees and the associated riparian corridor create a distinctive landscape with strong ecological and visual value. Public views from nearby footpaths and lanes reinforce the site's role as part of the open countryside surrounding the town. Development would be perceived as an isolated encroachment into the rural landscape and would adversely affect the character and appearance of the Special Landscape Area. Overall, the site is considered a **Clear Omission Site Option (--)**, as its high landscape sensitivity, location within the Moreton-in-Marsh Surrounds Special Landscape Area and important contribution to the rural setting of Moreton-in-Marsh substantially reduce its suitability for development relative to less constrained alternatives.	

Site ref.	Site name	Site assessment findings	Site rating
M11	Land at Bourton Road	The site comprises greenfield land to the west of Moreton-in-Marsh and is wholly located within the Cotswolds National Landscape. The site is predominantly Grade 3 agricultural land and is affected by areas of groundwater flood susceptibility. Approximately half of the site lies within Flood Zones 2 and 3. The site is adjacent to the Moreton-in-Marsh Conservation Area and is visually prominent on approaches to the town from the west, meaning landscape and heritage impacts would require careful consideration. Existing access is available via a small agricultural access from the south-west, although upgrades may be required. The site subject to significant landscape, heritage and flood risk impacts and is a **Clear Omission Site Option (--)**.	**--**
M22	Land west of Croft Holm	The site comprises a greenfield site in Moreton-in-Marsh. The site lies in a sensitive location within the Moreton-in-Marsh Surrounds Special Landscape Area. The site lies largely in Flood Zone 2 and Flood Zone 3. However, existing flood defences decrease the existing flood risk on site. A Public Right of Way runs along the southern boundary. Access to the site still needs to be resolved. The site is currently retained for operational use, but Thames Water are examining the operational requirements of their land holdings, and the site could be made available for redevelopment with some infrastructure improvements. It is proposed to undertake these infrastructure works during Asset Management Plan 8 (AMP 8 1st April 2025 – 31st March 2030). The site is potentially suitable for development, subject to suitable access and consideration of other identified constraints. Overall, the site is considered a	**-**

Site ref.	Site name	Site assessment findings	Site rating
		Marginal Omission Site Option (-), with a potential to come forward during the latter half of the plan period dependent on the completion of the infrastructure works and confirmation that the site is surplus to Thames Water's operational requirements.	
M74A	Land south of Moreton and west of Fosse Way (eastern part of the site)	The site comprises greenfield land to the south-west of Moreton-in-Marsh and is wholly located within the Cotswolds National Landscape. The site is assessed as having a 'medium' sensitivity within the Study of Land Surrounding Settlements (July 2026). The site is predominantly Grade 3 agricultural land and is affected by areas of groundwater flood susceptibility. A small part of the site falls within the Little Rissington Airfield Safeguard Area. Development would result in the loss of agricultural land and would need to be carefully designed to conserve the landscape character and scenic beauty of the National Landscape. A Public Right of Way is located adjacent to the site, and access arrangements would require further investigation. Overall, the site is considered a **Clear Preferred Site Option (+)**, as it is adjacent to the existing settlement and the identified constraints are generally capable of mitigation.	**++**
M78 (Employment)	Land west of Roman Road / Fosse Way (A429)	The site comprises greenfield land to the south of Moreton-in-Marsh and is affected by the Cotswolds National Landscape, areas of groundwater flood susceptibility and the Little Rissington Airfield Safeguard Area. The site comprises predominantly Grade 3 agricultural land, with a significant proportion affected by Flood Zones 2 and 3. Existing access is available via the adjoining development to the north and a	**-**

Site ref.	Site name	Site assessment findings	Site rating
		planning application for a hotel (ref: 26/00874/FUL) is currently pending determination. The site has been assessed as having medium landscape sensitivity. The Employment Land Review (2026) identifies the site as having good road accessibility, with direct access to the A429, and considers that small-scale employment units could be appropriately accommodated in this location. Overall, the site is considered a **Marginal Omission Site Option (+)**, as it benefits from good accessibility and has potential to accommodate small-scale employment development. Any future development would need to carefully address flood risk and landscape considerations associated with the Cotswolds National Landscape.

Northleach

6.54 The village is wholly within the Cotswolds National Landscape, with several public rights of way connecting the village with the surrounding countryside. This includes the Diamond Way, Monarch's Way, and Fosse Way. Most of the village is a designated Conservation Area, including Grade I, Grade II, and Grade II* Listed Buildings. Areas of Flood Zone 2 and Flood Zone 3 follow the corridor of the River Leach, through the western section of the village before extending alongside its southern boundary.

6.55 Reflecting the above, only one site has been classified as 'potentially deliverable / developable' within Northleach, specifically: N14B. In July 2026, the Council resolved to grant planning permission for 50 homes on the site. On this basis, **no site options within Northleach have been assessed in detail through Stage 3 of the site selection process.**

Siddington

6.56 Located approximately 750m to the south of Cirencester, key constraints surrounding Siddington include areas of Grade 2 agricultural land (to the west), areas of Flood Zone 2 and Flood Zone 3 (to the east) associated with the River Churn and the Thames and Severn Canal, and areas of Deciduous Woodland Priority Habitat and the Cotswold Water Park SSSI (to the south). Areas to the south east, south, and south west of the village overlap with a Groundwater Source Protection Zone. The village is outside of the Cotswolds National Landscape.

6.57 There are several opportunity sites for development around Siddington, particularly to the north and to the south. A key consideration for the site selection process is the extent to which growth may reduce the openness between Siddington and Cirencester and increase likeliness of coalescence.

6.58 Reflecting the above, the following sites (or clusters of sites) have been taken forward to Stage 3 of the site selection process for a potential sustainable urban extension:

- 'Land south west of Siddington' (SD20).
- 'Land north of South Cerney Airfield' (SD24).

6.59 Reflecting the above, the following non-strategic site options have been considered in detail through Stage 3 of the site selection process, specifically: SD3A, SD5, SD6, SD8, SD9A, SD9B, SD9C, SD11B, SD15, SD17, SD21, SD22, and SD23. The assessment findings are presented in the table below and accompanying map.

Site ref.	Site name	Site assessment findings	Site rating
SD20 (Sustainable Urban Extension)	Land south west of Siddington	The site comprises greenfield land adjacent to Siddington and contains a mix of Grade 2 and Grade 3 agricultural land. The site lies within the airfield safeguarding areas associated with Fairford, Kemble and South Cerney. Development would result in the loss of agricultural land, including a significant proportion of best and most versatile agricultural land. An overhead 33kV power line crosses the site and may reduce the developable area. The site benefits from an existing access from Clark's Lane, although further investigation would be required to determine its suitability for residential development. The Employment Land Review (2026) identifies the site as being capable of accommodating a small-scale employment component as part of a wider mixed-use development. Whilst landscape and infrastructure constraints will require careful consideration, the site offers an opportunity to provide employment land alongside future growth in a location well related to Cirencester. Overall, the site is considered a **Clear Preferred Site Option (++)**, as there are no significant environmental, heritage or infrastructure constraints that would preclude development, and the identified constraints are limited in extent and capable of mitigation.	**++**
SD24 (Sustainable Urban Extension)	Land north of South Cerney Airfield	The site comprises a large greenfield site to the east of Siddington and is wholly within Grade 3 agricultural land. Development would result in the loss of agricultural land and the site is affected by a 33kV overhead power line which would reduce the developable area. The site lies opposite a Grade II listed building and any development would need to carefully consider potential impacts on its setting. The	**-**

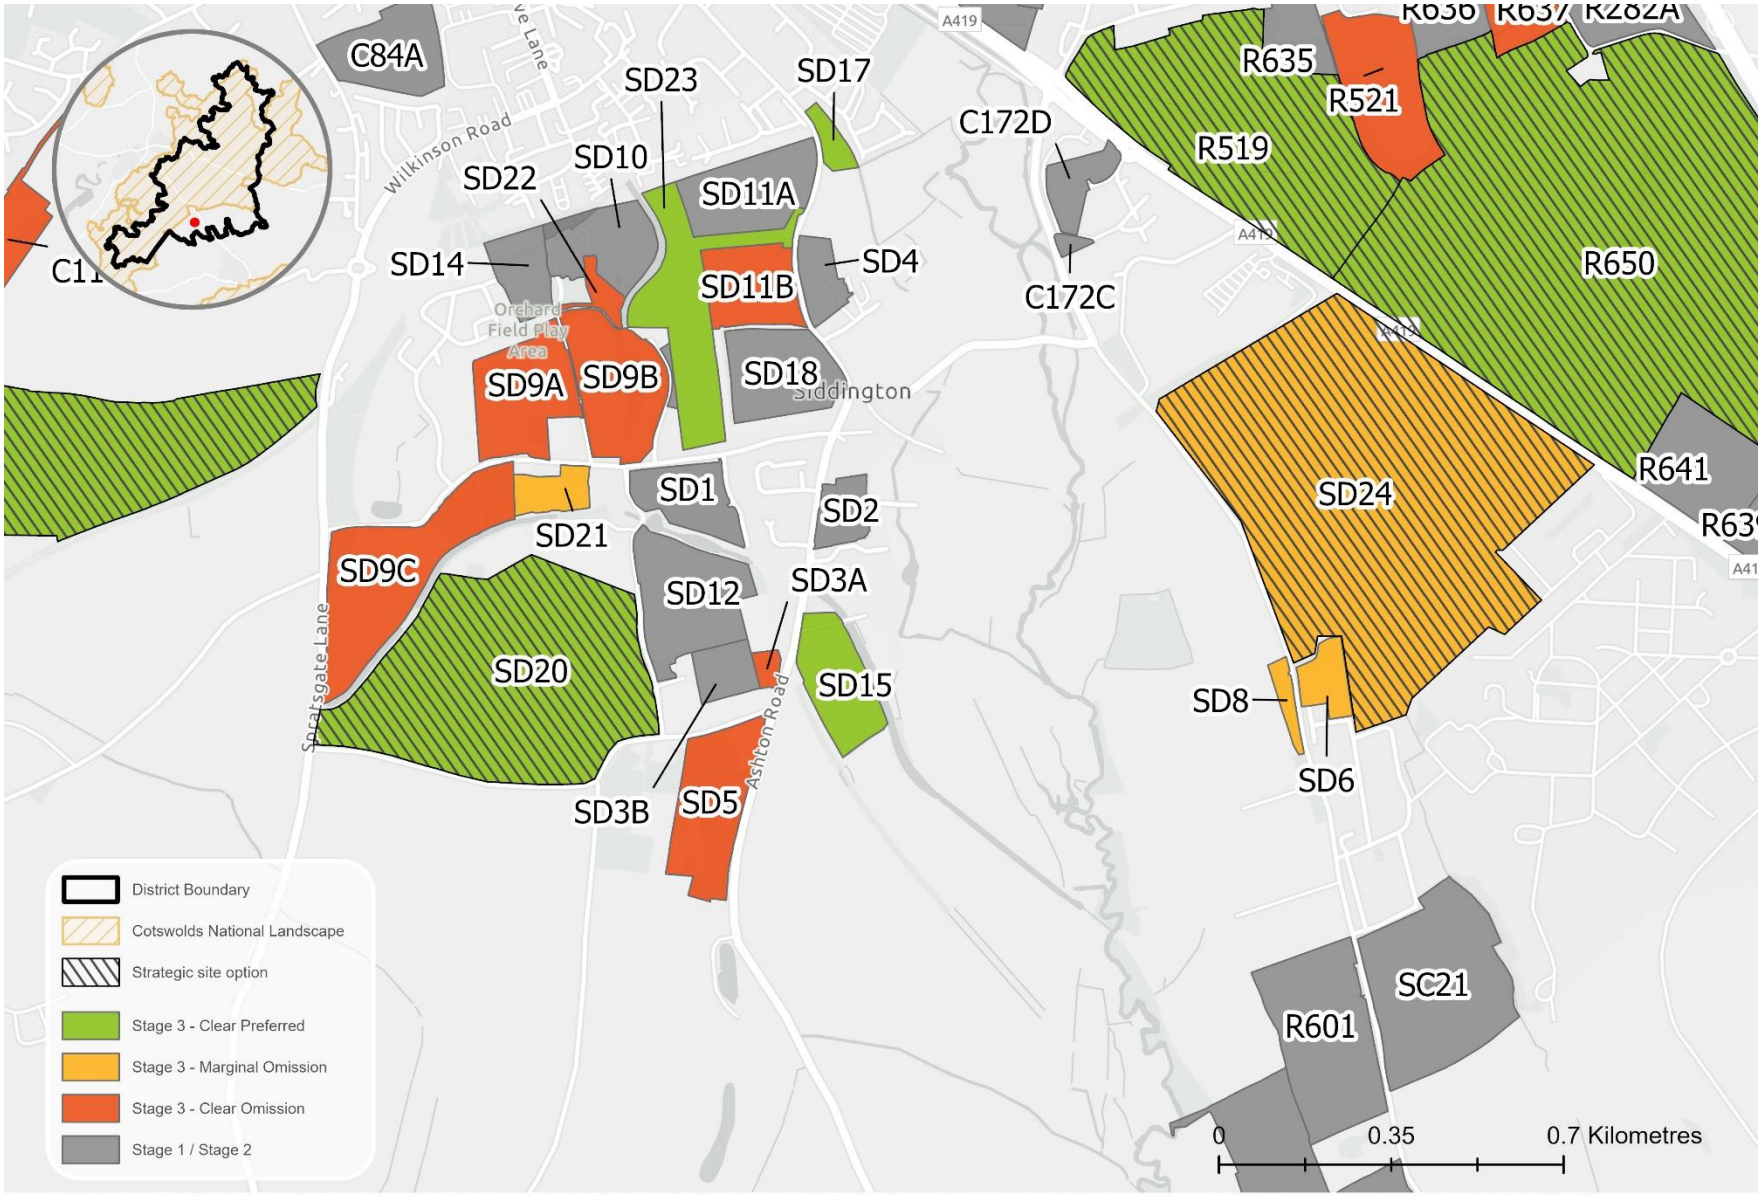
Site ref.	Site name	Site assessment findings	Site rating
		site benefits from an existing agricultural access from Cirencester Road, although further investigation would be required to determine whether a suitable access arrangement can be achieved. The site benefits from relatively few significant environmental constraints, being located outside the Cotswolds National Landscape and higher flood risk areas. However, it is separated from the main services and facilities serving nearby settlements and would require substantial supporting infrastructure to create a sustainable community. Whilst the site adjoins existing development to the south-east and could potentially be considered as an extension to the wider South Cerney area, it is physically separated from the main settlement by existing landscape features and does not relate particularly well to the established settlement pattern. Overall, the site is considered a **Marginal Omission Site Option (-)**, as despite its relative lack of physical constraints and potential development opportunities, its detached relationship to existing services and facilities and reliance on significant supporting infrastructure reduce its suitability relative to better-related and more sustainable alternatives.	
SD3A	Former quarry north of Nursery View and east of Ashton Road	The site comprises greenfield land adjacent to Siddington and is wholly within Grade 3 agricultural land. The site lies within the airfield safeguarding areas associated with Fairford, Kemble and South Cerney. Development would result in the loss of agricultural land. The site has been identified as having medium/low landscape sensitivity, indicating that landscape impacts are likely to be relatively limited and capable of mitigation through appropriate design.	**--**

Site ref.	Site name	Site assessment findings	Site rating
		The HELAA identifies the site as potentially suitable for development, subject to suitable access arrangements and mitigation of the identified constraints. However, subsequent assessment has identified significant constraints to achieving an independent vehicular access, with access from Ashton Road unlikely to be feasible due to changes in level and the presence of the railway embankment. Overall, the site is considered a **Clear Omission Site Option (--)**, as a suitable and deliverable access appears unlikely to be achievable, fundamentally constraining the site's ability to come forward as a standalone development site.	
SD5	Land south of Siddington	The site comprises greenfield land to the south of Siddington and lies within the airfield safeguarding areas associated with Fairford, Kemble and South Cerney. The site is wholly within Grade 3 agricultural land and is substantially constrained by the presence of a gas pipeline buffer zone, which affects the majority of the site. In addition, over half of the site comprises deciduous woodland identified as Priority Habitat, significantly limiting the area available for development. The only part of the site outside the gas pipeline buffer is largely occupied by woodland, further restricting development potential. There is currently no existing access onto the site, although access may potentially be achievable from Ashton Road, subject to further investigation. The combination of extensive Priority Habitat and the extensive gas pipeline buffer substantially limits the developable area. Overall, the site is considered a **Clear Omission Site Option (--)**, as the majority of the site is constrained by either Priority	**--**

Site ref.	Site name	Site assessment findings	Site rating
		Habitat or gas pipeline safeguarding requirements, leaving very limited scope for development and significantly reducing its suitability compared with alternative sites.	
SD6	Site opposite 'Oakleaze', South Cerney Road	The site comprises greenfield land adjacent to Siddington and is wholly within Grade 3 agricultural land. The site lies within the airfield safeguarding areas associated with Fairford, Kemble and South Cerney. Development would result in the loss of agricultural land and the site benefits from an existing access from South Cerney Road, although further investigation would be required to determine whether this is suitable for residential intensification and any necessary upgrades. Overall, the site is considered a **Marginal Omission Site Option (-)**, as the site is relatively poorly related to the main built extent of Siddington and would not represent as logical or sustainable an extension to the settlement as alternative development opportunities. Whilst there are no significant environmental, heritage or infrastructure constraints that would preclude development, its location reduces its suitability.	**-**
SD8	Oakleaze, South Cerney Road	The site comprises partly previously developed land and greenfield land adjacent to Siddington and is wholly within Grade 3 agricultural land. The site lies within the airfield safeguarding areas associated with Fairford, Kemble and South Cerney. Development would result in the loss of agricultural land and the site benefits from an existing access from South Cerney Road, although further investigation would be required to determine whether this is suitable for residential intensification and any necessary upgrades.	**-**

Site ref.	Site name	Site assessment findings	Site rating
		Overall, the site is considered a **Marginal Omission Site Option (-)**, as the site is relatively poorly related to the main built extent of Siddington and would not represent as logical or sustainable an extension to the settlement as alternative development opportunities. Whilst the presence of some previously developed land weighs in favour of redevelopment, its location reduces its suitability.	
SD9A	Barton Farm (Part 1)	The site comprises a mixture of previously developed and greenfield land adjacent to Siddington and is affected by the airfield safeguarding areas associated with Fairford, Kemble and South Cerney. The site comprises predominantly Grade 2 agricultural land, with a small proportion of Grade 3 agricultural land, and development would result in the loss of best and most versatile agricultural land. A substantial proportion of the site falls within the Cirencester–Dukes Brake gas pipeline buffer, and a small area of traditional orchard is present within the site. Existing access is available from Coach Road, although further investigation would be required to determine whether it is suitable for residential intensification and to address any associated access constraints. The site is also affected by a number of additional constraints, including limited development potential resulting from adjacent newt mitigation and Public Right of Way areas associated with recent development to the north. Consideration would also need to be given to potential impacts on the setting of nearby listed buildings. The site was last confirmed as available for development in 2013 and the Council has subsequently been unable to verify whether it remains available.	--

Site ref.	Site name	Site assessment findings	Site rating
		Overall, the site is considered a **Clear Omission Site Option (--)**, as uncertainty regarding site availability raises significant concerns regarding deliverability. This, combined with the gas pipeline buffer, ecological mitigation requirements, heritage considerations and access constraints, substantially reduces the site's suitability.	
SD9B	Barton Farm (Part 2)	The site comprises a mixture of previously developed and greenfield land adjacent to Siddington and is affected by the airfield safeguarding areas associated with Fairford, Kemble and South Cerney. The site comprises predominantly Grade 3 agricultural land, with only a small proportion of Grade 2 agricultural land, and includes a limited area of deciduous woodland. The site benefits from existing access from Coach Road, although further investigation would be required to determine whether this is suitable for residential intensification. Development would also need to consider the setting of nearby listed buildings and the relationship with existing development, including the canal corridor. The site was last confirmed as available for development in 2013, and the Council has subsequently been unable to establish whether it remains available. Furthermore, much of the site incorporates existing housing and the canal corridor, while access and heritage constraints further limit development potential. Overall, the site is considered a **Clear Omission Site Option (--)**, as uncertainty regarding site availability raises significant concerns regarding deliverability. This, combined with access constraints, impacts on the setting of nearby listed buildings, and the limited extent of genuinely developable land, substantially reduces the site's suitability for development.	**--**



Site ref.	Site name	Site assessment findings	Site rating
SD9C	Barton Farm (Part 3)	The site comprises greenfield land adjacent to Siddington and is affected by the airfield safeguarding areas associated with Fairford, Kemble and South Cerney. The site contains a mix of Grade 2 and Grade 3 agricultural land, and development would result in the loss of agricultural land, including a proportion of best and most versatile agricultural land. An overhead 33kV power line crosses the site and may constrain the developable area. The site benefits from an existing access from Park Way, although further investigation would be required to determine whether it is suitable for residential intensification and any necessary upgrades. A small area of deciduous woodland is also present within the site. The site was last confirmed as available for development in 2013, and the Council has subsequently been unable to establish whether it remains available. Overall, the site is considered a **Clear Omission Site Option (--)**, as uncertainty regarding site availability raises significant concerns regarding deliverability. This, combined with constraints associated with the overhead power line and the loss of agricultural land, substantially reduces the site's suitability.	**--**
SD11B	Land west of St Peter's Church	The site comprises greenfield land adjacent to Siddington and is wholly within Grade 3 agricultural land. The site lies within the airfield safeguarding areas associated with Fairford, Kemble and South Cerney. Small parts of the site fall within Flood Zones 2 and 3, requiring consideration of flood risk and the application of the sequential test and site-specific flood risk mitigation measures. The site benefits from existing access from Siddington Road, although further investigation would be required to determine whether it is suitable for residential intensification. Development would result in the	**--**

Site ref.	Site name	Site assessment findings	Site rating
		loss of agricultural land. The site has been identified as having High/Medium to Medium landscape sensitivity to development. Overall, the site is considered a **Clear Omission Site Option (--)**, as the site has since been confirmed as being unavailable for development and therefore cannot be relied upon to contribute towards housing delivery. This, together with its landscape sensitivity and flood risk constraints, substantially reduces its suitability.	
SD15	Plummers Farm, east of Ashton Road	The site comprises greenfield land adjacent to Siddington and is wholly within Grade 3 agricultural land. The site lies within the airfield safeguarding areas associated with Fairford, Kemble and South Cerney. Development would result in the loss of agricultural land and the site benefits from an existing access from Ashton Road, although further investigation would be required to determine its suitability for residential development and any necessary upgrades. Overall, the site is considered a **Clear Preferred Site Option (++)**, as it is well related to the existing settlement and there are no significant environmental, heritage, landscape or infrastructure constraints that would be likely to preclude development. The identified constraints are limited in extent and considered capable of mitigation through the development process.	**++**
SD17	Land east of Siddington Road and west	The site comprises greenfield land adjacent to Siddington and is wholly within Grade 3 agricultural land. The site lies within the airfield safeguarding areas associated with Fairford, Kemble and South Cerney. Part of the site falls within Flood Zone 2, affecting over half of the site area and requiring the application of the sequential test and site-specific flood risk considerations. Development would result in the loss of	**++**

Site ref.	Site name	Site assessment findings	Site rating
	of Bluebell Drive	agricultural land and there is currently no existing access onto the site, although access may potentially be achieved from Siddington Road, subject to further investigation. Overall, the site is considered a **Clear Preferred Site Option (+)**, as it is well related to the existing settlement and there are no significant heritage or environmental constraints that would be likely to preclude development. The flood risk issues on the site are likely to be addressed by the inclusion of appropriate mitigation measures through the design of new development areas.	
SD21	Land adjacent to Barton Leaze, Upper Siddington	The site comprises greenfield land adjacent to Siddington and is affected by the airfield safeguarding areas associated with Fairford, Kemble and South Cerney. The site contains a mix of Grade 2 and Grade 3 agricultural land and development would result in the loss of agricultural land, including a proportion of best and most versatile agricultural land. The site benefits from an existing access from Park Way, although further investigation would be required to determine whether this is suitable for residential intensification and any necessary upgrades. The site occupies a relatively contained parcel on the western edge of Siddington. Existing woodland boundaries, including Priority Habitat woodland and the canal corridor, provide enclosure and help to limit wider landscape and visual impacts. The site has been assessed as having medium landscape sensitivity, reflecting its local landscape contribution whilst recognising its limited wider visibility. However, the eastern part of the site is particularly sensitive in heritage terms, owing to its contribution to the setting of nearby listed buildings, including the farmhouse.	**-**

Site ref.	Site name	Site assessment findings	Site rating
		Overall, the site is considered a **Marginal Omission Site Option (-)**, as potential impacts on the setting of nearby listed buildings, together with the loss of agricultural land and the site's contribution to the local landscape, reduce its suitability.	
SD22	Land adjoining The Old Rectory	The site comprises greenfield land adjacent to Siddington and is affected by the airfield safeguarding areas associated with Fairford, Kemble and South Cerney. The site comprises predominantly Grade 3 agricultural land and includes a small area of deciduous woodland. There is currently no established vehicular access to the site and access constraints are significant, with Coach Road being narrow and constrained, particularly near the primary school where it also functions as a pedestrian route. Access from the east is not considered feasible due to the presence of the canal. Development would also result in the loss of agricultural land and would need to take account of the nearby canal corridor. The site is further constrained by ecological, heritage and landscape considerations. The eastern part of the site, including the potential access area, is identified as Priority Habitat Deciduous Woodland and contributes to the site's strong wooded character. The site also forms part of the setting of the Grade II listed Old Rectory and may contain the remains of St Mary's Church, which could further restrict development potential. The mature woodland structure, relationship with the canal corridor and contribution to the historic setting of nearby heritage assets are important characteristics of the site. Although relatively contained visually, development would likely require substantial vegetation removal and would fundamentally alter the established woodland character.	--

Site ref.	Site name	Site assessment findings	Site rating
		The site has been assessed as having Medium-High landscape sensitivity, reflecting its ecological value, heritage context and strong woodland character. Overall, the site is considered a **Clear Omission Site Option (--)**, as significant access constraints, the presence of Priority Habitat, potential heritage constraints and the site's important contribution to the setting of nearby heritage assets collectively and substantially reduce its suitability for development.	
SD23	Land between disused canal and disused railway line, north of Park Way	The site comprises greenfield land adjacent to Siddington and is wholly within Grade 3 agricultural land. The site lies within the airfield safeguarding areas associated with Fairford, Kemble and South Cerney. Development would result in the loss of agricultural land and the site benefits from an existing access from Siddington Road, although further investigation would be required to determine whether this is suitable for residential development and any necessary upgrades. The site's location between the disused canal and disused railway line provides a clear physical relationship with the existing settlement. Overall, the site is considered a **Clear Preferred Site Option (++)**, as it is well related to the existing settlement and, although careful design is needed, there are no significant landscape, heritage, environmental or infrastructure constraints that would be likely to preclude development on the southern part of the site. The identified constraints are limited in extent and considered capable of mitigation through the development process.	**++**

South Cerney

6.60 Located towards the southern extent of the district and sharing a boundary with Wiltshire, South Cerney is surrounded by the Cotswold Water Park SSSI to the east, south, and to the west. Land to the west is also primarily underlain by Grade 2 (Very Good) Agricultural Land and areas of Flood Zone 2 and Flood Zone 3 associated with the River Churn and the Water Park. The northern section of the village is a designated Conservation Area, containing most of the village's Grade I and Grade II Listed Buildings. 'South Cerney Castle' Scheduled Monument is located adjacent to the northern boundary of the Conservation Area. The village is outside of the Cotswolds National Landscape.

6.61 Within the HELAA, of the sites which are classified as 'potentially deliverable / developable' or 'deliverable / developable' for non-strategic scale development at South Cerney:

- R556, R600, and R645 are not located adjacent to the settlement and allocating these locations would result in isolated development, approximately 1.5km to the north east of the village, contrary to the broad spatial strategy for the emerging Local Plan.
- R601, SC20, and SC21 are located between 250-750m to the north of the village, alongside South Cerney Road and adjacent to South Cerney Airfield (to the east). Allocating these locations would deliver growth in comparatively isolated locations outside of the existing core of the village, contrary to the broad spatial strategy.
- R673 and RUR_E12 are located approximately 1.5km and 600m to the south east of the village, respectively. Both sites contain areas of Flood Zone 2 or Flood Zone 3 and are adjacent to the Cotswold Water Park SSSI. In light of this, the sites are excluded from further assessment.
- SC36 and SC37 are adjacent to the north of the village, to the east and west of South Cerney Road. The Study of Land Surrounding Settlements (July 2026) concludes that SC36 has a 'medium-high' sensitivity, and SC37 has a 'high' sensitivity. Additionally, SC32 is adjacent to the western edge of the village and is also concluded as having a 'medium-high' sensitivity. The justification for these sensitivity ratings outlines:
  - SC32: The site forms part of the western rural edge of South Cerney, contributing to the green and open setting of the village and maintaining a distinct transition between settlement and countryside.
  - SC36: Development would represent encroachment into a rural landscape, although this is tempered by the level of enclosure and adjacent permanent boundary created by the railway embankment. The

setting of the listed buildings within and adjacent to the parcel would likely restrict the scale of any development.

