

ANNEX A

ECONOMIC BACKGROUND

- 1.1** UK inflation continued to decline from the 8.7% rate seen at the start of 2023/24. By the last quarter of the financial year headline consumer price inflation (CPI) had fallen to 3.4% in February but was still above the Bank of England's 2% target at the end of the period. The core measure of CPI, i.e., excluding food and energy, also slowed in February to 4.5% from 5.1% in January, a rate that had stubbornly persisted for three consecutive months.
- 1.2** The UK economy entered a technical recession in the second half of 2023, as growth rates of -0.1% and -0.3% respectively were recorded for Q3 and Q4. Over the 2023 calendar year GDP growth only expanded by 0.1% compared to 2022. Of the recent monthly data, the Office for National Statistics reported a rebound in activity with economy expanding 0.2% in January 2024. While the economy may somewhat recover in Q1 2024, the data suggests that prior increases in interest rates and higher price levels are depressing growth, which will continue to bear down on inflation throughout 2024.
- 1.3** Labour market data provided a mixed message for policymakers. Employment and vacancies declined, and unemployment rose to 4.3% (3mth/year) in July 2023. The same month saw the highest annual growth rate of 8.5% for total pay (i.e., including bonuses) and 7.8% for regular pay growth (i.e., excluding bonuses). Thereafter, unemployment began to decline, falling to 3.9% (3mth/year) in January and pay growth also edged lower to 5.6% for total pay and 6.1% for regular pay, but remained above the Bank of England's forecast.
- 1.4** Having begun the financial year at 4.25%, the Bank of England's Monetary Policy Committee (MPC) increased Bank Rate to 5.25% in August 2023 with a 3-way split in the Committee's voting as the UK economy appeared resilient in the face of the dual headwinds of higher inflation and interest rates. Bank Rate was maintained at 5.25% through to March 2024. The vote at the March was 8-1 in favour of maintaining rates at this level, with the single dissenter preferring to cut rates immediately by 0.25%. Although financial markets shifted their interest rate expectations downwards with expectations of a cut in June, the MPC's focus remained on assessing how long interest rates would need to be restrictive in order to control inflation over the medium term.
- 1.5** In the Bank's quarterly Monetary Policy Report (MPR) released in August 2023 the near-term projection for services price inflation was revised upwards, goods price inflation widespread across products, indicating stronger domestic inflationary pressure with second-round effects in domestic prices and wages likely taking longer to unwind than they did to emerge. In the February 2024 MPR the Bank's expectations for the UK economy were positive for the first half of 2024, with a recovery from the mild recession in calendar H2 2023 being gradual. Headline CPI was forecast to dip below the 2% target quicker than previously thought due to

declining energy prices, these effects would hold inflation slightly above target for much of the forecast horizon.

- 1.6** Following the latest MPC meeting, Arlingclose, the authority's treasury adviser, maintained its central view that 5.25% remains the peak in Bank Rate and that interest rates will most likely start to be cut later in H2 2024. The risks in the short-term are deemed to be to the downside as a rate cut may come sooner than expected, but then more broadly balanced over the medium term.
- 1.7** The US Federal Reserve also pushed up rates over the period, reaching a peak range of between 5.25-5.50% in August 2023, where it has stayed since. US policymakers have maintained the relatively dovish stance from the December FOMC meeting and at the meeting in March, economic projections pointed to interest rates being cut by a total of 0.75% in 2024.
- 1.8** Following a similarly sharp upward trajectory, the European Central Bank hiked rates to historically high levels over period, pushing its main refinancing rate to 4.5% in September 2023, where it has remained. Economic growth in the region remains weak, with a potential recession on the cards, but inflation remains sticky and above the ECB's target, putting pressure on policymakers on how to balance these factors.
- 1.9** Sentiment in financial markets remained uncertain and bond yields continued to be volatile over the year. During the first half of the year, yields rose as interest rates continued to be pushed up in response to rising inflation. From October they started declining again before falling sharply in December as falling inflation and dovish central bank attitudes caused financial markets to expect cuts in interest rates in 2024. When it emerged in January that inflation was stickier than expected and the BoE and the Federal Reserve were data dependent and not inclined to cut rates soon, yields rose once again, ending the period some 50+ bps higher than when it started.