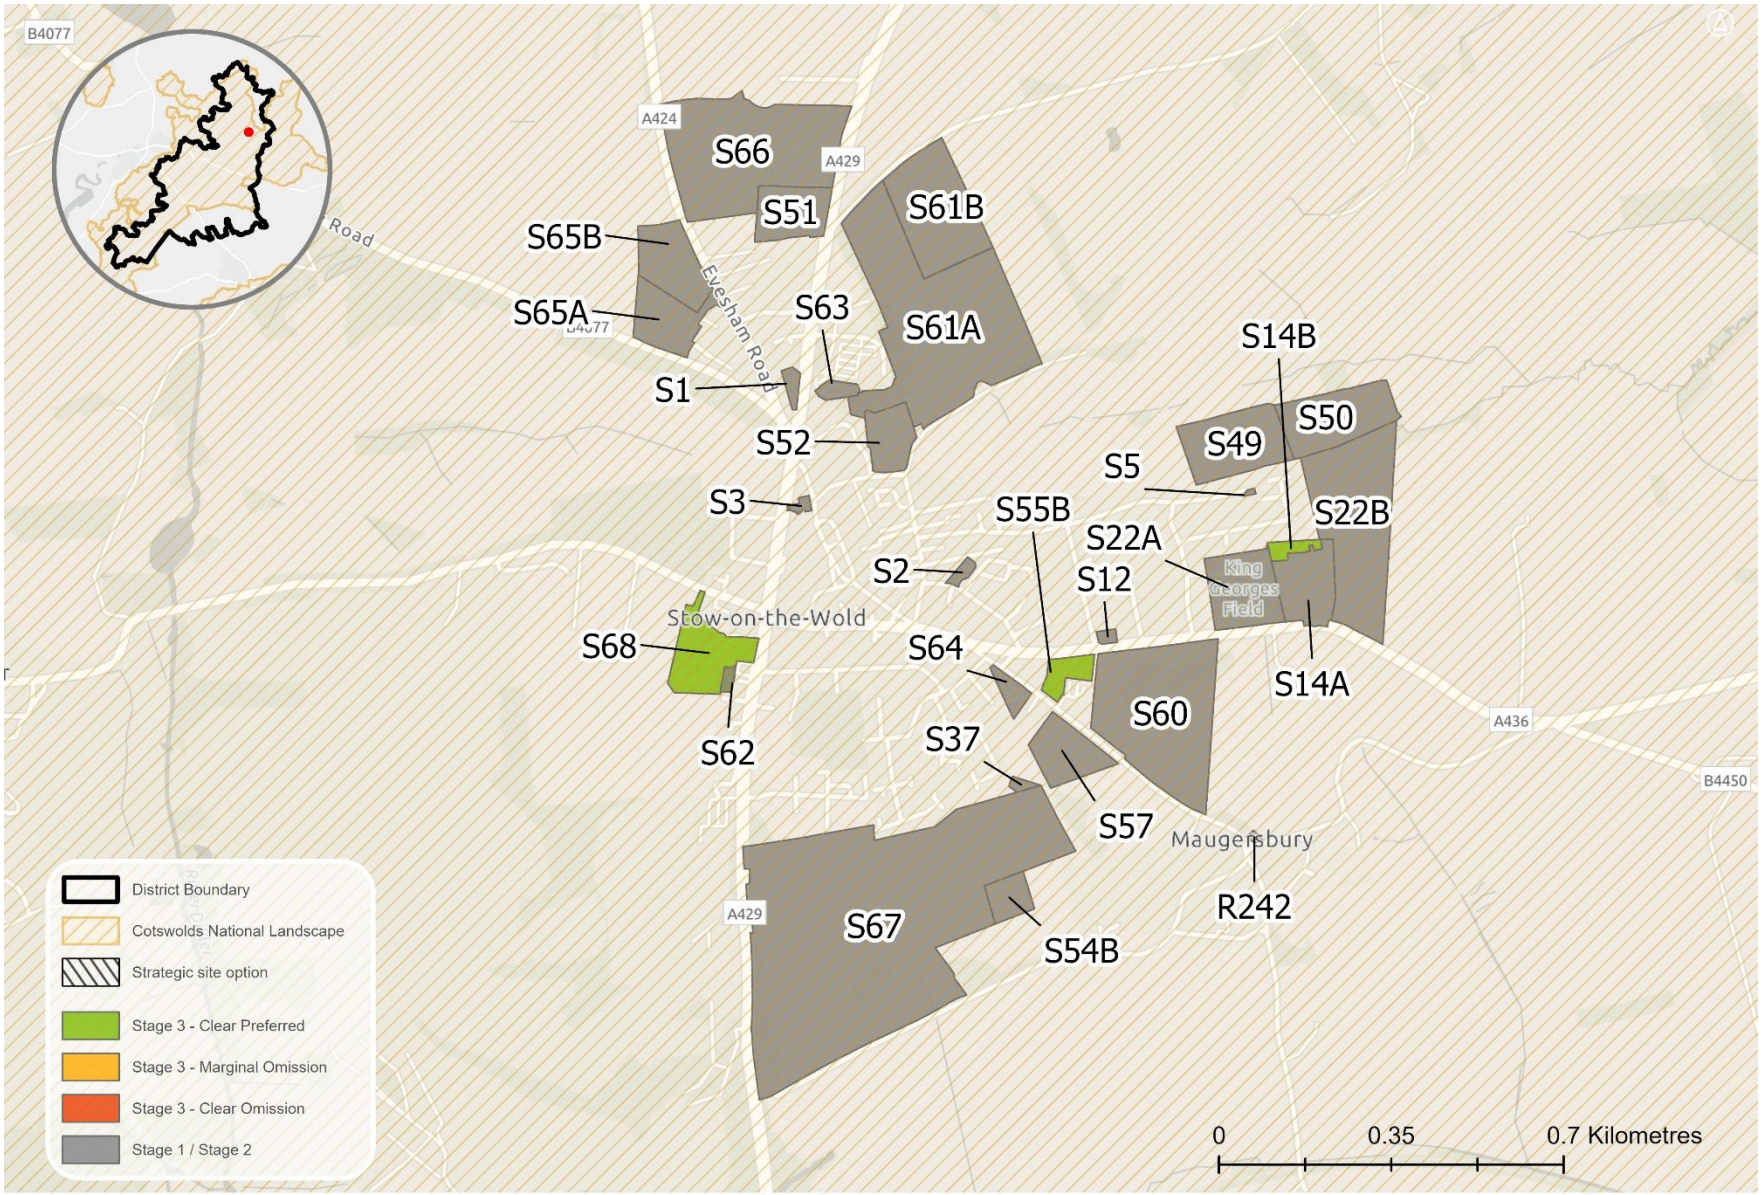
- SC37: The site occupies a visually and physically prominent position on the north-western edge of South Cerney. The undulating landform rising to the west increases visibility, where open views across the site and surrounding countryside are available. The parcel reads clearly as open countryside forming part of the rural setting and western transition of the village.

6.62 Reflecting the above, **no site options within South Cerney have been assessed in detail through Stage 3 of the site selection process**.

Stow-on-the-Wold

6.63 Located approximately 250m above sea level, Stow-on-the-Wold is the highest town in the district. Wholly within the Cotswolds National Landscape, the town is at a junction between several public rights of way, including Gloucestershire Way, Monarch's Way, Macmillan Way, and the Heart of England Way. Most of the central and south eastern sections of the town are a designated Conservation Area, with the Grade II* Listed 'Abbotswood' Historic Park and Garden encompassing land to the west of the town.

6.64 Within the HELAA, of the sites which are classified as 'potentially deliverable / developable' or 'deliverable / developable' for non-strategic scale development at Stow-on-the-Wold:



- S14A has planning permission for residential development but is not yet built out. The site is considered deliverable during the first five years of the plan period.
- There is a cluster of four sites adjacent to the northern boundary of the town, all of which have received a 'medium-high' sensitivity rating within the Study of Land Surrounding Settlements (July 2026). The justification for these sensitivity ratings outlines:
    - S51: Due to its elevated position, rural approach setting, and role in defining the northern edge of Stow-on-the-Wold, the site exhibits the characteristic features of the High Wold Plateau, including open fields, stone walls, and far-reaching views that are strongly representative of the Cotswold landscape.
    - S65A / S65B: Reflecting their elevated position, open westerly views, and role in defining the north-western edge of Stow-on-the-Wold, the sites form part of a visually prominent approach, contributing to special qualities of scenic beauty, settlement containment, and the historic character of the High Wold plateau.
    - S66: This is due to its elevated and open character, traditional field pattern, and clear physical and visual separation from the existing settlement. The site occupies part of the High Wold Plateau and contributes strongly to the rural, expansive setting that defines Stow-on-the-Wold's northern approach.

6.65 Reflecting the above, the following non-strategic site options have been considered in detail through Stage 3 of the site selection process, specifically: S14B, S55B, and S68. The assessment findings are presented in the table below and accompanying map.

Site ref.	Site name	Site assessment findings	Site rating
S14B	Land off Oddington Road (A436), adjacent to Griffin Court / Playing Field	The site comprises greenfield land to the east of Stow-on-the-Wold and is wholly located within the Cotswolds National Landscape. The site comprises Grade 3 agricultural land and is affected by areas of groundwater flood susceptibility. The site lies within the airfield safeguarding areas associated with Little Rissington and Oxford Kidlington. Development would result in the loss of agricultural land and there is currently no direct access to the site. Access would likely need to be provided through adjacent land to the south that already benefits from planning permission for residential development, although further investigation would be required to confirm deliverability. Overall, the site is considered a **Clear Preferred Site Option (++)**, as it is well related to the existing settlement and could form a logical continuation of approved development to the south. Its location within the Cotswolds National Landscape and contribution to the rural setting of Stow-on-the-Wold will need to be carefully considered through the design of any new development areas at this location.	**++**
S55B	Land adjoining Tall Trees, Oddington Road	The site comprises a brownfield site to the east of Stow-on-the-Wold and is wholly located within the Cotswolds National Landscape. The site comprises Grade 3 agricultural land and lies within the airfield safeguarding areas associated with Little Rissington and Oxford Kidlington. The site has been assessed as having medium landscape sensitivity and is adjacent to the Stow-on-the-Wold Conservation Area, requiring careful consideration of potential landscape and heritage impacts. The site benefits from an existing vehicular access from the north, which is likely to be suitable for residential intensification.	**++**

Site ref.	Site name	Site assessment findings	Site rating
		The Employment Land Review (2026) identifies that the site is of insufficient scale to deliver a meaningful employment allocation. Furthermore, Stow-on-the-Wold is not an established employment location and is likely to experience limited market demand for new employment floorspace compared with larger and more accessible employment centres. Overall, the site is considered a **Clear Preferred Site Option (++)** for residential development, as it comprises previously developed land well related to the existing settlement and the identified landscape and heritage constraints are considered capable of mitigation. Its location within the Cotswolds National Landscape, adjacency to the Conservation Area, and contribution to the rural setting of Stow-on-the-Wold will need to be carefully considered through the design of any new development areas.	
S68	The Hollies, Lower Swell Road	The site comprises greenfield land on the edge of Stow-on-the-Wold and is wholly located within the Cotswolds National Landscape. The site comprises Grade 3 agricultural land and is affected by areas of groundwater flood susceptibility. The site also lies within the airfield safeguarding areas associated with Little Rissington and Oxford Kidlington. The site forms part of the agricultural landscape on the edge of the settlement and contributes to the rural setting of Stow-on-the-Wold. It reflects the characteristics of the Vale of Moreton Farmed Slopes landscape character area, including its agricultural field pattern and hedgerow boundaries. Whilst development would extend the settlement edge into currently open land, the site is closely related to the existing	**++**

Site ref.	Site name	Site assessment findings	Site rating
		built form and does not appear isolated from the settlement. The site also contributes to the setting of the Stow-on-the-Wold with Maugersbury Conservation Area, although it lies beyond the historic core and is not subject to significant recreational or visual sensitivity. The site has been assessed as having medium landscape sensitivity. Overall, the site is considered a **Clear Preferred Site Option (++)**, as it is well related to the existing settlement and there are no significant heritage, ecological or infrastructure constraints that would be likely to preclude development. Its location within the Cotswolds National Landscape and contribution to the rural setting of Stow-on-the-Wold will need to be carefully considered through the design of any new development areas at this location.	

Sources: Esri, TomTom, Garmin, FAO, NOAA, USGS, © OpenStreetMap contributors, and the GIS User Community, Contains OS data © Crown Copyright and database right 2026 Contains public sector information licensed under the Open Government License v3.0. Contains OS data © Crown copyright and database right 2025. © AC0000815979.

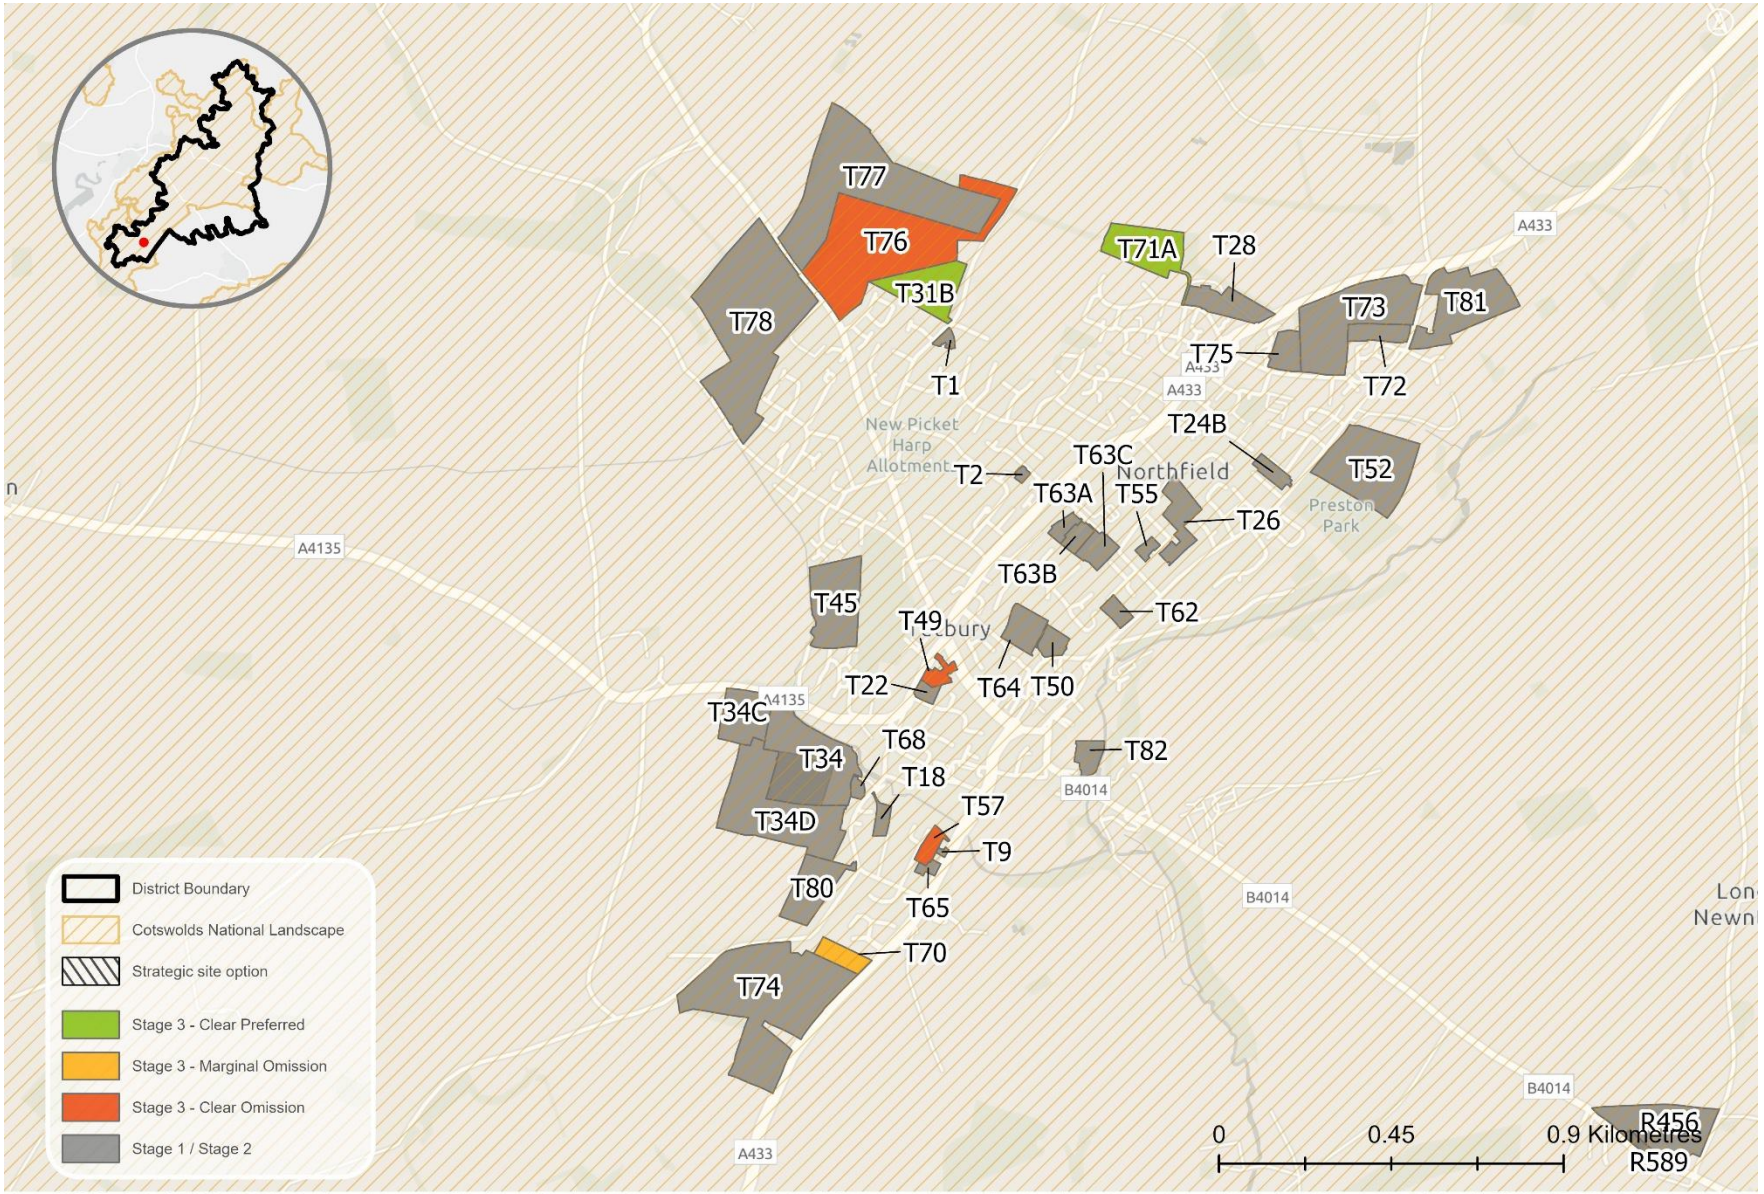
Tetbury

6.66 Tetbury is wholly within the Cotswolds National Landscape. Land to the north and to the west of the town is primarily underlain by areas of Grade 2 (Very Good) Agricultural Land. Veizey's Quarry SSSI is approximately 400m to the north west of the town. From a heritage perspective, the southern half of the town is a designated Conservation Area, containing the majority of the town's Grade I, Grade II, and Grade II* Listed Buildings. 'Tetbury Camp' Scheduled Monument forms the southern extent of the Conservation Area. Areas of Flood Zone 2 and Flood Zone 3 broadly follow the corridor of the River Avon, along the eastern, southern and western boundaries of the town.

6.67 Within the HELAA, of the sites which are classified as 'potentially deliverable / developable' or 'deliverable / developable' for non-strategic scale development at Tetbury, the following are classified as having a 'medium-high' or 'high' sensitivity within the Study of Land Surrounding Settlements (July 2026), with the justifications as follows:

- T45: Reflecting its sloping topography, open visual relationship with the western countryside, and role in defining the town's green edge. The site forms part of the rural setting of Tetbury, where open land, riparian vegetation, and the floodplain create a natural transition between built form and the wider lowland landscape. Although the site is physically enclosed by development on two sides, its exposed slope, ecological value, and visual prominence contribute to its overall sensitivity.
- T52: Reflecting its pastoral landscape character, sloping topography, and role as part of the undeveloped eastern approach to Tetbury. The site lies within the Cotswolds National Landscape, where open farmland, hedgerows, and mature trees define the transition between the town and its rural setting. Although new residential development is present to the north, the site remains visually and perceptually separate, maintaining a strong rural identity and contributing to the sense of openness on approach from Cirencester Road.
- T74: Discounted during Stage 1 of the Study of Land Surrounding Settlements due to the following four factors: its location on a prominent ridgeline, escarpment or high ground; falls within clear views from public vantage points; would extend the settlement in an uncharacteristic direction or weaken form; and would not be attached / adjacent to existing development.

6.68 Reflecting the above, the following non-strategic site options have been considered in detail through Stage 3 of the site selection process, specifically: T31B, T49, T57, T70, T71A, and T76. The assessment findings are presented in the table below and accompanying map.



Site ref.	Site name	Site assessment findings	Site rating
T31B	Land adjacent to Blind Lane	The site comprises agricultural land adjacent to Blind Lane and is affected by the Kemble Airfield Safeguard Area and areas of groundwater flood susceptibility. The site comprises Grade 2 agricultural land and development would result in the loss of best and most versatile agricultural land. The site lies within the Cotswolds National Landscape and would therefore require careful consideration of landscape impacts. Several Tree Preservation Orders are located along the site boundaries and would need to be retained and incorporated within any development proposals. The site benefits from an existing access from Lowfield Road, although further investigation would be required to determine its suitability for residential intensification and to address any transport-related constraints. The Employment Land Review (2026) identifies the site as being more suitable for residential development than employment uses. Employment development in this location would create a new and isolated employment site that is disconnected from the existing Tetbury industrial estate and other established employment areas, reducing its attractiveness to the market. Overall, the site is considered a **Clear Preferred Site Option (++)** for residential development, as it is potentially capable of accommodating development and the identified landscape, transport and environmental constraints are generally capable of mitigation, although its location within the Cotswolds National Landscape reduces its suitability relative to the most sustainable site options.	**++**
T49	Large garden adjacent to fire	The site comprises a partially brownfield site in Tetbury containing a small number of dwellings and an extensive garden area. The site lies within the Cotswolds National	**--**

Site ref.	Site name	Site assessment findings	Site rating
	station, New Church Street	Landscape and the Tetbury Conservation Area and is also within the setting of a number of listed buildings, including a Grade I listed building. Development would therefore need to carefully consider and mitigate potential impacts on the character and appearance of the Conservation Area and the significance of nearby heritage assets. The site is affected by areas of groundwater flood susceptibility, contains a Tree Preservation Order along its western boundary, and includes Grade 3 agricultural land. Existing access is provided from New Church Street, although the narrow nature of this access would require further investigation to determine its suitability for residential intensification. Overall, the site is considered a **Clear Omission Site Option (--)**, as the combination of heritage sensitivities associated with the Conservation Area and nearby listed buildings, together with its location within the Cotswolds National Landscape and access constraints, reduces its suitability. The constraints therefore outweigh the benefits of redeveloping a partially brownfield site.	
T57	The Old Quarries, The Berrells – large garden	The site comprises a partially brownfield site in the south of Tetbury and is wholly located within the Cotswolds National Landscape. The site forms part of the setting of the Tetbury Conservation Area and development would need to carefully consider and mitigate potential heritage impacts. The site is heavily vegetated, and development would likely require the removal of a significant number of trees, which could affect its character and landscape contribution. Existing access is available via a private road from the east, although further investigation would be required to determine whether this is suitable for residential intensification.	**--**

Site ref.	Site name	Site assessment findings	Site rating
		Overall, the site is considered a **Clear Omission Site Option (--)**, as its location within the Cotswolds National Landscape and the likely need for substantial tree removal reduce its suitability relative to less constrained alternatives. The constraints therefore outweigh the benefits of redeveloping a partially brownfield site.	
T70	Land at Bath Road	The site comprises agricultural land within the Cotswolds National Landscape and is affected by the Kemble Airfield Safeguard Area and areas of groundwater flood susceptibility. The site comprises Grade 3 agricultural land and development would result in the loss of agricultural land. The site benefits from an existing access from Bath Road, although further investigation would be required to determine whether it is suitable for residential intensification. The site has Permission in Principle for 9 homes (ref: 25/00352/PLP). A live planning application (ref: 25/02572/FUL) for the erection of 8 dwellings is currently under consideration on the site. Overall, the site is considered a **Marginal Omission Site Option (-)**, as it is a small-scale site with an existing access and there are no significant heritage, ecological or infrastructure constraints that would be likely to preclude development. However, its location within the Cotswolds National Landscape will require any potential new development areas to incorporate a sensitive design which respects its setting.	**-**
T71A	Land north-west of Highfield Cottage	The site comprises agricultural land within the Cotswolds National Landscape and is affected by the Kemble Airfield Safeguard Area and areas of groundwater flood susceptibility. The site comprises Grade 2 agricultural land and development would result in the loss of best and most versatile agricultural land. The site has been identified as having medium landscape sensitivity, indicating that development would	**++**

Site ref.	Site name	Site assessment findings	Site rating
		need to be carefully designed to conserve the character and appearance of the National Landscape. The site benefits from an existing access from Bath Road, although further investigation would be required to determine whether it is suitable for residential intensification. Overall, the site is considered a **Clear Preferred Site Option (++)**, as the identified landscape, access and environmental constraints are considered capable of mitigation and there are no significant heritage, ecological or infrastructure constraints that would be likely to preclude development. However, its location within the Cotswolds National Landscape and medium landscape sensitivity will require the inclusion of sensitive design measures which respect its setting.	
T76	Land north-east of Hampton Street	The site comprises agricultural land on the edge of Tetbury within the Cotswolds National Landscape and is affected by the Kemble Airfield Safeguard Area and areas of groundwater flood susceptibility. The site comprises predominantly Grade 2 agricultural land and development would result in the loss of best and most versatile agricultural land. There is currently no suitable access to the site and the creation of a new access from the B4014 would require further investigation and significant engineering works. A number of Tree Preservation Orders are present within the site and would influence the developable area. The site has been assessed as having Medium-High landscape sensitivity, reflecting its location within the Cotswolds National Landscape, contribution to the rural approach to Tetbury and relationship with the wider farmed landscape. Whilst neighbouring development is present on several boundaries and opportunities exist to enhance	**--**

Site ref.	Site name	Site assessment findings	Site rating
		green infrastructure and public access, development would extend built form beyond the established settlement edge and alter the existing rural character of the area. Overall, the site is considered a **Clear Omission Site Option (--)**, as its location within the Cotswolds National Landscape, Medium-High landscape sensitivity, access constraints and loss of best and most versatile agricultural land reduce its suitability relative to less constrained alternatives, notwithstanding that development may be achievable subject to appropriate mitigation and landscape enhancement measures.

Upper Rissington

6.69 The whole of the village is within the boundaries of the Cotswolds National Landscape. There are several areas of Deciduous Woodland Priority Habitat to the north, east, and west of the village. RAF Little Rissington Airfield encompasses land to the south.

6.70 Within the HELAA, of the sites which are classified as 'potentially deliverable / developable' or 'deliverable / developable' for non-strategic scale development at Upper Rissington, UR4A and UR4B were excluded at Stage 1 of the Study of Land Surrounding Settlements (July 2026) due to the following factors: located on prominent ridgelines, escarpments, or high ground; falls within clear views from public vantage points; and introduce a significant area of built form into a rural or visually sensitive landscape.

6.71 Reflecting the above, only one non-strategic site option has been considered in detail through Stage 3 of the site selection process, specifically: UR1A. The assessment findings are presented in the table below and accompanying map.

Site ref.	Site name	Site assessment findings	Site rating
UR1A	Upper Rissington Business Park, west of Delphin Way	The site comprises greenfield land to the west of Upper Rissington and is wholly located within the Cotswolds National Landscape. The site lies within the airfield safeguarding areas associated with Little Rissington and Oxford Kidlington. The site forms part of a wider mixed-use scheme and benefits from extant employment permissions, demonstrating an established principle of development in this location. The site is part of a larger mixed-use development that has outline planning permission and previously had reserved matters approval for employment use. However, this has not been implemented, and the Council's Employment Land Review (Iceni, July 2026) confirms a lack of demand for employment uses in this location. National policy states that planning policies should not continue to protect employment land indefinitely where there is little realistic prospect of it being used for employment purposes. A live planning application for 26 affordable dwellings is currently under consideration, indicating ongoing interest in the site's delivery and development potential. Overall, the site is considered a **Clear Preferred Site Option (++)**, as it forms part of a wider planned development area and has the potential to deliver housing alongside existing employment uses. The site's location within the Cotswolds National Landscape will need to be carefully considered through the design of any new development areas.	**++**

Sources: Esri, TomTom, Garmin, FAO, NOAA, USGS, © OpenStreetMap contributors, and the GIS User Community, Contains OS data © Crown Copyright and database right 2026 Contains public sector information licensed under the Open Government License v3.0. Contains OS data © Crown copyright and database right 2025. © AC0000815979.

Non-Principal Settlements

Avening

6.72 The whole of the village is within the boundary of the Cotswolds National Landscape. Areas of Flood Zone 2 and Flood Zone 3 follow the corridors of the watercourses which pass through the village and extend to the north, east, and south west. Most of the village is a designated Conservation Area, split into two sections covering the western and south eastern sections.

6.73 Within the HELAA, none of the available site options within Avening are classified as 'potentially deliverable / developable' or 'deliverable / developable' for non-strategic scale development at Avening due to their 'high' landscape sensitivity. Specifically, the Study of Land Surrounding Settlements (July 2026) notes that Avening is highly sensitive to change due to its location within a steep-sided valley landscape, its strong historic character and its position within the Cotswolds National Landscape. The surrounding valley sides are particularly sensitive as they provide the essential landscape setting to the village and create the characteristic sense of enclosure. Development on these slopes would be highly visible and could detract from the wooded and pastoral backdrop that defines the settlement. The village is also sensitive to development that would contribute to the coalescence of built form along the valley floor or result in the erosion of the distinct settlement pattern that has evolved in response to the valley landform.

6.74 Reflecting the above, **no site options within Avening have been assessed in detail through Stage 3 of the site selection process.**

Bibury

6.75 Bibury is entirely within the Cotswolds National Landscape, with most of the village a designated Conservation Area. There are three Grade I and two Grade II* Listed Buildings within the Conservation Area, with the 'Bibury Roman villa near Bibury Mill' Scheduled Monument marking its eastern boundary. The River Coln passes through the centre of the village (east to west), with areas of Flood Zone 2 and Flood Zone 3 surrounding the river corridor.

6.76 The Study of Land Surrounding Settlements (July 2026) states that Bibury is highly sensitive to change due to the exceptional quality of its historic and landscape setting within the River Coln valley and the Cotswolds National Landscape. The strong relationship between the settlement, the river corridor and the enclosing valley sides forms an essential component of the village's character and scenic value. The valley sides surrounding the settlement are particularly sensitive as they provide the visual and physical setting to the village and allow views across and along the valley. Development on elevated land or upper valley slopes would be visually prominent and would risk eroding the

contained and secluded character of the settlement. Additionally, land closely associated with the Conservation Area, the river corridor and the historic core of the village is also highly sensitive due to the contribution these areas make to the significance, character and appearance of Bibury.

6.77 Reflecting these sensitivities, none of the available site options within and adjacent to Bibury are classified as 'potentially deliverable / developable' or 'deliverable / developable' for non-strategic scale development at Bibury. Whilst R677 is the only site afforded a 'medium' sensitivity within the Study, the site is not adjacent to the village and would add to the ribbon development along the B4425. The location of R677 outside of the village is contrary to the broad spatial strategy for the emerging Local Plan.

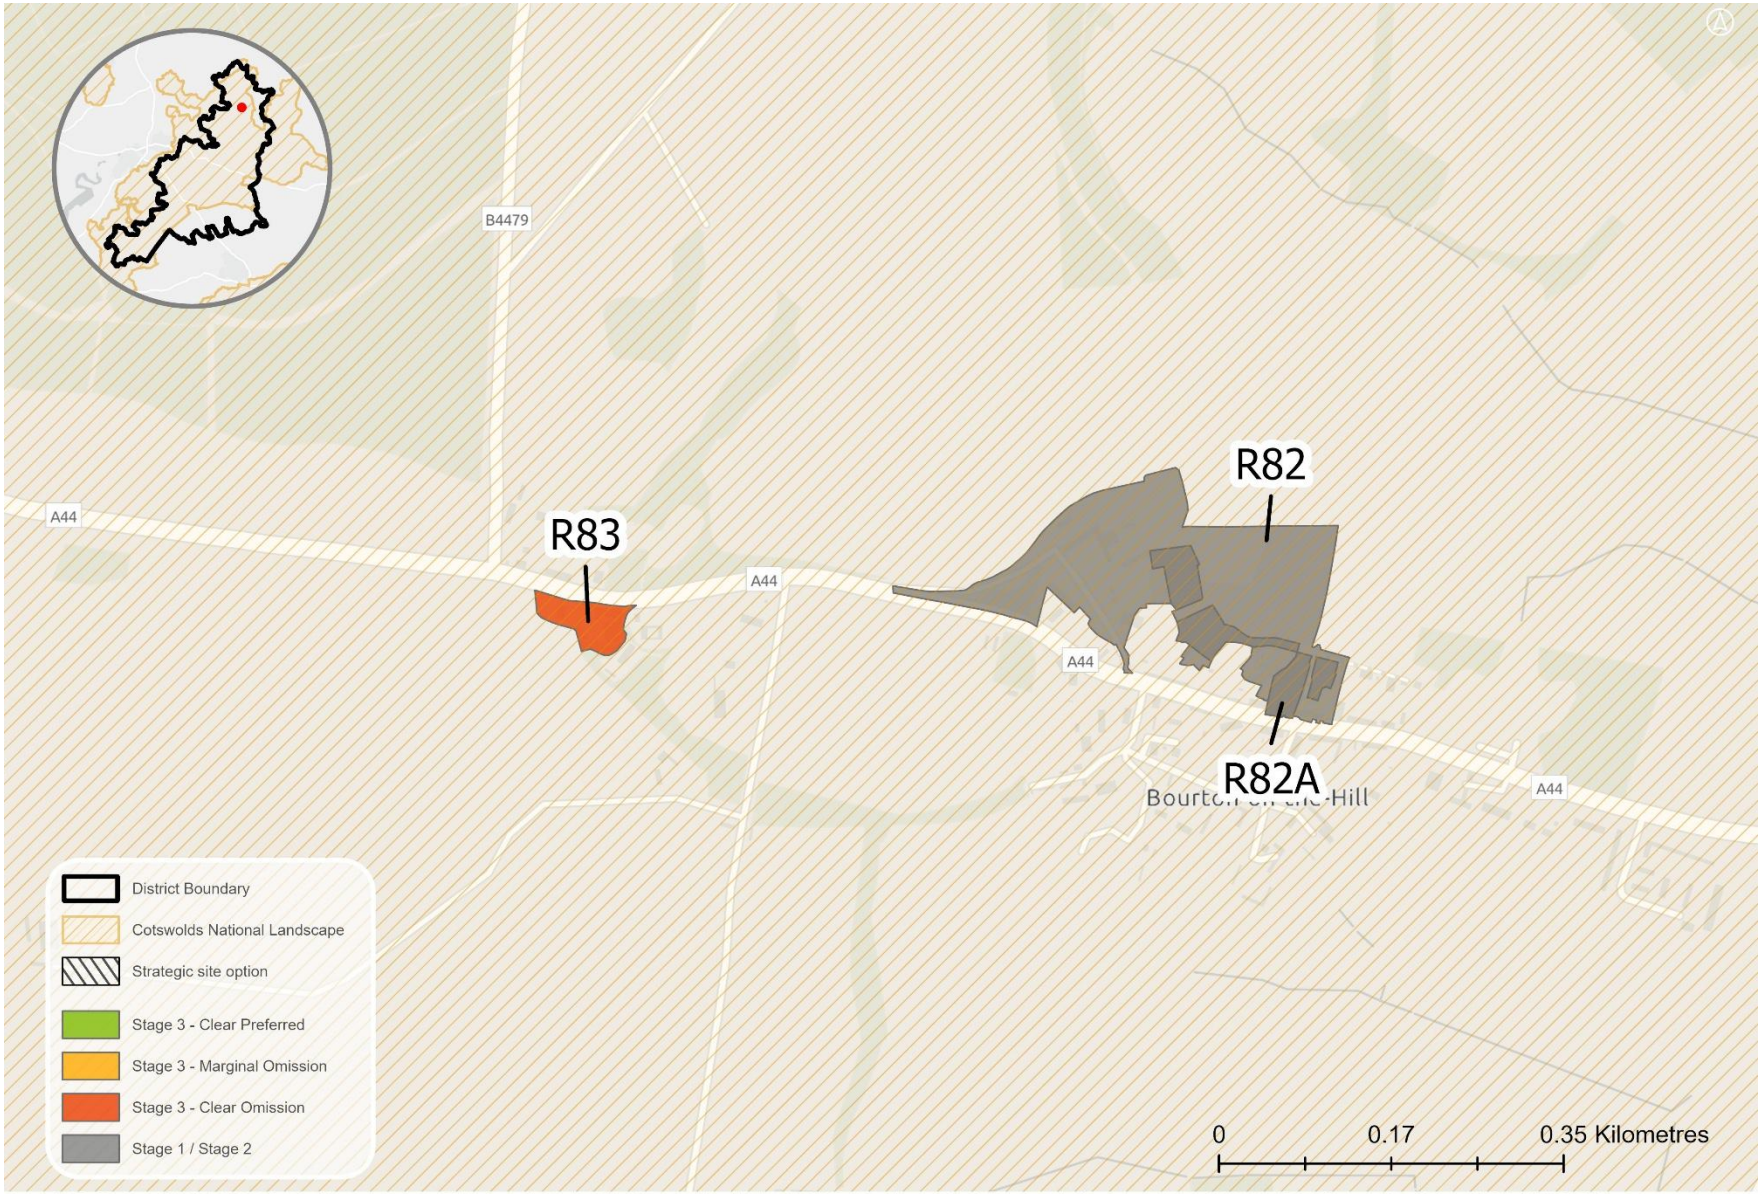
6.78 Reflecting the above, **no site options within Bibury have been assessed in detail through Stage 3 of the site selection process.**

Bledington

6.79 Bledington is located towards the eastern boundary of the district, within proximity to the neighbouring authority of West Oxfordshire. The whole of the village is within the Cotswolds National Landscape. Most of the land surrounding the village is within Flood Zone 2 and Flood Zone 3, following the corridors of the Bledington Brook, Westcote Brook, and Cornwell Brook. The brooks are tributaries of the River Evenlode, which passes to the east of the village. Land to the north of Church Lane is designated as a Conservation Area and contains most of the village's Grade II Listed Buildings. The village is approximately 1km to the west of Kingham Railway Station, located in West Oxfordshire.

6.80 Within the HELAA, all of the four available site options within Bledington are classified as 'not deliverable / developable'. In light of this, **no site options within Bledington have been assessed in detail through Stage 3 of the site selection process.**

Bourton-on-the-Hill



6.81 The whole of the village is within the boundaries of the Cotswolds National Landscape, with most of the village also a designated Conservation Area. The Grade I Listed 'Church of St Peter' and the Grade II* Listed 'Bourton House' are within the Conservation Area, along with the 'Tithe Barn, Bourton House' Scheduled Monument (at its eastern boundary). With regard to local ecological assets, there are areas of Deciduous Woodland Priority Habitat to the north, south west, and west of the village. 'Bourton Woods' is an area of Ancient Replanted Woodland to the north west of the village, between the A44 and B4479.

6.82 The Study of Land Surrounding Settlements (July 2026) states that Bourton-on-the-Hill is highly sensitive to change due to its elevated position on the Farmed Slopes and its strong visual relationship with the surrounding landscape. The village itself is highly visible from parts of the surrounding vale and benefits from extensive outward views. Development on exposed edges or prominent slopes would have the potential to alter the character of the settlement and affect its relationship with the wider landscape.

6.83 Reflecting the above, only one site has been classified as 'potentially deliverable / developable' within Bourton-on-the-Hill and has been considered in detail through Stage 3 of the site selection process, specifically: R83.

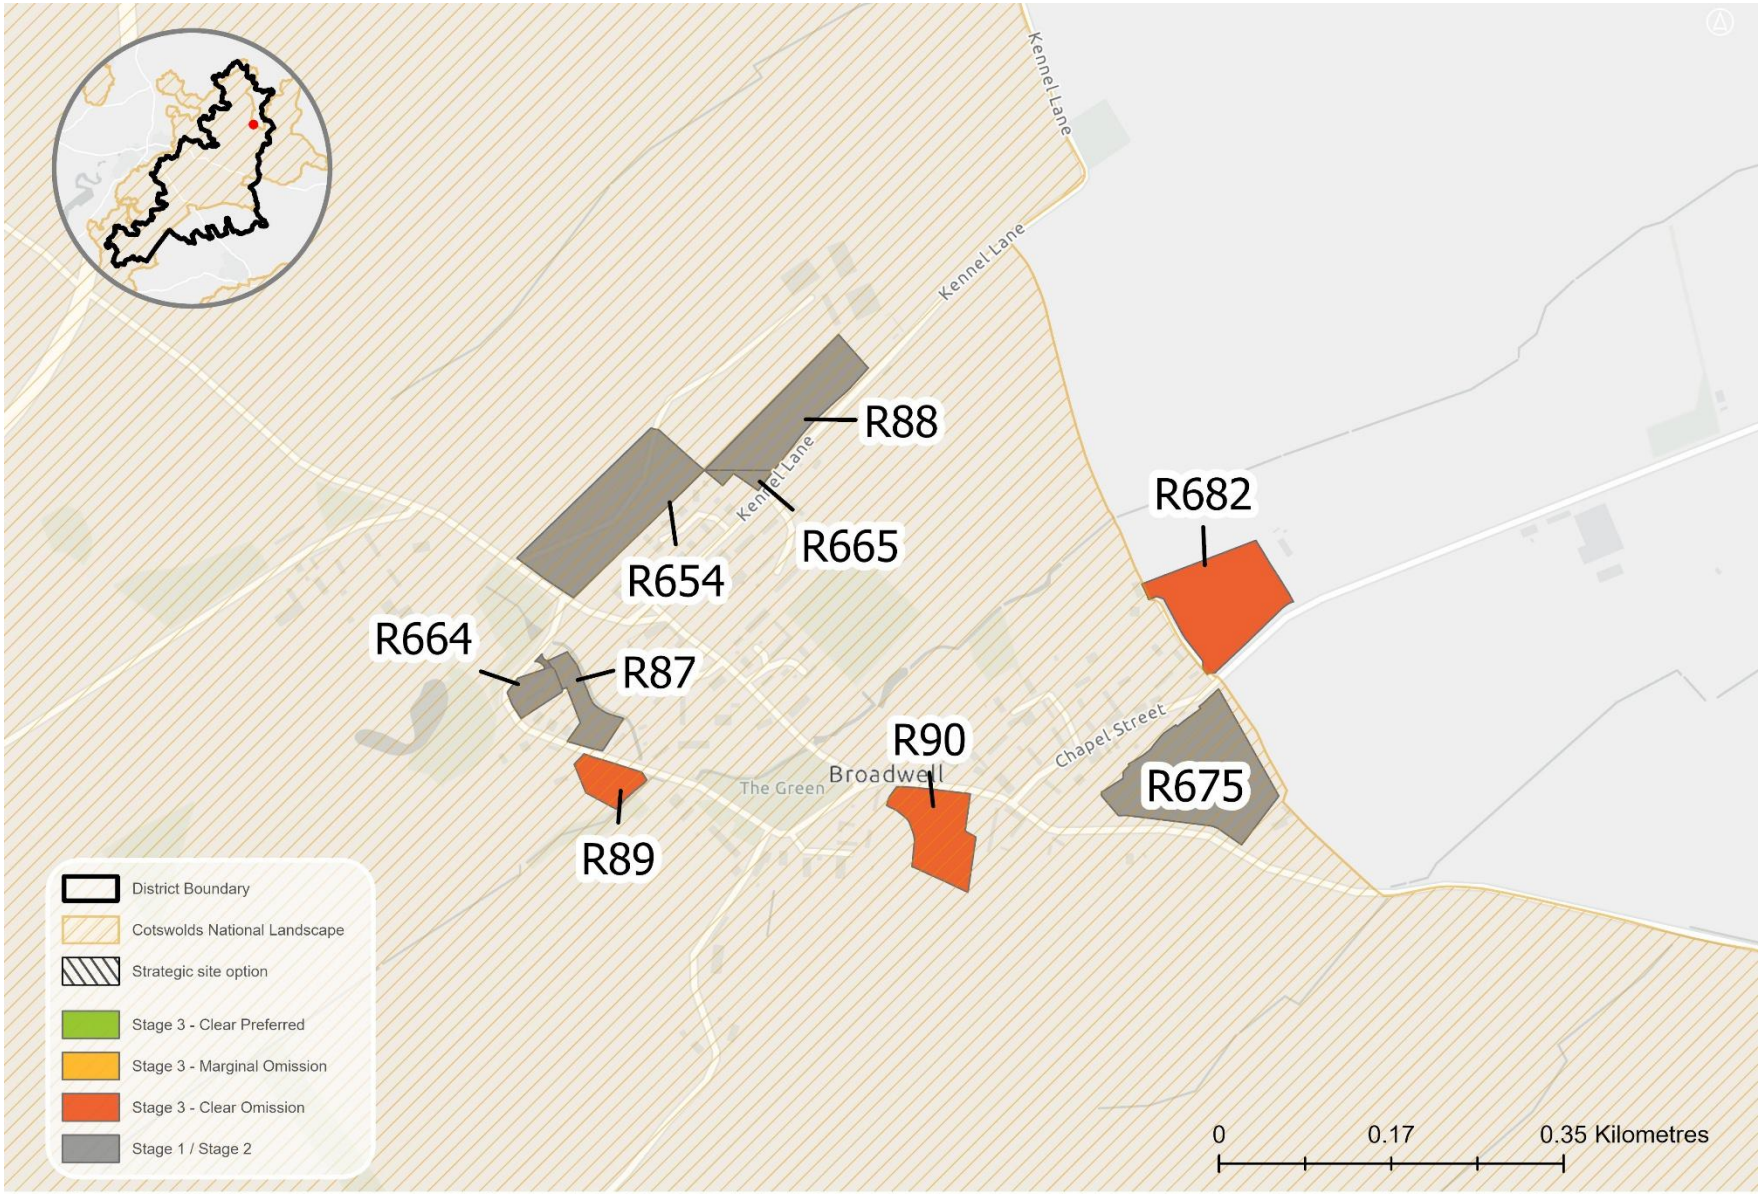
6.84 The assessment findings are presented in the table below and accompanying map.

Site ref.	Site name	Site assessment findings	Site rating
R83	The Quarry Filling Station and Bungalow	The site comprises a partially brownfield site containing an existing petrol filling station and bungalow and is wholly located within the Cotswolds National Landscape. The site comprises Grade 3 agricultural land and is crossed by a Public Right of Way, which may constrain the developable area and influence the layout of any future development proposals. The site benefits from an existing access from the A44, although further investigation may be required to determine whether it is suitable for residential intensification. The site's existing and former commercial use may also require consideration of any remediation requirements associated with redevelopment. Development would need to be carefully designed to minimise impacts on the character and appearance of the National Landscape. Overall, the site is considered a **Clear Omission Site Option (--)**, as its relatively isolated location, limited developable area, location within the Cotswolds National Landscape and additional constraints associated with site access and redevelopment significantly reduce its suitability. The constraints therefore outweigh the benefits of redeveloping a partially brownfield site.	**--**

Sources: Esri, TomTom, Garmin, FAO, NOAA, USGS, © OpenStreetMap contributors, and the GIS User Community, Contains OS data © Crown Copyright and database right 2026 Contains public sector information licensed under the Open Government License v3.0. Contains OS data © Crown copyright and database right 2025. © AC0000815979.

Broadwell

6.85 Along with the village itself, land to the north, south, and west of the village is within the Cotswolds National Landscape. Most of the village is a designated Conservation Area, containing clusters of Grade II Listed Buildings, three Grade II* Listed and one Grade I Listed Buildings. 'Broadwell Roman villa' Scheduled Monument is located approximately 250m to the north west of the village.



6.86 The Study of Land Surrounding Settlements (July 2026) states that Broadwell exhibits generally high landscape sensitivity due to the strong relationship between the settlement, the River Evenlode, the extensive village green and the surrounding agricultural landscape. Land to the east of the village is comparatively less constrained, albeit within the setting of the National Landscape.

6.87 Reflecting the above, the following non-strategic site options classified as 'potentially deliverable / developable' within the HELAA have been considered in detail through Stage 3 of the site selection process, specifically: R89, R90, and R682. The assessment findings are presented in the table below and accompanying map.

Site ref.	Site name	Site assessment findings	Site rating
R89	Land adjacent the Fox Inn	The site comprises agricultural land on the edge of Broadwell and is wholly located within the Cotswolds National Landscape. The site comprises Grade 3 agricultural land and is affected by areas of groundwater flood susceptibility. The site also lies within the airfield safeguarding areas associated with Little Rissington and Oxford Kidlington. Existing access is available, although further investigation would be required to determine whether it is suitable for residential intensification. The site adjoins the Conservation Area and forms part of the rural setting of nearby Grade II listed buildings, including The Gables. Development would need to respect the established pattern of low-density development in this location and carefully consider impacts on the character of the Cotswolds National Landscape, Conservation Area and heritage assets. Overall, the site is considered a **Clear Omission Site Option (--)**, as the combination of landscape, heritage and access constraints would significantly limit the scale of development that could be accommodated. Evidence indicates that a form of development capable of preserving the character of the area would be unlikely to deliver the minimum allocation threshold of five dwellings. Furthermore, achieving a suitable access would require substantial alteration to the existing rural lane and adjoining hedgerows, resulting in unacceptable impacts on the Conservation Area, the setting of nearby listed buildings and the character of the Cotswolds National Landscape.	--

Site ref.	Site name	Site assessment findings	Site rating
R90	Land to rear of Timberley Cottage	The site comprises greenfield land within the Cotswolds National Landscape and is affected by areas of groundwater flood susceptibility. The site lies within the Conservation Area and is affected by the Little Rissington and Oxford Kidlington Airfield Safeguard Areas. The site comprises Grade 3 agricultural land and benefits from an existing access, although further investigation may be required to determine whether it is suitable for residential intensification. The site is located within the Conservation Area and is surrounded by a number of Grade II listed buildings, including Broadwell Farm and its associated outbuildings, Millbrook House and associated listed structures, Lower Farmhouse and Timberley Cottage. The site therefore forms an important part of the historic setting of these heritage assets and contributes to the character and appearance of the Conservation Area and wider Cotswolds National Landscape. Overall, the site is considered a **Clear Omission Site Option (--)**, as development would be likely to result in significant adverse impacts on the character and appearance of the Conservation Area and the setting of the surrounding Grade II listed buildings. The combination of heritage and landscape constraints substantially reduces the site's suitability for development relative to less constrained alternatives.	--
R682	Field at Walkers Close, GL56 0TS	The site comprises greenfield land to the east of Broadwell and is affected by the Moreton-in-Marsh Surrounds Special Landscape Area, the Little Rissington and Oxford Kidlington Airfield Safeguard Areas, and areas of groundwater flood susceptibility. The site comprises Grade 3 agricultural land and development would result in the loss of	--

Site ref.	Site name	Site assessment findings	Site rating
		agricultural land. The site benefits from an existing agricultural access from the south-east, although further investigation would be required to determine whether it is suitable for residential intensification. The site forms part of the pastoral landscape on the north-eastern edge of Broadwell and contributes to the transition between the settlement and surrounding countryside. Whilst closely associated with existing residential development to the east and west, the site contributes to the rural setting of the Broadwell Conservation Area, the adjacent Cotswolds National Landscape and the Moreton-in-Marsh Surrounds Special Landscape Area. The site has been assessed as having medium landscape sensitivity, with strong boundary vegetation and a relatively enclosed character helping to limit wider landscape effects. Overall, the site is considered a **Clear Omission Site Option (--)**, as development would result in the loss of an open pastoral field and extend built form into an area that currently contributes to the rural setting of Broadwell. Whilst landscape effects are likely to be relatively localised, the site's location within the Special Landscape Area and its contribution to settlement character reduce its suitability relative to less constrained alternatives.	

Sources: Esri, TomTom, Garmin, FAO, NOAA, USGS, © OpenStreetMap contributors, and the GIS User Community, Contains OS data © Crown Copyright and database right 2026 Contains public sector information licensed under the Open Government License v3.0. Contains OS data © Crown copyright and database right 2025. © AC0000815979.

Chedworth

6.88 Chedworth is wholly within the Cotswolds National Landscape and most of the village is a designated Conservation Area. There are several areas of Deciduous Woodland Priority Habitat within and surrounding the village (including the Stony Furlong Railway Cutting SSSI), with larger areas of interconnected and ancient woodland approximately 500m to the north of the village (including Burfords Grove and Chedworth Woods). There is a corridor of land to the east of the village within Flood Zone 2 and Flood Zone 3, associated with a tributary of the River Coln.

6.89 The Study of Land Surrounding Settlements (July 2026) states that Chedworth is highly sensitive to change due to the strong relationship between the settlement, the valley landform, the surrounding High Wold landscape and its exceptional historic environment. The valley sides surrounding the village are particularly sensitive as they form the immediate setting of the settlement and contribute to views into and out of the village. Development on these slopes would be prominent and could erode the intimate and secluded character of the valley landscape. Limited opportunities may exist for small-scale development closely related to the existing built framework of the village where proposals can be accommodated without harming the landscape setting, historic character or wider National Landscape.

6.90 Within the HELAA, of the sites which are classified as 'potentially deliverable / developable' or 'deliverable / developable' for non-strategic scale development at Chedworth:

- R505 and R534 are excluded at Stage 1 of the Study of Land Surrounding Settlements due to the following factors: would not be attached / adjacent to existing development; would introduce a significant area of built form into a rural or visually sensitive landscape; would extend settlement in an uncharacteristic direction or weaken form; and for R534, falls within clear views from public vantage points.
- R98 has 'medium to high' sensitivity to development. The site occupies an open and transitional position on the northern edge of Chedworth and forms part of the rural setting of the village within the Cotswolds National Landscape. Although influenced by existing recreational uses and adjacent residential development, the site retains an open and semi-rural character that contributes positively to the settlement edge and wider landscape setting.

6.91 Reflecting the above, only one non-strategic site option has been considered in detail through Stage 3 of the site selection process, specifically: R504. The assessment findings are presented in the table below and accompanying map.

Site ref.	Site name	Site assessment findings	Site rating
R504	Old Dairy	The site comprises predominantly agricultural land with some existing employment uses and is wholly located within the Cotswolds National Landscape. The site comprises Grade 3 agricultural land and is affected by areas of groundwater flood susceptibility. A substantial proportion of the site falls within Chedworth Conservation Area and the site is also associated with a Grade II listed building, requiring careful consideration of potential heritage impacts. The site benefits from existing access from Fields Road, although further investigation may be required to determine whether this is suitable for residential intensification. The site is physically separated from the main built form of Chedworth, along with the heritage and landscape sensitivities limit development potential. Overall, the site is considered a **Clear Omission Site Option (--)**, as it does not accord with the broad spatial strategy and is located in a highly constrained environment comprising nationally protected landscape and heritage assets. These constraints substantially reduce its suitability.	--

Sources: Esri, TomTom, Garmin, FAO, NOAA, USGS, © OpenStreetMap contributors, and the GIS User Community, Contains OS data © Crown Copyright and database right 2026 Contains public sector information licensed under the Open Government License v3.0. Didmarton

6.92 Located towards the south western boundary of the district, adjacent to Wiltshire, Didmarton is wholly within the Cotswolds National Landscape. There is a corridor of land to the east of the village which is within Flood Zone 2 and Flood Zone 3, associated with Joyce's Pool (a source of the River Avon). Most of the village is a designated Conservation Area, with land to the south west comprising the Grade I Listed 'Badminton House' Historic Park and Garden.

6.93 The Study of Land Surrounding Settlements (July 2026) states that the undeveloped countryside surrounding Didmarton plays an important role in maintaining the settlement's rural character, preserving views and preventing the erosion of its distinct identity. Limited opportunities may exist for small-scale development where proposals are well related to the existing built form, avoid visually prominent locations and retain the characteristic landscape structure of the area.

6.94 Within the HELAA, of the sites which are classified as 'potentially deliverable / developable' or 'deliverable / developable' for non-strategic scale development at Didmarton:

- R437 has a medium-high sensitivity. The site occupies a sensitive edge-of-settlement location on the western approach into Didmarton where the village transitions into the surrounding open countryside. Whilst the site contains existing barns and areas of hardstanding, it nevertheless retains a relatively open and semi-rural character due to the mature vegetation, open western aspect and relationship with the wider rural landscape.
- R439 has a medium-high sensitivity. The site forms part of the pastoral landscape on the southern edge of Didmarton and contributes positively to the rural setting of the village within the Cotswolds National Landscape. Although physically adjacent to existing residential development, the site remains visually and spatially associated with the wider countryside beyond the established ribbon pattern of development along The Street.
- R440 has a medium-high sensitivity. The site occupies a sensitive position on the northern edge of Didmarton where the existing settlement transitions into the surrounding rural landscape. Although the site is closely associated with adjacent residential development and existing settlement form, it nevertheless contributes positively to the open character and historic setting of the village edge within the Cotswolds National Landscape.

6.95 Whilst R436 is the only site afforded a 'medium-low' sensitivity within the Study, the indicative capacity of the site within the HELAA is below the minimum threshold of five dwellings and has been excluded at Stage 1 of the site selection process. Reflecting the above, **no site options within Didmarton have been assessed in detail through Stage 3 of the site selection process.**

Down Ampney

6.96 Most of the undeveloped areas surrounding the village is either Grade 1, Grade 2, or Grade 3a Agricultural Land, which is some of the best and most versatile agricultural land in the country. Land to the south of the village is within a Minerals Safeguarding Area at the former RAF Down Ampney Airfield. The southern extent of the village is a designated Conservation Area, containing Grade I and Grade II listed buildings, with land to the south east of the village comprising the Settlement at Bean Hay Copse Scheduled Monument. To the west, areas of Flood Zone 2 and Flood Zone 3 comprise the undeveloped areas of land between the village and Ampney Brook. The village is not within the Cotswolds National Landscape.

6.97 The Study of Land Surrounding Settlements (July 2026) states that the landscape surrounding the village is generally large scale, relatively open agricultural land and strongly defines the rural character of the area. On this basis, the following sites (or clusters of sites) have been taken forward to Stage 3 of the site selection process for a potential sustainable urban extension:

- 'Land east of Down Ampney' (DA20B).
- 'Land south of Down Ampney' (DA17B).
- 'Land surrounding Down Ampney' (DA5, DA17A, DA20A, DA21, DA22A, DA32).

6.98 Within the HELAA, of the sites which are classified as 'potentially deliverable / developable' or 'deliverable / developable' for non-strategic scale development at Down Ampney:

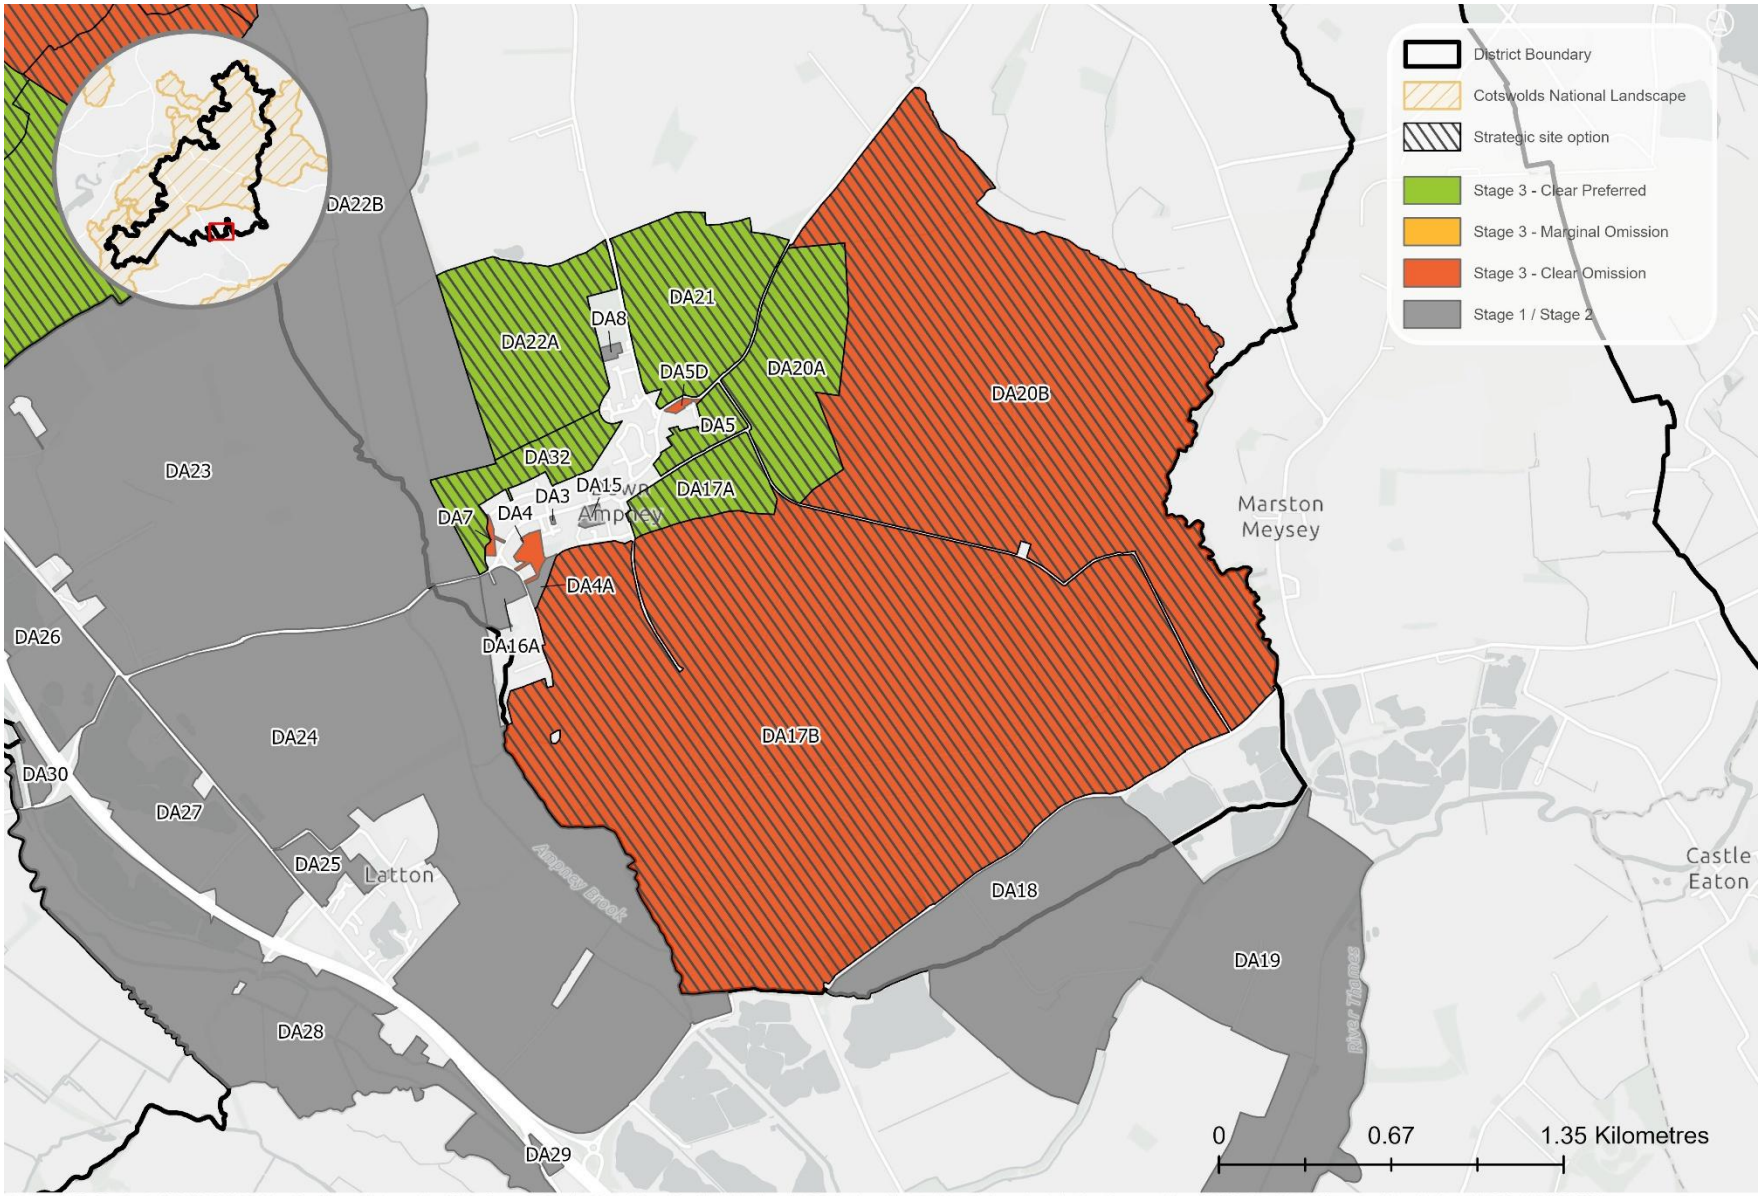
- DA4A has a medium to high sensitivity. The site occupies a transitional position between the built edge of Down Ampney and the wider countryside. Its open and level form, combined with the presence of PRoW Footpaths 3 and 4, gives the land an accessible and visually sensitive character. The open southern boundary provides views across adjoining farmland, contributing to the perception of rural openness around the settlement. Although the site's use for flower cultivation and its proximity to residential development reduce susceptibility in part, it still plays an important role in maintaining the rural edge and visual connection between the village and its countryside setting. The PRoW are particularly influential, creating frequent viewpoints across the land and strengthening recreational and perceptual sensitivity
- DA8 has planning permission for residential development but is not yet fully built out. The site is considered deliverable within the first five years of the plan period.

- DA16A has significant flood risk constraints which, together with landscape, heritage and locational constraints, substantially reduce its suitability for employment development. The site's rural location and limited accessibility make it less attractive than alternative employment opportunities in more accessible locations.

6.99 Reflecting the above, the following non-strategic site options have been considered in detail through Stage 3 of the site selection process, specifically: DA4, DA5D, and DA7.

6.100 The assessment findings are presented in the table below and accompanying map.

Site ref.	Site name	Site assessment findings	Site rating
DA5, DA17A, DA20A, DA21, DA22A, DA32 (Sustainable Urban Extension)	Land surrounding Down Ampney	The site comprises predominantly greenfield land around Down Ampney and is affected by the Fairford Airfield Safeguard Area, with parts also falling within the South Cerney Airfield Safeguard Area. The site is affected by areas of groundwater flood susceptibility and contains a significant proportion of Grade 2 and Grade 3 agricultural land, resulting in the potential loss of best and most versatile agricultural land. The site includes land within the setting of the Down Ampney Conservation Area, requiring careful consideration of potential heritage impacts, while parts of the site are affected by Flood Zones 2 and 3, which would require appropriate flood risk mitigation. Existing access opportunities are present in a number of locations, although further investigation would be required to determine their suitability for residential development and any necessary upgrades. The Employment Land Review (2026) identifies DA5, DA21 (formerly DA13), and DA32 as being less suited for employment development due to their proximity to residential areas and more rural location. Accessibility to the Strategic Road Network is limited and relies on the local B-road network, reducing the attractiveness for employment uses and limiting market demand. However, opportunities to deliver employment land as part of a mixed-use scheme could improve the market attractiveness of the sites. Overall, the site is considered a **Clear Preferred Site Option (++)**, as it has potential to accommodate development and the identified heritage, flood risk, agricultural land and infrastructure constraints are generally capable of mitigation. The site would deliver growth in a sustainable location which is in proximity to the A419, a key	**++**



Site ref.	Site name	Site assessment findings	Site rating
		transport corridor connecting to the main settlement of Cirencester and wider route between Cheltenham and Swindon.	
DA17B (Sustainable Urban Extension)	Land south of Down Ampney	The site comprises a predominantly greenfield site to the south-east of Down Ampney incorporating part of the former RAF Down Ampney airfield. The site is affected by the Fairford and South Cerney Airfield Safeguard Areas and areas of groundwater flood susceptibility. The site contains a mix of Grade 2 and Grade 3 agricultural land, and development would result in the loss of agricultural land, including a substantial proportion of best and most versatile agricultural land. Parts of the site fall within Flood Zones 2 and 3 and would require careful consideration of flood risk and the implementation of appropriate mitigation measures. The site also contains areas of deciduous woodland, a Scheduled Monument and a small area within the Conservation Area. Existing access is available from Oak Road to the north, although further investigation would be required to determine whether it is suitable for residential intensification. Planning permission has been granted for a major sand and gravel quarry at the former RAF Down Ampney airfield, including aggregate processing facilities, associated infrastructure and a phased extraction programme expected to operate over a prolonged period. In light of this, the site is considered a **Clear Omission Site Option (--)**, as it is subject to an approved minerals development and is therefore unavailable and unsuitable for residential allocation. The approved quarry operations, together with the site's flood risk, heritage and environmental constraints, substantially reduce its suitability. As the site is committed to mineral extraction and	--

Site ref.	Site name	Site assessment findings	Site rating
		associated operations, it is therefore unavailable for residential development during the plan period.	
DA20B (Sustainable Urban Extension)	Land east of Down Ampney	The site comprises a large greenfield site to the east of Down Ampney and is affected by the Fairford Airfield Safeguard Area and areas of groundwater flood susceptibility. The site contains a mix of Grade 2 and Grade 3 agricultural land, and development would result in the loss of agricultural land, including a significant proportion of best and most versatile agricultural land. Parts of the site lie within Flood Zones 2 and 3 and would require careful consideration of flood risk and appropriate mitigation measures. The site also contains a Grade II listed building and development would need to take account of its significance and setting. Existing access is available via an agricultural route from the south, although further investigation would be required to determine whether it is suitable for residential intensification. The site is located away from the main built form of Down Ampney and is physically separated from the settlement by open countryside. Whilst the scale of development proposed could create a functional relationship with Down Ampney, it would effectively result in a standalone development of a scale more akin to a new settlement rather than a logical extension to the existing village. Development would therefore represent a substantial encroachment into the countryside and would not relate well to the established settlement pattern. Additionally, the site is not likely to be deliverable within the Plan period as other development closer to Down Ampney would need to be completed first.	--

Site ref.	Site name	Site assessment findings	Site rating
		Overall, the site is considered a **Clear Omission Site Option (--)**, as it is physically separate from Down Ampney and would represent an isolated and substantial extension into the open countryside. The site's detached location, together with flood risk, heritage constraints and the loss of best and most versatile agricultural land, significantly reduces its suitability.	
DA4	Jim's Paddock	The site comprises greenfield land to the south of Down Ampney and is affected by the Fairford and South Cerney Airfield Safeguard Areas and areas of groundwater flood susceptibility. The site comprises Grade 2 agricultural land and development would result in the loss of best and most versatile agricultural land. A number of Tree Preservation Orders are located along the eastern boundary and would need to be retained and incorporated into any future development proposals. The site benefits from an existing agricultural access from the south-west, although significant improvements may be required and further investigation would be necessary to determine whether a suitable access could be achieved. The site forms an important area of open land within the historic core of Down Ampney and contributes to a notable vista identified within the Neighbourhood Plan. Public Footpath 3 crosses the site and provides a valued connection through the village and surrounding countryside. The site contributes to the setting of the Conservation Area and nearby listed buildings and retains a parkland character that forms part of the historic setting of the village. Development would likely require upgrades to the existing narrow access track, with potential impacts on trees and hedgerows, and surface water flooding has been recorded along the access route.	--

Site ref.	Site name	Site assessment findings	Site rating
		The site has been assessed as having medium landscape sensitivity, reflecting its contribution to settlement character, visual amenity and local recreational value. Overall, the site is considered a **Clear Omission Site Option (-)**, as development would erode an important area of open land within the historic core of the village and could adversely affect the setting of the Conservation Area, nearby listed buildings and a locally important vista.	
DA5D		The site comprises greenfield land to the north-east of Down Ampney and is affected by the Fairford Airfield Safeguard Area and areas of groundwater flood susceptibility. The site comprises Grade 2 agricultural land and development would result in the loss of best and most versatile agricultural land. The site is heavily influenced by woodland and vegetation which contribute to its landscape character and provide screening within the surrounding countryside. There is currently no existing access to the site. Overall, the site is considered a **Clear Omission Site Option (--)**, as the site has since been confirmed as being unavailable for development and is therefore not deliverable. In addition, the absence of an established access and the presence of extensive vegetation further constrain development potential.	--
DA7	Land rear of Charlham Way	The site comprises greenfield land to the west of Down Ampney and is affected by the Fairford and South Cerney Airfield Safeguard Areas and areas of groundwater flood susceptibility. The site comprises Grade 2 agricultural land and development would result in the loss of best and most versatile agricultural land. Parts of the site lie within Flood Zones 2 and 3, requiring careful consideration of flood risk and the implementation of appropriate mitigation measures. The site benefits from woodland	--

Site ref.	Site name	Site assessment findings	Site rating
		screening to the south, which helps to limit visual effects. There is currently no existing access onto the site, although access may potentially be achievable via the yard fronting Charlham Way, subject to further investigation and the partial removal of an existing stone wall. The site is narrow and linear in form, and its configuration, flood risk constraints and access requirements significantly limit its development potential. Evidence indicates that an appropriate form of development would be unlikely to accommodate the minimum allocation threshold of 5 dwellings without resulting in an unsuitable form of development. Overall, the site is considered a **Clear Omission Site Option (--)**, as its constrained shape, flood risk considerations and access limitations substantially restrict development capacity.

Kempsford

6.101 Kempsford is a village located toward the south eastern boundary of the district, adjacent to the neighbouring authority of Swindon. Land to the north of the village primarily comprises RAF Fairford. Land to the south and to the west is within Flood Zone 2 and Flood Zone 3, following the corridor of the River Thames. From a heritage perspective, the village core is a designated Conservation Area. Key features of the Conservation Area include a corridor of Deciduous Woodland Priority Habitat alongside the River Thames, and a cluster of Grade II Listed Buildings surrounding the Grade I Listed 'Church of St Mary the Virgin (toward the eastern boundary of the village). 'Sites near Manor Ham Barn' Scheduled Monument sits approximately 750m to the west of the village. The village is outside of the Cotswolds National Landscape.

6.102 The Study of Land Surrounding Settlements (July 2026) states that the village is characterised by a strong historic core centred on St Mary's Church, Kempsford Manor and a collection of traditional limestone buildings. Development extends along the principal routes through the village, creating a predominantly linear settlement pattern with occasional clusters of more recent residential development. The open and relatively flat nature of the landscape means that development on the settlement edge can be visible across a wide area and has the potential to affect the rural character of the floodplain. The village's historic core, church, mature trees and river corridor form key components of local character and are particularly sensitive.

6.103 Within the HELAA, of the sites which are classified as 'potentially deliverable / developable' or 'deliverable / developable' for non-strategic scale development at Kempsford:

- R202 and R202A have a 'medium-high' to 'high' sensitivity. Whilst parts of the site are associated with existing agricultural and equestrian activity, the overall site extends beyond the established settlement edge and forms part of the wider rural landscape surrounding the village. Historic character and setting are particularly important considerations. The site adjoins the Kempsford Conservation Area and contributes to the setting of both Church of St Mary the Virgin and Manor Farm Barns. The open agricultural character, paddocks and fields form part of the wider rural setting within which these heritage assets are experienced. Over 50% of the site areas are within Flood Zone 2 or Flood Zone 3, adding further sensitivities to development.

6.104 Reflecting the above, the following non-strategic site options (all to the north of the village) have been considered in detail through Stage 3 of the site selection process, specifically: R203A, R203B, R203C. The assessment findings are presented in the table below and accompanying map.

Site ref.	Site name	Site assessment findings	Site rating
R203A, R203B, R203C	Land to the rear of the Knoll, Whelford Road	The site comprises a series of greenfield parcels adjacent to Kempsford and is affected by the Fairford Airfield Safeguard Area, with parts of the site also falling within the Brize Norton Airfield Safeguard Area. The site contains a mix of Grade 2 and Grade 3 agricultural land, and development would result in the loss of agricultural land, including a substantial proportion of best and most versatile agricultural land. The site benefits from existing access opportunities from Whelford Road, although further investigation would be required to determine whether these accesses are suitable for residential intensification and any necessary upgrades. The southern parcel (R203C) is more closely associated with the existing settlement edge, being enclosed on three sides by residential development. Development within this field would represent a contained extension of the village and is therefore considered to have a medium landscape sensitivity. The northern parcels (R203A and R203B) form part of the wider agricultural landscape beyond the established settlement edge. While defined by strong hedgerows, these parcels remain visually and spatially associated with the surrounding countryside. Development here would extend built form further north and would be somewhat incongruous with the existing settlement pattern. Overall, the site is considered a **Clear Preferred Site Option (++)**, as it is well related to the existing settlement and there are no significant landscape, heritage, ecological or flood risk constraints that would be likely to preclude development. The identified access and airfield safeguarding constraints are considered capable of mitigation through the development process.	++

Longborough

6.105 The village is wholly within the Cotswolds National Landscape. To the north east, a corridor of land within Flood Zone 2 and Flood Zone 3 broadly follows a watercourse towards Moreton-in-Marsh (for approximately 2km) before connecting to the River Evenlode. There are areas of Deciduous Woodland Priority Habitat to the south and to the south west of the village, including Horsington Plantation and Humble Bee Coppice which forms a green ring and natural buffer between Longborough and the neighbouring village of Donnington (to the south east). Within the village core, land surrounding High Street, The Folly, and Charlesway is a designated Conservation Area which is primarily lined with Grade II Listed Buildings. The Grade I Listed 'Church of St James' is toward the northern extent of the Conservation Area (and village).

6.106 The Study of Land Surrounding Settlements (July 2026) states that Longborough exhibits generally high landscape sensitivity owing to its elevated position, strong relationship with the surrounding landform and visibility within the wider landscape. The surrounding landscape displays many characteristic Cotswold features including rolling topography, dry stone walls, mature hedgerows, scattered woodland and historic field patterns. These elements contribute to landscape distinctiveness. R577 is the only site classified as having a 'medium-low' sensitivity but is designated as an Established Employment Site in the adopted Local Plan and is in active use as employment units (known as The Sitch). The Local Plan evidence base finds this site should continue to be protected for employment use and is therefore unsuitable for redevelopment.

6.107 Within the HELAA, none of the sites are classified as 'potentially deliverable / developable' or 'deliverable / developable' for non-strategic scale development at Longborough. R560 and R561 have planning permission for 9 and 14 homes respectively, and the developments are complete. The sites forms part of the 'known commitments' total for the emerging Local Plan. Additionally, R229C and R457 are classified as having a 'high' landscape sensitivity to development

6.108 Reflecting the above, **no site options within Longborough have been assessed in detail through Stage 3 of the site selection process.**

Meysey Hampton

6.109 Located to the south of the A417, and approximately 2.5km to the west of Fairford, Meysey Hamton is at the border between the Cotswold District and the neighbouring authority of Wiltshire. The village core is a designated Conservation Area containing clusters of Grade II Listed Buildings. There are two Grade II* Listed Buildings in the village, specifically: the Church of St Mary the Virgin (toward the western village boundary), and Villars Farmhouse (toward the south western village boundary). There are areas of Deciduous Woodland Priority Habitat to the south west and south east of the village, with corridors

of Flood Zone 2 and Flood Zone 3 approximately 750m to the east and west (respectively). The village is not within the Cotswolds National Landscape.

6.110 There are **no available sites for residential development within or adjacent to Meysey Hampton** after reviewing the site submissions from the various 'call for sites' exercises completed by the Council to date. The only available site, R516, is approximately 2.5km to the north of the village and has permission for change of use from a former mushroom composting facility to provide Class B2 vehicle workshop. The site is not currently built out but is considered deliverable within the first five years of the plan period.

North Cerney

6.111 Wholly within the Cotswolds National Landscape, North Cerney is broadly linear in its character and extends to the north east from the A435 and River Churn. Land surrounding the River Churn is within Flood Zone 2 and Flood Zone 3, encompassing areas to the south and to the north west of the village. The southern half of the village is a designated Conservation Area, including clusters of Grade II Listed Buildings and the Grade I Listed 'Church of All Saints' (to the south west of the A435 and River Churn). The road and the river splits the Conservation Area into two sections. Areas of Deciduous Woodland Priority Habitat follow the river corridor and surround Cerney House, a Grade II Listed Building to the south west of the village and the Church of All Saints.

6.112 Within the HELAA, the two available site options within North Cerney (R262 and R263) are classified as 'not deliverable / developable'. In light of this, **no site options within North Cerney have been assessed in detail through Stage 3 of the site selection process.**

Poulton

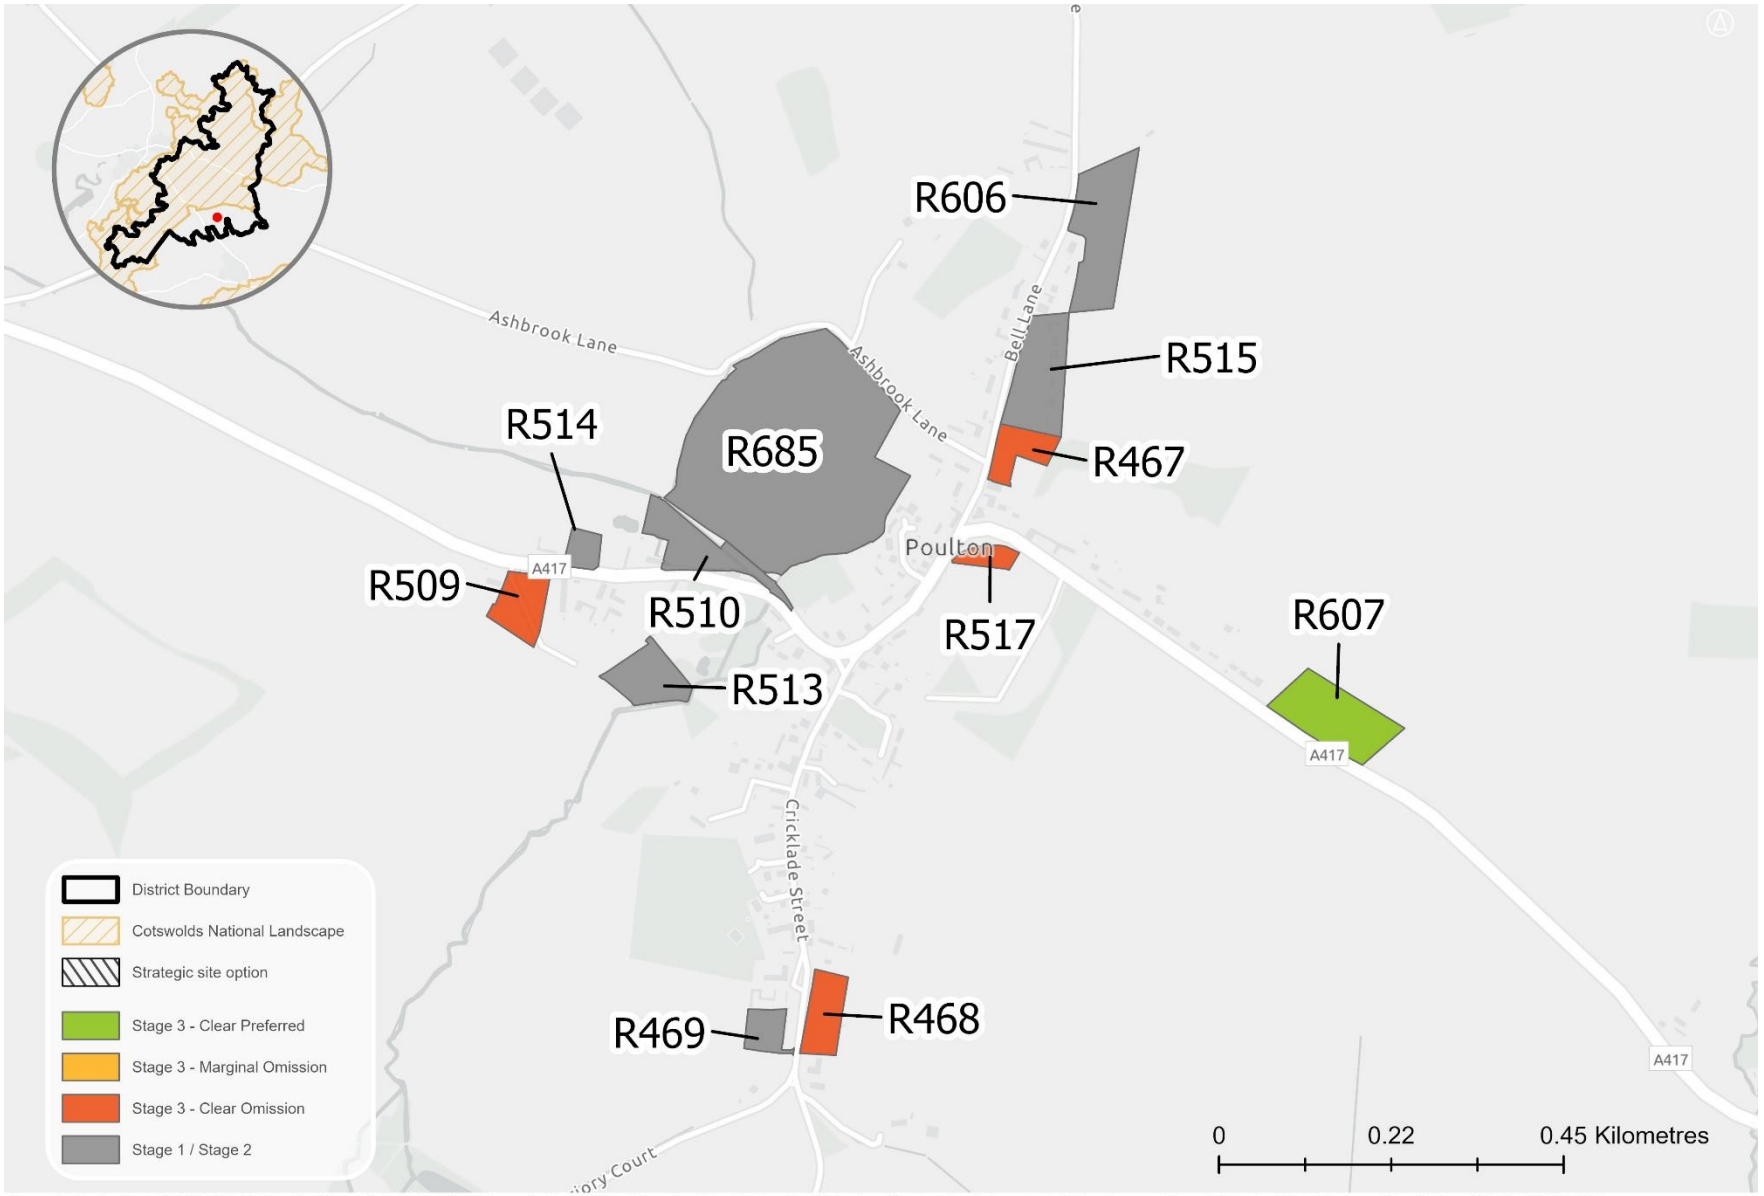
6.113 Poulton is located along the A417 towards the southern boundary of the district. A tributary of Ampney Brook flows to the south west and to the west of the village, with a corridor of land surrounding the watercourse within Flood Zone 2 and Flood Zone 3. Most of the village is a designated Conservation Area, containing clusters of Grade II Listed Buildings (along London Road and Cricklade Street). The Grade I listed 'The Manor House and Gatepiers' stands in the village core, and 'Ranbury Ring' Scheduled Monument is approximately 750m to the west.

6.114 Land to the north east and south east of the village is comparatively unconstrained, albeit within the setting of the Conservation Area and comprising areas of open countryside. There are isolated areas of Deciduous Woodland Priority Habitat, and the village is outside of the Cotswolds National Landscape. The Study of Land Surrounding Settlements (July 2026) states that whilst some opportunities may exist for limited and well-contained development, proposals should respect the settlement's rural setting, maintain characteristic landscape features and avoid visually prominent locations.

6.115 Within the HELAA, of the sites which are classified as 'potentially deliverable / developable' or 'deliverable / developable' for non-strategic scale development at Poulton:

- R606 has been classified as having a 'medium-high' sensitivity. The site forms part of the open northern approach to Poulton, contributing to the rural setting and character of the village. Its gently rising topography, arable land use, and open northern views reinforce its role as a transitional space between built form and countryside. Although the site is influenced by adjacent residential properties, it remains predominantly rural and undeveloped, with strong visual and physical connections to the wider landscape to the north and east.
- R512 is located approximately 500m from the southern settlement edge of Poulton (via Cricklade Street), and approximately 1km to the south of the village centre. Allocating this site would result in isolated development outside of the village, contrary to the broad spatial strategy for the emerging Local Plan.

6.116 Reflecting the above, the following non-strategic site options have been considered in detail through Stage 3 of the site selection process, specifically:, R467, R468, R509, R517, and R607. The assessment findings are presented in the table below and accompanying map.



Site ref.	Site name	Site assessment findings	Site rating
R467	Land at Bell Lane	The site comprises greenfield land in the north-east of Poulton and is affected by the Fairford Airfield Safeguard Area and areas of groundwater flood susceptibility. The site comprises Grade 3 agricultural land and lies adjacent to the Poulton Conservation Area, meaning development would need to carefully consider and mitigate potential impacts on its character and appearance. Development would result in the loss of agricultural land and could affect the rural setting of the settlement. The Study of Land Surrounding Settlements (July 2026) states that the site occupies a contained parcel of land on the northern edge of Poulton, with a semi-rural, transitional character influenced by adjacent housing and agricultural buildings. While the land is modest in scale and partially enclosed by vegetation, its adjacency to the Poulton Conservation Area increases sensitivity due to its contribution to the broader setting of the historic village. With respect to the planning history for the site, a previous application for residential development was refused and the subsequent appeal dismissed, with identified concerns relating to the erosion of rural character and harmful impacts on the Conservation Area. Overall, the site is considered a **Clear Omission Site Option (--)**, as development has previously been found to result in unacceptable impacts on the rural character of the area and the setting of the Poulton Conservation Area, and these heritage and character concerns substantially reduce the site's suitability.	**--**
R468	Land south of village	The site comprises greenfield land to the south of Poulton and is affected by the Fairford and South Cerney Airfield Safeguard Areas and areas of groundwater flood susceptibility.	**--**

Site ref.	Site name	Site assessment findings	Site rating
	and east of Cricklade Road	The site comprises Grade 3 agricultural land and development would result in the loss of agricultural land. The site benefits from an existing agricultural access which is likely to be suitable for residential intensification. The site forms part of the rural edge of Poulton and contributes to the setting of the Conservation Area and the wider agricultural landscape surrounding the village. The site also contributes positively to the setting and significance of Butts Farmhouse (Grade II), maintaining its historic relationship with the surrounding countryside. Whilst influenced by nearby development, the site remains visually connected to the wider farmland to the east and has been assessed as having Medium landscape sensitivity. With respect to the planning history for the site, appeal decisions have identified harm to the setting of Butts Farmhouse arising from development of the site, concluding that even limited development would detrimentally affect its rural setting. Development at an allocation scale would be likely to increase this harm and further erode the open countryside character of the southern approach to Poulton. Overall, the site is considered a **Clear Omission Site Option (--)**, as development would result in harm to the setting of a Grade II listed building and the rural character of the village edge, with the scale of development required for allocation likely to increase the level of identified heritage harm and reduce the certainty of deliverability.	
R509	Ranbury Farmyard	The site comprises greenfield land to the west of Poulton and is affected by the Fairford and South Cerney Airfield Safeguard Areas and areas of groundwater flood susceptibility. The site comprises Grade 3 agricultural land and development would result in the loss of	**--**

Site ref.	Site name	Site assessment findings	Site rating
		agricultural land. The site lies adjacent to the Poulton Conservation Area and benefits from an existing access which is likely to be suitable for residential intensification. The site occupies a visually prominent but relatively contained parcel on the western approach to Poulton, forming part of the transition between the village and the surrounding countryside. The site has been assessed as having medium landscape sensitivity, reflecting its semi-rural character, relationship with the Conservation Area and contribution to the historic village edge. Public Bridleway 13 crosses the site and increases its visual and recreational sensitivity. Development would reduce an important visual break along the western approach to the village and would alter the relationship between the built form and surrounding countryside. The site's heritage sensitivities, contribution to the setting of the Conservation Area, presence of the Public Right of Way and concerns regarding the density of development likely to be required reduce its suitability for allocation. Overall, the site is considered a **Clear Omission Site Option (--)**, as development would adversely affect the rural and historic character of this part of Poulton and reduce the openness that contributes to the setting of the Conservation Area.	
R517	Land adjacent to 15 London	The site comprises greenfield land within the centre of Poulton and is wholly located within the Poulton Conservation Area. The site comprises Grade 3 agricultural land and is affected by the Fairford Airfield Safeguard Area and areas of groundwater flood susceptibility. The site benefits from an existing agricultural access, although further investigation would be	**--**

Site ref.	Site name	Site assessment findings	Site rating
	Road, GL7 5JE	required to determine whether it is suitable for residential intensification and whether adequate visibility can be achieved. The site forms part of the green core of the village and contributes positively to the character and appearance of the Conservation Area. Mature vegetation, stone boundary walls and the site's relationship with surrounding historic development provide an important sense of openness within the village and contribute to its historic layout and spatial character. The site has been assessed as having medium landscape sensitivity, reflecting its historic and townscape value balanced against its limited visibility and modest scale. Development would result in the loss of an important area of open land within the Conservation Area and could adversely affect its character and appearance. Concerns also remain regarding the suitability of the site's access and visibility arrangements. Overall, the site is considered a **Clear Omission Site Option (--)**, as its contribution to the character and appearance of the Poulton Conservation Area, together with access constraints, reduce its suitability.	
R607	Land north of London Road	The site comprises greenfield land to the east of Poulton and is affected by the Fairford Airfield Safeguard Area. The site comprises Grade 3 agricultural land and development would result in the loss of agricultural land. The site benefits from an existing agricultural access from London Road which, subject to appropriate upgrades and highway assessment, is likely to be suitable for residential intensification. The site forms part of the eastern edge of Poulton and adjoins existing ribbon development along London Road. The site has been assessed as having medium-low landscape	++

Site ref.	Site name	Site assessment findings	Site rating
		sensitivity, reflecting its small scale, relationship with existing development and limited landscape constraints. Whilst development would broadly continue the existing linear pattern of development, it would also extend the settlement further eastwards into open countryside. Overall, the site is considered a **Clear Preferred Site Option (++)** as development would broadly continue the existing linear pattern of development in a location that has a 'medium-low' landscape sensitivity.

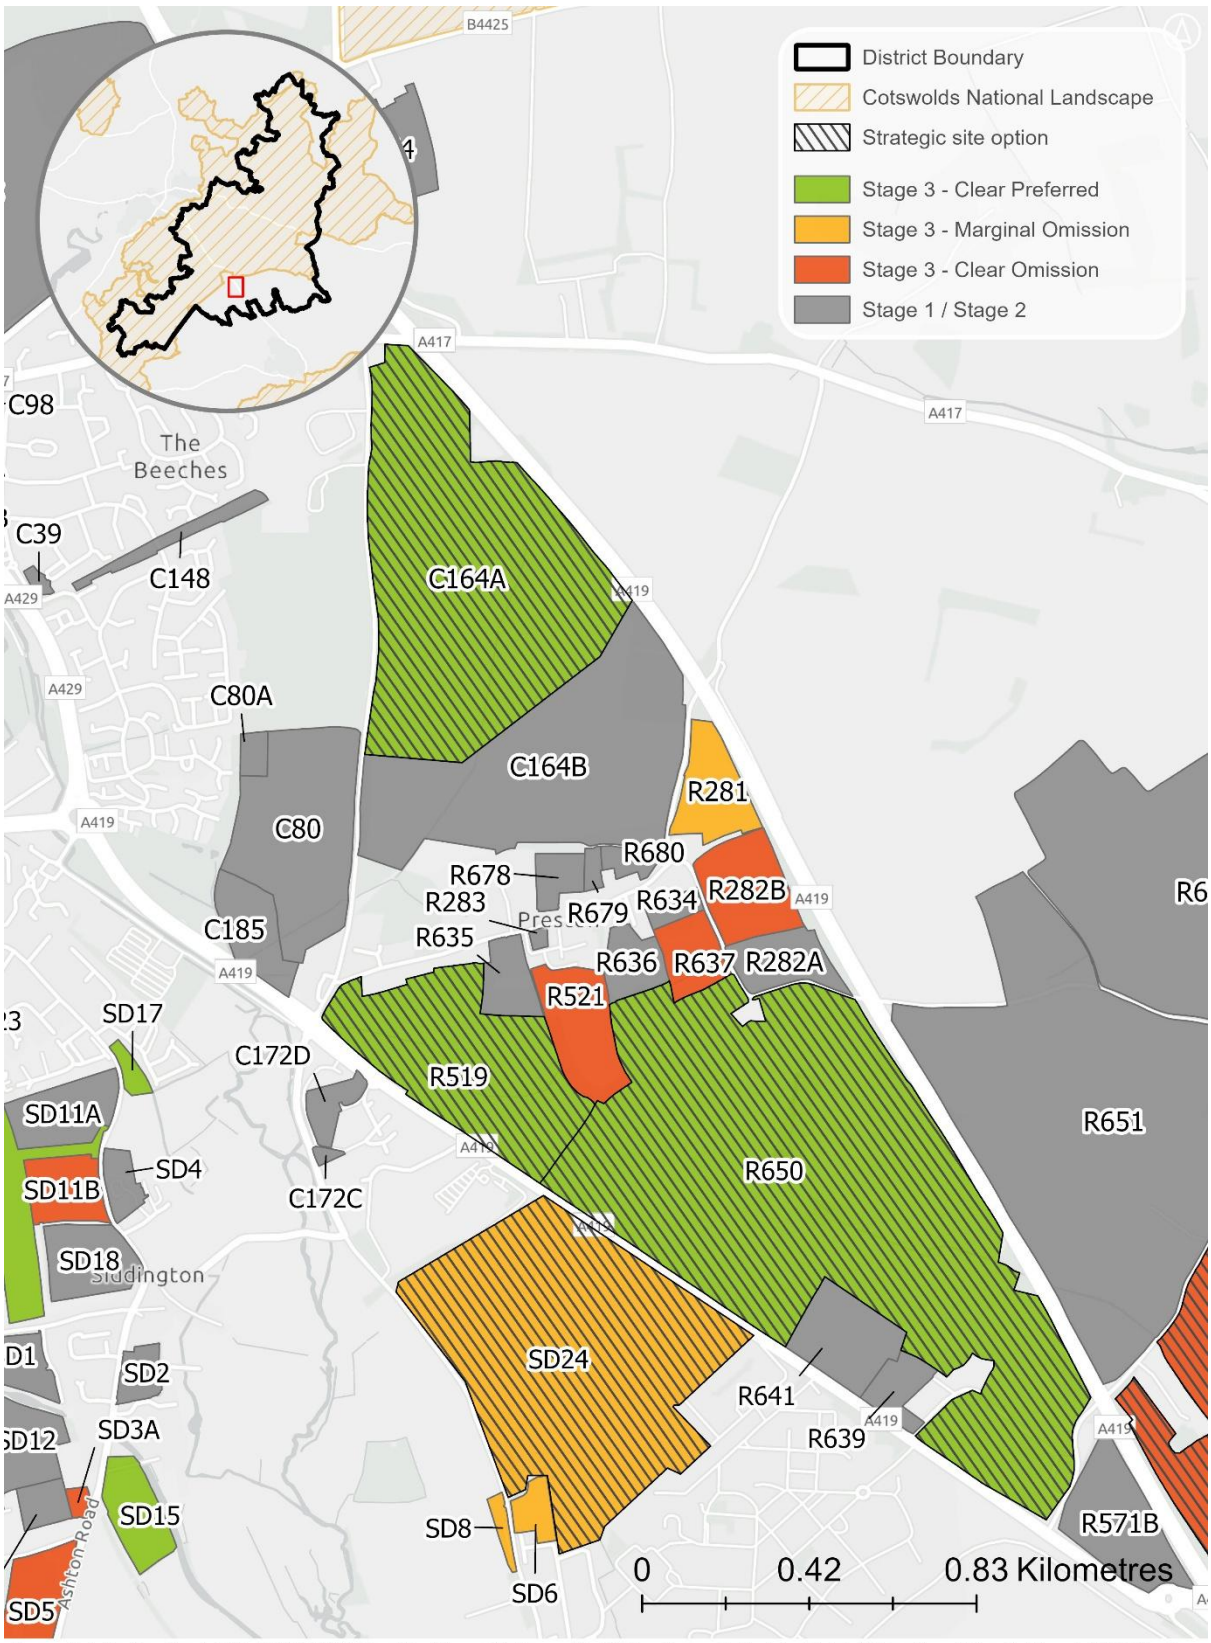
Preston

6.117 Preston is approximately 750m to the east of Cirencester and is a broadly linear village in character extending north eastward from the A419. The village has a functional relationship with Cirencester in this respect. The village core is a designated Conservation Area, centred around the Grade II* Listed 'Church of All Saints'. Land to the west of the village is within Flood Zone 2 and Flood Zone 3, following the corridor of the River Churn which extends to the south towards Siddington.

6.118 Land to the north, east, and south of the village is comparatively unconstrained, albeit within the setting of the Conservation Area and comprising areas of open countryside. There are isolated areas of Deciduous Woodland Priority Habitat, and the village is outside of the Cotswolds National Landscape. The Study of Land Surrounding Settlements (July 2026) states that the settlement remains relatively compact and linear in form, with development generally confined to the road corridor. Specifically, Preston exhibits generally moderate-high landscape sensitivity arising from its small scale, historic character and strong relationship with the surrounding agricultural landscape.

6.119 The following sites (or clusters of sites) have been taken forward to Stage 3 of the site selection process for a potential sustainable urban extension: 'Land south east of Cirencester and south of Preston' (R519, R650).

6.120 Within the HELAA, of the sites which are classified as 'potentially deliverable / developable' or 'deliverable / developable' for non-strategic scale development at Preston, R531 is detached from the existing settlement and is currently in active employment use.



6.121 Reflecting the above, the following non-strategic site options have been considered in detail through Stage 3 of the site selection process, specifically: R281, R282B, R521, and R637. The assessment findings are presented in the table below and accompanying map.

Site ref.	Site name	Site assessment findings	Site rating
R519, R650 (Sustainable Urban Extension)	Land south east of Cirencester and south of Preston	The site comprises predominantly greenfield land to the south-west and south-east of Preston and is wholly within Grade 3 agricultural land. The site lies within the airfield safeguarding areas associated with Fairford, Kemble and South Cerney and is affected by areas of groundwater flood susceptibility across substantial parts of the site. A small area of deciduous woodland is present within the site. Development would result in the loss of agricultural land and, given the scale of the land identified, may require additional infrastructure provision and upgraded access arrangements. While parts of the site benefit from existing access opportunities, further investigation would be required to confirm their suitability for residential development and whether additional access points would be necessary. The Employment Land Review (2026) notes that, whilst employment development may be possible as part of a wider mixed-use scheme, employment uses would be more appropriately located within the southern section of the adjacent R650 site where they would have less potential to conflict with nearby residential development. R650 is considered particularly well suited to employment uses due to its strong connectivity to the A419 and A417. Overall, the site is considered a **Clear Preferred Site Option (++)**, as development could be accommodated subject to addressing infrastructure, access and flood risk constraints. The design of new development areas should incorporate green infrastructure enhancements between new and existing development to maintain settlement identity and distinctiveness.	**++**

Site ref.	Site name	Site assessment findings	Site rating
R281	Land between Pine Corner and the A419	The site comprises greenfield land to the north-east of Preston and is affected by the Fairford, Kemble and South Cerney Airfield Safeguard Areas and areas of groundwater flood susceptibility. The site comprises Grade 3 agricultural land and benefits from an existing access, although further investigation would be required to determine whether it is suitable for residential intensification. Whilst the site is related to existing development, it does not adjoin the main built form of Preston and would extend development beyond the established settlement pattern. As a result, development would have a weaker relationship with existing services and facilities. Overall, the site is considered a **Marginal Omission Site Option (-)**, as its peripheral location and relatively limited relationship with the core of Preston reduce its suitability Whilst development may be achievable in principle, the site would extend built form into the surrounding countryside.	-
R282B	Field south-west of Preston	The site comprises greenfield land to the east of Preston and is affected by the Fairford, Kemble and South Cerney Airfield Safeguard Areas. The site comprises Grade 3 agricultural land and is affected in part by areas of groundwater flood susceptibility. The site is adjacent to the existing settlement and benefits from access via an existing lane serving development on the site, although further investigation would be required to determine whether this is suitable for residential intensification. Whilst the site adjoins the existing settlement, development would extend built form beyond the established edge of Preston and would not reflect the traditional linear pattern of development along Preston Road. As a result, development would alter	--

Site ref.	Site name	Site assessment findings	Site rating
		the existing settlement form and introduce new built development into an area that currently contributes to the transition between the village and the surrounding countryside. Overall, the site is considered a **Clear Omission Site Option (-)**, as development would not relate particularly well to the established settlement pattern of Preston and would extend built form into the surrounding countryside.	
R521	Land at Preston (Site 1)	The site comprises a large greenfield site to the south of Preston and is affected by the Fairford, Kemble and South Cerney Airfield Safeguard Areas and areas of groundwater flood susceptibility. The site comprises Grade 3 agricultural land and is accessed via an existing track, although further investigation would be required to determine whether a suitable access arrangement could be achieved for residential development. Whilst the site is adjacent to the existing settlement, its scale and location would result in a substantial extension of built form beyond the current village edge. Development would not reflect the traditional linear settlement pattern of Preston and would extend development into the surrounding countryside. Overall, the site is considered a **Clear Omission Site Option (-)**, as development would represent a significant extension beyond the established form of Preston and would not reflect the village's traditional linear pattern of growth. Whilst development may be achievable in principle, the site's relationship to the existing settlement reduces its suitability.	--

Site ref.	Site name	Site assessment findings	Site rating
R637	Land west of Harnpit to Witpit Lane	The site comprises greenfield land to the south-east of Preston and is affected by the Fairford, Kemble and South Cerney Airfield Safeguard Areas and areas of groundwater flood susceptibility. The site comprises Grade 3 agricultural land and development would result in the loss of agricultural land. A Public Right of Way runs along the southern boundary of the site. Access is currently provided via a small agricultural track from the eastern boundary, although this is unlikely to be suitable for residential intensification and further investigation would be required to determine whether a suitable access could be achieved. The site's relationship with the existing settlement is relatively limited and development would extend built form into the surrounding countryside. The presence of the Public Right of Way also increases the site's recreational and visual sensitivity. Overall, the site is considered a **Clear Omission Site Option (-)**, as access constraints, its peripheral location and the extension of development into open countryside reduce its suitability for development.	--

Sapperton

6.122 Sapperton is located along the western boundary of the district, adjacent to the neighbouring authority of Stroud. The village is wholly within the Cotswolds National Landscape and is a designated Conservation Area. Land to the north and west of the village comprises a corridor of Deciduous Woodland Priority Habitat and Ancient Woodland which surrounds the River Frome. Daneway Banks SSSI is approximately 750m to the north west of the village, albeit within the neighbouring authority area. Land to the east is within the Grade I Listed 'Cirencester Park' Historic Park and Garden.

6.123 The Study of Land Surrounding Settlements (July 2026) states that Sapperton exhibits high landscape sensitivity due to the combination of its historic character, distinctive topography and location within the Cotswolds National Landscape. The High Wold Valley landscape is particularly sensitive to development due to its enclosed character, steep valley sides, extensive woodland cover and strong sense of tranquillity. Development has the potential to interrupt the secluded character of the valley and affect important views along and across the landscape. In light of this, all of the 'potentially deliverable / developable' sites within Sapperton (R660, R661, and R662) have been classified as having a 'medium-high' or 'high' sensitivity to development.

6.124 In light of the above, **no site options within Sapperton have been assessed in detail through Stage 3 of the site selection process.**

Swell

6.125 Comprising two distinct communities within Upper Swell and Lower Swell, the villages are approximately 1.5km to the west of Stow-on-the-Wold (via the B4077 and B4068, respectively) and entirely within the boundaries of the Cotswolds National Landscape. Land between Stow-on-the-Wold and the villages forms the Grade II* Listed 'Abbotswood' Historic Park and Garden. The River Dikler flows to the east of the villages, with a corridor of land adjoining the watercourse within Flood Zone 2 and Flood Zone 3. Both villages are designated Conservation Areas.

6.126 There are **no available sites for residential development within or adjacent to Upper Swell or Lower Swell** after reviewing the site submissions from the various 'call for sites' exercises completed by the Council to date.

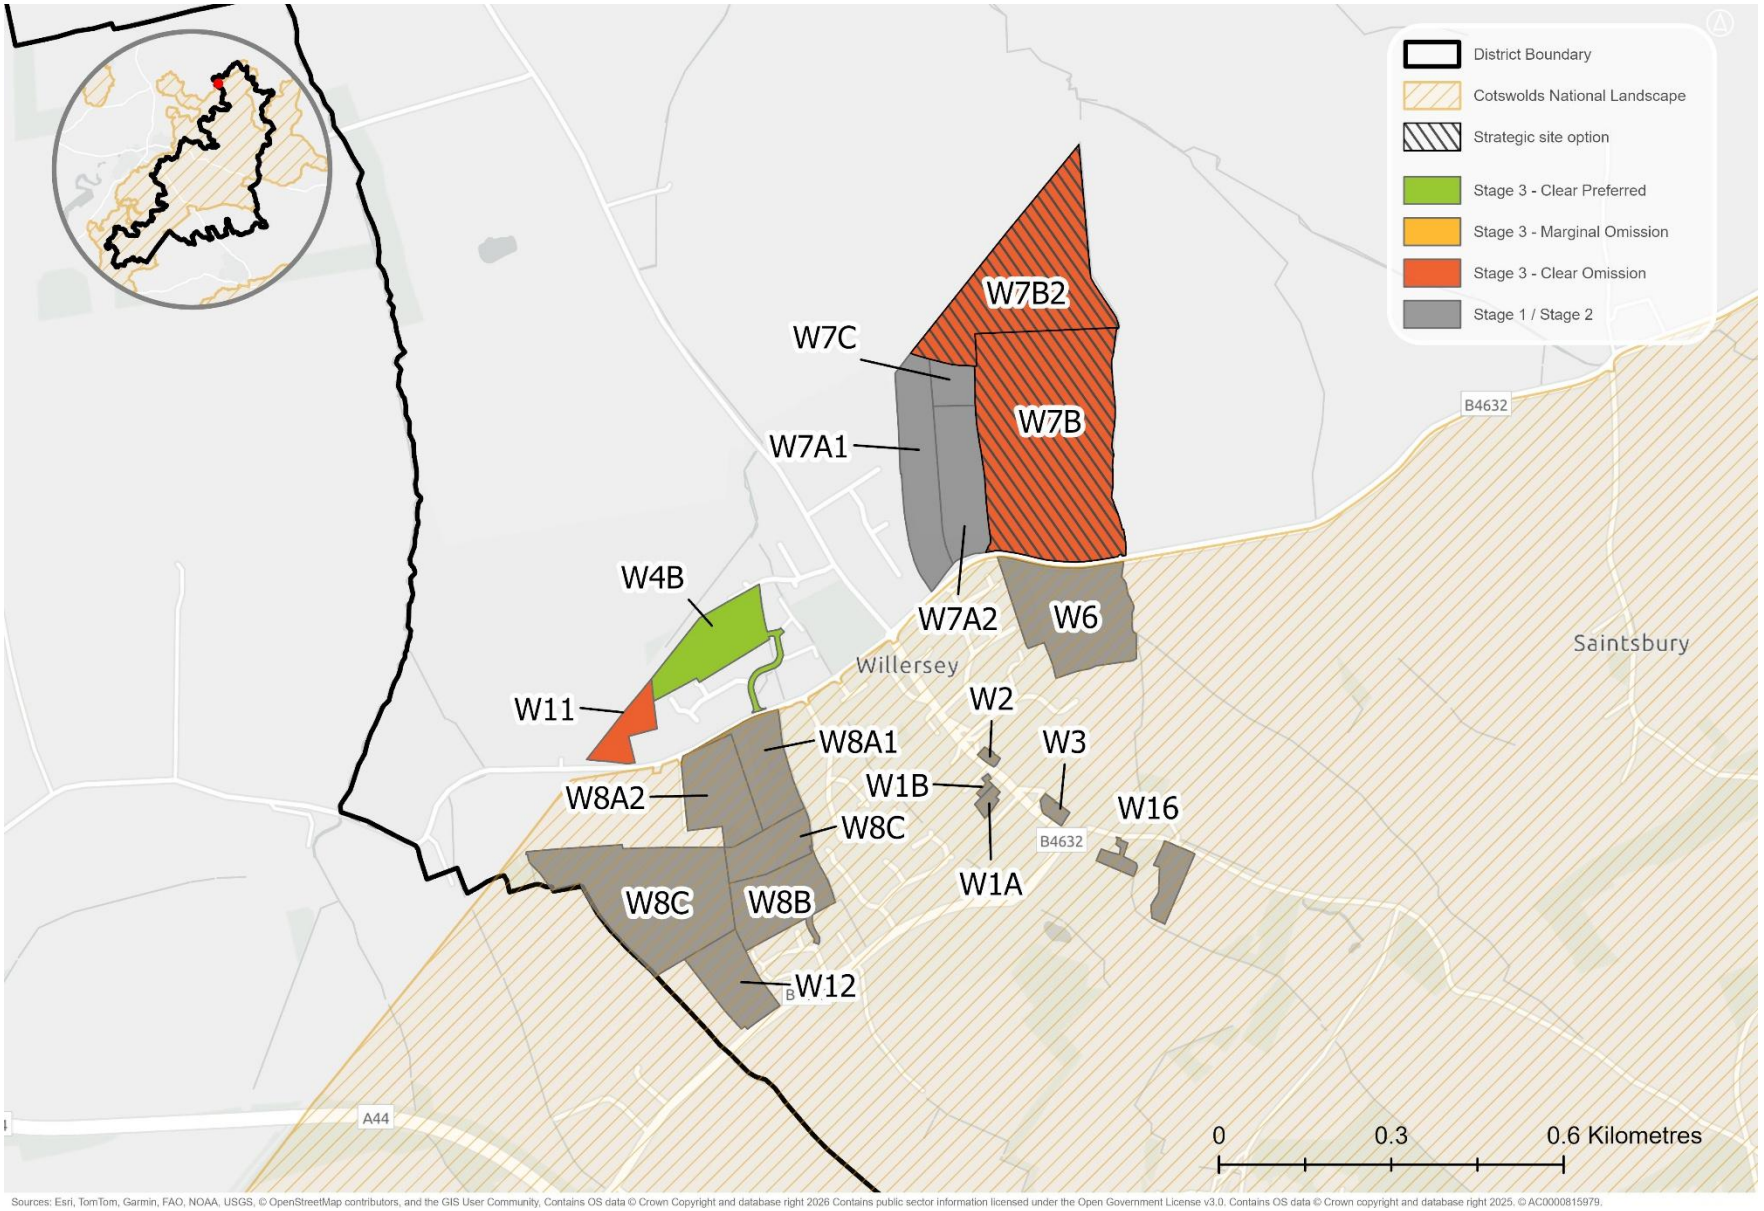
Willersey

6.127 Land to the east and to the south east of the village is within the Cotswolds National Landscape, with land to the south west within the neighbouring authority area of Wychavon. Most of the village within the National Landscape is also designated as a Conservation Area, containing several Grade II Listed Buildings and the Grade I Listed 'Church of St Peter'.

6.128 The Study of Land Surrounding Settlements (July 2026) states that the southern part of the village is a more sensitive landscape consisting of smaller fields and hedges with more trees and occasional blocks of woodland. Land to the north, north east, and north west of the village is comparatively unconstrainted, albeit within the setting of the National Landscape. A corridor of land within Flood Zone 2 and Flood Zone 3 follows the watercourse to the west of the village and forms the boundary between Cotswold District and Wychavon District.

6.129 The following sites (or clusters of sites) have been taken forward to Stage 3 of the site selection process for a potential sustainable urban extension: 'Cluster of sites to the north of Willersey' (W7B, W7B2).

6.130 Within the HELAA, of the sites which are classified as 'potentially deliverable / developable' or 'deliverable / developable' for non-strategic scale development at Willersey:



- W7A1 has full planning permission for residential development but is not yet built out. The site is considered deliverable within the first five years of the plan period.
- W7A2 and W7C have a resolution to grant permission for 60 homes, and W8B has a resolution to grant permission for 30 homes.
- W8A1, W8A2, and W8C are classified as having a 'medium to high' sensitivity within the Study of Land Surrounding Settlements (July 2026).

6.131 Reflecting the above, the following non-strategic site options have been considered in detail through Stage 3 of the site selection process, specifically: W4B and W11. The assessment findings are presented in the table below and accompanying map.

Site ref.	Site name	Site assessment findings	Site rating
W7B, W7B2 (Sustainable Urban Extension)	Cluster of sites to the north of Willersey	The site comprises a large greenfield site to the north of Willersey and is wholly within Grade 3 agricultural land. The site is located adjacent to, and closely connected with, the Cotswolds National Landscape. Development would result in the loss of agricultural land and would represent a substantial extension to the village that is significant in scale relative to Willersey and does not reflect the existing pattern of development. The site benefits from an existing access from the south-west, and a planning application is currently pending on adjacent land that proposes use of the same access arrangements. The site contains ridge and furrow features across its entirety, which are identified as a Non-Designated Heritage Asset and contribute to the site's rural character and historic landscape significance. These features are closely related to similar ridge and furrow land within the Cotswolds National Landscape and contribute to its wider setting and cultural connection. Development of the site would therefore have the potential to adversely affect both the historic landscape character of the area and the setting of the National Landscape. The site is considered a **Clear Omission Site Option (--)**, as its scale would represent a substantial extension to Willersey, resulting in significant harm to the rural landscape, the setting of the Cotswolds National Landscape and the extensive ridge and furrow Non-Designated Heritage Asset present across the site.	--
W4B	Land between Colin Lane and future	The site comprises greenfield land adjacent to Willersey and lies outside the Cotswolds National Landscape. The site comprises Grade 3 agricultural land and would result in the loss of agricultural land if developed. The site benefits from a strong and defensible	++

Site ref.	Site name	Site assessment findings	Site rating
	Heritage Railway	northern boundary formed by the heritage railway line, helping to contain development and limit encroachment into the wider countryside. Overall, the site is considered a **Clear Preferred Site Option (++)**, as it is well related to the existing settlement, lies outside the Cotswolds National Landscape and benefits from a clear defensible boundary. There are no significant landscape, heritage, ecological or infrastructure constraints that would be likely to preclude development, and the identified constraints are considered capable of mitigation through the development process.	
W11	Land between substation and future railway line, Colin Lane	The site comprises greenfield land on the north-western edge of Willersey and is affected by areas of groundwater flood susceptibility. The site comprises Grade 3 agricultural land and lies outside the Cotswolds National Landscape. The site is adjacent to the Broadway Substation and is crossed by existing energy infrastructure, which would constrain the developable area and may affect the viability of development. The site does not currently have direct access to the road network and would need to be brought forward comprehensively alongside adjoining land to secure suitable access arrangements. The site contributes to the agricultural landscape surrounding Willersey and retains a semi-rural character despite the influence of nearby utility infrastructure. The presence of ridge and furrow earthworks, which represent an important historic landscape feature, contributes to the site's local distinctiveness. Whilst visibility is relatively limited and the site is reasonably contained, these heritage features elevate its overall sensitivity. The site has been assessed as having a medium landscape sensitivity.	**--**

Site ref.	Site name	Site assessment findings	Site rating
		Overall, the site is considered a **Clear Omission Site Option (--)**, as the absence of independent access, reliance on comprehensive development with adjoining land, the presence of ridge and furrow earthworks, and significant constraints associated with existing energy infrastructure reduce its suitability and likely deliverability during the plan period.

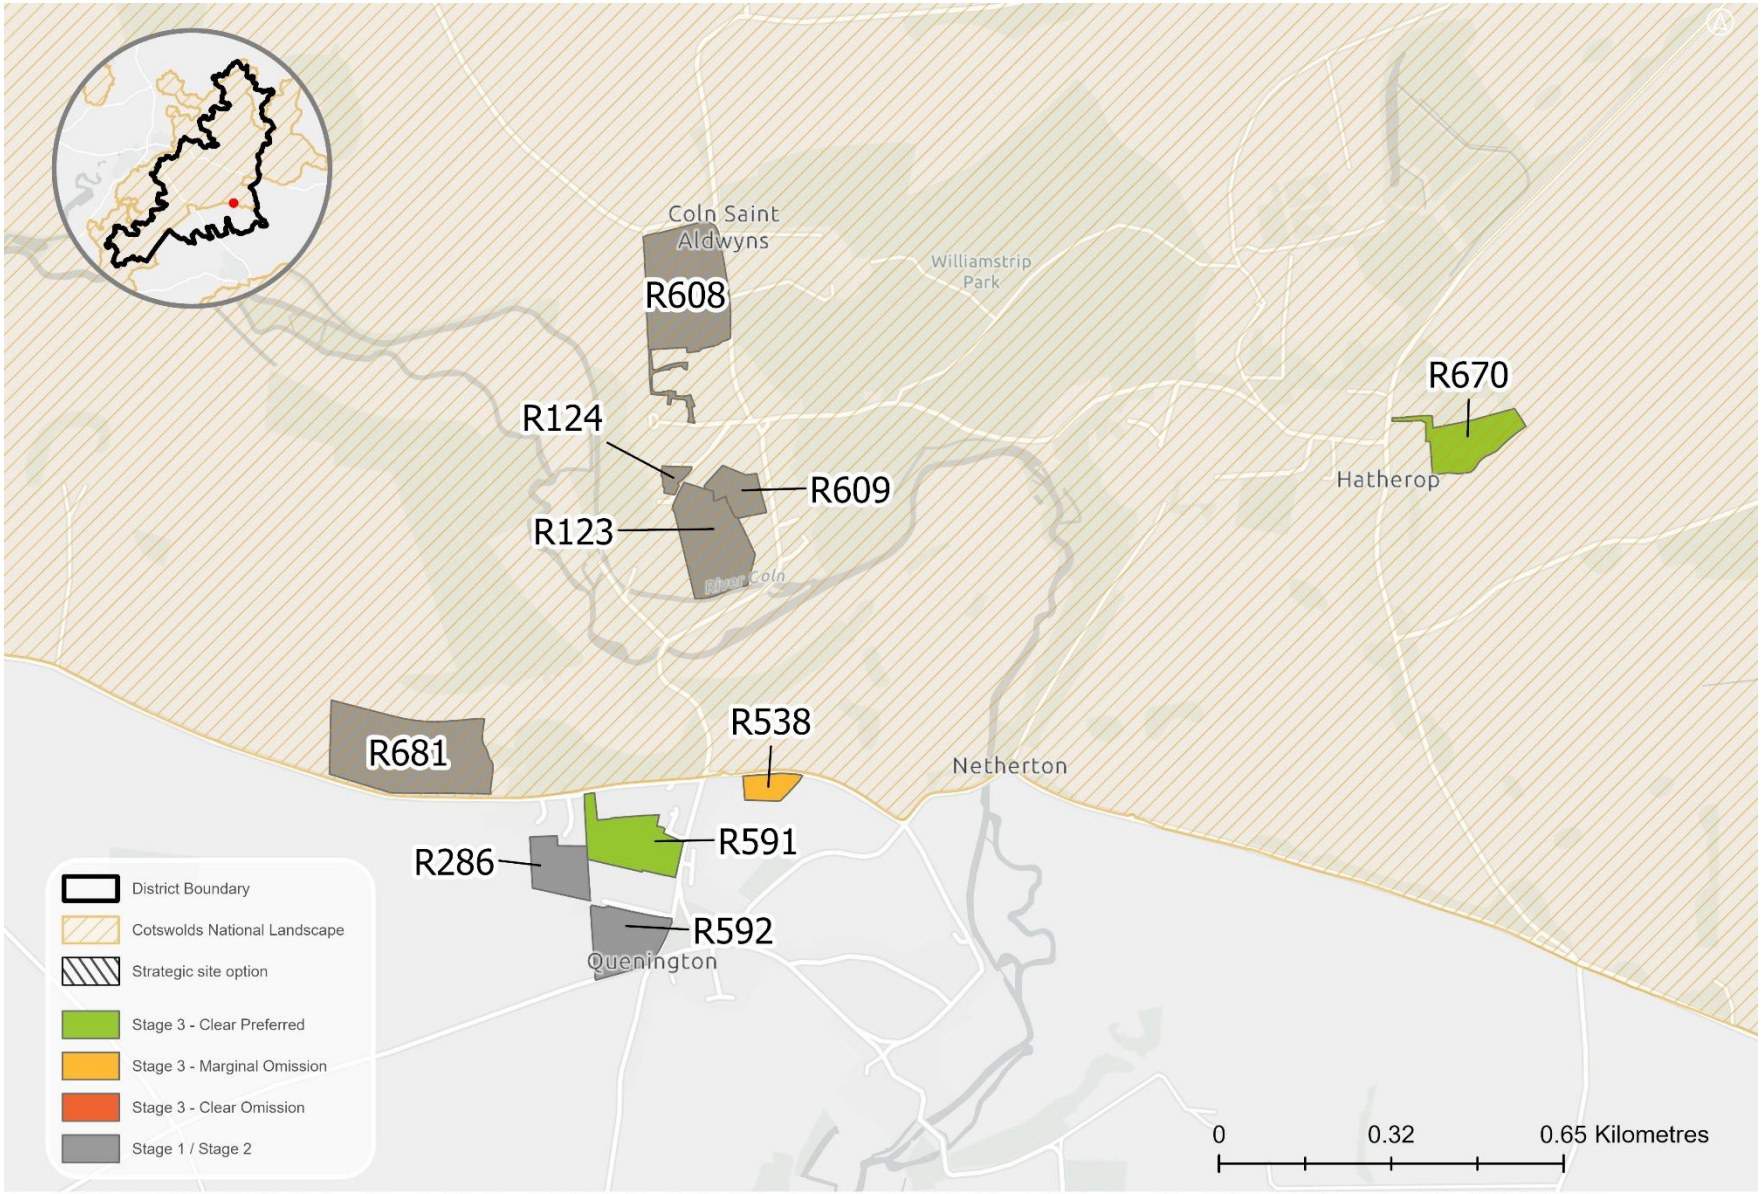
Village cluster of Coln St Aldwyns, Hatherop, and Quenington

6.132 Coln St Aldwyns and Hatherop are within the boundaries of the Cotswolds National Landscape, with Quenington directly to the south and within its setting. The River Coln meanders between the villages, with a corridor of land adjacent to the watercourse within Flood Zone 2 and Flood Zone 3. Most of the land between the villages forms part of the Grade II Listed 'Hatherop Castle' Historic Park and Garden, with the villages themselves containing designated Conservation Areas. There are areas of Deciduous Woodland Priority Habitat (including some areas of Ancient Woodland) to the west of Coln St Aldwyns, to the north of Hatherop, and to the north of Quenington.

6.133 The Study of Land Surrounding Settlements (July 2026) states that Coln St Aldwyns, Hatherop and Quenington exhibit generally high landscape sensitivity due to their location within the Coln Valley and the strong relationship between the settlements, the river corridor and the surrounding agricultural landscape. The River Coln and associated floodplain, meadows, watercourses and riparian vegetation form key components of local character and are particularly sensitive to change. Development which adversely affects these features could diminish the distinctive valley character and setting of the settlements. The undeveloped countryside between and surrounding the settlements plays an important role in maintaining their separate identities and preventing the perception of coalescence within the valley.

6.134 Within the HELAA, of the sites which are classified as 'potentially deliverable / developable' or 'deliverable / developable' for non-strategic scale development at the village cluster of Coln St Aldwyns, Hatherop, and Quenington:



- R123, R608, and R609 in Coln St Aldwyns are excluded at Stage 1 of the Study of Land Surrounding Settlements due to the following factors: adjacent to / within designated heritage features; falls within clear views from public vantage points; introduce a significant area of built form into a rural or visually sensitive landscape; located on prominent ridgelines, escarpments or high ground (for R123); and would extend settlement in an uncharacteristic direction or weaken form (for R123 and R608).
- R681 in Quenington is also excluded at Stage 1 due to the factors listed above for the three Coln St Aldwyns sites. This is the only available site option in Quenington which is within the Cotswolds National Landscape.

6.135 Reflecting the above, the following non-strategic site options have been considered in detail through Stage 3 of the site selection process, specifically: Quenington (R538 and R591) and Hatherop (R670). The assessment findings are presented in the table below and accompanying map.

Site ref.	Site name	Site assessment findings	Site rating
R538	Land at Stonyfell, Quenington	The site comprises an existing residential curtilage on the north-eastern edge of Quenington and is located within the Coln Valley north of Fairford Special Landscape Area. The site is affected by the Fairford and Brize Norton Airfield Safeguard Areas and areas of groundwater flood susceptibility. The site benefits from an existing access, although further investigation may be required to determine whether suitable visibility and access arrangements could be achieved for any material increase in use. The site is strongly associated with the existing settlement pattern along Fowlers Hill and benefits from a high degree of enclosure provided by mature vegetation. The site has been assessed as having medium-low landscape sensitivity, reflecting its established residential character, limited visibility and relatively modest contribution to the wider landscape. However, the site contributes to the setting of the Quenington Conservation Area and the Special Landscape Area, and development would need to carefully consider these sensitivities. Overall, the site is considered a **Marginal Omission Site Option (-)**, as its small size, limited development capacity, access constraints and contribution to the setting of the Conservation Area and Special Landscape Area reduce its suitability.	**-**
R591	Former Godwin Pumps Factory, Springfield Road, Quenington	The site comprises a brownfield employment site to the north of Quenington and is currently in active use. The site is adjacent to the existing settlement and benefits from established access arrangements. The site lies within the Fairford and Brize Norton Airfield Safeguard Areas and is affected by areas of groundwater flood susceptibility. A very small proportion of the site falls within the Coln Valley north of Fairford Special Landscape Area, although this is limited in extent and is unlikely to represent a	**++**

Site ref.	Site name	Site assessment findings	Site rating
		significant constraint. The site had a planning application for 47 homes pending as of July 2026. Overall, the site is considered a **Clear Preferred Site Option (++)**, as it comprises previously developed land well related to the existing settlement and offers potential for redevelopment in the event that the current employment use is no longer required.	
R670	Glebe Farm Yard, Hatherop	The site comprises a brownfield farmyard complex to the east of Hatherop and is wholly located within the Cotswolds National Landscape. The site comprises Grade 3 agricultural land and is affected by the Fairford and Brize Norton Airfield Safeguard Areas, together with areas of groundwater flood susceptibility. A small part of the site falls within the Hatherop Conservation Area and development would therefore need to carefully consider and mitigate any potential heritage impacts. The site benefits from an existing access road from the north-west which appears capable of accommodating development and is likely to be suitable for intensification. The site has been identified as having medium to medium-high landscape sensitivity, although it comprises an existing modern farmyard and is seen in the context of surrounding village development rather than as an isolated or undeveloped landscape feature. Evidence indicates that the site can reasonably be regarded as part of the existing settlement and that redevelopment has the potential to reduce the prominence of existing built development and improve the landscape setting of the village. Subject to	++

Site ref.	Site name	Site assessment findings	Site rating
		an appropriate scale, design and layout, development also has the potential to preserve or enhance the character and setting of nearby heritage assets. Overall, the site is considered a **Clear Preferred Site Option (++)**, as it comprises previously developed land that is closely related to the existing settlement and there is evidence that development could be accommodated without unacceptable impacts on the Cotswolds National Landscape or nearby heritage assets. However, its location within the National Landscape and its medium to medium-high landscape sensitivity will need to be reflected within the design of any new development areas.

7. Stage 4: Selecting the draft allocations

7.1 The proposed site allocations comprise all of the 'Clear Preferred' site options identified through Stage 3 of the site selection process. A total of 11,284 homes and the full residual employment land requirements are to be delivered across ten strategic site allocations for mixed-used development. Additionally, a total of 1,551 homes will be delivered across 32 non-strategic site allocations. Alongside the saved allocations, known commitments, and anticipated windfall for housing, the proposed site allocations will meet and exceed LHN. This includes an approximate 5% headroom in the interest of providing for flexibility and contingency. Housing trajectory work has been completed to ensure that there is sufficient supply during the first part of the plan period to maintain a five-year housing land supply and in recognition of the fact that the proposed strategic site allocations have longer lead-in times.

7.2 The proposed strategic site allocations (which include nine 'sustainable urban extensions' and one 'new settlement') have been subject to further engagement with site promoters and key stakeholders to help refine the exact nature of any proposals and the policy requirements for each site. Detailed masterplanning and transport modelling for the strategic allocations has been informed by this process. The Statement of Effective Cooperation Topic Paper (July 2026) sets out the detail in relation to the efforts undertaken to incorporate joint working with key stakeholders for the emerging Cotswold District Local Plan.

7.3 The approach to meeting employment land requirements during the plan period focuses on safeguarding and expanding employment provision on existing sites and delivering mixed-use development across strategic sites. Planning for larger scale development across strategic sites will help to ensure that that their size and location will support a sustainable community with access to services and employment opportunities. Further detail can be found within the Employment Land Review (2026).

7.4 All of the proposed site allocations are accompanied by development templates and design briefs within the emerging Cotswold District Local Plan which consider and address any outstanding constraints to development which have been identified through the findings of the Site Selection Topic Paper and wider evidence base for the emerging Local Plan.

Appendix 4 - Windfall Evidence

1. Introduction

1.1 This evidence paper sets the housing requirements and land supply position of Cotswold District for the Regulation 19 Publication Local Plan 2026 to 2043 (the emerging Local Plan). This includes deliverable and developable sites, saved and proposed allocations, windfalls, and required buffers.

1.2 A local housing need (LHN) figure of 1,054 dwellings per annum is used for the emerging Local Plan, based on the Government's Standard Method[1]. This is apportioned across a stepped residual housing requirement within the housing trajectory over the 2026 to 2043 Plan period, enabling the full LHN to be delivered. This allows sufficient time for the significant uplift to housing requirement to be delivered[2].

1.3 The emerging Local Plan seeks to provide sufficient housing land supply to deliver in excess of the stepped requirement for the Plan period, and maintain a five year housing land supply of deliverable housing sites (5YHLS) over time, including the anticipated 5% or 20% buffer on the 5YHLS required by national policy. The housing requirement over the Plan period is 17,918 net dwellings (i.e. 17 years x 1,054 homes per year).

1.4 Over the Plan period, 18,911 homes are planned for, which provides 5.5% more homes than the LHN (known as headroom). The headroom is needed to provide flexibility in case some sites are not delivered as expected.

1.5 The Council has been unable to demonstrate a 5YHLS since the introduction of the NPPF in December 2024, following amendments to the Standard Method calculation of the LHN. This undersupply is likely to continue until the new Local Plan is adopted.

1.6 The current Housing Delivery Test (HDT) measurement indicates that the Council met 95% of its housing requirement over the previous three-year period[3]. In accordance with the NPPF (December 2024) paragraph 79 the Council is currently required to provide a 5% buffer on its 5YHLS.

[1] Identified by the national Planning Practice Guidance for Housing and economic needs assessment as of July 2026 (https://www.gov.uk/guidance/housing-and-economic-development-needs-assessments)
[2] When the NPPF was published in December 2024, the housing need was 495 homes a year and the residual 2011-31 Local Plan housing requirement was 250 homes a year.
[3] Housing Delivery Test: 2023 measurement (MHCLG, 12 December 2024)

1.7 Nevertheless, given the quantum by which the Council has under delivered dwellings against the revised Standard Method over the previous two monitoring years, it is anticipated that the Council will soon not meet the HDT requirement for delivering over 75% of the housing requirement over the previous three years. Given the projected rates of delivery compared to the current housing requirement, this position is expected to remain for several years to come. The Council has therefore taken a precautionary approach and has applied a 20% buffer to the housing requirement for the first three years of the emerging Local Plan period for the purpose of measuring the 5YHLS[4]. Within a few years of the adoption of the Local Plan the Council would anticipate delivery of at least 85% of its HDT requirement, at which point a 5% buffer would apply.

1.8 The relevant 5% and 20% buffers will be accommodated for within the housing trajectory. These have been brought forward from years 6-15 (post adoption).

1.9 Of the 18,911 net dwellings anticipated over the Plan period these are expected to come forward through various sources, as shown in **Table 1**.

Table 1: Cotswold Housing Requirement and Housing Supply 2026 to 2043

Category		**Number of dwellings**
Housing requirement for the full Plan period (April 2026 to March 2043)		17,918
Housing Completions		0
Housing Supply	Known commitments	1,570*
	Strategic Allocations	11,302
	Non-Strategic Allocations	1,468
	Saved Allocations	2,282
	Windfalls	2,289
Total Housing Supply		**18,911**

*Includes 164 dwellings from additional major development permitted since 1 April 2026

[4] Paragraph 78 of the NPPF (December 2024)
https://assets.publishing.service.gov.uk/media/67aafe8f3b41f783cca46251/NPPF_December_2024.pdf

2. Deliverable and Developable Sites

Deliverable sites

2.1 NPPF (December 2024) paragraph 72 requires a supply of specific, deliverable sites for five years following the intended date of adoption of the emerging Local Plan. Deliverable sites in this report cover the 5YHLS following the intended adoption of the emerging Local Plan, 1 April 2028 to 31 March 2033.

2.2 The Planning Practice Guidance (PPG) on Housing supply and delivery provides explanation about what other information is required to demonstrate the deliverability of sites that have outline planning permission for major development (i.e. sites of 10 or more dwellings); are allocated in a development plan; have a grant of permission in principle; or are identified on a brownfield register.

> *"Such evidence, to demonstrate deliverability, may include:*
>
> - *current planning status – for example, on larger scale sites with outline or hybrid permission how much progress has been made towards approving reserved matters, or whether these link to a planning performance agreement that sets out the timescale for approval of reserved matters applications and discharge of conditions;*
> - *firm progress being made towards the submission of an application – for example, a written agreement between the local planning authority and the site developer(s) which confirms the developers' delivery intentions and anticipated start and build-out rates;*
> - *firm progress with site assessment work; or*
> - *clear relevant information about site viability, ownership constraints or infrastructure provision, such as successful participation in bids for large-scale infrastructure funding or other similar projects."* [5]

2.3 **Appendix 1a** and **1b** includes an assessment of whether all major sites and proposed allocations are considered deliverable. This is summarised in **Appendix 1a** with individual templates completed in **Appendix 1b.**

[5] PPG on 'Housing supply and delivery'. Paragraph: 007 Reference ID: 68-007-20190722. Revision date: 22/07/2019

Developable sites

2.4 NPPF (December 2024) paragraph 72 also requires a supply of developable sites or broad locations for growth for years 6-10 and, where possible, for years 11-15 following the intended date of adoption of the emerging Plan. Developable sites should be in a suitable location for housing development. There should also be a reasonable prospect that the site will be available and can be viably developed at the point envisaged [6]. Developable sites in this report cover the period 1 April 2033 to 31 March 2043.

2.5 The PPG on Housing supply and delivery provides further clarity on what constitutes a developable site.

> "*In demonstrating that there is a 'reasonable prospect' plan-makers can use evidence such as (but not exclusively):*
>
> - *written commitment or agreement that relevant funding is likely to come forward within the timescale indicated, such as an award of grant funding;*
> - *written evidence of agreement between the local planning authority and the site developer(s) which confirms the developers' delivery intentions and anticipated start and build-out rates;*
> - *likely buildout rates based on sites with similar characteristics; and*
> - *current planning status - for example, a larger scale site with only outline permission where there is supporting evidence that the site is suitable and available, may indicate development could be completed within the next 6-10 years.*
> - *A pragmatic approach is appropriate when demonstrating the intended phasing of sites. For example, for sites which are considered developable within 6-10 years, the authority may need to provide a greater degree of certainty than those in years 11-15 or beyond. When producing annual updates of the housing land supply trajectory, authorities can use these to provide greater certainty about the*

[6] NPPF (December 2024) Glossary: Definition of a 'Developable site'

delivery of sites initially considered to be developable, and those identified over a longer time span." [7]

3. Proposed Allocations

3.1 The emerging Local Plan seeks to ensure the delivery of sufficient housing to maintain a 5YHLS throughout the Plan period. To support this, a number of strategic and non-strategic sites are proposed for allocation.

3.2 There are 10 strategic sites proposed, which are expected to accommodate 11,302 dwellings over the Plan period. Additionally, there are 33 non-strategic sites expected to accommodate 1,468 dwellings over the Plan period.

3.3 The Council has individually assessed each allocated site and considered whether the evidence indicates which sites are deliverable within five years, having regard to factors such as developer interest, site control, planning progress, infrastructure provision, viability, lead-in times and anticipated build-out rates. Where that evidence demonstrates a realistic prospect of delivery within five years, sites (or parts of sites) have been included within the deliverable supply for years 1-5; where delivery is more likely beyond that period, they have been included within the developable supply for years 6–15.

Strategic sites

3.4 The 10 proposed strategic allocations mostly comprise mixed-use developments, incorporating residential and other uses, such as employment, education, green and blue infrastructure, and other community uses.

3.5 The indicative residential capacity calculations for strategic sites have been based on site specific concept masterplan frameworks, which form part of Appendix B of the emerging Local Plan, and are summarised in **Table 2**.

[7] PPG on 'Housing supply and delivery': Paragraph: 011 Reference ID: 68-020-20190722. Revision date: 22/07/2019

Table 2: Proposed strategic sites and their capacities

Name of allocation	Capacity
Steadings southern extension, Cirencester	1,364 (585 delivered in the Plan period)
Land south east of Cirencester and south of Preston	1,368
Land east of Kingshill Lane, Preston	613
Land south west of Siddington	372
Land surrounding Down Ampney	1,658
Land south of Driffield	2,222 (1,090 delivered in the Plan period)
Land north east of Fairford	1,141
Land south west of Kemble	1,020
Land north and west of Mickleton	1,238
Land east and south of Moreton-in-Marsh	2,217

3.6 Delivery on strategic sites is expected primarily within the 6-15 years period, with two strategic sites continuing to deliver beyond the end of the Plan period in 2043. This is shown in **Appendix 2** the housing trajectory.

3.7 The anticipated delivery trajectory for these sites has been informed by independent advice prepared by Iceni Projects[8], drawing on information supplied by the relevant landowners / promoters, comparable site delivery rates, lead-in times and market factors. Several allocations, including those at Land south east of Cirencester and south of Preston, Down Ampney, Mickleton and Moreton-in-Marsh, have already made substantial progress towards development, with site assessments advancing and, in some instances, planning applications having been submitted on some sites. This provides additional confidence in the realism and deliverability of the proposed trajectory.

3.8 The Council has engaged with landowners and promoters to establish a clear understanding of delivery assumptions. This has been supported through the preparation of Memoranda of Understanding (MoUs) where possible, which set out indicative delivery trajectories and demonstrate a shared commitment to bringing sites forward. While not legally binding, these agreements provide

[8] Cotswold Housing Delivery Study (Iceni, June 2026)

supporting evidence of deliverability and developability. The rationale for the trajectory on the sites is shown within **Appendix 1a**.

3.9 Several proposed strategic allocations have already progressed site investigations, masterplanning, technical assessments and pre-application engagement. A number are expected to be capable of submitting planning applications prior to Local Plan adoption.

Non-strategic sites

3.10 The 33 non-strategic sites are at varying stages of progress, ranging from schemes with planning applications under consideration, to sites at an early stage of promotion.

3.11 The indicative residential capacity calculations for non-strategic sites have been based on site specific capacity estimates, including key constraints and potential densities. Site Development Templates setting this out are provided in Appendix C of the emerging Local Plan.

3.12 Given their smaller scale and based on an assessment of their deliverability / developability, a proportion of these sites will be capable of delivery within the first five years following the intended adoption of the emerging Plan. However, considering lead-in times for allocation, planning permission and site commencement, it is anticipated that completions will generally begin from 1 April 2030 onwards.

3.13 Some of the proposed non-strategic site allocations have already had applications for full or outline planning permission submitted. These have been considered within the proposed allocations, with the trajectory on the sites reflective of their progression.

3.14 To support the deliverability / developability assumptions, the Council has engaged with site promoters and landowners to establish their expected delivery trajectories and demonstrate a shared commitment to bringing non-strategic sites forward, including, where possible, to secure a MoU to this effect. A more cautious approach has often been taken by the Council regarding the speed of delivery of sites compared to the site promoter's estimations. In combination with other factors, such as progression towards the submission of a planning application and land ownership, where there is clear evidence to support anticipated delivery rates, the Council has included non-strategic site

allocations (or a portion of these sites) within the 5YHLS. This is outlined within **Appendix 1a**.

4. Saved Allocations

Chesterton Strategic Site, Cirencester (The Steadings) – Proposed saved strategic allocation

4.1 The Steadings is a mixed use development, located on the southern edge of Cirencester. It includes the erection of up to 2,350 dwellings (including up to 100 units of student accommodation and 60 homes for the elderly), 9.1 hectares of employment land (B1, B2 and B8 uses), a primary school, a neighbourhood centre including A1, A2, A3, A4 and A5 uses as well as community facilities (including a health care facility D1), public open space, allotments, playing fields, pedestrian and cycle links (access points onto Tetbury Road, Somerford Road and Cranhams Lane) landscaping and associated supporting infrastructure to include vehicle access points from Tetbury Road, Spratsgate Lane, Wilkinson Road and Somerford Road.

4.2 The developer (Savills on behalf of Bathurst Developments Ltd. (BDL)) has provided an update on the various factors that affect the delivery trajectory for the site. The Council has produced a commentary, which sets out the recent work that has been completed (see **Appendix 3**). This includes the progress on discharging planning conditions, installing infrastructure, securing house builders and delivery partners, and preparing reserved matters planning applications. The developer has also provided an update to their delivery trajectory in **Appendix 3a**, which shows the position as of 2 July 2026.

4.3 The developer's update from July 2026 explains that the development is now expected to deliver 609 dwellings across the site in the five year period following the intended adoption of the Local Plan (April 2028 to March 2033), with an additional 1,635 within the emerging Plan period. This is in addition to the 68 already completed and expected in the years prior to the anticipated adoption of the emerging Local Plan. The full allocation will be delivered by the end of the emerging Local Plan period.

4.4 The Council has reviewed BDL's delivery estimations. There is clear evidence that the site will deliver 609 dwellings between April 2028 and March 2033.

4.5 It is possible to compare whether the overall picture for the site looks credible against recent industry research (e.g. Lichfields' updated Start to Finish report[9]). Lichfields' evidence indicates that the lower quartile to upper quartile average build-out rate for sites of 2,000+ homes is between 100 and 188 dwellings per annum (dpa). The Steadings' delivery trajectory is programmed to deliver a peak of 208 dpa up to 2043. This exceeds the upper quartile average identified by Lichfields, although remains lower than maximum build-out rates identified within the research. Given the strength of housing demand in the District, high house prices and the proportion of affordable housing proposed, delivery rates in excess of 188 dpa may be achievable. Nevertheless, the Council considers it appropriate to apply the more cautious upper quartile rate of 188 dpa within the trajectory. Applying this maximum build-out rate until 2042/43 would still enable the full allocation to be delivered within the emerging Plan period. The trajectory has therefore been amended to reflect a maximum build-out rate of 188 dpa. Delivery assumptions for the site are considered further in the Housing Delivery Study (Iceni, July 2026).

5. Known Commitments and Additional Major Development

5.1 As of 1 April 2026, there were extant planning permissions 3,798 net dwellings in the District[10]. The extant planning permissions at The Steadings (2,282 dwellings) are considered separately in Section 4 (Saved Allocations). Furthermore, an extant planning permission for 110 dwellings at Brewery Court, Cirencester has been discounted from the emerging Local Plan housing supply, as this is no longer considered to be developable (ref: 14/01529/FUL). Of the remaining 1,406 dwellings, 1,405 are considered to be either deliverable within the first five years following the adoption of the emerging Plan, or likely to have already been completed prior to adoption. The remaining 1 dwelling remains developable in the Plan period.

[9] https://lichfields.uk/media/w3wjmws0/start-to-finish-3_how-quickly-do-large-scale-housing-sites-deliver.pdf

[10] Residential Land Monitoring Statistics 2025/26 (CDC, July 2026) – Table 10

5.2 Most of the sites which are considered as deliverable within five years of the anticipated adoption of the emerging Local Plan have full planning permission or have outline consent but are not major development. These are therefore considered deliverable.

5.3 Only two major development sites (10 or more dwellings) with planning permission at 1 April 2026 are Outline consents[11]. The agents/developers of these sites have been contacted and have confirmed the timescales of their intentions to submit follow up reserved matters applications, when they will commence on-site and their expected completions. Given this, it is considered that the sites are capable of delivery of some housing within five years of the adoption of the emerging Local Plan.

5.4 In addition, the Council has granted or resolved to grant planning permission for three major developments since 1 April 2026, totalling 164 dwellings. These were already being considered as potential emerging Local Plan site allocations but given their current planning status, they have instead been considered as committed developments[12]. It is considered that some dwellings on these sites will be deliverable within five years of the anticipated adoption of the emerging Local Plan.

6. Windfall Sites

6.1 Annex 2 (the Glossary) of the NPPF (December 2024) defines windfall sites as "*Sites not specifically identified in the development plan*." NPPF (December 2024) paragraph 75 explains how windfalls should be considered in the 5YHLS:

> "*Where an allowance is to be made for windfall sites as part of anticipated supply, there should be compelling evidence that they will provide a reliable source of supply. Any allowance should be realistic having regard to the strategic housing land availability assessment, historic windfall delivery rates and expected future trends*."

[11] 25/02983/OUT Land North Of Folly View, Broadway Road and 24/02854/OUT Land west of Kingshill Lane

[12] 54 dwellings at Land North Of The Wern Lechlade (ref: 24/03501/OUT); 50 dwellings at Land adjoining East End and Nostle Road, Northleach (ref: 26/00613/OUT); and 60 dwellings at Land north of B4632 and east of employment estate, Willersey (ref: 25/02687/FUL).

6.2 The PPG further explains that:

> "*Local planning authorities have the ability to identify broad locations in years 6-15, which could include a windfall allowance based on a geographical area (using the same criteria as set out in the NPPF).*"[13]

Historic windfall delivery

6.3 Cotswold District has a historic trend of consistently delivering windfalls, with the type of dwellings categorised as windfalls expanded following the update to the definition in the NPPF (December 2024).

6.4 When reviewing the historic windfall data, consideration has been given to Cotswold District not having an up-to-date Development Plan between 1 April 2011 and 2 August 2018. Any dwellings delivered in this period that were not allocated in the adopted Cotswold District Local Plan (2011-31) are technically windfall sites under the NPPF (December 2024) definition.

6.5 Notwithstanding this, many sites delivered between April 2011 and August 2018 were identified as deliverable or developable locations for development and had the potential to be allocated in the adopted Local Plan, had a Local Plan been in place. Instead, these sites gained planning permission and delivered housing before the Local Plan was adopted. To address this, the historic windfall figures were adjusted using a set of assumptions: sites identified in the Strategic Housing and Economic Land Availability Assessment (SHELAA) and capable of delivering five or more dwellings within or adjoining the District's Principal Settlements were treated as potential allocations, while all other completions, including 1-4 dwelling sites, those in open countryside, and permissions granted post-adoption on non-allocated sites, were classified as windfalls.

6.6 The historic windfall delivery figures incorporate both large and small sites. Indeed, 31 large sites (10 or more net dwellings) have contributed towards windfall delivery in Cotswold District since April 2011. These developments delivered 736 windfalls, which is 49 dwellings per annum on average.

6.7 A schedule of all windfalls delivered since 2011 is provided at **Appendix 4** and a summary is provided in **Table 3**. Taking an average of windfall delivery over

[13] PPG on 'Housing and economic land availability assessment'. Paragraph: 023 Reference ID: 3-023-20190722. Revision date: 22/07/2019.

the first 15 years of the adopted Local Plan period flattens out any peaks and troughs in windfall delivery rates. On average, 153 windfalls per annum have been delivered over the past 15 years.

Table 3: Historic windfall delivery

Year	Windfall completions
2011/12	121
2012/13	136
2013/14	83
2014/15	110
2015/16	164
2016/17	208
2017/18	153
2018/19	230
2019/20	171
2020/21	91
2021/22	105
2022/23	208
2023/24	276
2024/25	120
2025/26	112

Future trends

6.8 Careful consideration has also been given to any future trends in windfall delivery to understand whether future windfall delivery rates are likely to increase or decrease. Emerging national policy reforms are expected to remain supportive of sustainable windfall development.

Continued windfall delivery on large sites

6.9 Looking to the future, policies within the emerging Local Plan enable the continued delivery of large site windfalls in the longer-term. For example, large windfall sites can still be delivered within Non-Principal settlements, Development Boundaries, from permitted development schemes, on Rural Exception Sites, specialist accommodation developments (e.g. elderly, care or student accommodation) and so on.

Supply of potential windfall sites running out

6.10 Being a large rural area, windfall delivery in Cotswold District comes from a wide variety of sources. The District's windfalls are not delivered from a diminishing pool of brownfield infill plots; for example, windfall supply in urban authorities can be constrained by tight local authority boundaries that do not extend into

the countryside, edge of settlement designations (Green Belt) or the sea, which might mean there is a finite supply of brownfield industrial land. **Appendix 4** demonstrates the wide variety of types of windfalls delivered since 2011, which includes barn conversions, permitted development schemes, changes of use (e.g. from holiday homes to dwellings), new workers' dwellings, subdivisions, standalone developments, and many more.

Economic cycles, Covid-19, Brexit and the Cost of Living crisis

6.11 High house prices in Cotswold District provide a strong financial incentive for residential development and have historically supported housing delivery, including during periods of economic uncertainty. Although house price growth has moderated in recent years, values remain comparatively high, helping to sustain development viability and supporting the continued delivery of windfall sites throughout the emerging Local Plan period

6.12 Windfall delivery has remained resilient during periods of significant disruption, including the Covid-19 pandemic, Brexit-related supply chain issues and the subsequent cost of living crisis. As shown in Table 3, windfall homes continued to be delivered throughout this period, demonstrating that windfall development remains a reliable source of housing supply. These periods of economic uncertainty are already reflected within the historic delivery rates used to derive the windfall allowance and therefore add to the robustness of the allowance. Changes in housing demand associated with increased home-working and a greater preference for larger homes and access to open space have also continued to support demand for housing in the District.

Community Infrastructure Levy

6.13 The potential impact of the Community Infrastructure Levy (CIL) on windfall delivery has been considered. Whilst most new dwellings are liable for CIL, a range of exemptions and reliefs apply, including for self-build housing, affordable housing and certain charitable developments. In addition, existing vacant floorspace can be offset against CIL liabilities, reducing costs for some schemes. The viability of the CIL charging schedule was tested through examination and continues to be considered through the preparation of the emerging Local Plan to ensure that development remains viable and deliverable.

6.14 CIL has been in operation since June 2019 and there is no evidence that it has reduced windfall delivery. Indeed, average windfall completions increased from 151 dwellings per annum between 2011/12 and 2018/19 to 162 dwellings per annum between 2019/20 and 2025/26. This indicates that CIL has not constrained the delivery of windfall development and that windfalls will continue to provide a reliable source of housing supply throughout the emerging Local Plan period.

Biodiversity Net Gain

6.15 Biodiversity Net Gain (BNG) was introduced in 2024 and has the potential to affect the viability and delivery of some windfall developments through additional land and cost requirements. However, there is currently no clear evidence that BNG has reduced windfall delivery, as completions typically occur several years after planning permission is granted.

6.16 Reforms to the BNG regime introduced from August 2026, including a new exemption for sites of 0.2 hectares or less and simplified requirements for minor developments, are expected to offset much of the additional burden on small-scale windfall schemes and help support their continued delivery.

Changes to Permitted Development rights

6.17 Successive amendments to permitted development rights between 2015 and 2024 expanded opportunities for residential conversion from agricultural, commercial, employment and other buildings.

6.18 The main boost to windfall delivery occurred in the years immediately following the introduction of The Town and Country Planning (General Permitted Development) (England) Order 2015. Overall, 71 dwellings have been permitted by the aforementioned Order and completed since 2015 as windfall sites. This contributed approximately 4.7 dwellings per annum since 2011.

6.19 A notable numbers of prior approval notifications continue to be granted (or determined not to be required) including changes of use from Class E or agricultural buildings to residential[14]. This indicates that there remains a supply

[14] In the year 2025/26 39 dwellings were granted prior approval or it was determined prior approval was not required: 25/00463/OPANOT (2 flats), 25/02200/OPANOT (19 dwellings), 25/02747/OPANOT (1 dwelling), 25/01916/OFRPAN (1 dwelling), 25/00193/AGRPAN (1 dwelling), 25/01420/AGRPAN (1 dwelling), 25/02668/AGRPAN (4 dwellings), and 25/03404/AGRPAN (10 dwellings)

of potential sites that are likely to continue coming forward as windfall development. Furthermore, the expansion of permitted development rights, including the introduction of additional use classes and amendments to existing provisions, is likely to further increase the contribution of windfall delivery.

6.20 As such, it is considered reasonable that the average of 4.7 dwellings per annum incorporated within the historic windfall would be delivered over the emerging Plan period.

Impact of NPPF (March 2012) vs NPPF (December 2024) on windfall delivery

6.21 Regarding future trends, the NPPF (December 2024) essentially relaxed planning restrictions and makes it easier to create new homes, including the restriction on 'garden grabbing'[15]. On balance, this will likely create a net increase in windfalls.

6.22 Furthermore, the Council has been unable to demonstrate a 5YHLS since the introduction of the NPPF (December 2024). Since then, the housing policies within the adopted Local Plan (2011-2031) have been considered to be out of date, and applications for residential development have been assessed against the tilted balance in paragraph 11 of the NPPF. Whilst the District is highly constrained with the National Landscape and significant numbers of conservation areas and listed buildings, this titled balance nevertheless is expected to result in an increase in the number of windfalls. This change is relatively recent, and as such the impact of these changes have not been seen but are expected to gradually result in higher annual windfall completions.

Applying the windfall allowance

6.23 Drawing together the supporting information on the historic windfall delivery rates and considering the various factors that will affect the future rate of windfall delivery:

(i) An average delivery rate of 153 windfalls per annum has been sustained since 1 April 2011.

[15] NPPF 2012 paragraph 48 stated "should not include residential gardens" whereas the NPPF 2024 paragraph 75 states "Plans should consider the case for setting out policies to resist inappropriate development of residential gardens, for example where development would cause harm to the local area".

(ii) Regard has been paid to the SHELAA and commitments in the housing trajectory. The District has many planning permissions that once completed will continue to deliver windfalls in future.

(iii) Future trends of windfall delivery have been considered. The evidence indicates that the historic windfall delivery rate will continue to be delivered in future and indeed could potentially increase (e.g. if the proposed NPPF changes are implemented).

6.24 There is reasonable justification to set a windfall allowance of 153 dwellings per annum to the emerging Local Plan housing trajectories.

6.25 Some of the extant planning permissions at 1 April 2026 already included in the housing trajectory will deliver windfalls. To avoid double counting and given that planning permissions generally last for three years[16], the full 153 dwelling windfall allowance is applied from 1 April 2029 onwards.

6.26 Notwithstanding this, there will be some windfalls that did not have planning permission on 1 April 2026 that will be delivered in the following three years. These should be accounted for in the housing trajectory. **Table 4** shows the number of windfalls that have been completed within one, two and three years of gaining planning permission, which is based on historical windfall delivery since 2011.

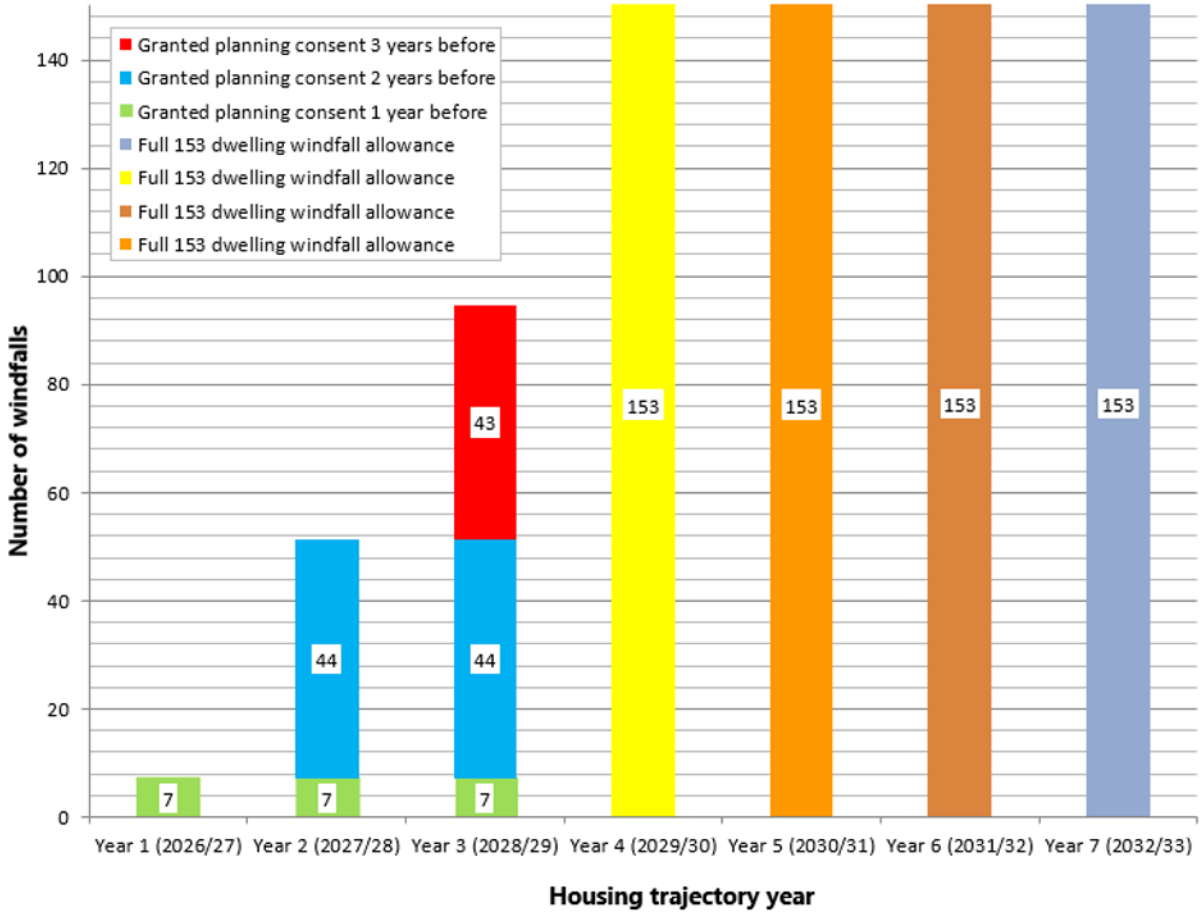
6.27 On average, 5% of windfalls are delivered in 0-1 years of gaining planning permission, 29% in 1-2 years and 28% in 2-3 years. The breakdown of applications permitted and when these delivered dwellings can be found in **Appendix 4.**

6.28 To provide a realistic housing trajectory, a reduced windfall allowance has been applied to the first three years of the 5YHLS to account of this evidence. This approach was endorsed by the Planning Inspector during the examination of the 2011–2030 Local Plan and has consequently been carried forward[17].

[16] Full and Outline planning permissions generally last for three years, although longer permissions can be granted in exceptional circumstances. Reserved Matters planning permissions generally last for two years and the prior notification time period for permitted development schemes generally lasts for five years.
[17] Paragraph 117 of the Report on the Examination of the Cotswold District Local Plan 2011-2031 https://www.cotswold.gov.uk/media/i5thlm0l/a1-1-3-cotswold-local-plan-inspector-s-report-june-2018.pdf

Table 4: Comparison of when windfalls were granted planning permission vs when they were delivered

Year	Windfall completions	0-1 year before	1-2 years before	2-3 years before	>3 years before
2011/12	121	5 (4%)	63 (52%)	18 (15%)	35 (29%)
2012/13	136	7 (5%)	52 (38%)	15 (11%)	62 (46%)
2013/14	83	27 (33%)	32 (39%)	9 (11%)	15 (18%)
2014/15	110	0 (0%)	39 (35%)	41 (37%)	30 (27%)
2015/16	164	22 (13%)	92 (56%)	48 (29%)	2 (1%)
2016/17	208	52 (25%)	82 (39%)	51 (25%)	23 (11%)
2017/18	153	-2 (-1%)	65 (42%)	63 (41%)	27 (18%)
2018/19	230	26 (11%)	30 (13%)	44 (19%)	130 (57%)
2019/20	171	46 (27%)	15 (9%)	62 (36%)	48 (28%)
2020/21	91	-60 (-66%)	29 (32%)	40 (44%)	82 (90%)
2021/22	105	-13 (-12%)	53 (50%)	17 (16%)	48 (46%)
2022/23	208	-1 (0%)	33 (16%)	119 (57%)	57 (27%)
2023/24	276	4 (1%)	35 (13%)	69 (25%)	168 (61%)
2024/25	120	4 (3%)	18 (15%)	15 (13%)	83 (69%)
2025/26	112	-10 (-8%)	25 (22%)	37 (33%)	58 (53%)
Average	**153**	**7 (5%)**	**44 (29%)**	**43 (28%)**	**58 (38%)**



Note: Figures may not add up to 100% due to rounding. Also note that minus figures are due to demolitions. Also note: Minus figures relate to demolitions.

6.29 **Figure 1** illustrates how the allowance is applied to the 5YHLS, which is as a proportion of the full 153 dwelling windfall allowance. The proportion of windfalls expected to be delivered each year is cumulative and increases year on year before reaching the full windfall allowance of 153 dwellings per annum from Year 4 onwards. For example:

- Year 1 = 5% of the 153 dwelling windfall allowance,
- Year 2 = 34% (5% + 29%) of the 153 dwelling windfall allowance, and
- Year 3 = 62% (5% + 29% + 28%) of the 153 dwelling windfall allowance[18].

[18] Due to rounding of figures the windfalls for Year 3 is 95 rather than the sum of the figures shown

Figure 1: Windfall delivery up to 31 March 2033

6.30 This has been expanded to cover windfalls within the first five years following the intended adoption of the emerging Local Plan (1 April 2028 to 31 March 2033).

6.31 Overall, there is compelling evidence to justify the inclusion of the windfall allowance in the housing land supply in the emerging Local Plan housing trajectory, as it provides a reliable source of supply. A proportionate approach to windfall delivery is applied to the housing trajectory that is realistic and based on strong recent evidence.

7. Small Site Delivery

7.1 Paragraph 73a of the NPPF specifies that local planning authorities should "identify, through the development plan and brownfield registers, land to accommodate at least 10% of their housing requirement on sites no larger than

one hectare; unless it can be shown, through the preparation of relevant plan policies, that there are strong reasons why this 10% target cannot be achieved".

7.2 As of 1 April 2026, 532 homes already had planning permission on sites no larger than 1 hectare. In addition, 112 dwellings are proposed to be allocated in the emerging Local Plan on sites no larger than 1 hectare.

7.3 Windfalls are expected to contribute significantly to the small sites requirement over the emerging Local Plan period. Of the 2,288 windfalls completed between 1 April 2011 and 31 March 2026, 68% came from sites of less than 10 houses. Whilst these sites were not specifically assessed against a 1 hectare threshold, the number of dwellings delivered indicates that most are likely to have been under 1 hectare in size. Equally some sites under 1 hectare in size would be expected to provide 10 or more dwellings, and as such would not have been incorporated in the above measure. It is therefore considered that assuming 68% of windfall sites have stemmed from sites less than 1 hectare in size is reasonable.

7.4 Assuming a similar range of sites during emerging Local Plan period, of the 2,289 windfalls anticipated over the Plan period, approximately 1,556 would be on small sites. This equates to approximately 8.7% of the emerging Local Plan housing requirement.

7.5 In combination, extant planning permissions, proposed non-strategic site allocations and windfalls on sites of 1 hectare or less are expected to deliver 12% of the emerging Local Plan housing requirement.

7.6 As such, it is considered that at least 10% of the Council's housing requirement would be on sites no larger than 1 hectare.

8. Buffers

8.1 NPPF paragraph 78 states:

"Strategic policies should include a trajectory illustrating the expected rate of housing delivery over the plan period, and all plans should consider whether it is appropriate to set out the anticipated rate of development for specific sites. Local planning authorities should identify and update annually a supply

of specific deliverable sites sufficient to provide a minimum of five years' worth of housing against their housing requirement set out in adopted strategic policies, or against their local housing need where the strategic policies are more than five years old. The supply of specific deliverable sites should in addition include a buffer (moved forward from later in the plan period) of:

- *5% to ensure choice and competition in the market for land; or*
- *20% where there has been significant under delivery of housing over the previous three years, to improve the prospect of achieving the planned supply…"*

8.2 A significant under delivery is measured against the Housing Delivery Test (HDT), where this indicates that delivery was below 85% of the housing requirement[19].

8.3 The 2024 or 2025 HDT measurement have not been published yet; however, given the significant increase to the housing need in December 2024, and that the 1,054 homes a year will be the HDT requirement from this point until the emerging Local Plan is adopted, the HDT measurement will temporarily fall below 85% of the housing requirement. This under-delivery is likely to continue until the emerging Local Plan is adopted.

8.4 The HDT calculation is a percentage measurement of the number of net homes delivered against the number of homes required over a rolling three year period.

"Housing Delivery Test (%) =

Total net homes delivered over 3 year period

divided by

Total number of homes required over 3 year period"[20]

8.5 The last HDT was published in December 2024, providing the position as of 2023. At this time Cotswold's HDT measurement was 95%. As such, a 5% buffer is currently required on the 5YHLS. Paragraph 80 of the NPPF is clear that the HDT results from previously published result should be used.

[19] Footnote 40 of the NPPF

[20] Housing Delivery Test measurement rule book - GOV.UK

8.6 The HDT measurement rule book[21] advises that where there are changes to the housing requirement the following would apply:

> *"16. Any new housing requirement will be used for the calculation of the Housing Delivery Test from the date that it becomes part of the development plan.*
>
> *17. For the purposes of calculating the Housing Delivery Test, the new adopted housing requirement will apply from the start of the relevant plan period (set out in the strategic policies for housing), which may be earlier than the adoption of the strategic policies.*
>
> *18. Following adoption of new strategic policies, the new housing requirement figure can be used to recalculate the Housing Delivery Test results during the year, in collaboration with MHCLG."*

8.7 As the Upon adoption of the Local Plan, the housing requirement applying from 1 April 2026 will be substantially reduced. The Council will then be able to request a recalculation of the HDT based on the revised requirement. However, given that adoption of the emerging Local Plan is anticipated in 2028, the HDT will continue to measure delivery against the housing requirements applicable during the preceding three-year period. As a result, the Standard Method requirement of 1,054 dwellings for 2025/26 will continue to form part of the HDT calculation in 2028. To reflect this transitional effect, and the likelihood that a higher HDT buffer may apply during the early years following adoption, a precautionary 20% buffer has been applied to the first three years of the Plan period.

9. Trajectory

9.1 The emerging Local Plan spatial strategy is underpinned by ten new strategic allocations, which are expected to deliver around 60% of the housing required over the Plan period. However, the scale and complexity of these sites mean that they are likely to make their greatest contribution to housing delivery in the medium to longer term. Delivery rates are expected to increase progressively as sites secure planning permission, infrastructure is provided and development becomes established. Whilst strategic allocations are therefore

[21] Housing Delivery Test measurement rule book - GOV.UK

unlikely to deliver substantial numbers of homes during the early years of the Plan period, they are anticipated to provide sustained and significant levels of housing delivery thereafter.

9.2 Given the significant increase in the District's housing requirement, the constraints affecting the availability of development opportunities, and the lead-in times associated with bringing forward strategic allocations, the Council considers it unrealistic to address any potential shortfall solely through the allocation of additional sites. Instead, a stepped housing requirement is required to align planned housing delivery with the anticipated build-out profile of strategic sites in particular and to provide a realistic, deliverable and justified housing trajectory over the Plan period.

9.3 Planning Practice Guidance recognises that a stepped housing requirement may be appropriate where there is a significant change in housing requirements between adopted and emerging policies, or where strategic sites are expected to deliver on a phased basis or later in the Plan period[22]. The Council considers that both circumstances apply in the Cotswold context. The proposed stepped housing requirement does not seek to delay the delivery of identified housing needs unnecessarily, nor does it reduce the overall housing requirement. Rather, it reflects the expected timing of development whilst ensuring that LHN is met in full over the Plan period and that growth is delivered through a realistic and plan-led strategy.

9.4 In order to provide a realistic and deliverable pattern of growth, whilst ensuring that LHN is met in full, the Council proposes a stepped housing requirement comprising three distinct phases:

Table 5: Stepped housing requirement (2026 to 2043)

Plan Years	Annual Housing Requirement	Total of Housing to be Delivered
2026-31	420	2,100
2031-36	1,030	5,150
2036-43	1,525	10,675
	Total	**17,925 (7 surplus)**

[22] PPG: Housing supply and delivery. Paragraph: 012 Reference ID: 68-021-20190722, Revision date: 22 07 2019

9.5 A flat annual requirement of 1,054 dwellings per annum would not reflect the anticipated delivery profile of strategic allocations and would therefore fail to provide a realistic and deliverable housing trajectory.

9.6 It is important to note that the stepped housing requirement does not reduce the District's overall housing requirement of 17,918 dwellings over the Plan period. The emerging Local Plan continues to plan for the delivery of the LHN in full. The stepped housing requirement simply redistributes housing delivery across the Plan period to reflect the anticipated delivery profile of strategic allocations and other housing sites, whilst ensuring that the full housing requirement is delivered by 2043.

9.7 The stepped housing requirement has been derived to reflect the anticipated delivery profile of the Plan's strategic allocations. Housing delivery is expected to be more limited during the early years of the Plan period while strategic sites progress through the planning, detailed design, infrastructure provision and construction phases. Delivery is then anticipated to increase significantly as multiple strategic allocations come forward concurrently and achieve higher build-out rates. This pattern is reflected in the emerging Local Plan housing trajectory set out in **Appendix 2**.

9.8 The proposed trajectory ensures that LHN is met in full over the Plan period whilst providing a realistic and deliverable reflection of the Council's spatial growth strategy and the anticipated timing of development.

Addressing housing shortfalls within the Plan Period

9.9 Given the nature of housing delivery, annual completion rates will inevitably fluctuate during the Plan period. Delivery is influenced by a range of factors, including the timing of planning permissions, infrastructure provision, site preparation, market conditions and build-out rates, and as a result periods of under-delivery may occur. The Council's housing trajectory has been prepared with these uncertainties in mind and reflects the anticipated delivery profile of sites over the Plan period. In accordance with Planning Practice Guidance, any housing shortfall should be measured from the base date of the adopted plan and added to the housing requirement for the subsequent five-year period, commonly referred to as the Sedgefield approach, before the appropriate buffer is applied. This ensures that housing delivery performance is assessed

accurately against the emerging Local Plan requirement and that any under-delivery is addressed at the earliest reasonable opportunity[23].

9.10 The housing trajectory indicates that a cumulative shortfall of approximately 59 dwellings is likely to arise during the first two years of the plan period (1 April 2026 to 31 March 2028). In accordance with the Sedgefield approach, this shortfall would be addressed within the following five-year period by adding the 99 dwellings to the relevant five-year housing requirement. This approach is consistent with the objective of addressing any under-delivery at the earliest reasonable opportunity whilst maintaining a realistic and deliverable housing trajectory. The resulting five-year housing land supply calculation is set out in **Table 6**.

Table 6: Cotswold District Council Housing Supply anticipated at 1 April 2028

		Total
A	Number of dwellings required for five years 1 April 2028 to 31 March 2033 as per stepped requirement (420*3+1030*2)	3,320
B	Number of dwellings required for five years 1 April 2028 to 31 March 2033 as per stepped requirement including expected shortfall (99)	3,419
C	Number of dwellings required for five years 1 April 2028 to 31 March 2033 as per stepped requirement including deficit and 20% buffer	4,103*
D	Estimated supply of deliverable sites for five years 1 April 2028 to 31 March 2033	3,827*
E	Shortfall over the requirement (D-C)	-276*
F	Annual housing target (C divided by five years)	821*
G	Number of supply years (D divided by F)	4.7* years

9.11 Whilst national planning policy only requires the Council to demonstrate a 5YHLS from the anticipated date of adoption, the Council has also assessed housing land supply across the remainder of the Plan period. This shows that whilst the current 5YHLS cannot currently be demonstrated at 1 April 2028, it can be demonstrated throughout the majority of the Plan period. This provides confidence that the proposed housing trajectory can maintain an adequate supply of deliverable sites thereafter. The assessment demonstrates that the

[23] PPG: Housing supply and delivery. Paragraph: 022 Reference ID: 68-031-20190722, Revision date: 22 07 2019

emerging Local Plan provides a robust and resilient housing land supply position throughout the Plan period. The resulting trajectory demonstrates a realistic and deliverable pattern of housing growth in which any temporary shortfall arising during the early years is addressed within the subsequent five-year period, consistent with the Sedgefield approach, whilst later surpluses provide confidence that the District's housing requirement will be met in full over the Plan period. Whilst the assessment identifies a housing land supply equivalent to 4.8 years in the final monitoring year of the Plan period, this does not indicate a deficiency in the Plan's overall strategy. By this stage, only a limited number of years remain before the end of the Plan period and a substantial proportion of the District's housing requirement will already have been delivered.

9.12 There will be less than five years remaining of the Plan period after 2038/39, so a 5YHLS cannot be calculated after this date. The resulting 5YHLS position is summarised in **Table 7**.

Table 7: 5YHLS throughout the Plan period

Date	Years Supply
2028/29	4.7
2029/30	5.2
2030/31	5.0
2031/32	5.0

2037/38	5.0
2038/39	4.8
2039/40	-
2040/41	-
2041/42	-
2042/43	-

10. Conclusion and summary

10.1 This Topic Paper demonstrates that the emerging Cotswold Local Plan provides a robust, justified and deliverable strategy for meeting the District's housing needs over the period 2026 to 2043. The evidence confirms that sufficient

housing land has been identified to meet the District's LHN of 17,918 dwellings in full, whilst also providing additional flexibility through an overall housing supply of approximately 18,911 dwellings.

10.2 The housing land supply is derived from a range of sources, including existing commitments, saved allocations, proposed strategic and non-strategic allocations, and a justified windfall allowance. The Council has undertaken a detailed assessment of the deliverability and developability of sites, having regard to planning status, infrastructure requirements, lead-in times, viability considerations, developer evidence and anticipated build-out rates. This provides a clear and proportionate evidence base to support the housing trajectory and 5YHLS position.

10.3 The evidence demonstrates that the proposed windfall allowance represents a reliable source of housing supply. Historic delivery rates have remained consistently strong over an extended period and are supported by local circumstances, national policy changes and the anticipated continuation of a range of windfall opportunities throughout the Plan period. The Council is therefore satisfied that the inclusion of a windfall allowance is fully justified by compelling evidence.

10.4 The Council has also considered the implications of the significant increase in housing requirements introduced through the revised NPPF and Standard Method in December 2024. Given the scale of this increase, the reliance on strategic site allocations to deliver a substantial proportion of housing growth, and the lead-in times associated with bringing such sites forward, the Council considers that a stepped housing requirement provides the most realistic and deliverable approach to meeting housing needs.

10.5 The stepped housing requirement has been designed to align with the anticipated delivery profile of the Council's strategic growth strategy. It reflects the expected timing of housing delivery whilst ensuring that LHN is met in full over the Plan period. The approach is consistent with the PPG and does not seek to delay the delivery of housing need unnecessarily.

10.6 The housing trajectory demonstrates that the Council is capable of maintaining a 5YHLS for nine years following the anticipated adoption of the emerging Local Plan. The Local Plan review will likely be undertaken well before 2037, particularly in light of upcoming Local Government Reorganisation changes.

Any shortfall arising during the early years of the Plan period can be addressed through the application of the Sedgefield approach, whilst the overall level of planned housing delivery and available headroom provide confidence that housing requirements will continue to be met throughout the Plan period.

10.7 Overall, the evidence indicates that the emerging Local Plan provides a realistic, deliverable and positively prepared framework for housing growth. The housing trajectory, 5YHLS position and identified housing supply provide confidence that the District's housing needs can be met in full whilst maintaining a Plan-led approach to sustainable development. The Council therefore considers that the emerging Local Plan's housing requirement, housing trajectory and housing land supply strategy are justified, effective, deliverable and consistent with national policy.

Major Sites with Planning Permission

Cirencester and Villages Strategy Area

Parish	Planning Application Number	Site Address	Remaining Capacity (at 01/04/2026)	Is the site considered deliverable? If not, why?
Cirencester	25/00650/FUL	Land At Nos. 26 To 48 Austin Road GL7 1BT	14	Yes (to be delivered in years -1 to 0, prior to adoption of Local Plan)
Cirencester	25/02200/OPANOT	Querns Business Centre Whitworth Road GL7 1RT	19	Yes (to be delivered in year -1, prior to adoption of Local Plan)
Cirencester	16/00054/OUT	Land at Chesterton Farm Cranhams Lane GL7 6JP (The Steadings)	2,182	Yes (see combined template with 25/02763/REM)
Cirencester	25/02763/REM	The Steadings Development Phase 2A Crahams Lane GL7 6JP	100	Yes (see combined template with 16/00054/OUT)
Cirencester	24/02117/FUL	5 Dyer Street GL7 2PP	15	Yes
Preston	24/02854/OUT	Land West Of Kingshill Lane	280	Yes

South Cotswold Area Strategy

Parish	Planning Application Number	Site Address	Remaining Capacity (at 01/04/2026)	Is the site considered deliverable? If not, why?
Avening	22/03666/FUL	Old Quarries Rectory Lane GL8 8NJ	11	Yes (to be delivered in years -1 to 0, prior to adoption of Local Plan)
Down Ampney	17/03826/REM	Land at Broadway Farm	21	Yes (to be delivered in year -1, prior to adoption of Local Plan)
Down Ampney	24/01608/FUL	Land west of Down Ampney Football Club Broadleaze	13	Yes (to be delivered in year 0, prior to adoption of Local Plan)
Fairford	20/04147/FUL	Coln House School Horcott Road GL7 4DB	17	Yes (to be delivered in year 0, prior to adoption of Local Plan)
Fairford	25/01717/FUL	Land west of Hatherop Road	98	Yes
South Cerney	23/02101/FUL	Land and properties at Berkeley Close GL7 5UN	59	Yes (to be delivered in years -1 and 0, prior to adoption of Local Plan)
Tetbury Upton	23/02682/FUL	Land west of Worwell Farmhouse Cirencester Road GL8 8RY	24	Yes (to be delivered in year -1, prior to adoption of Local Plan)

Tetbury	21/00549/FUL	Northfield Garage London Road GL8 8HW	17	Yes (to be delivered in year -1, prior to adoption of Local Plan)
Tetbury	23/02424/FUL	Land north of Cirencester Road GL8 8SA	63	Yes

North Cotswold Area Strategy

Parish	Planning Application Number	Site Address	Remaining Capacity (at 01/04/2026)	Is the site considered deliverable? If not, why?
Moreton-In-Marsh	19/02248/FUL	Land at Dunstall Farm Fosseway	133	Yes
Stow-on-the-Wold	23/01513/FUL	Land north of Oddington Road	37	Yes (to be delivered in years -1 to 0, prior to adoption of Local Plan)
Willersey	25/02983/OUT	Land North Of Folly View Broadway Road	30	Yes
Bourton-on-the-Water	24/00627/FUL	Former Co-Operative Food Station Road	82	Yes

Applications Permitted after April 2026, part of wider strategic sites:

Moreton-in-Marsh, 25/01036/OUT, Land East of Cotswold Business Village, south of London Road M71A

Mickleton, 25/03351/OUT, Land south-west of Mickleton MK13

Applications Granted on Appeal after 1 April 2026:

Parish	Planning Application Number	Site Address	Site Capacity	Is the site considered deliverable? If not, why?
Lechlade	24/03501/OUT	Land north of The Wern, GL7 3DN	Up to 54 dwellings	Yes
Northleach	26/00613/OUT (resolution to grant)	Land adjoining East End and Nostle Road	50	Yes
Willersey	25/02687/FUL (resolution to grant)	Land north of B4632 and east of employment estate	60	Yes

COTSWOLD
District Council

Non-Strategic Allocations

Cirencester and Villages Strategy Area

Parish	Site ref.	Planning Application Number	Site Address	Remaining Capacity (at 01/04/2026)	Is the site considered deliverable?
Cirencester	C71	24/00660/PLP (refused)	Land adjacent 'Donside', off Barn Way	10	No. Insufficient evidence to classify as deliverable. The site is considered developable in the plan period.
Cirencester	C81B	-	Land west of Gardner Way	31	Yes. It is considered there is sufficient evidence to classify the site as deliverable within five years of the expected adoption of the emerging Local Plan (although given timescale provided by the promoter the site is not expected to deliver homes within 5 years from April 2026). - The site has a promotion agreement in place with a Promoter with an established track record for delivery including in the District. - The site is therefore considered available for development. - Previous site assessments undertaken in relation to previous applications of the wider site, although new surveys required. - Key infrastructure available due to previous development, with infrastructure requirements considered standard (i.e. roads, green infrastructure, enhanced pedestrian routes, SUDs etc.). - No viability concerns raised. - Small to medium site - Principle of an MoU agreed for delivery trajectory.

Parish	Site ref.	Planning Application Number	Site Address	Remaining Capacity (at 01/04/2026)	Is the site considered deliverable?
Siddington	SD15	-	Plummers Farm, east of Ashton Road	35	Yes. It is considered there is sufficient evidence to classify the site as deliverable. - The site has a promotion agreement with an option for a housebuilder to develop the site, who has an established track record for delivery including in the District. - The site is therefore considered available for development. - A number of surveys have been undertaken to date, along with a pre-application enquiry. - Usual infrastructure requirements expected, along with enhancement of the canal. - No viability concerns raised. - Small to medium site - Principle of an MoU agreed with including delivery years.
Siddington	SD17	-	Land east of Siddington Road and west of Bluebell Drive	5	No. Insufficient evidence to classify as deliverable. The site is considered developable in the plan period. - Limited site assessment - No pre-application advice - Small scale, with landowner with experience developing sites
Siddington	SD23	-	Land between disused canal and disused railway line, north of Park Way	22	No. Insufficient evidence to classify as deliverable. The site is considered developable in the plan period. - Limited site assessment - No pre-application advice - Small scale, with landowner with experience developing sites

South Cotswold Strategy Area

Parish	Site ref.	Planning Application Number	Site Address	Remaining Capacity (at 01/04/2026)	Is the site considered deliverable?
Andoversford	A2		Land north-west of Templefields	52	No. Insufficient evidence to classify as deliverable. The site is considered developable in the plan period. - The landowner has engaged an agent to secure options agreement - The site is therefore considered available for development. - A number of surveys have been undertaken to date (with an updated ecology survey currently being undertaken), along with a pre-application enquiry. - Usual infrastructure requirements expected, along with improved off site pedestrian and cycle provision, and appropriate traffic management measures. - No viability concerns raised. - Medium site
Coln St Aldwyns, Hatherop, Quenington	R591	26/01327/FUL (pending consideration)	Former Godwin Pumps factory Springfield Road, Quenington	47	Yes. It is considered there is sufficient evidence to classify the site as deliverable. - The landowner has engaged an agent (who has advised the site will be vacant from August 2027) - The site is therefore considered available for development (with planning applications dealt with whilst the site is occupied). - Full surveys and viability submitted with planning application - Current detailed planning application pending decision - Usual infrastructure requirements expected for this size of site. - Medium site

Parish	Site ref.	Planning Application Number	Site Address	Remaining Capacity (at 01/04/2026)	Is the site considered deliverable?
Coln St Aldwyns, Hatherop, Quenington	R670	-	Glebe Farm Yard, Hatherop	12	Yes. It is considered there is sufficient evidence to classify the site as deliverable. - The landowner (a trust) has engaged an agent, and the proposed developer is a subsidiary of the landowner. - The site is therefore considered available for development. - Initial site assessment surveys are being undertaken and pre-application advice has been engaged with. - Usual infrastructure requirements expected for this size of site. - Small to medium site
Fairford	F20A	-	Land south-east of Fairford	55	No. Insufficient evidence to classify as deliverable. The site is considered developable in the plan period (years 6-10). - The landowner has engaged an agent, and are in active discussions with a promoter - The site is therefore considered available for development. - Preliminary site assessment and desktop review work has been undertaken - No viability issues identified - Usual infrastructure requirements expected for this size of site, with some off-site pedestrian and cycle enhancement required. - Medium sized development .

Parish	Site ref.	Planning Application Number	Site Address	Remaining Capacity (at 01/04/2026)	Is the site considered deliverable?
Fairford	F39C / F52	25/03880/OUT (Pending consideration)	Land west of Terminus Cottage and Station Cottage	30	Yes. It is considered there is sufficient evidence to classify the site as deliverable. - A promotion agreement is in place - An outline application has been submitted with site investigation undertaken in preparation for this and is currently pending consideration - The site is therefore considered available for development - No viability issues identified - Usual infrastructure requirements expected for this size of site, with some off-site pedestrian and cycle enhancement required - Medium sized development
Fairford	F53A	-	Land at Totterdown Hill, Horcott	150	Yes. It is considered there is sufficient evidence to classify the site as deliverable. - A promotion agreement is in place - Surveys have commenced (with archaeology survey undertaken) - The site is therefore considered available for development. - No viability issues identified - Usual infrastructure requirements expected for this size of site, with some off-site pedestrian and cycle enhancement required. - Principle of an MoU agreed with including delivery years

Parish	Site ref.	Planning Application Number	Site Address	Remaining Capacity (at 01/04/2026)	Is the site considered deliverable?
Kempsford	R203A, R203B, R203C	23/01665/OUT, 17/02224/FUL	Land to rear of the Knoll, Whelford Road	149	Yes. It is considered there is sufficient evidence to classify the site as deliverable. - An options agreement is in place with a housebuilder - Updated Preliminary Ecological Appraisal carried out June 2026. Other surveys undertaken in relation to 2023 outline application. - The site is therefore considered available for development. - No viability issues identified - Additional infrastructure required including noise mitigation measures, provision of allotments, convenience store - Principle of an MoU agreed with including delivery years (although not numbers)
Lechlade-on-Thames	L19	24/00845/FUL	Land south of Butler's Court	15	No. Insufficient evidence to classify as deliverable. The site is considered developable in the plan period. - A landowner with a record of previous delivery on their land (noting previous promoter agreement) - Previous applications submitted as such survey works have been undertaken on the site previously. - The site is therefore considered available for development. - No viability issues identified - Usual infrastructure requirements expected for this size of site - Small sized development - Advised that they will look to develop alongside recently approved scheme to the north 24/03501/OUT

Parish	Site ref.	Planning Application Number	Site Address	Remaining Capacity (at 01/04/2026)	Is the site considered deliverable?
Lechlade-on-Thames	L33	25/04047/OUT	Land south of Ferrers Park	150	Yes. It is considered there is sufficient evidence to classify the site as deliverable. - A promotion agreement is in place - An outline application has been submitted with site investigation undertaken in preparation for this. - The site is therefore considered available for development. - No viability issues identified to date (although to be discussed during S106 agreement) - Usual infrastructure requirements expected for this size of site, with additional ecological buffers - Principle of an MoU agreed with including delivery years
Poulton	R607		Land north of London Road	10	Yes. It is considered there is sufficient evidence to classify the site as deliverable. - Site in one ownership with an agent acting on their behalf - Site assessment work being undertaken following pre-application advice - The site is therefore considered available for development. - No viability issues identified - Usual infrastructure requirements expected for this size of site - Principle of an MoU agreed with including delivery years

Parish	Site ref.	Planning Application Number	Site Address	Remaining Capacity (at 01/04/2026)	Is the site considered deliverable?
Tetbury	T31B	14/01610/OUT	Land adjacent to Blind Lane	44	Yes. It is considered there is sufficient evidence to classify the site as deliverable. - Site has an option agreement with an established house builder - Although site assessment works haven't been undertaken, a pre-application enquiry has been submitted to the Council - The site is therefore considered available for development. - No viability issues identified - Usual infrastructure requirements expected for this size of site - Principle of an MoU agreed with including delivery years
Tetbury	T71A	-	Land north-west of Highfield Cottage	50	No. Insufficient evidence to classify as deliverable. The site is considered developable in the plan period. - Limited site assessment - No pre-application advice - Land owner has advised first completions expected in 2033

North Cotswold Area Strategy

Parish	Site ref.	Planning Application Number	Site Address	Remaining Capacity (at 01/04/2026)	Is the site considered deliverable?
Blockley	BK11		Former Station Road Allotments	40	No. Insufficient evidence to classify as deliverable. The site is considered developable in the plan period (years 11-15).
Blockley	BK14A	16/03027/FUL: permitted a single dwelling on part of site (lapsed) 18/00612/FUL: permitted two dwellings on part of site (lapsed)	The Limes, Station Road	8	Yes. It is considered there is sufficient evidence to classify the site as deliverable. - Landowner been involved in other development in the area - Various site assessment works have been undertaken - The site is therefore considered available for development. - No viability issues identified, although costs of archaeology surveys noted - Standard infrastructure requirements, as well as off-site pedestrian and cycle enhancement, and ecological buffers/enhancement required - Principle of an MoU agreed with including delivery years
Bourton-on-the-Water	B56	-	Land off Mallard Crescent	53	Yes. It is considered there is sufficient evidence to classify the site as deliverable. - There is a site promoter with an established development record - The site is therefore considered available for development. - No viability issues identified - Standard infrastructure requirements, including a link to a PRoW and provision of a circular route. - Principle of an MoU agreed with including delivery years, although number disagreed with

Parish	Site ref.	Planning Application Number	Site Address	Remaining Capacity (at 01/04/2026)	Is the site considered deliverable?
Chipping Campden	CC10A	-	Land east of Chandlers, Station Road	8	No. Insufficient evidence to classify as deliverable. The site is considered developable in the plan period (years 11-15).
Chipping Campden	CC66B	25/03349/FUL	Land north-west of Aston Road	10	No. Insufficient evidence to classify as deliverable. The site is considered developable in the plan period (years 6-10). - There is a current application submitted on behalf of a property developer (albeit for 5 rather than 10 houses) - The site is therefore considered available for development. - No viability issues identified - Standard infrastructure requirements - Principle of an MoU agreed with including delivery years
Chipping Campden	CC68	25/03689/SCR	Land north-east of Aston Road	150	No. Insufficient evidence to classify as deliverable. The site is considered developable in the plan period (years 11-15).
Mickleton	MK2B/C	25/01621/OUT	Land east of former Meon Hill Nurseries	40	Yes. It is considered there is sufficient evidence to classify the site as deliverable. - Site investigation works undertaken in relation to the submission of an outline planning application (withdrawn) with pre-application advice also engaged in - There is an options agreement in place with an established housebuilder - The site is therefore considered available for development. - No viability issues identified - Standard infrastructure requirements, with pedestrian route to neighbouring site - Principle of an MoU agreed with including delivery years

Parish	Site ref.	Planning Application Number	Site Address	Remaining Capacity (at 01/04/2026)	Is the site considered deliverable?
Mickleton	MK7	-	Land between Summerville Ltd. and Stratford Road	33	No. Insufficient evidence to classify as deliverable. The site is considered developable in the plan period (years 11-15).
Mickleton	MK11A	-	Land east of Stratford Road (Site A)	76	No. Insufficient evidence to classify as deliverable. The site is considered developable in the plan period (years 11-15).
Moreton-in-Marsh	M28B	25/02443/FUL	Land west of Aldi	20	Yes. It is considered there is sufficient evidence to classify the site as deliverable. - Site investigation works undertaken in relation to the submission of a full planning application - There is an options agreement in place with an established housebuilder - The site is therefore considered available for development. - Viability issues identified for the delivery of 10 dwellings, as such no affordable housing offered - Standard infrastructure requirements - Principle of an MoU agreed with including delivery years
Moreton-in-Marsh	M74A		Land south of North Cotswold Hospital	44	No. Insufficient evidence to classify as deliverable. The site is considered developable in the plan period (years 11-15).
Stow-on-the-Wold	S14B	-	Land adjacent Griffin Court / Playing Field (remaining land after 23/01513/FUL)	10	No. Insufficient evidence to classify as deliverable. The site is considered developable in the plan period (years 6-10). - Site assessment works undertaken in expectation of submission of application in 2027 - Linked to development infrastructure to the south under construction - Draft agreement in place to transfer land ownership (to a Trust)

Parish	Site ref.	Planning Application Number	Site Address	Remaining Capacity (at 01/04/2026)	Is the site considered deliverable?
Stow-on-the-Wold	S55B		Land adjoining Tall Trees, Oddington Road	8	No. Insufficient evidence to classify as deliverable. The site is considered developable in the plan period (years 6-10). - Planning agent involvement on the site - Preapplication enquiries engaged with - Small scale site indicating quick build out rate
Stow-on-the-Wold	S68		The Hollies, Lower Swell Road	35	Yes. It is considered there is sufficient evidence to classify the site as deliverable. - Site investigation works underway with expectation of submitting a full planning application by Autumn 2026 - Pre-application discussions undertaken with agent engaged - The site is therefore considered available for development - No viability issues raised (subject to securing sufficient housing) - Standard infrastructure requirements - Principle of an MoU agreed with including delivery years
Upper Rissington	UR1A	26/01045/FUL (pending for 26 affordable)	Land West of Delphin Way, Upper Rissington	26	Yes. It is considered there is sufficient evidence to classify the site as deliverable. - Site investigation works undertaken in relation to the submission of a full planning application - There is an options agreement in place with an established developer - The site is therefore considered available for development. - Planning application current pending consideration - No viability issues raised - Standard infrastructure requirements - Principle of an MoU agreed with including delivery years
Willersey	W4B	20/04553/OUT	Land between Colin Lane and	40	Yes. It is considered there is sufficient evidence to classify the site as deliverable.

			future Heritage Railway		- The site is being promoted on behalf of a SME housebuilder with an options agreement in place - The site is therefore considered available for development - Site investigations works have been undertaken - Standard infrastructure requirements - Principle of an MoU agreed

* It should be assumed that the plan will be adopted no earlier than one year after the date on which it is submitted for examination, and that Y1 starts on the 1 April following the date of adoption.

Ownership and availability	Platform Housing Group own site - completed purchase of site 2.5 weeks ago, own entire freehold
Developer interest	Platform Housing Group – Platform Housing Group do not directly build their own homes. They instead rely upon a series of partnerships with trusted local and national developers who build on their behalf. In the case of the subject site, Platform have worked with Lovell Partnerships since inception of the project and intend to award a Pre Contract Services Agreement to LP to cater for bringing the site from Outline Planning approval through to Reserved Matters (full) approval.
Site assessment work	Outline application – pre-commencement conditions to require additional investigations
Viability	No known viability issues

Infrastructure provision	Extensive consultation was conducted between Platform, Cotswold DC and Gloucestershire CC prior to entering into contract to purchase the site. The key areas for discussion at this early stage to enable the site will be the Deed of Variation required to the 2 x s106 agreements attached to the scheme and confirmation on the preferred route for a footpath connection to the schools to the north of the site Discussion is ongoing with CDC's planning team regarding the most efficient route to ensure meaningful engagement pre-RM submission, whether this is in the form of a standard pre-app, or whether a Planning Performance Agreement may be preferred. The scheme is not overly infrastructure dependant, with the site entrance and the north/south footpath link requiring highways sectional agreements being the key approvals required in this respect.
Planning permission	24/02854/OUT – Reserved Matters anticipated to be ready for submission by early autumn, determination period of 6-7 months, planning conditions discharges 3 months, 8 months to get first plot ready for practical completions, anticipated delivery of dwellings from end of 2027 calendar year.
Progress towards applications, reserved matters, discharge of conditions, etc.	Work continuing to progress to the submission of a reserved matters application late 2026.

South Cotswold Area Strategy

Tetbury: Old Quarries (22/03666/FUL)

Site Details	
Site name	Old Quarries Rectory Lane Avening Tetbury Gloucestershire GL8 8NJ
Total capacity (dwellings)	11
Total completions in plan period	11
Total completions in five years following adoption	0 – to be completed prior to year 1 of adoption

Plan period up to adoption			**Years following adoption***														
-2	-1	0	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
2025/26	2026/27	2027/28	2028/29	2029/30	2030/31	2031/32	2032/33	2033/34	2034/35	2035/36	2036/37	2037/38	2038/39	2039/40	2040/41	2041/42	2042/43
Annual completions																	
	4	7															

* It should be assumed that the plan will be adopted no earlier than one year after the date on which it is submitted for examination, and that Y1 starts on the 1 April following the date of adoption.

Ownership and availability	Elmsley Homes (Avening) Ltd. Applicant is sole owner of all land to which this application relates.
Developer interest	Developer owns the land.
Site assessment work	No further site assessment work required
Viability	Potential viability issues in phase 2 when working on listed building which has suffered water damage due to theft of lead on the roof.
Infrastructure provision	CIL is payable, S106. The developer has not raised any concerns regarding infrastructure provision, and as they are currently working on site, it is considered that there are no infrastructure issues.
Planning permission	22/03666/FUL
Progress towards applications, reserved matters, discharge of conditions, etc.	Various listed building consent conditions to satisfy.

Down Ampney: Land at Broadway Farm (15/01567/OUT, 17/03826/REM)

Site Details	
Site name	Land At Broadway Farm Down Ampney Gloucestershire
Total capacity (dwellings)	44
Total completions in plan period	21
Total completions in five years following adoption	0 – site to be completed before adoption.

Plan period up to adoption			**Years following adoption***														
-2	-1	0	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15

Annual completions																	
	23	36															

* It should be assumed that the plan will be adopted no earlier than one year after the date on which it is submitted for examination, and that Y1 starts on the 1 April following the date of adoption.

Ownership and availability	3 land owners, site is under construction.
Developer interest	Bromford Housing Association
Site assessment work	No further site assessment work required
Viability	No viability issues affecting delivery of site, currently ahead of schedule
Infrastructure provision	No infrastructure requirements that may constrain delivery of site
Planning permission	23/02101/FUL
Progress towards applications, reserved matters, discharge of conditions, etc.	None

Tetbury: Land West of Worwell Farmhouse (23/02682/FUL)

Site Details	
Site name	Land West Of Worwell Farmhouse Cirencester Road Tetbury Gloucestershire GL8 8RY
Total capacity (dwellings)	27
Total completions in plan period	24
Total completions in five years following adoption	0 – due to be completed before adoption (2026/27).

Plan period up to adoption			**Years following adoption***														
-2	-1	0	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
2025/26	2026/27	2027/28	2028/29	2029/30	2030/31	2031/32	2032/33	2033/34	2034/35	2035/36	2036/37	2037/38	2038/39	2039/40	2040/41	2041/42	2042/43
Annual completions																	
	19	5															

* It should be assumed that the plan will be adopted no earlier than one year after the date on which it is submitted for examination, and that Y1 starts on the 1 April following the date of adoption.

Ownership and availability	One landowner, site is under construction
Developer interest	Developer is Stonewood Homes
Site assessment work	No further site assessment work required
Viability	Request to modify S106 was submitted 12th February to remove the First Homes element, but this has not been actioned yet.
Infrastructure provision	HV cables and PROW diversion required which is significantly holding up progress and delivery. Also GP surgery required to provide.
Planning permission	23/02682/FUL
Progress towards applications, reserved matters, discharge of conditions, etc.	Awaiting archaeological final sign off. The developer's assumptions indicated earlier delivery of the site; however, the Council has taken a more cautious view of deliverability and has therefore revised the trajectory to reflect completion in 2027/28.

Tetbury: Northfield Garage (21/00549/FUL)

Site Details	
Site name	Northfield Garage London Road Tetbury Gloucestershire GL8 8HW

Annual completions																	
						15	15										

* It should be assumed that the plan will be adopted no earlier than one year after the date on which it is submitted for examination, and that Y1 starts on the 1 April following the date of adoption.

Ownership and availability	1 landowner, and site available for development now.
Developer interest	Contract with landowner.
Site assessment work	A full suite of technical assessments has been prepared in support of the current outline planning application. These assessments have been considered by the Council and relevant technical consultees and have not prevented the application from receiving a resolution to grant planning permission, subject to completion of the Section 106 agreement and the imposition of appropriate planning conditions.
Viability	There are no known viability constraints that would prevent delivery of the site. The proposed scale of development is modest and the site is capable of delivering policy-compliant development.
Infrastructure provision	Detailed access applied for so road infrastructure will be secured and easily implementable. It is acknowledged that Severn Trent Water is undertaking investigations into sewer capacity. If any capacity improvements or connection works are required, these can be addressed through the statutory undertaker process and/or secured by appropriate planning conditions. Conditions have been

	agreed to ensure that the development would not result in unacceptable drainage or sewerage impacts.
Planning permission	Application 25/02983/OUT has a resolution to grant permission
Progress towards applications, reserved matters, discharge of conditions, etc.	Following issue of the decision notice, the applicant intends to progress reserved matters and the discharge of pre-commencement conditions in a timely manner. Given the modest scale of the proposed development and the advanced stage of the outline application, there is a realistic prospect that the site can begin delivering homes within the early years of the plan period.

Bourton-on-the-Water: Former Co-Operative Food (24/00627/FUL)

Site Details	
Site name	Former Co-Operative Food Station Road Bourton-on-the-Water Gloucestershire
Total capacity (dwellings)	82
Total completions in plan period	82
Total completions in five years following adoption	82

2025/26	2026/27	2027/28	2028/29	2029/30	2030/31	2031/32	2032/33	2033/34	2034/35	2035/36	2036/37	2037/38	2038/39	2039/40	2040/41	2041/42	2042/43
Annual completions																	
			6	20	56												

* It should be assumed that the plan will be adopted no earlier than one year after the date on which it is submitted for examination, and that Y1 starts on the 1 April following the date of adoption.

Ownership and availability	Site owned by Pegasus Homes Rental Investments 2 Ltd – a development company set up by Pegasus Homes for the purpose of developing the site.
Developer interest	Pegasus Homes
Site assessment work	Further site investigation required for ground conditions and contamination, will be required following removal of hardstanding
Viability	Build costs have increased substantially, while demand from Registered Providers (RPs) for affordable units has weakened, as the affordable element is small at only 6 homes (plus 2 first homes which an RP would not acquire), there appear to be very few RPs interested and early indications of returns are below earlier expectations.
Infrastructure provision	Upgrades to water and sewer are required. Thames Water have advised that existing water cannot meet demands. It has therefore recommended the attachment of a condition requiring water network upgrades to be completed or a development and infrastructure phasing plan to be agreed.
Planning permission	24/00627/FUL
Progress towards applications, reserved matters, discharge of conditions, etc.	No conditions have been discharged as yet.

Applications Granted on Appeal after 1 April 2026:

Northleach: Land adjoining East End and Nostle Road (ref: N14B)

Site Details	
Local plan allocation ref	N14B

* It should be assumed that the plan will be adopted no earlier than one year after the date on which it is submitted for examination, and that Y1 starts on the 1 April following the date of adoption.

Ownership and availability	The site is within one ownership, The Farmington Trust Limited. The site is available for delivery.
Developer interest	The land owners intend to develop the site themselves.
Site assessment work	A full suite of technical assessments relating to landscape, ecology heritage, drainage and transport were submitted with submitted outline application.
Viability	No known issues
Infrastructure provision	The site promoter has advised the development is not expected to require major strategic infrastructure. Technical Reports accompanying the outline application submission indicate that the main infrastructure will include upgrading the existing Nostle Road access to an adoptable 6m-wide carriageway with 2m footways and visibility splays. Drainage works are also proposed and under discussion and consideration.
Planning permission	Outline application 26/00613/OUT with resolution to grant
Progress towards applications, reserved matters, discharge of conditions, etc.	Anticipate submitting reserved matters from mid-2027 (subject to grant of outline planning application).

Lechlade: Land north of The Wern, GL7 3DN

Site Details	
Site name	Land north of The Wern, GL7 3DN

* It should be assumed that the plan will be adopted no earlier than one year after the date on which it is submitted for examination, and that Y1 starts on the 1 April following the date of adoption.

Ownership and availability	New College, Oxford is the sole landowner and is in full agreement with the proposed development. Hallam Land secured outline consent on behalf of the landowner (in May 2026 following appeal). The land is available now. Subject to Reserved Matters consent, Hallam Land is in a position to progress on site without delay.
Developer interest	Hallam Land has longstanding relationships with its housebuilder partners and can bring parcels to market quickly. Therefore, there is minimal barrier to delivery.
Site assessment work	Outline consent was granted on the basis of an extensive suite of technical assessments which demonstrated that, in principle and subject to sensitive design and mitigation, there are no overriding constraints and/or environmental designations that would preclude development from occurring at the site. Appropriate mitigation (such as BNG) is secured through the outline consent. Future Reserved Matters Application(s) will provide additional detail regarding design and layout.
Viability	There are no physical or infrastructure constraints which would lead to development being unviable. The s106 Agreement allows for policy-compliant levels of affordable housing.
Infrastructure provision	The site benefits from an existing access road from the roundabout on the A417. There is therefore limited preparatory works required for the proposed development to commence promptly. The outline consent secures some improvements and contributions towards existing infrastructure (e.g. enhancement of existing bus stop infrastructure).

Planning permission	24/03501/OUT (allowed at appeal) (appeal ref: 6002824)
Progress towards applications, reserved matters, discharge of conditions, etc.	Following receipt of outline consent in May 2026, Hallam Land is preparing the site for marketing and the selected housebuilder partner will prepare and submit the Reserved Matters Application(s).

Willersey: Land north of B4632 and east of employment estate (site ref: W7A2, W7C)

Site Details

* It should be assumed that the plan will be adopted no earlier than one year after the date on which it is submitted for examination, and that Y1 starts on the 1 April following the date of adoption.

Ownership and availability	The site is owned by the Gloucester Diocesan Board. An application has been submitted for development, and as such the site is considered available.
Developer interest	Yes
Site assessment work	Full investigations undertaken in preparation of the planning application currently pending consideration.
Viability	No issues raised during planning application, considered to be viable
Infrastructure provision	Road access, drainage etc. utilities required.
Planning permission	Application 25/02687/FUL for "Residential development comprising 60 dwellings with associated roads, accesses, parking and servicing, open space, landscaping and drainage infrastructure". The Committee in July 2026 resolved to permit the application subject to a legal agreement. Permission issue expected Autumn 2026
Progress towards applications, reserved matters, discharge of conditions, etc.	Not applicable at this current stage

Non-Strategic Site Allocations

Cirencester and Villages Strategy Area

Cirencester: Land adjacent to Donside, off Barn Way (ref: C71)

Site Details

Annual completions																	
								5	5								

* It should be assumed that the plan will be adopted no earlier than one year after the date on which it is submitted for examination, and that Y1 starts on the 1 April following the date of adoption.

Ownership and availability	Owned by two individuals promoting the land themselves, with planning consultant engaged
Developer interest	There are no option or promotion agreements. The owners intention will be to sell land to housebuilders.
Site assessment work	None undertaken to date
Viability	No issues known
Infrastructure provision	No major infrastructure anticipated given scale of site.

Planning permission	Planning in principle application (24/00660/PLP) refused in 2024 due to conflict with strategic policy and insufficient information on the Cotswold Beechwoods Special Area of Conservation.
Progress towards applications, reserved matters, discharge of conditions, etc.	The intention is to submit a new application once outcome of the emerging local plan is further clarified. Principle of an MoU agreed to.

Cirencester: Land west of Gardner Way (ref: C81B)

Site Details	
Local plan allocation ref	C81B
Site name	Land west of Gardner Way
Total capacity (dwellings)	31
Total completions in plan period	31
Total completions in five years following adoption	31

Plan period up to adoption			Years following adoption*

25/26	26/27	27/28	28/29	29/30	30/31	31/32	32/33	33/34	34/35	35/36	36/37	37/38	38/39	39/40	40/41	41/42	42/43
Annual completions																	
						15	16										

* It should be assumed that the plan will be adopted no earlier than one year after the date on which it is submitted for examination, and that Y1 starts on the 1 April following the date of adoption.

Ownership and availability	The site is within one title (two named owners), with an options/promotion agreement in place with both of them with Robert Hitchins Ltd.
Developer interest	Land to be sold to housebuilder upon grant of planning permission
Site assessment work	Site previously the subject of comprehensive assessments in connection with planning permission refs: 06/02666/OUT, 13/02942/OUT. The former application supported by an Environmental Statement.

Viability	None known, but the overhead electricity transmission lines and pylon tower restrict extent of the developable area.
Infrastructure provision	Infrastructure already provided/available to serve the site given it formed part of the wider site which has previously been developed around it. The Council's template requires multi-structural green space required, enhanced footpath, and cycle and pedestrian access to south.
Planning permission	Part of previous planning permissions granted refs: 06/02666/OUT and, 13/02942/OUT, although indicated as employment use for these.
Progress towards applications, reserved matters, discharge of conditions, etc.	The developers engaged in pre-application end of 2025, which was favourable although noting that given the power lines National Grid would need to be consulted. The agent has also undertaken studies previously as part of outline applications and are therefore unlikely to find further issues on the site. The agent has advised that they would seek to prepare an outline application to coincide with the adoption of the Local Plan in late 2027 early 2028. Robert Hitchins has a longstanding delivery record in Cotswold District. The proposed trajectory of delivery is considered realistic. It is considered there is sufficient evidence to support this with a agreement to complete a MoU as well as confirmed intention to submit, trajectory and delivery rate.

Siddington: Plummers Farm, east of Ashton Road (ref: SD15)

Site Details	
Local plan allocation ref	SD15
Site name	Plummers Farm, east of Ashton Road

* It should be assumed that the plan will be adopted no earlier than one year after the date on which it is submitted for examination, and that Y1 starts on the 1 April following the date of adoption.

Ownership and availability	Newland Homes Ltd have an option to buy the site in place.
Developer interest	Newland Homes Ltd are a SME housebuilder who would build out the site.
Site assessment work	Site assessment works to date include: • A Preliminary Ecological Appraisal • A Landscape & Visual Statement for Pre-Application Purposes • A Transport Statement, produced by CTC Ltd, including a Draft Access Plan 941-ACC-001, produced by CTC Ltd

Viability	No issues raised
Infrastructure provision	Newland have carried out service capacity enquiries, where all services are available to support development and new homes. No major infrastructure is anticipated to be required to deliver the development.
Planning permission	None currently
Progress towards applications, reserved matters, discharge of conditions, etc.	A pre-application enquiry is with the Council currently. Newland Homes is an experienced provider of zero carbon homes, with a proven track record of delivery of homes within the district.
